Both "he and she," the King and Queen of England, did come to the United States. Their tour was triumphal. America flocked to the sidewalks to see them go by. The press maintained a steady din of apotheosis, idolizing the King and Queen as though we were still their subjects and believed in their God-given right to rule.

We swallowed the royal visit for the bait it was intended, just as Belloc had predicted. Faced with the prospect of another major war with Germany, the English Government dispatched their King and Queen as ambassadors to enlist the sympathy of the American public and to create the illusion that we must continue to aid the "motherland" in whatever straits it might subsequently find itself.

The day is fast approaching on which the British expect their royal visit to be repaid in full. This country has already contributed its moral support and its full economic and industrial effort. But the British will not be satisfied with this. When the British take the offensive, if they ever round that corner, they will want our men. They will want the pilots we are now training, the tank operators, the gunners, etc. They will want our ships and the men who sail on them. They will ask America, through the proper American associates in Washington, to reciprocate the royal visit with a delegation of two or three million soldiers.

German propaganda is geared to a totalitarian reading and listening public. We in this country easily recognize the Goebbels' product and reject it as such. But the British are great propagandists also. In the years following the last war we learned of the subtle but effective British propaganda machine which had been instrumental in pulling us into that conflict. Now, during this war, we are again under the full force of the British method of propaganda. Our press is swallowing it and swelling it before unseeing eyes. It is a propaganda designed especially for us by people who understand our psychology all too well, and once again we are being taken by the hand and led toward the holocaust. Mr. Belloc understated the force of British propaganda. There is no "almost" about it; British propaganda does what it likes with American opinion.

The third prediction of Hilaire Belloc is also borne out. The British are having their troubles with Ireland. The Irish are refusing to sacrifice their resources, their men, and their cities for the sake of Britain. And we, as children following the British pied piper, are denouncing Ireland and the neutrality to which it is bravely clinging. We at the beginning of the war asserted in voice and in law our determination to remain neutral. We have given up our neutrality and are flaying Ireland for displaying the strength of purpose which we relinquished.

At the Crossroads

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

EDITORIAL FROM THE JACKSON (MICH.) CITIZEN PATRIOT

Mr. MICHENER. Mr. Speaker, pursuant to permission given to me, I include herein an editorial from the Jackson (Mich.) Citizen Patriot of April 27, 1941, which is as follows:

[From the Jackson (Mich.) Patriot Citizen of April 27, 1941]

AT THE CROSS ROADS

The United States definitely has reached the cross roads. Having gone all-out short of war on a program of aid to Britain, we discover that Hitler's submarine campaign is sinking our munitions and supplies before they reach England. That puts us on the spot. Mr. Roosevelt has assured the world that we are in this business "until victory." And it now looks very much as though victory cannot be sure without actual American participation in the war.

That is the meaning of the profound pronouncements Thursday night by Secretary of the Navy Knox and Secretary of State Hull. The country is being prepared for abandonment of the "short of war" business. We're going further along the road followed when the Neutrality Act was amended, when the 50 destroyers were traded to Britain and when the lease-lend bill was enacted.

And the challenging thing about the spectacle is that the American people obviously do not look upon this as our war and are not ready to take part. Every poll shows that fact. Our recent page 1 correspondence from Washington reported that 80 percent of the people are opposed to getting in the war. Members of Congress say that their mail is as high as 10-to-1 antiwar.

But, as Senator VANDENBERG said when the lease-lend bill was passed, "you can't go half way over Niagara Falls." We can't retrace our steps.

That the administration is aware of the public's opposition has been revealed many times recently. Mr. Hull said Thursday: "Too many people assume that the present struggle is merely an ordinary regional war."

Unquestionably the attitude of the public has slowed up the President. The public took him at his word when he said during the campaign and since that no Americans would be sent out of the Western Hemisphere to fight.

That the administration is preparing openly to give up that policy was indicated when Hull said: "Some among us, doubtless with the best of intentions, still contend that our country need not resist until armed forces of an invader shall have crossed the boundary line of this hemisphere. But this merely means that there would be no resistance by

the hemisphere, including the United States, until the invading countries had acquired complete control of the other four continents and of the high seas, and thus had obtained every possible strategic advantage, reducing us to the corresponding disadvantage of a severely handicapped defense. This is an utterly short-sighted and extremely dangerous view."

Mr. Hull is actually criticizing the view expressed by Mr. Roosevelt not many months ago. Speaking to the teamsters' union last September 11, he reiterated the statement from the Democratic platform and pledged himself to it. That statement was: "We will not participate in foreign wars, and we will not send our Army, naval or air forces to fight in foreign lands outside of the Americas, except in case of attack."

Now Mr. Hull tells us that to refuse to fight outside of the Western Hemisphere is "utterly short-sighted and extremely dangerous."

Secretary Knox went even further Thursday night than did Mr. Hull. Said he, "Having gone thus far, we cannot back down. There is no retracing our steps. We have committed ourselves in this world struggle. If we should attempt to back down now, England would go down to catastrophic defeat, and we would face a world-wide victorious Germany and her allies whom we should have to fight alone."

This newspaper long ago said that, if this is our war, we should say so and should take up our swords on the side of Britain; and if it is not our war, we should keep our nose out of it. But the administration has persisted in a silly course of saying one thing and doing another. It has indicted Germany and supported Britain while at the same time declaring its purpose to remain at peace. That anomalous course was unsound from the first moment it was expounded.

The administration is now at a point where it can no longer "play horse" with the issue. It holds back because the country isn't ready for war. But the truth is that the country would be more nearly ready if the administration had been honest in stating its policies and had not talked peace while inviting war. The crisis which now confronts us was made in Washington.

Location of Proposed Veterans' Hospital in the Philadelphia Area

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

REMARKS MADE BY HON. MICHAEL J. BRADLEY, OF PENNSYLVANIA, BEFORE A SUBCOMMITTEE OF THE FEDERAL BOARD OF HOSPITALIZATION, JANUARY 16, 1941

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent granted me, I am placing in the RECORD my statement and testimony before the Federal Hospitalization Board regarding the location of the proposed veterans' hospital for Pennsylvania, which I urged should be in the Philadelphia area:

Congressman BRADLEY. General, I would first like to ask, if I may, a question so that we probably will have a better understanding of the situation here this morning. Some of the communications which have been received by Members of Congress announcing this hearing date have stated that the purpose of the hearing was to determine a site in central Pennsylvania. Now, I would like to know, and my colleagues would like to know, right at the start, if the Board has already decided on a site in central Pennsylvania.

General HINES. I may say the Board has not decided on any site. The Board indicated sometime ago, with the information before them, that they thought this unit should be located in central Pennsylvania. Since that time, upon the request of many who have been interested in it, the Board has given the subcommittee power to hold an open hearing with regard to location.

Congressman BRADLEY. Then I take it for granted that that part of the communication is not the present situation.

General HINES. It is not binding upon this subcommittee to make a recommendation.

Congressman BRADLEY. In other words, the question is not settled as to location in eastern or central Pennsylvania?

General HINES. It is not.

Congressman BRADLEY. Thank you. I represent a district in Philadelphia. I want to say at the outset, I don't wish to take the position that the hospital should be located absolutely within the confines of Philadelphia; however, I do feel that the area now served by the naval hospital in Pennsylvania, in the area of Philadelphia, the eastern part of Pennsylvania, is where this new hospital should be located. As you well know, the Veterans' Administration is providing beds for about 500 to 600 patients in Philadelphia. With the present expansion, the building up of our Navy, etc., it is fair to assume that in the future the Navy is going to have greater need for the hospital in the city of Philadelphia and for that reason we have to provide adequate facilities for the veterans in the eastern part of the State of Pennsylvania. I don't think that in other parts of the State the needs at present are as great as in the eastern part of the State.

The official figures of the Veterans' Administration indicate that the center of population affected by the present congested hospital situation is in the metropolitan area of Philadelphia. In the fiscal year 1938 there were 4,585 patients received in the naval hospital in Philadelphia. Of that number 4,042 came from the Philadelphia area, indicating that there were only about 500 some odd cases from the Harrisburg or the Scranton territory. In the fiscal year 1939 there were 4,447 patients in the naval hospital in Philadelphia, of which 4,075 came from the Philadelphia area. So far for the fiscal year 1940, from July to December, there were 2,426 patients in the naval hospital, of which 2,054 came from the Philadelphia area.

In the eastern part of Pennsylvania there are 200,000 potential cases of veterans of which about 140,000 to 150,000 are located in the Philadelphia area. We have in Philadelphia perhaps the greatest medical center in the world. One of the chief causes of complaint at the present time is that the veterans are denied the services of the most eminent physicians and specialists in the United States. If the hospital is located too far from the metropolitan area of Philadelphia, we will continue to be without the services of these men who are willing to volunteer their services for $1 a year. To my way of thinking there would be no justification for locating this hospital anywhere except in eastern Pennsylvania and at a site that would be as near to the city of Philadelphia as would be possible and at the same time provide for certain environments which would be desirable.

I think that the Board should take into consideration the number of patients who have been given treatment during the past 3 or 4 years and where they are located, and the hospital should be in a place where it would be accessible to the largest number of men and where transportation facilities would be easily provided, not only for the purpose of taking the men to the hospital but also for visitors; and I say that if the hospital should be erected in central Pennsylvania, we in eastern Pennsylvania will be back to the Veterans' Administration next year for a facility in the eastern part of the State, which we are entitled to, because we cannot agree that there will be any justification, even for the purpose of a so-called soldiers' home, in locating this institution or this facility in any part of the State where it would not serve the area where the greatest number of veterans now are and for whom adequate hospital facilities have not been provided. I submit to the Board the figures, which are the official figures of the Veterans' Administration, showing the resident location of the men who have been receiving hospitalization for the last 3 years.

General HINES. We have that of record, unless you wish it to be put in the record again.

Congressman BRADLEY. I would like to put it in the record. I think other phases of the matter will be gone into by my colleagues.

General HINES. I would like to ask one question if you do not object. If you are assured that the naval hospital would still be available to the veterans in the vicinity of Philadelphia and that the increase in the Navy is not going to result in a reduction in the number of beds which are now given the veterans there, about 600, would you still feel that a new one would be necessary there?

Congressman BRADLEY. I am glad you asked that question.

General HINES. I think it is necessary because that assurance was given the Board at the time that they indicated in their judgment they liked the area of central Pennsylvania to be surveyed.

Congressman BRADLEY. May I ask who gave that assurance?

General HINES. Admiral McIntire, member of the Board, the Surgeon General of the Navy.

Congressman BRADLEY. I don't think it is possible for any man to visualize what the Navy needs will be in the next 10 years. We realize that the naval hospital is primarily a naval institution under the complete control of the Navy, so much so that outside physicians are not allowed there, to give the veterans the benefit of their knowledge, at the present time.

I am a member of the Naval Affairs Committee and I have intimate knowledge of the expansion, which is taking place in our Navy; for that reason I believe I am justified in saying, I don't think it is possible for Admiral McIntire or any member to predict what the needs of the Navy are going to be at that hospital for the next 10 years. With a big fleet in the Atlantic it can easily have need of all the facilities at the naval hospital in Philadelphia.

General HINES. There is one element I do not believe you are familiar with, Congressman. When it was originally designed it was designed to give us not less than 450 beds.

Congressman BRADLEY. That is right.

General HINES. I remember very well when the Congressman from that district found the funds were tied up following the Economy Act and asked that the Veterans' Administration assist in getting them released for that project because we were interested to that extent.

Congressman BRADLEY. There were also a million dollars of the funds of the enlisted men of the Navy used in the construction of that hospital. One million dollars were taken from the Navy enlisted men's medical fund, and that went into the construction expenditures. To all intents and purposes it is a naval hospital and always will be. They will have the first claim and the veterans may be allowed to use what may be left. I

agree with you it was probably through the influence of the Veterans' Administration that the decision was finally made to construct the hospital, but it nevertheless is, first of all, a Navy hospital.

General HINES. It was due to the need of the veterans.

Congressman BRADLEY. It is not adequate at the present time and we really feel that as the Navy is built up there is going to be less opportunity for the veterans to receive services there, and that the one place in Pennsylvania where a new institution should be is in the eastern part of the State, and when you consider the eastern part of the State you must consider the territory in or adjacent to Philadelphia to get the advantage which Philadelphia offers as a medical center, with the attendant services of many eminent specialists, and also at the same time thereby secure a location in the area where the overwhelming majority of veterans who will be hospitalized reside.

General HINES. I might also place in the record here the fact that at the time the Board indicated the feeling that the unit should be in the central part of the State of Pennsylvania we were not faced exactly with the emergency that has since developed.

Congressman BRADLEY. That is right, General. I am not interested in any particular site, no particular piece of land or location, except that the hospital should be in the part of the State where it will do the greatest good to the greatest number of veterans.

St. Patrick's Day and Tolerance

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

ADDRESS BY RT. REV. MSGR. FULTON J. SHEEN

Mr. MICHAEL J. KENNEDY. Mr. Speaker, I wish to bring to the attention of the Members of the House an address given in New York City by the Rt. Rev. Msgr. Fulton J. Sheen, of the Catholic University of America, before the Society of the Friendly Sons of St. Patrick, on the occasion of their one hundred and fifty-seventh anniversary dinner, held March 17, 1941.

I know that those Members of the House and their constituents who derive great pleasure in listening to Msgr. Fulton Sheen's radio broadcast on Sunday evenings will read this address with great interest. His radio audience embraces millions of people of every race and creed—Catholics, Protestants, and Jews—to all of whom he appeals for tolerance. There is no room in this country of ours, this America, for anything but tolerance, and his mission will have been a noble effort if it succeeds in teaching all of us this simple lesson.

Msgr. Fulton Sheen is one of the most militant leaders of the Catholic Church and one of the most distinguished citizens of this country; a friend of outstanding statesmen and the lowliest and most humble citizens alike. He is a crusader and a scholar. The address which follows is of particular interest to those of us who claim Irish descent, recalling as it does many of the outstanding traits and characteristics which constitute the Irish heritage. It is a mixture of the wit and pathos which has characterized the true Irishman for centuries.

We recall, too, that the Ireland of today has been built upon blood and sweat and tears, but out of the agony of her history she has engraved three marks of character on her escutcheon which constitute her badge of honor—tolerance; a stout heart, and a sense of humor. She stands now on the threshold of another great crisis and the heart of every American beats with sympathy for the plight of that ever-brave little island.

We salute her while we pray:

I am becoming a kind of biennial disturber of peace, like the wife who inscribed on the husband's tombstone, "He rests in peace," but who, when the will was read leaving all to the first wife, added another line, "Until we meet again."

The last time I was here I spoke on Blarney and Boloney. Blarney is the varnished truth, boloney the unvarnished lie. Tonight I shall speak on the Rainbow of Irish Character.

There are more rainbows in Ireland than any other country in the world, for it never rains there but the sun shines, like a child that smiles through its tears and makes human rainbows. There is no climate in Ireland—only weather. One never knows whether it will rain or whether it won't. Now, the Irish character is like Irish weather—it has a rainbow in it; there is never a joy without a tinge of sorrow, and never a sorrow without a joy. Every Irishman is a beautiful mixture of joy and sorrow. As the skies above him alternate between sunshine and mist, so the heart within him alternates joy and sorrow, a smile and a tear. All his joy is seasoned with the myrrh of sorrow; and all his sorrow is lightened with the incense of gladness. This is a typical Christian phenomenon. The church, for example, in the midst of her two penitential seasons of Lent and Advent, introduces a Sunday of rejoicing called Laetare and Gaudere, to keep our faces from getting too long and to keep our eyes on the feast beyond Then, on the feast of Easter, the church enthrones on her altar the image of the Saviour hanging on a cross.

We find that mixture of joy and sorrow in the fact that St. Patrick's Day always falls in Lent, but we also find archbishops who say to us on March 17, "Forget it—rejoice and eat meat." We find it too in the life of our divine Lord, who never once spoke of His cross without referring to His resurrection, nor of His resurrection without reference to His cross. Thus are we reminded that no sorrow is irreparable or final on this earth, and that no joy is complete in this world but only in the glorious Easter of eternity.

Now for some samples of this rainbow quality of the Irish which are to be found in their music, in their folklore, in their humor, in their outlook on politics, and in their poetry.

In music the majors are used generally to denote gladness and minors to denote sadness. In Irish music there is a greater intermingling of majors and minors than in any folk songs in the world. Take, for example, the Minstrel Boy that starts with a major and then with the lines "Land of sing cried the warrior bard, Though all the world betray thee" breaks into a minor. Have you ever noticed in this connection that the Irish are either very good singers or else very bad singers? There are no "in betweeners." On one side of the road they sing like birds; on the other side of the road they croak like crows. And the two of them are as much a part of the Irish people as shillalah and county fairs.

On the one hand there are singers who bring joys like John McCormack or our own John Finnegan of blessed memory. I remember once asking John McCormack if his father could sing. The answer was no. Your mother? No. Your grandfather? No. Your grandmother? No. Where did you get your voice? In answer he blessed himself, "In the name of the Father, Son, and Holy Ghost."

On the other hand, there are the singers like the rain who bring sorrow. I am one of them. I sing all my songs in the skeleton key—it fits anything. There is always something missing when I sing—generally it is a tin cup. Several years ago I was invited to address the musicians of the United States at their annual convention at the Metropolitan Opera. I began by saying, "It is quite fitting that I, who could not carry a key on a ring, should be asked to address the musicians of the United States on April Fool's Day." I know one Irishman who is such a poor singer that when his wife told him to walk the floor with the baby the baby would pretend he was asleep.

Consider next the intermingling of sun and rain or joy and sorrow in Irish humor. It is part of the Irishman's nature; but you will never find that same strain naturally in other people. In Americans it is generally artificial; it comes out only in our stories about drunks. The Irishman has his rainbow when he is sober; the American only when he is in a state of amiable incandescence. Consider the Irish maid who fell downstairs and broke all the new dishes. As she picked herself up she said, "Well, thank God they weren't washed."

To find a similar mixture of humor in tragedy you have to get an American intoxicated; like the drunk who fell 36 stories down the elevator shaft at the Empire State Building and, as he stood on his feet, said, "I said, 'Up.'" Take the young Irish caddy I had one day in Dublin. Just ahead of me was an American who had two too many—not too many strokes, but too many cups. He was down so deep in the bunker of the fifteenth hole, I counted 16 echoes. When I got up to that bunker, my caddy found a pair of false teeth. I said, "Whose are they?" He said, "They must be the American's. They were still gnashing when I picked them up."

An Irishman can see the funny side of tragedy in public life—the colossal wastage of taxes to pay professors who would destroy America by teaching Russian bolshevism. It is not to the point to say, as some newspapers do, that only 3 percent of the professors and 20 percent of the students are disloyal to their country. Why is it you will not find a single Communist teaching in Manhattan College? Why none in Fordham? Why none in St. Patrick's Parochial School? Why none in Mount St. Vincent's? Why none in any single Catholic school, college, or university in the United States? Because having learned to serve their God, these schools have learned to serve their country.

But the Irishman, looking out on this sad condition of schools, sees a touch of humor in it. Take, for example, a college which we will call the "Little red schoolhouse." It has a lot of Trojan horses. The Irishman is interested in pedigrees and he is right in saying that those Trojan horses were sired by Joseph Stalin, damed by the taxpayers of New York—to say nothing of the Trojan mares. I heard that certain colleges and universities in New York City were not going to give out diplomas to the graduates this year; they were going to give the sheepskins to the taxpayers, because they were led like lambs to the slaughter. The professors in certain universities and colleges in New York City are the most learned professors in the world, because they are the "best red." One of these professors who had been teaching atheism died last week. An Irishman called to pay his respects, looked at the corpse attired in evening clothes, and said: "All dressed up and no place to go."

Every politician has three hats. One he wears on his head, one he throws into the ring, and one he talks through. Con McCool told me he knew a politician who supported so many "reds" for public office and education that he tried to become a porter so he could wear the red hat.

And now for the rainbow in Irish folklore. Again the intermingling of sunshine and rain. You know the leprechaun. It is the little shoemaker fairy, only about an inch high. The leprechaun always hides behind single bushes. That is why no Irishman would cut down a single bush in Ireland. And you will notice in Ireland how often an Irishman will tip his hat when he passes a certain tree or when he passes a certain rock, because tradition has it that that was where mass was read during the penal days.

One particular morning Bridget O'Toole was on her way to mass and she spied a leprechaun. Now, if you look at a leprechaun intently, you make the leprechaun a prisoner. He purchases his release by granting you three wishes. The Irish are great, you know, for three wishes. Not like the mind reader who went on the stage once in Sing Sing Prison and said to the prisoners: "Now think of a number" and they booed him off the stage.

An Irishman thinks only of one number—three. You may not tell anyone you have seen a leprechaun, otherwise you do not get your wishes. Well, Bridget O'Toole was elated that she had seen this leprechaun, and she wanted a little assistance, so she came home to Michael and said: "Michael, if you could have anything in all the world that you wanted, what would you like to have?" At that moment there was a man going by selling lanterns, and he said: "I want one of those lanterns." And just at that moment a beautiful lantern wafted across the room and suspended itself over the fireplace. Well, Bridget O'Toole was so mad, that of all the fine castles of the English lords in Ireland that he might have had, he should have chosen a silly, stupid lantern, she said: "Glory be to God, I wish it were hanging from the end of your nose." Whereupon the lantern began to hang from the end of Michael's nose, and she had to use her third wish to get it off and then she had none left.

One finds, too, the intermingling of joy and sorrow in Irish poetry. Take, for example, the poem about the Irish cop and the Irish maid:

"He said to me, 'Fair Maiden,
And what is it you do?'
I said, 'I'm a living-out girl
on Fifth Avenue.'

"He said, 'I've rarely seen a maid
With so much sweetness in her.'
I said, 'I'd like to cross the road
And hurry home for dinner.'

"He looked at me and raised his hand—
Ah Lord and who am I
That millionnaires in motorcars
Should stop to let me by?

"One gesture from his noble hand,
One swift look at the throng
And the roadway clears like magic
And the people move along.

"I dreamt of him, and in my dreams
He stood in worlds afar;
He kept the planets in their course
And star from striking star.

"And little hoped a timid maid
As plain as I to win him;
He's so beautiful and mighty—
There's some archangel in him.

"But one night when Fifth Avenue
And all its roar was still,
I heard his shiny whistle blow
Beneath my window sill.

"I ran from the lonely kitchen
And let the curtain drop—
And put my hand into the hand
That makes the whole world stop.

"A song of love he sang to me;
His words were sweet and low;
I did not dare resist the voice
That makes the whole world go.

"I ran away to be his bride,
My heart was all a-quiver—
Now I'm climbing seven flights of stairs
Beside the Harlem River.

"If you see a big policeman
You people passing by
With a wistful look upon him—
You will know the reason why.

"He is tired of the cross streets
And lonely in the noise;
And he's longing for the traffic
Of his little girls and boys."

And this little poem too, brings in the same rainbow quality. It was written by an Australian priest, Father John O'Brien. I will mention, merely for the sake of two or three in the radio audience who may not be familiar with one or two incidents in the poem, that the Irish wives always call the husband "himself." And so, when the daughter asks the mother for something, she never says "Ask your father"; she says: "Ask himself."

I hope there is no one here who is unfamiliar with the expression "The trimmin's on the rosary." I can remember the "trimmin's on the rosary" in my own family. "Trimmin's" are very common in Ireland. When the rosary is finished there are always some extra prayers that are added. For example, "Let us say five Our Fathers and five Hail Marys for Mrs. Murphy who is sick. Let us say three Our Fathers and three Hail Marys for Mr. O'Toole who lost his son. Let us say three Hail Marys and seven Our Fathers for Mrs. O'Brien that she may sell that piece of land." Those are the "trimmin's on the rosary." This poem brings out that rainbow quality:

Ah, the memories that find me now my hair is turning gray,
Drifting in like painted butterflies from paddocks far away:
Dripping dainty wings in fancy—and the pictures fading fast,
Stand again in rose and purple in the album of the past.
There's the old slab dwelling dreaming by the wistful, watchful trees,
Where the coolabahs are listening to the stories of the breeze;
There's a homely welcome beaming from its big, bright friendly eyes,
With the Sugarloaf behind it blackened in against the skies;
There's the same dear happy circle round the boree's cheery blaze
With a little Irish Mother telling tales of other days.
She had one sweet, holy custom which I never can forget,
And a gentle benediction crowns her memory for it yet;
I can see that little mother still and hear her as she pleads,
"Now it's getting on to bed-time; all you childer get your beads."
There were no steel-bound conventions in that old slab dwelling free;
Only this—each night she lined us up to say the Rosary;
E'en the stranger there, who stayed the night upon his journey, knew
He must join the little circle, ay, and take his decade too.
I believe she darkly plotted, when a sinner hove in sight
Who was known to say no prayer at all, to make him stay the night
Then we'd softly gather round her, and we'd speak in accents low
And pray like Sainted Dominic so many years ago;
And the little Irish mother's face was radiant for she knew
That "where two or three are gathered" He is gathered with them too.
O'er the paters and the aves how her reverent head would bend!
How she'd kiss the cross devoutly when she'd counted to the end!
And the visitor would rise at once, and brush his knees—and then
He'd look very, very foolish as he took the boards again.
She had other prayers to keep him. They were long, long prayers in truth;
And we used to call them "Trimmin's" in my disrespectful youth.
She would pray for kith and kin, and all the friends she'd ever known,
Yes, and everyone of us could boast a "trimmin'" all his own.
She would pray for all our little needs, and every shade of care
That might darken o'er The Sugarloaf, she'd meet it with a prayer.
She would pray for this one's "sore complaint" or that one's "hurted hand,"
Or that someone else might make a deal and get "that bit of land;"
Or that Dad might sell the cattle well, and season's good might rule,
So that little John, the weakly one, might go away to school.
There were trimmin's too, that came and went; but ne'er she closed without
Adding one for something special "none of you must speak about."
Gentle was that little mother, and her wit would sparkle free,
But she'd murder him who looked around while at the Rosary:
And if perchance you lost your beads, disaster waited you
For the only one she'd pardon was "himself"—because she knew
He was hopeless, and 'twas sinful what excuses he'd invent,
So she let him have his fingers, and he cracked them as he went,
And, bedad, he wasn't certain if he's counted five or ten,
Yet he'd face the crisis bravely, and would start around again;
But she tallied all the decades, and she'd block him on the spot,
With a "Glory, Daddah, Glory!" and he'd "Glory" like a shot.
She would portion out the decades to the company at large;
But when she reached the trimmin's she would put herself in charge;
And it oft was cause for wonder how she never once forgot,
But could keep them in their order till she went right through the lot.
For the little Irish mother's prayers embraced the country wide;
If a neighbor met with trouble, or was taken ill, or died,
We could count upon a trimmin'—till, in fact, it got that way
That the Rosary was but trimmin's to the trimmin's we would say.
Then "himself" would start a grumbling—for the public good we thought—
"Sure you'll have us here till mornin'. Yerra, cut them trimmin's short!"
But she'd take him very gently, till he softened by degrees—
"Well, then, let us get it over. Come now, all hands to their knees."
So the little Irish mother kept her trimmin's to the last.
Ever growing as the shadows o'er the old selection passed;
And she lit our drab existence with her simple faith and love.

And I know the angels lingered near to bear her prayers above,
For her children trod the path she trod, nor did they later spurn
To impress her wholesome maxims on their children in their turn.
Ay, and every "sore complaint" came right, and every "hurted hand"
And we made a deal from time to time, and got "that bit of land";
And Dad did sell the cattle well; and little John her pride.
Was he who said the Mass in black the morning that she died;
So her gentle spirit triumphed—for 'twas this, without a doubt,
Was the very special trimmin' that she kept so dark about.
But the years have crowded past us, and the fledglings all have flown,
And the nest beneath The Sugarloaf no longer is their own;
For a hand has written finis and the book is closed for good—
There's a stately red-tiled mansion where the old slab dwelling stood;
There the stranger has her "evenings" and the formal supper's spread
But I wonder has she "trimmin's" now, or is the Rosary said?
Ah, those little Irish mothers passing from us one by one!
Who will write the noble story of the good that they have done?
All their children may be scattered, and their fortunes windward hurled,
But the Trimmin's on the Rosary will bless them 'round the world.

Ireland looks out on the war and knows that barbarism is not final, because Good Friday was not final. She sees a rainbow in the sky of Europe and understands better than any people on earth, with the possible exception of Poland, the issue at stake. The battle in Europe is the microcosmic struggle that was once waged in microcosmic pattern in Ireland. England today is fighting to preserve the right to call her soul her own. In other words, England is fighting to preserve the very freedom she once tried to extinguish in Ireland. Those who denied food to the hungry often feel the pinch of hunger themselves, and those who tried to crush the soul must know how it feels to have it crushed. And in this struggle for freedom England could look nowhere better for inspiration, heroism, and faith than to Ireland. Ireland knows how to resist invasion; she resisted it not for 2 years but for 200. And perhaps England is looking there for her inspiration, for just a short time ago Prime Minister Churchill announced that he was awarding the highest decoration the Empire could bestow to nine men distinguished for bravery and sacrifice in resisting invasion—and seven of them were Irishmen.

Where shall we look for hope among the nations? What shall be the symbol of a regenerated world? Certainly not the swastika, the thing that started out to be a cross and then double-crossed itself and became a tortured cross or a swastika; certainly not in the hammer and sickle, the instruments of beating and cutting and destruction, the tools that keep a man's eyes fixed on the dust and metal, away from the stars and the heaven of his destiny.

There is one symbol left—the symbol of the Irish faith: the folded hands. They cannot strike, for they were not made for offense; they cannot protect, for they were not made for defense. They can only imprecate, only pray—a carnal decade; 10 Irish spires aspiring heavenward for the souls of men. And by and through those folded hands may the race of Cain be brought beneath a cross where there is a man enthroned upon it like a wounded eagle; and through those prayers may the clenched fists of the race of Cain be opened to release their hate. Then when hate has gone out of the world those hands that were nailed by hate will detach themselves and fold themselves together not in judgment but in embrace that all the world may know how sweet is Ireland that kept its faith in Christ.

Great Lakes-St. Lawrence Deep Waterway Project

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1941

Mr. PITTENGER. Mr. Speaker, the completion of the proposed Great Lakes-St. Lawrence deep-waterway project will benefit the people of the entire North American Continent. It will make possible trade and commerce now denied the people of the continent. It will be of lasting benefit and will mark one of those accomplishments that will promote the general welfare of all the people and will enlarge the opportunities for good of all who are engaged in the struggle for economic betterment.

CONGRESS WILL ACT ON PROPOSED LEGISLATION

I am not taking the time to trace the history of legislative efforts to have this project completed. However, it is interesting to note that on October 16, 1940, President Roosevelt, by Executive order, established the St. Lawrence Advisory Committee, and on October 17, 1940, transmitted a message to Congress, accompanied by his Executive order. Thereafter negotiations were carried on by the Government of the United States and the Canadian Government, and an agreement was reached by the two Governments for completion of this project. This agreement was transmitted to Congress by President Roosevelt on March 21, 1941, together with a message from the President, that he would submit concurrent legislation for action by Congress in order to make the agreement effective. The President's message is House Document No. 153. Legislative proposals will be before Congress in the near future.

GEOGRAPHICAL AREA INVOLVED

Those interested in the bare facts regarding the improvement will be interested in a document issued by N. R. Danielian, director of the St. Lawrence survey. This document has been prepared under the direction of the United States Department of Commerce. Part 2 of these series of reports deals with the navigational aspects of the proposed improvement, and also discusses engineering plans for deepening channels, building locks and dams, and so forth. Attached to this document is a map which gives most effectively a picture of the geography of the area and the proposed improvements. I shall refer to this map in my discussion here today. It points out Lake Superior and Lake Michigan, with their cities and ports. Then, to the east of these great bodies of water commerce continues on Lake Huron, and from Lake Huron moves into Lake Erie, thence into Lake Ontario, which connects with the St. Lawrence River, and then to the Atlantic Ocean. The proposed project would enable ocean vessels to travel from the eastern seaboard, enter the St. Lawrence River, and travel a distance of 2,687 miles to Duluth, Minn., the most western point on the Great Lakes.

CONSTRUCTION WORK REQUIRED

Referring again to the map, a most valuable exhibit, the actual construction work is pictured as follows:

First, one new lock will be required at Sault Ste. Marie, and dredging will be required in the St. Marys River at the eastern end of Lake Superior. The next engineering project, as shown on the map, is in the connecting channels between Lake Huron and Lake Erie. This involves the dredging of the St. Clair River, Lake St. Clair, and the Detroit River.

The third improvement noted on the map requires dredging in the Welland Canal. In the International Rapids, on the St. Lawrence River, the map indicates power development and the construction of locks. The Soulanges Canal will require two new locks, and the Lachine Canal will require a new canal and locks. The purpose of these improvements is to deepen those places in this great water highway which cannot be traveled by ocean boats to a depth of 27 feet. In some places the depth at the present time is only 14 feet.

The maker of this pictorial map states that it is designed to give the layman a bird's-eye view of the widely discussed Great Lakes-St. Lawrence seaway and power project. He says that the seaway plan visualizes the creation of a great marine highway for commerce providing deep-draft navigation from the westernmost port on Lake Superior 2,687 miles to the Atlantic Ocean.

90.4 PERCENT OF SEAWAY ALREADY BUILT

Of the seaway's total length, 90.4 percent is complete, consisting of natural waterways of the Great Lakes, the St. Lawrence River, and a system of connecting rivers, canals, and locks, which have already been built in natural progression by Canada and the United States. The incomplete sections total 258 miles, and chiefly require dredging channels to a depth of 27 feet, permitting passage of ocean-going vessels. The economic importance of the areas tapped by the seaway is shown on the map by the dollar value of the principal products of States bordering the waters. The significance of the trade routes is revealed by the enormous annual cargo tonnages carried through the Great Lakes. These figures are from the last census of manufacturers taken in 1937. The power project, of primary concern to New York State, calls for harnessing the tremendous flow of the St. Lawrence River an average of 220,000 cubic feet of water each second. Proponents of the plan estimate the power available will produce

an average annual output of 5,700,000,000 kilowatt-hours.

The St. Lawrence project backers further point out that the market for such power within economical transportation distance—300 miles—covers most of the North Atlantic States and the heart of the Nation's industrial area. Total cost to the United States of the entire project is estimated at $273,000,000. Of this huge sum, $90,000,000 is to be assumed by New York State for the power project. Canada's share is set at $270,000,000, of which $130,000,000 is credited for work on the Welland Canal. This leaves $140,000,000 to be spent by the Dominion.

VAST COMMERCE ON GREAT LAKES NOW WILL BE INCREASED

We must not lose sight of the fact that already there is a vast commerce on the Great Lakes. In 1937 it was estimated that 87,633,699 tons of cargo was carried through the locks at Sault Ste. Marie, and 113,836,956 tons passed through the Detroit River. I quote from part 2 of the St. Lawrence Survey, on page 6:

Despite its limitation to a depth of 14 feet, the present St. Lawrence Canal system is one of the busiest waterways of the North American Continent. A large amount of commerce passes over the upper river between the Great Lakes and Montreal. The traffic has grown steadily from 2,000,000 tons in 1910 to more than 8,000,000 tons in 1938, and in late years local or way traffic has amounted to an additional 1,000,000 tons. Grain, petroleum products, pulp and pulpwood, coal, ore, and iron and steel products are the principal items of freight tonnage carried on the present canals. It is significant that included in this traffic is a sizeable transoceanic business. During the 3-year period, 1937 to 1939, for example, there moved directly between lake ports and European ports approximately 600,000 tons of freight, requiring over 400 trips by small oceangoing freighters. This direct service was provided by Norwegian and Dutch lines which had constructed specially designed ships for this purpose.

The above quotation answers a lot of fanciful arguments of the opponents of the seaway. One of their favorite claims is that there is no need for the improvement. The steady increase in traffic and the fact that the Dutch and Norwegians, under present difficulties, could find it advantageous to travel from Europe to faraway Lake Superior with their products is an answer to the oft-repeated suggestion that there is no need for deepening the St. Lawrence.

GREAT MIDWEST LANDLOCKED EMPIRE

The Midwest lies between the mountains on the eastern side of the United States and the Rocky Mountains. The Midwest has now become an industrial center, and I need only call to your attention the automobile industry, manufacture of tires, and so forth. It has been estimated that 40,000,000 people in the Midwest would be benefited by the deepening of the St. Lawrence and the building of the locks for ocean-going traffic. The products of the eastern cities could come at reduced costs to Great Lake ports, and the products of the Midwest region could be sent to the people of New England and the Atlantic seaboard. I do not here enumerate the vast possibilities for the economic betterment of our people which will come from this project. It is interesting to note that in 1929 Henry I. Harriman, president, Boston Chamber of Commerce, issued an exhaustive booklet showing that New England and the East would derive great benefits. He said that they would be able by reason of the cheap transportation afforded by the St. Lawrence seaway to ship the products of their factories to the Midwest, and in return would be able to bring from the Midwest its products greatly desired by New England and the Atlantic seaboard. I commend his report to every interested person. What he said then was true and equally applies at the present time. Further, the possibilities of cheap waterway transportation makes possible commercial intercourse not only with the Pacific ports of our country but with the rest of the world. At some other time I expect to go further into detail.

THE PANAMA CANAL AND ITS RELATIONSHIP

In this connection it is interesting to note that the Panama Canal commenced doing business in 1914. It was an important development, and no one today would advocate that it should be discontinued or abandoned. Its construction, however, makes all the more imperative the completion of the St. Lawrence waterway project. In part 1 of the St. Lawrence Survey, prepared by Mr. N. R. Danielian, director, in the United States Department of Commerce, we find the following discussion on page 4 of this document:

The Panama Canal was opened to commercial traffic on August 14, 1914. It seriously weakened the competitive position of the Middle West. Its effect was to bring closer, economically speaking, the Pacific and the Gulf and Atlantic seaboards, and to diminish the economic advantages, in terms of transportation costs, of the Middle West in relation to both seaboards.

By the end of the war, both ocean and rail freight rates had risen in the general inflationary movement of prices. After the conclusion of the armistice, there was a brief boom in shipping. But the release of ships that had been interned or incapacitated in the war, combined with the depression of 1920–21, created a surplus of shipping. Consequently, shipping rates collapsed and remained for some years under pre-war levels. Rail rates, however, did not recede in the same degree.

This development greatly exaggerated the normal differential between ocean and rail costs, with the result that, while the Atlantic and Pacific littorals were brought far closer together by the Panama Canal, the Middle Western States at the same time were farther removed, in terms of cost, from San Francisco and New York than in 1914. The result was the erection of an economic barrier around the midcontinental area which tended to impede commerce. Since the last World War the movement to construct the St. Lawrence waterway has been interpreted in part by many authorities as a move on the part of the interior to restore its economic parity with the Atlantic and Pacific littorals.

CONGESTION OF RAIL TRANSPORTATION

The difficulties in the interior as compared to the eastern and western littorals were increased in the post-war period by the partial break-down of the railways during the war. In this time the tremendous expansion of tonnage moved, together with the special problems created by the war, proved too great for the railways to handle with efficiency. Much of the testimony before the International Joint Commission during 1920 and 1921 indicated that the railway facilities at that time proved inadequate. Since a great part of the advantages of the mass-production methods developed in the middle western area depended upon cheap and efficient transportation, the need for an alternative method of transportation to relieve the congestion upon the railroads was doubly great.

Mr. Danielian gives you in brief language the powerful argument and he sets forth facts which in my opinion cannot be challenged. This document was issued by the Department of Commerce, an agency of our Government, uninfluenced by propaganda, and its conclusions are sound.

SECTIONALISM AND THE MISSISSIPPI RIVER DEVELOPMENT

The St. Lawrence seaway project which, of course, involves the Great Lakes on the American continent, should not be a sectional matter. What benefits one part of the country results directly or indirectly to the good of other parts of the country. We should have an American viewpoint, unless we wish to obstruct progress. The leading opponents in the House of Representatives recently to the Great Lakes-St. Lawrence seaway project are my esteemed colleagues, the Honorable JAMES E. VAN ZANDT, of Pennsylvania, and the Honorable HAMILTON FISH, of New York. We have no more able or patriotic men in the House of Representatives than these two distinguished and leading statesmen. I cannot agree with them, however, because I think both of them have sectional viewpoints. One of them thinks that the boundary lines of the United States are coextensive with the boundary lines of the State of Pennsylvania. The other believes that all of the United States is to be found within the confines of the great State of New York. Both have had a bad start in geography. They have recently been joined by my esteemed colleague, the able and energetic gentleman, Mr. PLOESER, who hails from St. Louis, Mo. In his speech on April 25, he said, and I quote:

Congress has expended hundreds of millions of dollars for the improvement of a great inland-waterway system in this country. This system comprises the Mississippi River from the Twin Cities to the Gulf, the Ohio River from Pittsburgh to the Mississippi, the Missouri River from Sioux City to the mouth, the intracoastal canal from Corpus Christi to a point connecting with the lower Mississippi River, and a great waterway from the Great Lakes system, down the Illinois and Mississippi Rivers to the Gulf and out to the sea.

I commend my colleague Mr. PLOESER for his candor and his frank admission that hundreds of millions of dollars has been expended for the improvement of our inland waterways. I vigorously disagree, however, with his conclusions, namely, that after the Mississippi Valley people get what they want, the people in the rest of the country are to be forgotten and left to travel to that undiscovered bourne from whence no traveller returns. It has been my privilege to vote for these appropriations, or at least part of them, which have been of lasting benefit to the good folks in the Mississippi Valley. I adopted a national viewpoint in so doing. I did the right thing. Just as a matter of fair play and justice to the people of the Middle West, we are entitled to consideration from the repre-

sentatives of the Mississippi Valley section.

RAILWAY EMPLOYEES BENEFITTED BY WATERWAY PROJECT

One source of opposition to the Great Lakes-St. Lawrence seaway project comes from representatives of the railroad brotherhoods who have been led to believe that this project will cause unemployment among their ranks. I know full well the problems which have confronted them during past years. Passenger-bus lines and freight-truck lines have seriously handicapped the railroads. I want to say to the employees of railroads in the district I represent that the St. Lawrence project will lead to increased employment for railroad men. The increased freight tonnage which will come to Great Lakes ports will require increased activity on the part of the railroads in the Midwest. All of this tonnage, or a large portion thereof, will be transported inland to points with 16 or more Midwest States. This means that more freight trains will have to be operated and more railroad men put back to work. There is no escape from this conclusion. President Roosevelt, whose sympathy and constructive work for railroad employees needs no recital at this time, is asking for immediate action and favorable action on the St. Lawrence seaway project.

PROJECT ENDORSED BY WOODROW WILSON AND SUCCEEDING ADMINISTRATIONS

I want to conclude these remarks by quoting from the letter of transmittal of N. R. Danielian, director, St. Lawrence Survey, in which he advises the Secretary of Commerce under date of September 14, 1940, as follows—and I quote from page 5 of part I:

Every national administration since the time of President Woodrow Wilson has been in favor of proceeding as expeditiously as possible with plans to construct a seaway for oceangoing vessels from the Great Lakes to the Atlantic.

President Coolidge and President Hoover were particularly active in promoting the cause of a seaway. The Republican platform of 1932 contained the following resolution in support of the St. Lawrence seaway:

"The Republican Party stands committed to the development of the Great Lakes-St. Lawrence seaway. Under the direction of President Hoover, negotiations of a treaty with Canada for this development are now at a favorable point. Recognizing the inestimable benefits which will accrue to the Nation from placing the ports of the Great Lakes on an ocean base, the party reaffirms allegiance to this great project and pledges its best efforts to secure its early completion."

The new administration which took office in 1933 was equally desirous to see the seaway constructed. On July 9, 1932, President Franklin D. Roosevelt, then the nominee of the Democratic Party, telegraphed President Hoover his support of the latter's efforts in behalf of the project:

"I am deeply interested in the immediate construction of the deep waterway as well as the development of abundant and cheap power. * * * It has already been too long delayed."

Mr. Speaker, the above endorsements in no way limit or exhaust the long list of distinguished people and organizations which have from time to time taken favorable action on the Great Lakes-St. Lawrence seaway project. The American people realize the lasting benefits which will come to them. We are spending billions of dollars on a national-defense program. It is no argument at all to say that while that is being done our domestic projects and programs should be cast in the background. The sound position to take is just the reverse. We should do everything to build for a greater and better America, and this attitude should be the basis for a national defense which will be permanent and at the same time benefit future generations.

Defense Savings Bonds and Stamps

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

RADIO ADDRESSES BY THE PRESIDENT, THE POSTMASTER GENERAL, AND THE SECRETARY OF THE TREASURY

Mr. BARKLEY. Mr. President, last evening over the radio networks the President of the United States and the Postmaster General delivered addresses pertaining to the defense savings bonds and stamps which are to go on sale today. The Secretary of the Treasury, Mr. Morgenthau, introduced both speakers. I ask unanimous consent that the three addresses be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. HENRY MORGENTHAU, SECRETARY OF THE TREASURY, WEDNESDAY, APRIL 30, 1941

Tomorrow morning, the Government of the United States provides one answer to the question that patriotic Americans have been asking ever since the national-defense program was undertaken.

That question has been: "What can I do to help? As the defense savings bonds and stamps go on sale tomorrow in every State and county, city and town in America—it will be possible for everyone—literally everyone—to take part in the national-defense effort.

Defense savings bonds and stamps are not for the few; they are for the many. They are for the great mass of the people, for the laboring man, the skille mechanic, the office worker, the employer, the housewife, the retired businessman—even children can save their pennies to buy the stamps exchangeable for defense-savings bonds.

Let this be clear: Your Government is frankly seeking the current, regular savings o the people—all the people—men, women, and children. It is not asking you to buy one bond or one set of stamps and let it go at that; it is inviting you to save regularly and systematically by putting your money into the soundest investment on the face of the earth—the United States of America. Why does your Government want the savings of the people? Obviously there are faster and simpler ways for the Government to raise money. Why has the Treasury Department taken this more difficult course? Here are the reasons:

First, as I have said, your Government wants to give every one of you a chance to have a financial stake in American democracy, an opportunity to contribute toward the defense of that democracy, and the right to say to yourself, "I am doing something to help." Secondly, your Government wants to encourage the habit of thrift in all the people, to prevent a spending spree of the kind that accompanied the last war, to provide a check against high prices, to safeguard and stabilize the current American standard of living. Finally, your Government wants to provide each of you with a cushion against the post-war period, when, inevitably, adjustments of employment will have to be made. Your Government wants every American family to face this post-war adjustment period with savings protected and guaranteed by the full faith and credit of the United States of America.

We are now engaged in the greatest defense building program in the history of the world. Just as its results will be unprecedented, so will its cost.

But the billions that will be required to build all the planes and tanks and guns and battleships are not beyond our powers to supply. We can finance our defense, gigantic as it is, just as surely as our factories and men can turn out the weapons.

It is with full confidence in the willingness and eagerness of the American people to share the defense effort that this program of defense savings has been planned by the Treasury Department.

There is to be no "drive"; there are to be no quotas; there is to be no hysteria; there is to be no appeal to hate or fear. The defense savings bonds and stamps are presented as an opportunity—an opportunity for each citizen to buy a share in America.

Consequently the Treasury Department will not measure the success of the defense-savings program in terms of money alone; it will measure success in terms of people participating; in terms of the number of partners it wins among the men and women and children of the Nation.

And now it is my privilege to reserve the first defense-savings bond—not to be delivered, of course, until the opening of business in Washington tomorrow—in the name of Franklin Delano Roosevelt, the President of the United States.

And it is my further pleasure to present to you now the Postmaster General of the United States, under whose direction the Post Office Department has done such a splendid job in making the United States savings bonds available in the past; my good friend, Postmaster General Frank C. Walker, who speaks to you now from Des Moines, Iowa.

ADDRESS BY POSTMASTER GENERAL FRANK C. WALKER

Thank you, Mr. Secretary. I am happy indeed to pledge to you and the people of America the complete cooperation and patriotic support of the Post Office Department and its thousands of employees from coast to coast in the defense-savings program. These employees—postmasters and clerks throughout the Nation—are well qualified for the all-important roles they will play in this great undertaking by the Government and its people.

These same postmasters and clerks have served the Treasury Department and the public with great distinction before. Through their hands have passed the billions of dollars worth of baby bonds and postal savings stamps already purchased by 2,000,000 Americans. The Post Office Department is very proud of that record, and it stands ready to render an even greater service in the cause of defense savings.

The new defense-savings bonds and stamps will be within easy reach of all

Americans, no matter where they live. They may be purchased in every first-, second-, and third-class post office in the country, and they also will be available at some 400 fourth-class offices, making a total of 16,000 points at which the stamps and bonds will be available.

At every one of these offices the public will find our employees extremely cooperative and eager to be of assistance in every way possible.

They have been given complete information about the bonds and stamps and they are prepared to answer all of your questions. All offices have been supplied with brochures containing all vital information about every type of bond and postal savings stamp—and I would suggest that those of you who are not prepared to make an actual purchase tomorrow morning drop in at your post office and get one of these brochures to study at your leisure. All post offices have also been supplied with attractive pocket albums for postal-savings stamps. These albums provide a quick and convenient way for everyone to exchange current savings for bonds.

And so, on behalf of all the employees of the Post Office Department, I want to say that we are ready and eager to serve you. Do not hesitate to call on us for information whenever you need it. And we all hope that each one of you will get the habit of going to your post office regularly to save with your Government for the preservation of everything for which the Government stands.

Secretary Morgenthau has reserved the first defense-savings bonds in the name of the President. It it now my pleasure to reserve—for delivery tomorrow morning—the first defense-savings stamp, also in the name of the President of the United States.

ADDRESS BY THE PRESIDENT

Secretary Morgenthau, Postmaster General Walker, Americans everywhere, one thought is uppermost in my mind as I make grateful acknowledgment of this dual honor. It is that in reserving the first defense-savings bond and the first defense postal-savings stamps in the name of the President, the Secretary of the Treasury and the Postmaster General have given emphasis to the national character of the defense savings campaign. This character of the campaign is national in the best sense of the word—for it is going to reach down, we hope, to the individual and the family in every community, and on every farm, in every State and every possession of the United States.

It is national and homey at the same time. For example, I am buying not 1 stamp but 20 stamps to go into little books for each of my 10 grandchildren. And the first defense-savings bond is being made out in the name of Mrs. Roosevelt as beneficiary.

It is fitting that the President in his purchases should be the symbol of the determination of all the people to save and sacrifice in defense of democracy.

In the larger sense, this first defense bond and these first defense stamps reserved to the President, constitute tangible evidence of partnership—a partnership between all of the people and their Government—entered into to safeguard and to perpetuate all those precious freedoms which government guarantees. In this time of national peril what we all must realize is that the United States Government is you and I and all the other families next door all the way across the country and back again. It is one great partnership.

This evening we are giving thought to the financial structure of our partnership. We are engaged in an all-out effort to perpetuate democracy in the New World by aiding embattled democracy in the Old World. From the Atlantic to the Pacific, America is in full beauty of glorious springtime. And we have eyes to see the beauty of our country this spring as we never saw it in any spring before.

For a great many people are appreciating our blessings the more when they realize what blessings so many other millions of people have lost this spring and last spring—so many millions of people who hoped and prayed and even assumed—taking it for granted that fate would let them live on as they had always lived.

In the few words which I am speaking to my fellow countrymen tonight, I desire above all else to emphasize the thought that in just such measure as we support our Government will it be strong, effective, and safe.

Defenses that were adequate 10 years ago are today a broken reed. New machines in the air, on the land, and on the sea have created a revolution in the conduct of offensive war and defensive war.

Nations and lands safe 10 years ago by virtue of the mere fact of distance away from possible aggression have today been overrun by mechanized conquerors. Distance is no longer a guaranty of safety.

Your Government, therefore, is arming; factories spring up; production multiplies—a country-wide unanimous effort of planning and of work.

At this time we add another call—a frank and clear appeal for financial support to pay for our arming and to pay for the American existence of later generations.

With jobs more plentiful and wages higher, slight sacrifice here, the omission of a few luxuries there, will swell the coffers of our Federal Treasury. The outward and visible tokens of partnership through sacrifice will be the possession of those defense bonds and defense savings stamps, which are, at the same time, a guaranty of our future security.

Your Government asks that you make this sacrifice. But is it a sacrifice? Is it a sacrifice for us to give dollars when more than a million of our finest young men have been withdrawn from civilian life to accept the discipline of military life in defense of our country? No; sacrifice is not the word. This defense savings program is, rather, a privilege and an opportunity—an opportunity to share in the defense of all the things we cherish against the threat that is made against them. We must fight this threat wherever it appears; and it can be found at the threshold of every home in America.

Fellow Americans, I ask you to demonstrate again your faith in America by joining me in investing in the new defense savings bonds and stamps.

Charles A. Lindbergh

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 29, 1941

LETTERS RELATING TO SPEECH-MAKING OF CHARLES A. LINDBERGH AND AN ARTICLE FROM THE AMERICAN MERCURY MAGAZINE

Mr. SMATHERS. Mr. President, during the course of the past month I have received thousands of letters from citizens of my State of New Jersey protesting against the speech-making activity of Mr. Lindbergh, who claims residence in New Jersey.

I ask unanimous consent to have published in the Appendix of the RECORD a copy of one of these letters, together with copy of a letter directed by me to Mr. Lindbergh.

I also request to have published, in connection herewith, an article appearing in this month's Mercury magazine, on the subject of Why Lindbergh Is Wrong.

There being no objection, the letters and article were ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *April 24, 1941.*

Hon. CHARLES A. LINDBERGH,
Englewood, N. J.

DEAR SIR: Enclosed you will find a copy of one of many letters reaching my office. This particular letter comes from a constituent of mine residing at Princeton, N. J., the subject matter of which interested me, and most certainly should interest you.

I concur with this gentleman, in that it is about time you stop making these speeches—made, apparently, in an endeavor to divide the people of this country, and to try to sell them on the false doctrine of German invincibility.

If you want to help this country, which, incidentally, made you what you are through its manifold gifts, you should offer your services and flying knowledge—a subject about which you undoubtedly know much—to the Government, and stop your speech-making endeavors, setting yourself up as an authority on matters international—a subject about which you apparently know nothing.

Very truly yours,

WILLIAM H. SMATHERS,
United States Senator.

[Enclosure.]

KURKJIAN & CO., INC.,
Princeton, N. J., April 24, 1941.

Hon. WILLIAM H. SMATHERS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: We protest against the last speech of Charles A. Lindbergh. Such men were responsible for the fall of France and other countries. We believe in national policy of our President.

Please do everything you can to aid the President.

Very sincerely,

K. KURKJIAN,
President.

[From the American Mercury of May 1941]

WHY LINDBERGH IS WRONG

(By Maj. Alexander P. de Seversky)

Col. Charles A. Lindbergh has on repeated occasions in the past year offered his personal views on the war in Europe and on America's strategic position. Because of his deep hold on the emotions of Americans, those views have been received by a part of the public as somehow typical of the aviation fraternity as a whole. Nothing could be further from the facts. It was because of our natural reluctance to disturb a glowing symbol of American aviation achievement—the lovely legend of an aeronautical oracle in the popular imagination—that many of us remained silent, though we found ourselves in essential disagreement with him.

Indeed, we resented inwardly the manner in which that symbol was being dragged into the muddy market places of political argument. The writer for one has felt that the Colonel's prestige was being unfairly exploited by special pleaders—well-meaning

and otherwise—who played on the strings of his genuine patriotism. They inveigled him into fighting their battles by "expertizing" on international politics and economics, war strategy and air tactics, a hundred matters foreign to his flying experience.

All aviation people share, in some measure, the glory that is Colonel Lindbergh's. The laurels on his brow, we know, represent a tribute to all men and women who have given their years to the advancement of American aeronautics. And that is why we have been loath to argue with him as he continued to expound his opinions on the air, in the press, and at congressional hearings. This despite the embarrassing fact that his judgments were being erroneously attributed to all of us. But in his most recent pronouncement, A Letter to Americans, published in Collier's, Colonel Lindbergh issued a clear-cut challenge which aviators who disagree with him can no longer ignore. He called on readers to cut through the vague talk and demand from "experts" practical answers to practical questions of national defense.

In taking up the challenge, I must of necessity treat the colonel simply as a fellow aviator—human, fallible, and conditioned, like the rest of us, by limitations of knowledge and experience. Colonel Lindbergh would be the first to admit that by sitting for 33 hours in the cramped cockpit of a single-motored airplane, between New York and Paris, he did not miraculously acquire a superior grasp of all the complex principles of aeronautical science. He was not thereby automatically transformed into an authority on military tactics and strategy, the design and manufacture of airplanes, the organization of air power, or other matters which he has since then been maneuvered into discussing.

Colonel Lindbergh, whose intelligence and integrity are beyond question, would readily admit that he knew neither more nor less about such subjects at Le Bourget than he had known 33 hours earlier in Long Island. But having been catapulted into the ungrateful role of national hero, he was thereafter expected to speak the last word on everything remotely related to aviation, and on a lot of things wholly unrelated to it. The romantic exaggerations of a popular hero's qualities add up to a cross he must carry through life—and the colonel's exploitation in recent months by ax grinders has been a species of crucifixion.

As an American citizen deeply concerned for the security of our country and the preservation of its democratic way of life, I have opinions, of course, on the political aspects of the colonel's testimony and speeches. I feel, however, that neither his views nor mine, in that department, necessarily carry more weight than those of any other citizen. But when it comes to aviation, I consider myself not only justified in joining the discussion but in duty bound to speak candidly in line with my experience and convictions on the technical phases of the controversy.

I do so as one who has devoted his entire life to designing, manufacturing, and piloting airplanes, and to the extensive study of the potentialities and tactics of this new weapon. That study has been made against the background of a naval, military, and engineering education and 3 years of very active combat experience in the first World War. Like Colonel Lindbergh, I had the opportunity to make a close-up investigation of European air power just before the outbreak of the war, for 7 full months in 1939, when I observed Nazi planes in flight and in construction and, myself, flew British fighters and other European models.

Colonel Lindbergh's chief contentions, on the technical and strategic side of the discussion may fairly be summarized thus:

1. That Great Britain cannot win even with American assistance—or at least that its chances are so remote as to be negligible.

2. That by giving full productive aid to Britain we are "depleting" our own forces and weakening American security, even to the point of "danger of invasion."

3. That the United States, given proper defensive measures is absolutely safe in "any predictable future," because "we can build a military * * * position that is impregto attack." In short, he argues for old-fashioned "isolation" behind impregnable ramparts.

I am boiling down a great mass of his public expressions; yet these seem to me the major technical issues which he has raised. On all three I disagree with him fundamentally, and on all three for substantially the same underlying reasons. Colonel Lindbergh apparently bases his judgments on existing aeronautical equipment, and on an immediate strategic picture which may well prove to be ephemeral. To put the matter bluntly, I think that he has failed to grasp the full potentialities of air power; he has failed to understand the revolution in warfare that it is forcing relentlessly upon the world, the United States included. I am, indeed, amazed that anyone so close to aviation, even if he has not himself designed, built, or fought in warplanes, could remain so profoundly unaware of the swiftly expanding horizons of air power and their implications for American national security.

But let us tackle each of his main points separately.

II

All sentiment aside, there seems to me no valid excuse for a defeatist attitude in relation to Britain's prospects in the war. I am convinced not merely that it has a chance of winning, but that, given the full material backing of the United States, it has only a minor chance of not winning. In offering this broad summation I am speaking, of course, not only of England but of the British Empire.

I base my judgment first of all on the fact that this conflict is developing primarily into an air war, with victory ultimately on the side of the superior air power. The British Empire plus the United States add up to an aviation potential decisively outweighing Germany's, even with a conquered Europe in tow. "If England is able to hold out for several years," Colonel Lindbergh told a congressional committee, "and if we devote our maximum wartime effort to the production of aircraft, we can almost certainly equal or exceed the air strength of Germany." In this he was making the most conservative possible estimate of the balance of forces.

The war is shaking down to an epochal contest between two groups of producing nations. One of them, under Nazi control, will be more and more plagued by shortages of critical materials; it will be under continuous and growing attack by enemy aviation, operating with increasingly undernourished labor working in large part sullenly under coercion. The other, the Anglo-American bloc, its production centers widely scattered over the world, will have access to all materials; it will operate in many regions under relatively peaceful conditions, with labor that is voluntary and well fed. In that tug of war of production, equality in air power for the Anglo-American bloc is already within sight, and rapid establishment of supremacy seems in the cards.

In the study of European aviation on the threshold of the war to which I have alluded, it was obvious to me that German production facilities were the world's best. But it was no less obvious that the British planes were tactically superior. They had been conceived later than the equivalent Nazi types, since Hitler had "frozen" his models earlier for mass production. The German bombers were inferior to the British in defensive armament and bomb load; the British pursuits outperformed the Nazi pursuits.

I was convinced, therefore, that despite Hitler's great advantage in numbers he would have a hard time of it against England. As early as April 1940, before the test had been made, I put myself on record to that effect, and on June 1 I wrote that a German invasion of England was impossible under those conditions. Nothing has happened as yet to alter my opinion in that regard.

No doubt the world would have been better off today if Colonel Lindbergh's findings on air power in Europe in 1938 had been heeded. His warnings against the underestimation of Nazi Germany's air strength have been amply and tragically justified. Actually it took no special insight to discover German air superiority or the inadequacies of French and British aviation. It was all so glaringly evident that only the fatal faith in Maginot lines, traditional naval might and obsolete concepts of defense can explain French, British, and American complacency in the business.

On the other hand, Colonel Lindbergh failed to appreciate, or at least to note clearly in his public reports, the crucial qualitative advantage of the British over German planes. Having had no direct and intensive experience as a combat pilot, he was inclined, like laymen, to be rather dazzled by sheer numbers. Yet it is the British edge in quality which to date has denied control of the air over England to the enemy and thereby in effect saved the British Isles in the face of Hitler's numerical edge. As long as the R. A. F. retains its qualitative margin, Nazi invasion will remain an empty threat. Not until Hitler can bomb the islands in the daytime with relative impunity can they be conquered. He cannot do this unless he has more effective air equipment than any which he has thus far demonstrated.

Another item in what might be called Colonel Lindbergh's aviation "ideology"—one that helps explain his pessimism about Britain—deserves attention. He believes that Germany is, to use his own phrase, "a natural air power"; that we in America are a natural air power; but that other countries, and especially England, are not. The whole idea is fallacious. There have been natural seapower nations because some are surrounded by water and others are not. But all nations are surrounded by air. What gave Germany its lead was not some inherent air superiority but its revolutionary courage in cutting through outmoded strategic notions. Its advantage was psychological. By now Britain's fine performance and the amazing rise of its productive tempo despite a late start are no less impressive than Germany's initial lead.

Students of the science of warfare know that when comparatively equal foes are locked in combat the advantages shift from time to time. As in a wrestling match, now one has a seemingly decisive hold, now the other. For the observer the danger is that of mistaking temporary advantages for permanent ones. That is the mistake the colonel is making.

He was correct when he said that Germany now has a strategic advantage because its air bases surround the British Isles in a semicircle from Narvik to the Bay of Biscay. But he failed to note that this condition is by no means eternal. If Germany were simply fighting the British Isles, his conclusion might possibly hold. But Germany is fighting the British Empire and, in terms of production, also America. Churchill has stated that, if necessary, the struggle would be continued from the outposts of the Empire. In the same sense that Germany today surrounds England, the Empire and its allies surround Germany and the conquered area under its tutelage.

The range of striking air forces is being quickly enlarged, and with every increase the

strategic relation between Europe and Britain tends to be reversed. We come ever closer to the day when Germany, all of Europe, will be the center of a circle of hostile air power. Recent British entrenchment in North Africa, for example, foreshadows that encirclement. In the long run—and admittedly it may be a long and costly run—it will be easier for the British to obtain control of the air over Europe than for Europe to assume control of the skies above the British Empire. The direct attacks on Germany's vital centers will be undertaken from far-flung bases; not alone from Africa and perhaps the Near East but inevitably, in time, from Canada and even India. To cope with this Hitler would have to dominate the skies over virtually the entire globe.

Colonel Lindbergh has pictured England as a concentrated target, in the center of Germany's scattered bases. By his own logic, we must visualize Europe as comparatively a concentrated target surrounded by hostile air power operating from widely scattered encircling bases. Once we admit the possibility of superior Anglo-American air power, we must also admit the likelihood that the European target may be hammered into submission. The Colonel puts a lot of stress on the need for invasion—I shall deal with that concept later. But with air control firmly in British hands over any given area in Europe—Italy, southern France, any part of the Balkans—Germany could not prevent occupation of such area if it were deemed necessary. There is now general agreement on the principle that operation of ground forces is impossible if the skies overhead are held by the adversary.

Should the British Isles fall to Germany, the burden of the conflict would be transferred to the Empire and the struggle would then go on for years and years—while the kind of air power is constructed that is needed to reduce a Germanized Europe. If the Islands remain in British hands, the equalization of the two sides in the war will proceed rapidly. If Colonel Lindbergh's fondest hope, as he stresses, is to prevent prolongation of the war, denial of aid to Britain at this time is the worst possible method of achieving his purpose. In doing what it can to prevent the conquest of the British Isles, America decidedly is not prolonging the hostilities.

Nor should it be forgotten that while the contest is under way, the Nazi conquerors of Europe will have to police a hostile, if not actually subversive, Continent; will have to feed hundreds of millions under conditions of extreme shortage. They will hold a beleaguered and hard-pressed Continent, torn within itself, and pitted against a British-American group relatively unified and under far milder economic and political pressures. Already the human and material resources of the British Empire are beginning to affect the balance. Factories, and training grounds, and new bases are springing up throughout North America, in Australia and New Zealand, in Africa and the Middle East.

The pattern has not yet fully emerged, but it is a pattern in which Hitler's domain will be increasingly under siege by a constantly more powerful, determined foe whose strategic position must improve with time. The main force against the emergence of this pattern is the offensive against British commerce which, if successful, would break the strangle hold around Europe. But Germany is still far from success in that respect. The better employment of air forces will in time cancel out this Nazi advantage. Even now it is possible to establish lanes across the narrowest parts of the Atlantic protected by canopies of air power. The first line of defense against submarines is aviation; the only defense against air raiders on the high seas is aviation. And such aviation, we have reason to expect, will assume air control over the ocean lanes before the Nazi attack on shipping can prove decisive.

Thus, despite the immediate advantage for Germany, the rapid reversal of the balance is entirely possible. Only when some approach to equality is attained can there be any point in even talking about negotiated peace. Colonel Lindbergh showed his mettle when he stated, "I want to see neither side win. I would like to see a negotiated peace." He knew he was going against the popular tide of feeling, but he had the courage of his convictions. But if he genuinely desires neither side to win, should he not encourage immediate and extensive assistance to Britain? Since he believes that the victory of Germany is almost inevitable, should he not seek to level the scales a bit?

Indeed, all those who truly seek a durable negotiated peace can scarcely urge it seriously at this time, when Hitler holds most of the chips. Such negotiations would be a farce in the nature of the case. Regardless of how it might be camouflaged, a peace now would leave Germany in possession of a big stick and unhampered in making it even bigger. The whole undertaking could amount only to an armistice in the shadow of Nazi militarism, during which an armaments race would be unfolded, with the United States as the chief and most worried contender in the race.

Since negotiations can only take place as between approximate equals, it would seem Colonel Lindbergh's duty to help promote military equality. That can be achieved only in two ways. First, by curbing Germany—which we are doing through economic and other pressures. Second, by strengthening Britain, through providing it with the weapons of modern war. Under any other conditions a demand for a negotiated peace is tantamount to a demand for a German-dictated peace.

III

Now let us look at the second of Colonel Lindbergh's contentions. Can we prepare for our own defense if we "deplete" our forces and "strip" our aviation for Britain? My answer is that the very process of building for Britain—or, for that matter, for anyone else—serves to fortify our own strength.

I agree completely with Secretary of War Stimson's statement, in his letter to the Foreign Relations Committee, that it is not the number of planes on hand that counts in measuring national security—but the capacity for producing planes. Certainly we need an adequate number of all types of aircraft to keep our personnel in combat trim. Beyond that, our accretion of power must be judged by the expansion of our production facilities, the development of contingents of skilled labor in the defense industries, our intensive experience in building, handling, and maintaining large masses of airplanes.

These are things which we cannot ship to England or anywhere else. They stay with us as a permanent fortification of our country. They are the immediate dividends on the investment of effort and materials in provisioning Britain.

In his Collier's article and elsewhere Colonel Lindbergh has underlined the criminal failure of France and England to gear themselves for the realities of the danger that threatened them. Assume for a moment that those nations had been engaged for years in serving as arsenals for some other nation; for China, let us say. In pushing maximum production for China they would have been keyed up to a superb productive pitch—and would have been able to switch that production for themselves when the Nazi danger loomed. Even thus our all-out productive effort for Britain is forcing us in time of peace to key production, experience, discipline, and psychology to our own defense needs should the supreme challenge come.

To take advantage of the possibilities thus opened up, we must begin now to plan for the future. The new plants, for instance, must be constructed not simply for their present use but with a view to their subsequent use for vastly different and more imposing types. Without a clear prevision of the aviation that is coming we shall continue to trail Germany and England. We need to recognize that our air problems are different from theirs and plan logically to meet those specific problems. But—and that is where I join the issue again with the colonel—we can do so without interrupting a steady and ever larger flow of the present output. Our over-all task of preparing for the future air war is at this stage a matter of audacious designing, experimenting, planning. None of that, of course, is handicapped by the mass production for Britain; on the contrary, that production serves as a proving ground for creative aeronautical effort. In the act of equipping the British we shall be laying the foundation for our own air supremacy.

A significant contradiction can be traced through the arguments of those opposing aid to Britain. On the one hand, they show that American aviation now available or under construction is deplorably below standard, obsolete or quickly obsolescing. On the other hand, they insist that we must hold on to all that equipment to avoid depleting American defenses. There seems to me no warrant in common sense for conserving obsolescing arms. It is untrue that bad equipment is better than none. To the extent that they produce a false sense of safety they are worse than none. An inventory of outmoded aviation will only encourage a delusion of security; Italy, for example, has paid a high price for such a delusion.

Practically everything we now possess in the way of fighting aircraft, including models on the production line, would be useless in the kind of air war we may have to tackle. Pursuit planes seem the most natural for us to keep here. However, they are the types that become obsolescent most rapidly, as proven under actual combat in this war. Why hold on to them, since they would, so to speak, only die on our hands? The bombers we are producing are conspicuously unsuited for our own national needs. They are too short in range to use against any potential enemy. The whole theory of drawing our domestic and British production out of a single faucet, so to speak, is fallacious. Let us plan, design, develop the industrial foundation for the kind of air power essential to meet our eventual needs; meanwhile vast production facilities are being made ready for the purpose in manufacturing for British use.

Colonel Lindbergh has told, and told truly, how France and England could not break through their lethargy until war overtook them in earnest. We in America have been in the grip of the same sort of lethargy. In the great effort to aid Britain we are breaking through it. Our Government is fully justified in drawing the picture in dark colors. It recognizes the importance of arousing the American people to the real world of power politics and contending greeds in which we live. To accuse it of "hysteria" is especially short-sighted in the light of what wishful-thinking complacency did for France and other nations. Far from weakening us, the conversion of America into an arsenal for other nations is forcing the organization of a military industrial machine, strengthening the national muscles, making Americans conscious of their exposed position in a predatory world.

I submit, therefore, that the argument that we are undermining our own defenses in extending assistance to Britain—judged on purely technical grounds—does not stand up.

IV

I come finally to the crux of the dispute—the defensive position of the United States. Are we impregnable? Can we be made impregnable? Have we the right, under the new conditions created by air power, to divide our security into "offensive" and "defensive" elements?

Much of the confusion on these questions derives from a loose use of the word "inva-

sion" and the idea behind it. Invasion happens to be an obsolescent concept, and in the near future will be acnowledged, I am convinced, as a stone-age concept. To show that an enemy could not land armies and occupy a country mile by mile proves approximately nothing. The same enemy, if it succeeds in wresting control of the skies overhead, can pound the country into helpless wreckage without the need to occupy territory. Should it be argued that ultimate victory could not be obtained by that alone (though I believe it could), the fact still remains that it is a type of destructive fury to which no nation will wish to expose itself.

The basic procedure in modern warfare is no longer occupation. It is total destruction—and that is achieved from the air. One nation can now, with its aviation arm, strike at another as a totality, rather than inch by inch. That's the core of the "total war" idea, and that is the new threat, the air-age threat, against which we must be prepared. It is a threat in which oceans have already lost some of their protective valu> and are destined to become soon as illusory a defense as the Maginot Line proved.

The bombing of American objectives from across the ocean is already possible, as Colonel Lindbergh himself stated. With every year that possibility will be extended until, finally, the American continent will be as vulnerable to attack as the British Isles. The Atlantic will be no more protection than the English Channel; the only protection will be the size and the quality of our own air power.

While competent and realistic in dealing with existing types of aviation, Colonel Lindbergh is curiously timid in estimating the immediate future of air power. He fails to visualize the speed with which the "reach" and striking power of aviation are expanding. Already Nazi bombers are harassing British merchantmen in the last third of their journey across the Atlantic; soon enough it will be a half instead of a third. And the process will not stop until oceans are spanned with the utmost ease.

That 33-hour journey which made history and a national hero is perhaps too deeply imprinted on Colonel Lindberg's memory, making him unduly conscious of oceans as barriers. I venture to guess that he remembers too vividly the hazards and strains of the flight and his physical exhaustion at its finish, so that he retains an old-fashioned respect for oceans in some ways analogous to the fateful French respect for the Maginot fortifications.

To the practical men in the aviation industry, engaged in designing planes for planned tactical purposes, military aircraft with a range of 25,000 miles, equal to the circumference of the globe, seem wholly realistic in the predictable future—in 5 years at the outside. That will mean that no nation and no part of any nation will be immune from direct attack from any part of the world. And long before that, the Atlantic, then the Pacific, will fall under the domination of one air power or another, in total disregard of respective naval strengths. There will be no genuine defense against it except in the air. Oceans will be just so many Skagerraks.

I can understand how generals and admirals, nurtured on older strategic notions, close their minds against this picture of the emerging aviation of tomorrow. But I find it hard to understand why a man like Colonel Lindbergh should do so. I can only surmise that the colonel, having no military background and having come across the whole thing late in his career, remains impressed with the frozen tactical thinking of the past. It has for him the fascination of novelty. He has not caught up with the fact that the orthodox assumptions have been invalidated by air power and the lessons of this war.

Thus he takes the need for invasion and occupation and troop deployments for granted. Thus he still puts his faith in "defensive" armaments and techniques, as represented by wide oceans, powerful fleets, and defensive aircraft. He ignores the elementary military principle that the best defense is always a vigorous offense—a principle that applies a hundredfold more strongly in air power. To wait for enemy attacks and then to parry the blows is well-nigh suicidal. The one sane defense against air attacks is to annihilate their points of origin in the enemy country.

It will matter nothing that the armadas of bombers, thousands of them perhaps, will travel 10 hours or more before reaching American objectives. They will be crossing at substratospheric altitudes, perhaps with relief crews, under ideal conditions of comfort. On arrival at their destinations, the crews will be as fresh and rested as if they had stepped out of their own homes after breakfast. In modern planes, after all, what is the difference between flying for 3 hours to the interior of Germany or Italy and flying 10 hours across the ocean to the interior of the United States? Of all the elements involved in the undertaking, the period of approach is the least risky and the least exhausting. Once over enemy territory, whether the bomber is above the Ruhr or Pennsylvania, the Midlands or Chicago, London or New York, makes not the slightest difference technically. The procedure after arrival is identical—and the disastrous consequences of the visit are identical.

It is a curious truth, though not yet widely understood, that the more industrialized a country is, the more vulnerable it is to destruction from overhead. American industries, grouped in thick-sown concentrations dependent on centralized sources of power, make ideal targets for air attacks. The tremendous expanse of our country may give us a feeling of hugeness, but the vital centers are few and extremely exposed.

I contend that those who deny the practical possibility of an eventual air attack on America are lulling the American people into a false sense of safety as dangerous as the Maginot Line mentality that cost France its independence. Colonel Lindbergh, so well aware of what wishful thinking in such matters has done to European nations, should be the last one to join in the lullaby.

We had better discount our oceans and even our navies, while acknowledging their present importance, in considering the immediate future. The sooner we recognize that impregnability—the retirement ostrich-fashion behind ocean ramparts—is a thing of the past, the better. Such isolationism is ruled out physically by the advent of air power and the giant steps with which it is enlarging its range. Every new weapon has ended someone's isolation. The Indians were isolated in the Western Hemisphere until sailing ships and gunpowder overtook them. The last margins of oceanic isolation are crumbling, and no amount of rhetoric and patriotic invocations can alter the fact.

The Atlantic has already been narrowed to 8 hours or less. The future air traffic of the world will spin its web between continents with scarcely a second glance at oceans. It will crisscross over America as it speeds between points halfway round the world. Like some isolated prairie town suddenly yanked into the big, wide world by a new railroad junction, we shall find ourselves suddenly in the very midst of world air traffic, completely open for commerce or for destructive onslaught. It is well enough to preach a phantasmal ocean-guarded isolationalism to those who still live in the past. A new generation, alert to the changing realities of a new age, must and will reject it as a dangerous, ostrichlike evasion of reality.

It is unfortunate that Colonel Lindbergh has allowed himself to be used as spokesman for the soporific philosophy of make-believe isolationism, defensive armaments, and unrealistic withdrawal from a narrowed-down, highly integrated, modern world. But to doubt his profound loyalty to American ideals is the sheerest absurdity; and to blame him for his role is no less absurd. The Lindbergh of the popular imagination is a graven image, a sort of deity of aviation, which the American people have carved for themselves. We should not blame the real Lindbergh, therefore, if that diety does not, on demand, perform miracles of political, economic, and strategic insight.

The National Picture

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me before the Appleton, Wis., Chamber of Commerce on April 24, 1941, on the subject The National Picture.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When Alex Benz spoke to me about your gracious invitation to be your speaker at this annual meeting, I was delighted to accept.

There are many reasons for accepting your kind invitation, but I suppose the primary reason is because I have so many old and valued friends in Appleton.

I am indeed gratified at having this opportunity to visit with old friends.

"Oh, how good it feels—the hand of an old friend!"

Browning says:

"Hand grasps at hand, eye lights eye, with good fellowship. And great hearts expand and grow one, in the sense of the world's life."

When we speak tonight about the national picture we naturally consider the material and social progress which we have made in the United States. And yet the fact that we have made headway in our material and social progress is due in a large degree to responsible groups of citizens like this one tonight who are devoting their time to real progress in business, in government—and what is even more important—in living.

On March 31, 1940, your group issued a report which stated that the year 1940 marked the completion of two decades of service for your organization to the community.

ALL GROUPS AFFECTED BY SAME ECONOMIC TIDE

I heartily endorse the statement in your annual report that your group "recognizes the truth that the interests of all are so interwoven and interdependent that all groups or classes are always equally affected by the same economic tide."

In this single statement your organization has recognized a great fundamental truth.

I believe that recognition of that truth throughout the land would be a decisive step in correcting some of our existing economic maladjustments, and I further believe that it would do a great deal to unify all of the people of the United States.

PHYSICAL ASPECTS OF NATIONAL PICTURE

The subject of our discussion this evening is the national picture. The first consideration in our national picture must be a brief consideration of the physical aspects of the national picture.

Our land occupies about 6 percent of the total area of the globe. We have about 7 percent of the world's population. But, as is well known, we have about 60 percent of the world's telephone and telegraph equipment.

We look out over 60 percent of the world's wheat and cotton, 70 percent of its oil supplies, 50 percent of its copper and pig iron.

We claim nearly 67 percent of the banking resources of the world. We own half of the world's supply of gold, and our purchasing power is greater than the purchasing power of 500,000,000 Europeans.

This is the land where 10,000,000 persons, with twenty to forty million dependents, are direct owners in the larger industries of the country.

At the present time we are mobilizing these resources in a tremendous defense program. There have been difficulties in this mobilization, but, nevertheless, it cannot be denied that we have made tremendous strides and that we have almost unparalleled natural resources and equipment to draw upon.

In other words, the national picture, as it is concerned with our physical equipment, is an encouraging picture and a picture which presents tremendous material advances for which we must be grateful.

Here we are the most powerful nation in the world, 131,000,000 souls, located geographically in the most favorable position from every viewpoint and relatively safe from attack because of the two oceans. With a little vision we can become practically self-sustaining.

From the standpoint of production, the standard of living, and from every other material advantage we are way ahead of any nation the world has ever known.

However, we are not free from problems. We have entered upon a great defense program which may become an offense program, and as a result we are spending our resources at a prodigal rate.

FARMERS NOT GETTING REASONABLE COMPENSATION

Our farmers, outside the favored few, approximately about 20 percent, have not been getting reasonable compensation for what they produce. Speaking in the Senate of the United States just a few days ago and using the most recent Federal statistics available—1939—I called attention to the Wisconsin dairy situation.

In that year we produced about 12,000,000,000 pounds of milk. If 20 percent of our farmers were within the favored milkshed areas, that left 80 percent who got less than 2 cents a quart for their milk. There are almost a million people in Wisconsin dependent upon farming. That would leave about 750,000 of that million who haven't gotten a fair break. Something will have to be done.

Another angle of our defense program is mirrored forth in the tremendous cost of that program. Recently I opposed the appropriation of $7,000,000,000 to finance H. R. 1776. I was one of nine in the Senate who voted against it, and my reasons as stated on the floor of the Senate were:

(1) The President's failure to inform the Congress as to what steps he is taking to secure collateral security for the property, credits, and so forth, to be loaned or sold to Britain.

(2) The fact that the appropriations were not backed up by a realistic tax program.

(3) The utter lack of any disposition on the part of the managers of government to cut down on nondefense items.

(4) The careless manner in which the people's money is being spent in this defense program.

(5) The power to appropriate has become synonymous with the "must" requests or dictates of the Chief Executive.

Any one of these objections would be a subject for a speech.

FACTORS MENACE MATERIAL ASSETS OF NATION

There are factors which menace our material picture today. In 1890 the average worker gave possibly 1 day's work out of every 14 to government. Most of us do not realize it, but recently, according to experts, before the current emergency, government was taking the economic output of 1 out of every 4 working days. Naturally, this has drained our economic bloodstream.

In the first 3 months of the present year Congress appropriated more than $16,000,000,000. The assessed valuation of the State of Wisconsin is a little over $4,000,000,000. In other words, in the past 3 months we have appropriated more than four Wisconsins.

SHOVELING BILLS MEANS MORE TAXATION

Now, that cannot go on forever. Spending in these pork-barrel figures means that we are in for a period of sacrifice. We are going to have staggering bills with higher and more painful taxation. We must be prepared to stand the gaff.

The banks are loaded with idle savings because of lack of investment channels.

These factors, too, are part of the economic and material portion of the national picture.

On the other hand, almost every business and financial long-term forecast today is based on the fact that the industrial expansion involved in our defense program has only begun.

I do not know how great it will become, but I do know that it will become even more extensive. I do not know what will happen to our national expenditures, but I think it is likely that they too will be progressively skyrocketed by this administration.

DIFFICULT TO PREDICT WHAT THE TREND WILL BE

It is difficult to predict just precisely what the trend will be, but it is reasonable to believe that unless that trend is materially altered by events abroad—by the possible involvement of the United States or by the collapse of the Axis or by the return of world peace—the trend will be for greater industrial expansion and greater governmental spending.

At the present time the banner headlines are devoted to labor troubles. These are serious troubles. I believe they will be overcome. I believe we cannot longer jeopardize our national security by continued labor difficulty. I believe that public opinion will eventually insist on a decisive labor policy for this administration.

DEFENSE PRODUCTION MUST BE UNINTERRUPTED

It will be difficult to eliminate industrial disputes until there is in the country an overwhelming unanimity of conviction not merely that strikes must stop but that the Nation must be defended.

Men in the same boat, if there is danger, will pull in unison. Apparently there is not that sense of danger among the conflicting parties in America today.

A recent Gallup poll indicates that a large percentage of the people are in favor of outlawing strikes during the period of the present emergency, but strikes persist. Yet we must realize that there are undoubtedly over a hundred men engaged in production where one man strikes.

LABOR SITUATION DEMANDS PERSPECTIVE

The situation calls for perspective and understanding and patience—patience with the problems of America, especially the labor problem. We must be careful in this situation to see that the pendulum does not swing away over to the other extreme, resulting in the destruction of legitimate rights and privileges. We must remember that sometimes right is on one side and sometimes on the other.

The President sold the country on the need for the lease-lend bill and on the appropriation of $7,000,000,000. This was done on the basis and in the belief that the country was in jeopardy; that we needed the bill and the money for defense; and, according to the polls, approximately 90 percent of the people of this country were in favor of aid to Britain. Yet a recent poll indicates that 87 percent are not in favor of war.

But now, in this strike situation, we have two explanations: First, that there may be some sabotage in our defense production. It will be remembered that Hitler said that America would destroy herself, referring to his ability to divide us into warring factions, as he did in other countries which he has weakened and then overrun. It will be remembered that a recent poll showed that 72 percent of the people were of the opinion that many labor-union leaders were racketeers, 14 percent disagreed, and 14 percent had no opinion.

Secondly, that both management—and this is the point I believe in—and labor, or one or the other, as the case may be, do not comprehend the full force of the emergency argument which put over these two measures.

These combatants still cling to their rights; they dwell on their grievances and hug their prejudices. They will behave as they are accustomed to behave in normal times. They will not rise above ordinary habits of ordinary times.

We have no assurance that America comprehends the tremendous and difficult problems up ahead which require unity and sacrifice.

What do we need? We simply need a realization, if it is a fact, that this country is in jeopardy. We need to be sold the proposition that we have to pull together for production; and we have to realize that production is the nub of the matter. When that point is reached, I am satisfied that both management and labor will cease contending, except in those instances where, as it has been suggested, there are "fifth columnists," or racketeers, or foreign influences at work.

Where that situation exists, it is the business of the Government to step in and see that such activities cease.

These strikes have not been all loss. There is coming to the fore in American consciousness the thought that the public has a big interest in the picture.

Heretofore only management and labor were consulted. They had the whole say. Now the public is becoming audible. This will mean legislation giving consideration to the rights of the public.

Every strike causes loss to the public.

This is no time to permit the pendulum to swing so that it will obliterate legitimate rights and privileges. The question is not one-sided. So long as man continues to be man, the battle for economic power will go on. We have known of instances where labor, generaled by racketeers, has overplayed its hand. We have seen instances where the employer, through stubbornness and lack of comprehension that he was living in a changing world, has missed the mark.

But, as indicated by the polls, this country of ours is in no frame of mind for a stoppage in its production. It is calling out to all Americans for sacrifices. It is asking citizens everywhere for sacrifices. It is time for labor unions, employers, youth in the Army, taxpayers—for all of us to realize that this is no period for "business as usual"; no time for labor or management to be swayed and governed by grievances and prejudices. When

the house is on fire, there is no time for the fire department to go on a vacation.

There is something here that dissolves all pettiness, all minor differences. There is something here that unifies, that makes for a spirit of national cooperation. That something is national safety—the safety of home and loved ones, the safety of democratic principles.

When I came back from Europe, realizing the world emergency situation, I said on the floor of the Senate: "If I were in the councils of labor and wanted to advance unionism and labor's rights, I would advise the leaders of labor to issue a pronouncement in substance stating that during the period of the emergency there will be no strikes."

I believe if that course had been followed, labor would have advanced itself. I do not want to see labor prejudice its legitimate gains. In this country it probably has a union membership of between 7,000,000 and 9,000,000. Both labor and management must recognize that there is a great responsibility owed by both to the rest of our citizenry. In this great Nation no individual or group lives unto itself alone. There are great obligations to be fulfilled by all.

If the recent polls are correct—and I have no reason to distrust them—there is a clear indication that the public does not approve of what has been done. I am not acquainted with the merits of any of the strike situations. I pass no judgment on the merits. I only know that if the international situation is as bad as we were told it was in the lend-lease debate—and we know that Britain needs all the aid in the shape of material that we can give her—then no one has the right to stop defense production, because defense production, then, is a national matter in which 131,000,000 people are involved—not merely labor and management.

Therefore it is not unreasonable, unpatriotic, or un-American for a government to say to management and labor, "Carry on; open up the factories; labor, go to work and allow negotiations to go on while production is going on." It is fair to both management and labor that government in each such case give assurance that the questions in issue will be settled quickly.

In the present situation the right of labor to enjoy the American standard of living at a fair wage or the right of capital to receive a reasonable return is not involved. There is involved the duty and obligation and right of Government to speak definitely and clearly on a vital subject that involves the security of the lives and property of 131,000,000 people.

FURTHER PREDICTIONS FOR BUSINESS

Because a decisive knock-down-and-drag-out victory in the present war is unlikely in the near future, it is my prediction that we will become involved to an increasingly greater degree.

I think that in the next 90 days we may see this administration whoop up a national psychology, keyed to terms of national emergency. There will be an increase, rather than a decrease, in the mobilization of industry.

Because of abnormal demands, this administration will probably take steps to scrap the supply-and-demand factor. Prices may be determined primarily by costs rather than supply and demand.

More price schedules are on the way. There will probably be inventory controls. There will be more rationing and allocation—tax rates will be higher than ever before—the normal surtax and excess-profits taxes will be boosted.

INFLATION CAN STILL BE AVOIDED

Inflation has been defined as a change in money which tends to reduce its purchasing power.

Inflation is not such a remote possibility. As a matter of fact, inflation in the United States is already an actuality, or, at least, we might say that inflation has already been injected into our credit and money system. I do not think we have fully felt its effects up to the present time.

I do think that our gold holdings, our excess reserves, our low money rates, and our Government spending all make for a perfect set-up for a run-away inflation, though, fortunately, there are a number of controls on that inflation.

I regret keenly that control of the use and allocation of capital funds has passed from private hands to Government hands during the past 8 years. The business of raising money for new capital investment has shifted to Washington—and I do not believe it belongs in Washington.

Government borrowing and spending have largely superseded similar investment of funds by private enterprise.

I submit that one of the basic questions which will confront American industry and American business, in the years up ahead, will be the choice between a blackjack collectivistic economy and a revitalized economy of free enterprise.

To such a question there can be only one answer. If we are opposed to totalitarian doctrines abroad, we cannot adopt them here, or we render our opposition pointless.

There are at least five obvious checks on inflation:

1. High tax rates.
2. A loss of export business, due to war conditions.
3. Our large surplus of raw material and labor.
4. Our free competitive market.
5. Sale of Government bonds to individuals and business concerns, with defense-financing bonds taken out of the banking system.

Of course, there are also a number of arbitrary controls which could be used:

1. The reserve requirements of banks can be stepped up to reduce the risks of credit inflation.
2. The rediscount rates can be increased to discourage excessive borrowing.
3. Government controls over the banking system and over prices can be increased.
4. Government could sell future bond issues to the general public instead of to the banks where they create fiat credit.
5. The Federal Budget on nondefense items can be brought into line.
6. Competitive bidding among themselves by Government defense agencies can be stopped.

The elimination of inflation during the period of defense armament would eliminate the psychological fear of deflation after the war.

INDUSTRY WILL HAVE TO MAKE ADJUSTMENTS

In other words, there are some possibilities in the national picture for a business boom, but there will also be a number of factors which will make it necessary for industry and business to roll up their sleeves for a great many adjustments.

Business will have to fit into the picture of an industrial mobilization of men, machinery, money, and materials. Business will be jockeyed into the place of a Reserve officer in the Quartermaster Corps in an age of mandatory and voluntary priorities.

There will be an increasing problem in operating in an atmosphere of growing labor shortage—increasing production requirements and increasing military manpower requirements.

America's business will continue. It will grow, but it won't be business as usual.

This is not an overly encouraging picture. I am deliberately attempting to present a realistic picture. I do not want to imply, however, that there is anything in the national picture which will make business and industry sing the dirge of defeatism.

"The great lesson of life is to believe in what the centuries say as against the hours."

I do not believe, even in an age of mobilization of business and industry, that we can afford to subscribe to any pessimistic defeatism. I refuse to believe that American initiative will ever become permanently collectivistic.

I do see a dwindling emphasis on individualism in business and industry, and to a large extent that is to be keenly regretted, but I feel that in its place there will emerge an increasing emphasis on cooperation.

I would like to emphasize, also, the fact that we cannot neglect the long-range viewpoint.

WE CANNOT ORGANIZE SOUND LONG-TIME ECONOMY ON COLLECTIVISTIC OR TOTALITARIAN BASIS

Our immediate concern is with production and defense, but we must not neglect the long-time viewpoint of a sound American economy.

I do not believe we can create such a sound economy for the readjustment period, which will follow Europe's war, if we adopt a collectivistic or totalitarian economy.

I want to look ahead now to the time when we will shift from a defense economy to a peacetime economy, and I want that shift to be made without any back-breaking period of readjustment.

I do not want to see a period of tremendous boomtime overexpansion. I do not want to see a staggering public debt and crushing taxation with rising unemployment.

These are problems which we must confront now.

I do not think Government can anticipate these problems of itself. Government and business and the American people working together can do the job.

NEW HORIZONS UP AHEAD

I believe there are new frontiers for American business. They will not be geographical frontiers. To a certain extent they will be mental horizons.

In order to reach them we have to get out of the doldrums of defeatism. Our American economy will not go to pot. To a certain extent these new horizons will be the horizons of research, visioned today in the laboratory.

I do not think these new horizons will be primarily the result of any formal scheme of redistribution, but will rather be the result of the creation of more values to be distributed.

We have made tremendous advances in science, and these tremendous advances themselves are a smashing answer to the indictment that America's system of free enterprise has stagnated.

We have the facilities. We have the resources. We have the money, and I know that we have the will to meet the economic challenges of the period which will follow a cessation of Europe's conflict.

I believe in the future of America, and I believe in research. I do not think government has done enough in the field of research, and I sincerely hope that government will do more research, both laboratory research and the kind of research which means long-range planning.

APPLETON PROVIDES AN EXCELLENT EXAMPLE OF RESEARCH ACTIVITY

I might add that when we speak of research, there is no finer place to discuss such a subject than the city of Appleton. Appleton is a splendid example of research. Here in this city you inaugurated a unique experiment in adult education in 1929 when you created the Institute of Paper Chemistry.

This institute, in a relatively unexplored field, devoted its energies to research for the pulp and paper industry, and other industries concerned in production of a related nature. Yours was the first institute of its kind in the entire United States, and you deserve great credit for the excellent job you have done.

FOREIGN POLICY PART OF NATIONAL PICTURE

Defense and our foreign policy are today a vital part of the national picture.

From the stage at Washington we see, as you people here do, a world at war with only the Americas, North and South, at peace.

Will we continue to remain at peace? all America asks.

Eighty-seven percent of the people, according to a recent poll, do not want our Nation to engage in war. Yet 90 percent of the people want all-out aid to Britain.

We are told that we can expect more and more action on the part of America in the future and this may bring us into the fray.

We are taking over bases in Greenland—Danish territory.

The administration will be sending our Navy flying boats out over the Atlantic scouting for German submarines and surface raiders.

More destroyers and ships will go to Britain.

The administration is taking over foreign-owned ships in our ports, sending material to Suez and to Greenland, and opening our ports for the repair of British men-of-war.

We are getting into stride in the production of ships and planes and war material.

Will we convoy? That question will be determined, I believe, by British needs, as the administration interprets them. We are risking war now. Today Britain's need is great. Her forces are spread out very thin on land and sea. She must beat the submarine and air raiders or lose. She needs supplies, ships, and planes.

I said Britain's need—to be determined by future events—will determine whether we shall convoy. If her need becomes more critical the administration may seek to direct a shift in public opinion so that America will respond. This conclusion, I base upon the observation of what is going on in America and our pace toward intervention especially over the last 18 months.

There is no question but that we will be called upon to make that decision unless there is a change in the fortunes of war. I might add that I anticipated this danger in the passage of the lend-lease bill (which I opposed) but the administration refused to admit the issue. Now they will have to face the issue—the issue they dodged then.

Observers in Washington feel war is approaching closer to our shores. But war is not inevitable.

America should realize the whole picture. In this last year we have gone a long way toward preparedness, but not far enough. Even now there is talk of keeping our boys in camp for a longer period, because they haven't had the equipment to train them. (Incidentally I made that prediction when the selective-service law was passed and I was ridiculed for it. Now it is coming true.) But the Army is rounding itself into shape and, except for the strike situation, American industry is getting in stride in war production.

This is no time for our emotions to direct us. We must calmly face the greatest crisis in our history. It is a great crisis, because three nations, Germany, Italy, and Japan, are challenging the world order of which we are a part. They not only want dominant positions in Europe and in Asia and Africa, but also in the Americas and in the South Pacific.

When Hitler struck a year ago, we were in a very precarious condition—almost defenseless. We had a Navy, but it was not balanced. It didn't have a coordinating air arm. We were practically without an Army, and America was defenseless from the standpoint of ability to produce armament.

Secretary Knox tells us that our Navy is now prepared—the best in the world, with 324 ships supported by 1,754 auxiliary craft. It also has, which I am glad to announce, a large and highly trained naval air arm consisting of 3,250 planes and 3,700 pilots.

Since Hitler struck, we have obtained sites for bases ranging from Greenland and Newfoundland to Bermuda and Trinidad. It is well for us to remember that every man in the Navy and the Marine Corps is a volunteer. As a member of the Senate Naval Affairs Committee, I am glad to give you the assurance, which comes from the best source I can summon, that our first line of defense, the Navy, is prepared.

The Army is another story, but there has been a considerable improvement due to the fact that industry during the last 16 months, has been grinding out equipment. We are getting 6 light tanks a day now, and soon will be producing 15.

In medium tanks we are producing at the rate of five for each 8-hour shift. These tanks are supposed to be more powerful in fire power, in armor, and in speed than the tanks of any other nation.

The Garand rifle is being produced at the rate of 3,500 a week. We do not have an adequate number of machine guns and anti-aircraft guns. We are also deficient in our artillery. Britain's ability to withstand the onslaught has given us this breathing spell in our defense preparations. We should never again be blind to what is going on in the world.

We must realize that to get all the safety insurance that is necessary, we must be prepared to sacrifice and expend effort physically, financially, and spiritually.

This America belongs to all of us, but none of us had very much to do with making her what she is. Our fathers did that for us and handed down to us of this generation this America for us to maintain intact and hand down to future generations.

In the last decade America has grown soft in more ways than one. History will give Hitler the credit for having awakened us out of our dream of ease and plenty to a realization that values in life are lost unless they are guarded. To guard America we must be united.

On land and sea I have seen folks forget their petty differences when a great storm came up. Well, a great storm may strike this Nation. This is no time for us to think we can carry on as usual. It is time for all of us to submerge our petty differences, our petty quarrels, that result from a failure to forego some petty right. We are all of that breed we call American. We are custodians of great value. We must realize that.

If America would get her latent inventive genius into action and find the answer to the submarine and the bomber, we could keep out of the fray. This pressure for American intervention would disappear then. If the submarine could be stopped, if the bomber could be stopped, we would see a disintegration go on in the ranks of the Axis.

I said that America should realize the whole picture. Russia is an enigma. Japan is an open partner with Mussolini and Hitler. It is true the whole world has been awakened out of its lethargy by the blitzkrieg of Hitler. But Hitler's blitzkrieg consisting of mechanized tanks with coordinating Stukas, would not have accomplished what it has accomplished if it were not for the unity of Germany, in its economics, in its production. America doesn't need the ruthless control of labor and industry that Hitler has to accomplish the same result. But America must have unity. We may differ on nonessentials, but on this question of loyalty there must be no difference.

AMERICA ALSO HAS RESOURCES IN ITS NATIONAL CHARACTER—RESOURCES WHICH MUST BE REBUILT

Thus far our discussion has concerned itself largely with material values in the national picture. These material values are important, but there are other values which are even more important. They are values which involve American character—and they are spiritual values.

America has a magnificent heritage of things of the spirit. If the United States were destitute tomorrow of all of her material wealth she would be rich if she retained the American character. Nations may be looted of material possessions by brigands. It is more difficult to pillage a nation of its national character.

In this land we have a national character which embodies the concept of equality and the great freedoms which we regard as traditional. Along with these freedoms and along with our doctrine of equality, the American character has always been one embodying fair dealing, honesty, idealism, thrift, industry, faith.

I think that recent years have tended to partially sabotage American character. I think that recent years have partially undermined American morale. I think that recent years have tended to partially drain American virility.

The United States is fundamentally a land of independence, where government is dependent upon the people, rather than the people upon the government. That doctrine has been changed in recent years.

The United States is fundamentally a Nation of hard-working, thrifty people. In recent years there has been a gradual erosion of that doctrine. We have encouraged "leaners" on government, and we have replaced independence with dependence. The old ideas of thrift have almost been shell-shocked into oblivion. Today we live on the shabby doctrine of "spend to the limit," "borrow all you can," and "postpone paying the bills." We have blackjacked interest rates until there is little incentive for private investment, and we have pilloried the average businessman as an "economic royalist."

We have bartered convictions for bread. Relief has been administered as political pap.

We have subsidized one group after another into subservience to this administration, and that, by the way, is exactly what happened in totalitarian lands abroad.

This growing dependence on government, this scrapping of the doctrines of frugality and independence and paying as you go is nothing new. It has been the first step in the break-down of the moral fiber of every country which has gone totalitarian or which has fallen before the totalitarian onslaught.

I submit that it is absolutely vital that we do everything in our power to retain the American character in our people and the American character in our Government. And I believe America is waking up to that need.

We are essentially a nation of law. In other lands we have seen the break-down of legal morality, and today we confront a similar domestic problem. We are undergoing certain fundamental alterations in our basic concepts of law.

In other lands we have seen the doctrine that law results from force and that "might makes right" so that law is couched in terms of penalty rather than remedy—so that man's status is derived solely from the state.

In other lands an increasing emphasis on government—on the state—has resulted in dwindling rights for the individual so that finally all he retains are a few "privileges" which he enjoys at the sufferance of the state. This is directly contrary to our American concept of law and our way of life.

I believe in the importance of social groups when they are a means to the end of protecting individual rights, but not when they become an end in themselves. Government by pressure groups must cease. Today this administration rejects any type of appeasement in its foreign policy, but follows a weak-kneed policy of internal appeasement.

Another factor in altering our American character has been the growth of administrative bureaus, stealing the function

of the legislative branch. In recent years we have been confronted with the idea that American lawmakers, whether they be city councilmen or Senators of the United States, apparently are unable to write understandable English.

At any rate, it appears that every law which is written from city ordinances to acts of Congress have to be "interpreted." The interpreters are not elected officials. They are the heads of Government bureaus. They constitute an American army of illegitimate lawmakers, and they are largely responsible for the uncertainty of Government rulings affecting business.

We know there are too many laws, but by the same token there are far too many departmental rulings. You businessmen know what I mean when I speak of these administrative rulings. I think that in the field of public administration we need to return to fundamentals in American character.

In other words, not only labor and industry have to be united, but bureaucrats in Government have to be unseated from their high horses.

The S. E. C. must reexamine its policy and must cut through the unnecessary red tape regulations and restrictions. For the duration of the emergency the Trust Division of the Department of Justice should limit its interference with industries engaged in getting production in the defense program.

We are engaged in a major operation—seeking to make America safe and keep our freedom—and this is no time for the pseudo reformers to continue their so-called reform tactics. Neither is it a time for any Government board or commission—the National Labor Relations Board, the Federal Communications Commission, or the Treasury Department—to interject into the picture a course of conduct that will result in debilitating the morale of our people.

This is no time for pettifogging tactics or for throwing the monkey wrench farther into our economic system. It is a time to get rid of every saboteur (that includes the Government highjacker or bureaucrat) and for all Americans to unite on the forward march of America.

The United States, my faith tells me, will win the "battle of output in a machine-making war, and America will be strong in the defense of America."

I think we might well conclude with the encouraging words of Psalm 46: 1, 2: "God is our refuge and strength, a very present help in trouble. Therefore will not we fear, though the earth be removed and though the mountains be carried into the midst of the sea."

Daughters of American Revolution Congress

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

ADDRESS BY H. R. BAUKHAGE

Mr. TRUMAN. Mr. President, I ask unanimous consent to have inserted in the RECORD an address delivered by Mr. H. R. Baukhage, commentator of the National Broadcasting Co., before the Fiftieth Continental Congress of the National Society, Daughters of the American Revolution, in Constitution Hall, Washington, D. C., on April 19, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Madame President, delegates to the Fiftieth Continental Congress, National Society Daughters of the American Revolution, you are completing a successful congress. You are about to leave the Capital and return to your homes throughout the Nation.

You came here, not merely to conduct the business of your society, but, like two and one-half millions of other pilgrims who visit us each year, you came to pay your tribute at the shrine of your Nation here beside the Potomac.

I am wondering if you realize how your pilgrimage differs from theirs—how it should differ. They and you have looked upon the flowering beauty of this spot which the Father of our Country chose to be the Nation's Capital. They and you have looked upon the memorials of our country's great, in stone and marble; listened to the whisper of history in the immemorial elms on the White House lawn and along the storied avenues, where for more than a century and a half the American cavalcade has passed. These sights and these experiences you shared with our other visitors. But there is one thing that they did not share with you. You came not merely as the other pilgrims came, paying tribute at this shrine, but as representatives of an organization which is a living symbol of the very stuff of which the shrine is made.

You are here by one right, and one right alone.

It is a right conferred on you through the generations by a man who left his shop or his farmstead, his wealth or his poverty, his family and his community, because of an idea—a belief that his liberty and the happiness of those he left behind were as dear as life itself.

The establishment of our liberty was his obligation. His willingness to make whatever sacrifice was necessary ennobled him. You share his blood, and with the nobility of patriotism comes down to you the obligation to preserve the liberty which he established. That is noblesse oblige.

One hundred and sixty-six years ago today shots rang out over the quiet village green of Lexington. Men fell on both sides, martyrs to the cause in which they believed. Today we must not lose the true meaning of that conflict. We must remember that there echoes down from that historic day no harsh battle cry of soldiers hoarse with hatred and mad for plunder, but rather a cry of hope to all men who would be free, regardless of race, creed, or nationality. In that hour freedom was won. It became your noble heritage and mine.

I am one of those whose duty it is to record and report history in the making, but seldom we realize the significance of the things we record. Only the other day an experience I had when the war broke out came back to me vividly. I was suddenly back on one of the last trains to enter Berlin before the present war was declared. (I was on my way to make a series of broadcasts for the National Broadcasting Co.)

I was sitting with a good-looking passenger. We had been chatting on trivial things, when suddenly he rose, opened the door to the compartment, looked up and down the aisle, and returned to his seat.

Then in a voice with a haunting anguish in it I shall not forget, he said:

"I wish I might live in a free land again."

At first I was shocked at the frankness of such a remark in Gestapo-ridden Germany. But soon I learned that it was not so strange. This middle-aged German was voicing the suppressed yearning that has been within the human bosom since the first man turned his face upward from the clod. But only as I recalled it nearly 2 years later did I realize that incident's significance. That cry has become the symbol for the desire of a whole continent where the people of one country after another have seen the torch of freedom sputter and go out. I can now interpret the somber faces of the French soldiers I saw marching into the Maginot line, the bitterness of the weeping women when the trains pulled out. These were expressions of a people who had lost not only their freedom but their faith in free institutions.

I came face to face with the fact that if the forces moving in the world today continue, perhaps even free-born Americans may someday echo the universal cry of despair I heard as the storm broke over Europe: "I wish I might live in a free land again."

Do not think I am a defeatist of democracy. Democracy itself does not fail, anywhere on the earth. It is the people who fail democracy, well-meaning people like you and me here today. We fail democracy when we refuse to realize that we must make as great an effort to nurture the growing tree as our forefathers did when they broke the soil to plant it.

Can democracy be defended? I do not believe it is so much a question of can as of will.

Today totalitarianism has thrown down the gauntlet to democracy and threatens to drive it from the face of the earth. We do not fear the legions of the dictators. Already we are forging weapons of defense for the greatest arsenal of the world. Our most serious danger is not so much from invading armies. If the fate of our democracy rested solely on ships, guns, planes, tanks, and men, I do not believe we should be too much concerned over the Nation's future. This may be a boast but, as the President says, "not an idle boast."

But when I ask the question, Will we defend democracy? I am thinking of another host that threatens us, deadlier than the ones with guns, for like those for whom Jesus prayed, "they know not what they do."

I am thinking of those in America today who are failing democracy.

Can democracy be defended against such unwitting enemies? It cannot be done alone with graphs and charts and statistics—in committee sessions or by holding meetings and passing resolutions. It cannot be done by singing songs or repeating shibboleths. These things are empty symbols unless they represent a living force. Your meetings, your resolutions are no more than the vain repetitions of an esoteric cult unless they represent the faith of your fathers which you are translating into works.

Democracy cannot be defended unless it is renewed in the hearts and minds of each generation. Yours is the noble heritage—yours is the obligation to defend it.

What are your weapons? You have two.

First, the precept. Then the process.

The child must be taught what democracy is, must be shown how it works in the little group in which he moves. A very definite effort has been made in the last 5 years to implement the democratic way of life in and through our schools. You are familiar with this effort. Are you familiar with a study of the democratic spirit and educational practice, made in 90 American secondary schools by the Educational Policies Commission? Here are some of the things this survey tried to find out:

Does your school stress memorizing information about democracy as a substitute for democratic behavior? Is the course of study

in citizenship derived from civic problems which are faced by young people and adults today? Are social functions chiefly for the social elite of the school and the community?

Have you ever asked any of these questions about the schools in your community? If you have not, you do not know how well the foundations for the defense of democracy are being laid in your community.

Without the percepts, processes are meaningless. As we talk about processes it becomes clearer that democracy does not fail but that people fail democracy because democratic processes only stop when they run against the stone wall of self-interest of individuals and groups—a wall raised in the face of an indifferent majority.

For example, there is a man who represents a certain very large and very worthy organization in the National Capital which had already derived certain benefits from the Government. It was satisfied. The national organization was opposed to pressing for further legislation in its behalf. But its representative was worried about his job so he went out and addressed local units, whipped them up into a desire for additional benefits, obtained backing of individual groups, swept the national organization off its feet and staged a healthy raid on the Treasury.

If the people in those local communities had taken an interest in what was going on, had brought as much pressure to bear on their Congressmen as this minority did, that could not have happened.

This very thing is going on every day in a smaller or larger scale in every community. As a result, there exist as thriving but dishonored institutions the labor racketeer, the millionaire real-estate owner who makes slum clearance impossible, the city-hall gang, and all the other minorities who are destroying the processes of democracy. They are destroying the processes of democracy because of the indifference or the ineffectiveness of the majority which is unwilling or unable to unite for the common good. If you are one of such a majority you are doubly failing democracy, because you are not only denying its privileges to your community but you are standing by while your heritage is being squandered.

Without the process the precept is useless.

The school and the home may implant the principles of democracy in the minds of the youth. That teaching may be implemented by actual democratic experiences in the child's daily activities. But if he discovers that liberty and equality, freedom of thought and expression are not allowed to function in the larger world of political and social and economic life, he will be bitterly disillusioned. Then the sturdiest faith will waver. Disappointment and disillusionment are the twin conspirators that lure their victims into the clutches of every whispering ism offering a false panacea for ills.

The organization which has brought you here has done as much as any in the Nation to perpetuate the memories of the men and the events which have made this country what it is today—the last bulwark of democracy in a helpless world. But your task does not end there. You must preserve more than a memory of our glorious yesterdays. You must live the spirit of those memories today. You must build a fresh tomorrow.

There is a totalitarian counterrevolution in the world today. If its armies threaten our shores, we will rise to defend our homes as we always have. That may be tomorrow; or, if God is merciful, never. But the counterrevolution has its allies within our country today. I do not refer to "fifth columnists" or enemy agents. I refer to selfishness, greed, and easy living, indifference, disillusionment, and, as the President said day before yesterday, a complacence which is a luxury in these times that no loyal citizen can afford.

Daughters of the American Revolution, these are the enemies of the democracy which your forefathers fought. Yours is the nobility of that heritage. Yours is the obligation to see that it is preserved.

Noblesse oblige.

Let me tell you why I make this plea. It is because I have seen with my own eyes what happens when a people fail democracy.

We here in America are spending too much time fighting straw men. We think that if we can superciliously dust a few radicals off of our left coat sleeve, or push a few fat Fascists aside with our right elbow, then we can all relax, sing God Bless America (and us), and the country is saved.

So far neither of these parasites have had much to do with the curtailment of our liberties. We are still a fairly free people. It is true that some of us have to wait ignominiously on the curb in the face of an autocratic green light while the motorcade passes. It is true that some of us have to suffer silently amid the cushions of our limousines while an arrogant red signal holds us up. But on the whole we still have a good many privileges. Let me tell you about a people who have lost theirs.

Do you remember that in 1929 a great American historian wrote: "The constitution of the German Republic"—I am quoting—"is the very model of progressive democracy"? What happened to it? The German people failed democracy.

We all know that the Germans created a liberal republic on the ruins of the defeated Prussian autocracy at the end of the last war. It was handicapped at the start, it is true, by lack of encouragement from the other democratic nations, by the Communist and monarchistic groups who were not sympathetic with this idea, and by the lack of democratic experience of the German people. Also, the young republic suffered a cruel blow almost at birth from one of the worst periods of inflation in history—when it took a basketful of marks to buy a loaf of bread. Nevertheless, disintegration of the German democracy was due to weaknesses which may occur in any country.

The chief reason for the downfall of the German Republic was that the German people did not have a Benjamin Franklin to tell them that if they did not hang together they would hang separately. The various groups—the industrialists, the agriculturalists, and endless other interests—even though the majority of them believed in the republic, refused to work together. They strove, not for the general welfare, but for purely selfish, economic aims which would benefit their own class at the expense of the others. They could always unite to defeat the party in power, but they could not agree on any constructive measures. The parliament soon became a futile debating society.

When the Government and the people, sincerely trying to keep the Republic together, saw that parliament was hamstrung they began to increase the influence of the executive. The Weimar Constitution gave the Chief Executive special power in an emergency, but it never intended him to find an emergency in every pigeonhole. However, he did. And the courts, which are usually the least radical element in a modern democracy, supported the party in power. So did the civil service. Career men were appointed to Cabinet posts on the theory that they were nonpolitical. But they, too, fell in line with Government policies—devoting themselves chiefly to keeping their jobs. The unpropertied classes, supported to some extent by the extreme right, grew in power. Hardly disguising their purposes, they fought for their own betterment at the expense of the middle class. The middle class, you know, is the backbone of any democracy.

In Germany, the middle class—what was left of it—began to disintegrate because of pressure from above and below and because of growing fear and uncertainty—fear of bolshevism and uncertainty as to the effectiveness of their leaders. Meanwhile, the National Socialist Party, which had been the National Socialist Workers Party, began to thrive on hate, and feed on discontent. It appealed to the disillusioned democrats with its ballyhooed hatred of bolshevism. It appealed to the nationalists with a hatred of all other nations which had oppressed Germany. It appealed to the hatred of all the things which the Republic had tried to do and failed, as for instance, the attempt to obtain by negotiation modifications of the Versailles Treaty, and to improve economic conditions made worse by the 1930 depression.

And so, more and more of the disappointed, despairing, and disillusioned middle class, wracked with uncertainty forsook the democratic processes which they had never really given a chance to operate and enlisted with the brown shirts in their creed of force. Finally, the Government itself succumbed, personified by the then fast-failing Hindenburg. Hitler was made Chancelor.

The German people were willing to trade their tattered coat of liberty for what they believed was brown-shirted security. They deserted the spiritual concept of the rights of man for the harsh logic of the moment. They forgot the wisdom of their own great poet, Goethe, when he has Mephistopheles say in the prologue of Faust that man possesses what he calls reason—"thence his powers increase to be far beastlier than any beast's."

I saw the results at first hand of that bargain with the devil.

That is how one people failed democracy.

A people who, as Kipling wrote, "That puts her trust in reeking tube and iron shard, all valiant dust that builds on dust, and guarding, calls not thee to guard."

Now I do not say that the American Republic is built upon such shifting sands that the storms that blow about us wreck our solid foundations. But I do say that now, if ever in our history, our liberties need to be watched with the eternal vigilance that has always been their price. We must be as strong within as when the young Nation struggled into being bastioned only by its faith, the spirit that rose at Lexington and Concord, the spirit born in the solemn pact signed in the crowded cabin of the Mayflower. The spirit that was reborn in each new colony, the spirit that was written into the eternal parchment in Philadelphia, that lived in the stout hearts of the pioneers who led the wagon trains into the West, led onward by the star toward which throughout the ages wise men and foolish have moved—blindly, perhaps, and gropingly at times, but always in the hope that their children and their children's children would live in its light.

The trail the covered wagon left has gone. New pioneers went out on trails of steel to raise new towns—then came the easy life when we forgot the pioneer who tilled his field, his rifle by his side—that easy life is over. Once more the call of the minutemen has gone out. This time to wake the spirit that must guard our heritage lest it be squandered here, within our gates.

Can democracy be defended? I cannot answer that question. Nor can the President of the United States, nor all his generals and admirals—the answer rests in the hearts and hands of each of you.

Noblesse oblige.

Alleged Discriminations Against Colored People by Consolidated Aircraft Corporation

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

LETTERS FROM EDGAR N. GOTT AND WALTER WHITE AND AFFIDAVITS BY C. D. JOLLY AND T. R. DUNLAP

Mr. CAPPER. Mr. President, at my request there was printed in the Appendix of the RECORD on March 13, 1941, a statement by Mr. Walter White, secretary of the National Association for Advancement of Colored People, as recently published in the New York Post, alleging certain discriminations against Negroes applying for employment by the Consolidated Aircraft Corporation of San Diego, Calif.

I have received a letter from Edgar N. Gott, of the Consolidated Aircraft Corporation denying some of the statements made in this article. I ask unanimous consent to have Mr. Gott's letter printed in the Appendix of the RECORD.

I submitted Mr. Gott's letter to Mr. White, and in reply have received the following statement from him, accompanied by affidavits made by C. D. Jolly and T. R. Dunlap, of the industry and labor committee of the San Diego branch of the National Association for Advancement of Colored People. So that the public may have both sides of the controversy, I ask unanimous consent to have these two statements also printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CONSOLIDATED AIRCRAFT CORPORATION,
San Diego, Calif., April 4, 1941.

Hon. ARTHUR CAPPER,
United States Senate, Washington, D. C.

DEAR SIR: The CONGRESSIONAL RECORD of March 13, 1941, includes extension of remarks made by you which the RECORD states were derived from an article written by Walter White, National Association for Advancement of Colored People, printed in the New York Post. I wish to call your attention to the following:

1. I am not the manager of Consolidated Aircraft Corporation.

2. I did not say white men won't work with Negroes.

3. Nor did I say that there are no trained Negroes.

4. I did not say that we would employ no Negroes.

5. I did not say the United States Government had no power to force me so to do.

For further bearing on the subject I am quoting from a letter written by me on March 6, 1941, to Assemblyman Paul A. Richie, of the California State Legislature:

"We extend the opportunity of employment to any American citizen regardless of race, creed, or color. True American citizenship, including loyalty to American institutions and absolute allegiance to the United States and the democratic principles for which they stand, is, of course, essential. We do, however, reserve the right, in extending opportunity for employment, to consider the qualifications of the candidate, his or her past experience and ability, with a view to determining whether or not he or she is capable of filling any position which may be available at the time.

"We have in the past employed Negroes in positions which they, as individuals, were capable of filling, and will continue so to do. In employing persons of this race you must, of course, realize that the attitude of their fellow workers placed in close contact with them must be given every consideration. We have at present over 16,000 men employed, and, although we request the information on our application blank as to whether the applicant is white or otherwise, once he is employed we keep no separate record of this. We are therefore unable to give you the number now in our employ. The question of placing Negroes in training schools is a matter over which we have no jurisdiction and one which should be of interest only to the applicant and to the school in which he desires to obtain his training."

It is to be regretted that the New York Post has made such manifestly erroneous and, above all, misleading statements—especially at a time when everyone is trying to put his shoulder to the wheel. It is requested that you give due cognizance to this letter and that you extend same in the CONGRESSIONAL RECORD.

Yours very truly,

EDGAR N. GOTT.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
New York, April 29, 1941.

Hon. ARTHUR CAPPER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR CAPPER: Absence from the city and delay in receiving certain information requested from San Diego relative to the attitude of the Consolidated Aircraft Corporation of San Diego toward the employment of Negroes have caused my delay in complying with your request for comment upon the letter of April 4, 1941, from Mr. Edgar N. Gott.

I enclose herewith copy of affidavit from Messrs. C. D. Jolly and T. R. Dunlap of San Diego, regarding the interview Messrs. Jolly and Dunlap had with Mr. Gott on November 13, 1940, at 1:30 p. m. You will note in this affidavit that Messrs. Jolly and Dunlap swear under oath that Mr. Gott did state that the Consolidated Aircraft Corporation "would not employ Negroes in the skilled or semiskilled class"; that the Consolidated Aircraft Corporation as a private corporation "hired whom they desired and that the United States Government could not make them do otherwise"; and that Mr. Gott did say that "he did not believe the skilled white employees would work together with skilled Negro employees."

This would seem to resolve itself into a question as to who is telling the truth.

In affirmation of the veracity of Messrs. Jolly and Dunlap is the experience of William A. Dickinson, Jr., of Bakersfield, Calif., with the Consolidated Aircraft Corporation of San Diego. Employment was offered by Consolidated to all graduates of the Bakersfield Junior College who had completed a course in aircraft metal. Mr. Dickinson, a Negro, completed the course with a straight B average. Six of his white fellow students were given employment by Consolidated. Dickinson was curtly informed by Consolidated that "No Negroes accepted."

Whatever Mr. Gott's personal or official position may be on the matter of employment of Negroes, the most complete answer may be found in the figures of the number of Negroes employed at a time when Consolidated is seeking trained workers. In response to a telegram I sent to San Diego, I am informed that out of 16,000 employees at Consolidated only 9 Negroes are employed, and these as lavatory janitors. This obtains despite the fact that Consolidated is being paid for the airplanes it produces by the United States Government, whose funds are obtained by taxation of Negro Americans as well as white ones.

The attitude of the Consolidated Aircraft Corporation gives additional evidence of the need of passage by the United States Senate without delay of Senate Resolution 75, which provides for a Senate investigation of the widespread discrimination against Negroes which the Consolidated Aircraft Corporation, both in San Diego and elsewhere, as well as many other concerns to whom orders have been given for the national-defense program, are practicing.

Respectfully,

WALTER WHITE,
Secretary.

STATE OF CALIFORNIA,
County of San Diego,
City of San Diego, ss:

We, C. D. Jolly and T. R. Dunlap, being duly sworn, depose and say that on November 13, 1940, at 1:30 p. m., as members of the industry and labor committee of the San Diego branch of the National Association for the Advancement of Colored People, received the following statements or declarations made by Mr. Edgar N. Gott, public relations director and vice president of Consolidated Aircraft Corporation in the city of San Diego:

First. That he was at that time public relations director and vice president of Consolidated Aircraft Corporation.

Second. That he did not believe the skilled white employees of the above-mentioned corporation would work together with skilled Negro employees.

Third. That the above-mentioned corporation would not employ Negroes in the skilled or semiskilled class.

Fourth. That as a private corporation they hired whom they desired and that the United States Government could not make them do otherwise.

C. D. JOLLY.
T. R. DUNLAP.

On this 16th day of April 1941 personally appeared before me the above-named C. D. Jolly and T. R. Dunlap, to me known, and made oath that they personally signed the above instrument and that the information disclosed therein is true and full to the best of their knowledge and belief.

[SEAL] VIRGINIA BETH CLARK,
Notary Public in and for the County of San Diego, Calif.

My commission expires December 10, 1942.

British War Aims

OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

ARTICLE FROM THE CHRISTIAN CENTURY

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Christian

Century of the issue of April 9, 1941, entitled "Lord Halifax Reveals British War Aims."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Century]

LORD HALIFAX REVEALS BRITISH WAR AIMS

After a press conference in New York, during which he told more about British war aims than any high official of that country has yet revealed, it is safe to say that Lord Halifax will henceforth be more carefully protected from the probing questions of members of the American fourth estate. In this hour-long session, which followed his careful and innocuous Pilgrim Society address, Lord Halifax began affably and ended with acerbity. The acerbity was due to his realization that in the conference he had made the following admissions: (1) That Britain will not lose the war even if American aid does not arrive speedily; (2) that the post-war settlement will not include economic arrangements into which Germany can enter; (3) that Britain does not intend to abandon her system of Empire preferential trade agreements with their emphasis on economic nationalism; (4) that "the nations of the British Commonwealth will be frightfully jealous of anything that weakens their unity" and therefore will not be likely to accept closer economic ties with other nations, including ourselves, (5) that President Wilson's 14 points would not now be acceptable as a basis for peace; (6) that "the idea that Great Britain is to go Communist or Socialist or totalitarian, or something of that kind is quite fantastic"; (7) that while India has been given a promise of dominion status if she will help in this war, to accede to Gandhi's request that a date be set when dominion status will be made effective "has not been possible and will never be possible." This was in answer to a reporter whose question was, "Lord Halifax, last night you affirmed the absolute value of the human soul. You spoke of equal political opportunity for all peoples. You said that Britain's chief aim was human freedom, and you pictured a community of nations in which no country would dominate its partners. Does this imply that Britain is willing to free India?" Boiled down, these admissions of the British Ambassador reveal that Britain is fighting to retain the status quo within Britain and within the Empire. For a detailed account of this extraordinary interview see the New York Times for March 27.

Steps Toward War

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

EDITORIAL FROM ARGUS CHAMPION OF NEWPORT, N. H.

Mr. TOBEY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Argus Champion, of Newport, N. H., entitled "Let's Watch Our Step."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Argus Champion of Newport, N.H.]

LET'S WATCH OUR STEP

The flow of propaganda intended to lure the United States into the European conflict has reached such a stage that every American who loves his country should be on guard against the creation of a war sentiment.

The billions of money that our Congress has voted for national defense was for the purpose of keeping war away from our shores. It was gladly given with the understanding that its purpose was solely to insure peace in the Americas. Aid to Britain, short of war, was sanctioned, and still is sanctioned, in the belief that such aid was a measure of defense, against war, for this Nation. Yet, in spite of this overwhelming sentiment, we hear more and more talk by the warmongers among us about the likelihood of American intervention.

We are not going the limit of material aid to Britain for the purpose primarily of preserving the British Empire or wiping out Hitlerism in Europe. It is not America's mission to shape the policies or the destinies of Old World states that from ancient times have continually engaged in bloody conflicts. It is not our purpose to drift into foreign entanglements that can lead only to misery and ruin. The insurance of American defense and American peace is our one purpose.

We should frown upon every effort of the war propagandists to lead us, step by step, into a course that endangers our peace. We should seek to bolster by every possible means, the determination of the vast majority of our people to stay out of the war. We are going to the utmost limit of generosity and decency and prudence in extending all-out material aid to Britain in her emergency. We should be going to the limit of folly and recklessness in allowing ourselves to be dragged into the hell that exists in the Old World.

The War in Our Lap

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

EDITORIAL FROM CHICAGO TRIBUNE

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The War in Our Lap" appearing in the Chicago Tribune of April 30, 1941.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune of April 30, 1941]

THE WAR IN OUR LAP

Sir Gerald Campbell, British minister under Lord Halifax in Washington, made an astonishing speech Monday night in Washington at the annual dinner of the United States Chamber of Commerce. He said that Colonel Lindbergh's statement that a negotiated peace would favor England conferred the right to make a protest and express an opinion.

Campbell said it was British business to decide whether they were to desert the victims of German aggression in Europe "whom we are pledged to free." He added that if they abandoned what is called the first line of defense, the members of the chamber of commerce might as well cancel the word international "and give up all idea of holding meetings abroad for many decades to come. You must also give up the idea of trusting us—your best customers."

In another part of the speech Campbell said: "We may be despicable, decadent specimens of white trash, but at least we are white and not yellow." It is likely the speaker thought that if Mr. Roosevelt could call Colonel Lindbergh a traitor a British minister in our national capital could infer that he was also a coward. Yellow was a word frequently used in Great Britain and France to describe American conduct prior to April 1917 in the other war.

There was an outburst of name calling following Mr. Wilson's "too proud to fight" speech. Colonel House in May 1916 noted that it was evident that unless the United States were willing to sacrifice hundreds of thousands of lives and billions of treasure, "we are not to be on good terms with the Allies."

Mr. Churchill may think that Campbell committed an indiscretion, but we doubt that either Mr. Roosevelt or Mr. Hull will call the attention of the British diplomat's government to his conduct. Americans who do resent it may find additional reason for being disturbed when they learn first from London that Mr. Roosevelt within the next 2 weeks will make a speech which will virtually be a declaration of war on Germany and Italy. "It will, however, leave to Germany the onus of making the first warlike act against the United States."

When that announcement was called to the attention of the White House staff it was admitted that Mr. Roosevelt intended to make a very important speech about the middle of May and that it might be "something sensational."

The British at home complain that they are denied reliable and complete war news by their own Government. Americans are in somewhat worse plight. They gain knowledge of their Government's intention through leaks in London. Mr. Roosevelt may be about to put peace entirely out of reach by what he plans to say. He has about come to the point where Hitler will find no reason whatever for not declaring war. He may go to war without any more words about it. Mr. Knox, Secretary of the Navy, with the approval of Mr. Roosevelt, has said that Germany will be defeated if it does not stop the flow of American supplies to Britain and that America must see that it does not stop them.

On that statement of facts and intentions, regardless of what Mr. Roosevelt may say and do in a few weeks, Hitler may decide that the time has come when it is to his advantage to strike without warning at the first opportunity, and that may be precisely what Mr. Roosevelt wants him to do and is trying to force him to do.

The war then is in our lap.

Strategic Evacuation

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

EDITORIAL FROM THE CORNELL DAILY SUN

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the

RECORD an editorial entitled "Strategic Evacuation," and a letter appearing in conjunction with the editorial, published in the Cornell Daily Sun of April 15, 1941.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Cornell Daily Sun of April 15, 1941]

STRATEGIC EVACUATION

As Axis military and diplomatic blitzkriegs continue to modify the political face of Europe, Asia, and Africa, it grows increasingly important that the American people demand two things of their Nation's foreign policy: that it be judged by its effect on the security and prosperity of our Nation; that it be kept realistically abreast of a changing world and above domination by selfish interests.

Today it is important that we look at our foreign policy in this practical light. Our aims are neither the preservation of the British Empire nor the policing of the world. Our primary interest is in the security and prosperity of our Nation.

Considered from this point of view, it is vital that we withstand the efforts of vicious pressure groups which are operating within our Nation for the purpose of diverting our policy from these true American aims to a course more favorable to other interests. At this time it is obviously important to consider the British "fifth column" machine as foremost among those in operation, for its demonstrated effectiveness makes it a dangerous obstacle working to separate America's foreign policy from America's best interests.

In the past several years it has seemed wisest to give aid to anti-Axis forces in Europe as the best method of protecting the United States. This was, however, merely a means to an end. Since this means was first adopted the world situation has changed, and it becomes vital that we ask ourselves whether the original means is still the best possible for our end. This is a question of the greatest practical concern to the United States, and must be decided by practical, clear-thinking men.

In meeting this challenge we must remember that we are in a nation no longer emotionally stable. Our prejudices, biases, and emotions have been manipulated to a point making it difficult for us to clearly appraise the respective alternatives before us. Yet we must make the decision—our Nation's future rests on it. Moreover, we must stand ready to make such decisions for each new development in international affairs.

It is imperative that we ask ourselves at all times not "what is the best way of preserving democracy in Europe, of defeating the Axis, of saving Europe's down-trodden nations," but instead we must constantly make our policies measure up to the practical standard of "what is the best way of safeguarding the security and prosperity of our Nation." These other ideals may be worthy, admirable, backed up with historical and religious support, but above these stands the fact that today we must first secure our own future and then concern ourselves with the future of others.

We must stand honest to the reality that the Axis victories may make it strategically wise for us to withdraw from our present interventionist course to one of consolidating and improving our position in this hemisphere. We have learned much in recent years from the British about "strategic evacuation," and as American citizens interested primarily in America's future we must stand ready to perform such an evacuation from our present interventionist policy if Europe's events should make it necessary for our protection.

CORRESPONDENCE

TO THE EDITOR:

Since the passage of the lease-lend bill on March 25 the main emphasis of our foreign policy has been placed on unity of action through this established policy. Recently, however, other questions have arisen (especially the convoy) which are about to afford us another opportunity to define the foreign policy of our country. And it is important that we realize that such is still our privilege.

The strategy of the interventionists has been, briefly, to identify the interests of the United States more and more with those of the anti-Axis countries, particularly Great Britain, rather than with the best interests of the American people. First we were told that we must supply the Allies with all aid short of war; we were to give to others the implements with which to fight "our" war, remaining out of the conflict ourselves.

Then the interventionists gradually threw off their disguise and openly advocated "all-out aid" which, though it might lead to war, was necessary. By that time, the emphasis was placed not on the desirability or undesirability of America's entrance into the struggle, but rather upon the necessity of underwriting the victory of one of the contestants. Since that time, policies have been approved because they will benefit Britain, Greece, and Yugoslavia (with whom our interests are identified) or condemned because they are "just what Hitler wants." Thus, our decisions are now seemingly dependent upon the effect they will have upon the governments involved in this war and their acceptability to foreign statesmen. But what about their effect on America?

All of us know of the tremendous consequences of modern war. By armed intervention into World War II, the United States would: (1) incur war material costs far in excess of those of 1917; (2) incur the costs resultant from loss of normal production; (3) lose, in all probability, a terrific number of men; (4) and endanger the civil rights of its citizenry, and possibly even its form of government.

Therefore, every American must make one vital decision. Shall American foreign policy be governed according to its ability to protect democracy in America or according to its acceptability to a friendly foreign power? I feel that it is the duty of every citizen to ask himself how our present foreign policy will affect the democratic ideals and the security of the United States.

Signed,

AN AMERICAN.

The Triple-A Program

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1941

ARTICLES FROM THE ELGIN (NEBR.) REVIEW

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD at this point some clippings taken by me from a small country weekly newspaper published by a friend at Elgin, Nebr., known as the Elgin Review. These clippings cover a friendly, but rather serious, debate between the editor and a neighboring farmer as regards their views on some phases of the triple-A program. It began with an editorial by the editor entitled "We Would Debate." I ask that the editorial be printed at this point, and that it be followed by the letter written by the neighboring farmer, and that in turn by the editor's reply.

I also ask to have included in the RECORD, following the matters above referred to, a quotation from a real farmer and real philosopher, Jim Squire. Jim Squire operates a small but homey farm in the sand hills of Nebraska. He writes a weekly column for this paper, headed As a Farmer Sees It, and he usually hits the nail on the head. I wish there were more like him.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Elgin (Nebr.) Review of March 20, 1941]

WE WOULD DEBATE

Refusing to lend stored corn to desperately needy Nebraska farmers, Secretary of Agriculture Claude Wickard gives as his reason for not doing so the excuse that to do so would "directly contravene the price-stabilizing objectives" of the farm program.

He makes no concrete explanation of how this would come about. As a matter of fact it is doubtful that the lending of corn to drought sufferers in the entire United States on a basis of need would have any particular effect on the market. The price of corn is definitely established by the Government's price-pegging activities.

The real threat to the administration's program is HENRY WALLACE'S hybrid corn, through which the Iowa and Illinois farmers grow greatly increased yields on smaller and smaller acreages. Another threat is the practice of permitting southern farmers to take acreage out of cotton and plant it in corn.

Despite a definite promise that the ever-normal granary would be used in just such cases of drought as have prevailed in our State for some years, the Department of Agriculture prefers to dispose of its unwieldy surpluses by sales of corn in 25,000,000 bushel lots to Great Britain at one-half the price needy Nebraskans would have to pay.

"Stabilizing objectives!" Piffle! Bible-reading Henry should complete the story of Joseph's administration in Egypt and then act with as much humanitarianism as did Joseph centuries ago.

Granting that there have been several good features in the farm program, it would be an enjoyable evening's fun to get Henry, Claude, or even Freddie Wallace, the very well paid State triple-A administrator on the lecture platform for a debate. Next best will be to direct a few questions toward them. Maybe next week would be a good time, and this column a good place.

[From the Elgin (Nebr.) Review of April 17, 1941]

TILDEN FARMER TAKES HIDE OFF REVIEW EDITOR

TILDEN, NEBR., *March 26, 1941.*

Mr. F. V. PETERSON,
Editor of Elgin Review and
Secretary to the Governor,
Lincoln, Nebr.

DEAR MR. PETERSON: I've just read your article entitled "We Would Debate" which was published in your last edition of the Elgin Review. I wish to state that I do not believe you would need go quite so far as Vice President Wallace, Secretary Wickard, or even Freddie Wallace to answer your proposed arguments. You could hardly expect men of their caliber to be too much concerned over the feelings of some small country-town newspaper editor who apparently has become "riled up" over the failure of the Department of Agriculture to recommend some plan which he has been supporting.

Under BUTLER'S plan, as I understand it, he proposes to lend corn to the needy Nebraska farmers and in turn they are to repay it in bushels in some future years when

they raise corn. In the first place, Mr. Peterson, we must remember that the great National A. A. A. program is definitely not a relief set-up and that the principal objective of the entire program is to stabilize we farmers' prices through acreage adjustment and through commodity loans which have so obviously bolstered our prices of both corn and wheat, and not to depress our markets by dumping or in reality giving away millions of bushels of corn to farmers who would otherwise be in the market for grain, and thereby causing direct competition to our markets. Is there any absolute guaranty that the corn which BUTLER proposes to loan to the needy farmers, will ever be repaid? What would become of the corn loaned to farmers who would the next year decide to quit farming or would be forced to quit farming because of the depressed prices received from what grain they did raise as a result of this unbusinesslike method of proposing to aid the drought-stricken farmers? Moreover, could such a program be limited to Nebraska or would we be forced to extend the program to all other drought-stricken areas of the United States and if we did, how many millions of bushels of corn do you suppose it would require to supply the needy farmers of Nebraska, Kansas, Oklahoma, the Dakotas, Colorado, and any other drought-stricken area that there might be in the United States?

The great majority of those farmers to whom Mr. BUTLER proposes to lend corn have nothing to feed it to. We would merely be giving corn away which we had put under seal for the purpose of bolstering our prices to farmers, who in turn would put the corn on the market, the very thing which we have attempted to avoid, and thereby establish direct competition to our corn markets. I don't believe the farmers of the United States want to adopt such an "unbusinesslike method" of aiding our drought-stricken farmers.

I wonder if Mr. BUTLER ever attempted to run his business on such a basis. No doubt he had several reasons why he submitted his corn plan. One might have been to undermine the very foundation of the farm program, to which he is obviously not in sympathy, by releasing the very corn which we have sealed to keep off the market. Another might have been to put more corn into the regular channels of handling grain, thereby stimulating Mr. BUTLER'S own business. And another, last but not least, might have been to create more votes for Mr. Butler in the recent election by attempting to make farmers believe that he was in sincere sympathy with them and was trying to help them.

I fully realize, Mr. Peterson, that those farmers in the drought-stricken area are most unfortunate and that something must be done. I know this from my very own experience. However, I don't believe the logical answer is Butler's corn plan, but, on the contrary, it is crop insurance on corn. Even you must admit that the all-risk crop-insurance program on wheat has proved most successful and is most certainly a businesslike manner in which to solve our problem. We farmers really do, believe it or not, want to carry on our business in a businesslike manner, just as the grainmen and even the newspapermen of the country are doing.

In regard to HENRY WALLACE'S hybrid corn through which greatly increased yields are being produced on smaller acreages, I can only state that Mr. WALLACE or any other man who has aided in developing hybrid corn is to be highly complimented for their discovery in increasing corn yields. Planting hybrid corn and other means of increasing corn yields is the wise thing for farmers to do. It is simply the means by which farmers take advantage of more efficient methods to lower their per unit cost and increase their incomes. It is entirely reasonable for farmers to produce their corn as cheaply as possible. Higher yields is one way to lower per bushel costs. Likewise, being able to produce the same number of bushels on fewer acres makes it possible for the farmer to deplete less acres of land and to seed larger acreages of legumes on his farm, thereby increasing the value of his land. We must remember that we must leave the soil in a position to produce food for the people of our Nation for generations to come, and it is fully realized that the soil of our Nation has too rapidly been becoming depleted. If we raise more corn per acre, it simply means that we will need to raise less acres. Probably you shouldn't be too severely criticized for condemning our hybrid corn since you, not being a farmer, but having been a school teacher and a newspaperman, could hardly be expected to understand this situation.

Regarding the practice of permitting southern farmers to reduce their acreage of cotton and increase their acreage of corn, please let me point out a few facts in this connection. During the period from 1928 to 1932 inclusive, the period before we had a farm program, the 12 Southern States planted an average corn acreage per year of 28,920,000 acres while during the period from 1933 to 1938, the years of our A. A. A. program, they planted an average acreage per year of 30,926,000, an increase of but 2,006,000 acres. In 1939 they planted 30,888,000 acres. In the 1928 to 1932 period the 12 Southern States produced an average of 442,141,000 bushels per year while in the 1933 to 1938 period they produced an average of 445,316,000 bushels per year, an increase of only 3,175,000 bushels per year. In order to give you a clearer picture, Mr. Peterson, so that I can feel assured that you will understand it, let me give you this explanation. Antelope County, your home county, has been allotted 139,156 acres of corn for 1941, a figure which many critics of the A. A. A. program claim is a drastic cut, which when multiplied by a yield of 25 bushels per acre, which I'm sure you'll agree we could easily raise with ample rainfall, would result in a production of 3,478,900 bushels, a figure representing 303,900 bushels more corn than the 12 Southern States have increased their corn production during the program years. And Antelope County here in Nebraska, as you know, represents only one of the hundreds of counties in the Corn Belt and a low producing county, too, when compared with counties in the States of Iowa and Illinois.

Just how much have we farmers in the Corn Belt increased our acreage of cotton during the program years? Practically none, if any. And neither have the southern farmers increased their acreage of corn materially, Mr. Peterson, and they never will. We can't raise cotton profitably and they can't raise corn profitably. The average yield of corn in the 12 Southern States is 15.1 bushels as compared with an average yield in Iowa of 49.5 bushels, and an average yield of the entire United States of 27.9 bushels. These figures are authentic, Mr. Peterson, and I suggest that you study them.

Regarding your statement that the Department of Agriculture prefers to dispose of its unwieldy surpluses by sales of corn to Great Britain in 25,000,000-bushel lots at one-half the price needy Nebraskans would have to pay, I wish to state that that, too, is an untrue statement. The United States Government sold the corn you mentioned to Great Britain delivered f. o. b. Montreal, Canada, at 50 cents per bushel. Just a few days ago I talked with a trucker who was delivering corn from this area to the drought-stricken area of Nebraska at the price of 60 cents per bushel. I don't suppose a man of your ability could hardly understand how the sale of surplus corn from the United States to Great Britain could help the farmers of this country and how it might also help Great Britain in this time of great need, and in a time when the United States is doing everything possible to aid Great Britain in her fight of democracy versus dictatorship.

Let me also make a few remarks in connection with your statement as to "the very well paid Nebraska State A. A. A. Administrator, Freddie Wallace." I wonder how it happened that your salary as secretary to Governor Griswold was increased from $2,400 to $3,600 a year, a net increase of $1,200 over the salary paid to the secretary of former Governor Cochran. Perhaps it is because you're a better secretary than Governor Cochran was ever able to employ, or perhaps it is because you're a former school teacher and a newspaperman, or maybe it was for some other reason. I wonder what the "needy Nebraska drought-stricken farmers" would have to say about that if they knew it.

It's amazing how so many people who have never had any practical experience on a farm or who have possibly read something about the farm out of a book, can know or think they know so much more about the farmers' business than do the farmers themselves. I'm sure I know very little about your newspaper business and I frankly admit it. However, I do believe I have some knowledge of the agricultural situation, having been a farmer for the 67 years of my life in addition to having been awarded a first-class advanced certificate in scientific agriculture, and one of exactly the same rating in geology from a noted agricultural university in Wales before coming to this country.

If you are so very much interested in debating, may I suggest that you call at the office of Fred Wallace in Lincoln and I'm sure he'll be glad to answer a few of your questions. However I don't believe you have the courage to attempt to debate in person, but would rather publish your arguments in your little newspaper in order that you will not need to face an argument. If you intend to direct more arguments to Henry Claude, and Freddie, may I suggest that you select a topic on which you are a little better qualified to speak. Also, if you wish to carry on your debates in a manner which is fair to both sides you might print in your newspaper a part of this letter, at least the direct answers to your questions.

Before closing I wish to state that I believe if you will review the above statements in an unbiased state of mind that you must agree that your arguments have been answered quite conclusively.

Sincerely yours,

LEWIS EVANS.

P. S.—If you fail to print the answers to your arguments in your paper, some of my neighboring farmers and myself shall be obliged to have the entire letter printed in some other newspaper of the county.

[From the Elgin (Nebr.) Review of April 3, 1941]

WE LOSE OUR HIDE

I'm not wise enough to be an owl. What's more, I've never seen a boiled owl, although I've heard and read about 'em. Anyway, if you want to know how we imagine owls are boiled, turn to next week's Review and read a letter which a reader over Tilden way has addressed to us.

Mr. Lewis Evans, objecting to some of our observations of the farm program, "takes the hide off" the editor as he tosses a torrent of slashing, tearing, battering, bruising words at us. All sizes and shapes of words are used. There are 10, 25, and even 50 centers brought into play as well as some that are tinted with the acid of sarcasm. It's a real Roman holiday, and the blood, our blood, runs right freely.

Mr. Evans does a good job, and we have written and thanked him for the letter which

we are pleased to have. We have told him that we are always glad to have communications from our readers, and that, space permitting, we will print as much as possible of them. Maybe when you read next week's offering you will be inspired to dip your pen in poison and "have to." If so, more power to you.

In our letter to Mr. Evans we said in part: "While I have never been actively engaged in farming, except for brief periods of work as a farm laborer, yet, being a native Nebraskan and having spent my entire lifetime in the State, I am fully conscious of the fact that the welfare of all of us is utterly dependent upon the success of those engaged in agriculture. I am interested, as I assume you are, in anything that will promote Nebraska agriculture. My interest transcends that of any partisan or organization tie." With that spirit in mind, I will try to find time to prepare some answers for Mr. Evans' rather lengthy discourse.

[From the Elgin (Nebr.) Review of April 24, 1941]

THE EDITOR REPLIES TO MR. EVANS—CONTINUES DISCUSSION OF THE FARM PROBLEM

APRIL 24, 1941.

Mr. LEWIS EVANS,
Tilden, Nebr.

DEAR MR. EVANS: As I stated in my letter of acknowledgment, it was mighty fine to hear from you and it has been a pleasure to print your letter in the Review. I hope that our readers found it interesting and that, should the occasion arise, we may have the privilege of further communications from you.

It seems unfortunate to me that in discussing the Butler corn-lending plan you did not limit your comments strictly to its merits but found it necessary to question Senator BUTLER'S integrity and sincerity. He is the owner and operator of two large farms in Furnas County, is a triple-A cooperator, doesn't have one penny in the grain business, and since entering the United States Senate has been making a valiant fight to get the corn-lending plan adopted and has on several occasions risen to the defense of the American farmer when administration forces have attempted to employ the American taxpayers' (farmers included) money to bring South American farm products into the United States in competition with the products of Nebraska producers. Should you be interested, I would refer you to the CONGRESSIONAL RECORD for March 7, 20, and 31. I am certain that Senator BUTLER would be pleased to correspond with you regarding any phases of the agricultural program and to send you copies of his speeches in behalf of the Nebraska farmer.

The Butler plan was a result of the 7 terrible years of drought and attendant human suffering that have prevailed over a large portion of our State. For several years my neighbors south of Elgin have seen fiery blasts destroy their vegetation, watched their cattle starve or be trucked away to the market at great loss, while their families have gone without adequate clothing, medical and dental services and, in some cases, without proper food. Last summer the area from Elgin to the Kansas line, from Saline County to Colorado, was again a picture of desolation, possibly the worst in several unspeakable bad years. Men were at their wit's end, many gave up farming in August, merchants despaired of the future, thousands of our fellow Nebraskans cried for help. Seeing this, viewing the plight of his farm neighbors and at the same time conscious of the vast mountains of corn held by the Government under its so-called ever normal granary program, HUGH BUTLER, to his eternal credit, suggested the lending of corn to his fellow citizens (our neighbors) in order that they might keep on the farm the milk cows, chickens, cattle, and hogs that would furnish them with food and some little cash income to tide them over the winter. Instantly thousands of Nebraska farmers, business and professional men wrote praising the plan and hailing it as a lifesaver.

The proposal was made in early August 1940, and had it been put into effect at once would have done untold good. Many farmers could have stayed on their farms, Nebraska cattle and hogs wouldn't have been further reduced to pitifully low levels and thousands of Nebraska farmers would have been in a position to benefit by the cattle prices that have prevailed and the new hog and poultry prices that the Government is establishing. Even put into effect now, the proposal would still have great value.

In November 1939 the North Central Division of the A. A. A., a division of the Department of Agriculture, put out a pamphlet, N. C. R. Leaflet 401, entitled "Here's Our Farm Program for 1940," in which it stated: "Farmers can look upon the record corn carry-over in 1939 as an accomplishment in building an ever-normal granary. If foreign demand requires larger supplies or if crop failure comes, the ever-normal granary will meet the situation well."

Having read this promise, knowing the great need that existed in the State, and viewing the numberless shiny tin cribs into which corn had been poured, it seemed unbelievable that our Government would permit people living within the very shadows of those cribs to be driven off their farms for the lack of corn, corn which Uncle Sam had in tremendous abundance.

You suggest that the adoption of the plan would "depress" the market and possibly "undermine" the farm program. I am unable to accept your reasoning and for your information quote here the opinion of a long-time dealer in grains, who states that it could have no such effect:

"I do not see any possible way in which this plan could be construed as bearish or depressing on the corn price. If it is any factor at all in establishing values, it would be on the 'up' side, as it is a means of providing corn to the farmer feeder who is unable to purchase corn under present conditions. Therefore it should increase the consumption of corn and not only create a better demand at this time but also enable the distressed farmer to hold on to his livestock until such time as he became a producer, and at that time he would be in a position to consume his products rather than to throw it on the market.

"Since the Butler plan is a loan plan and not a gift, it is my opinion that it would be of very little effect as a market factor and if any effects at all were visible it should be toward strengthening corn prices. I believe this would be the conclusion of any economist."

You also ask how much corn would be required to carry out the plan in Nebraska and if it is adopted here whether it should not be extended to other drought areas in the Nation. Again I have turned to experienced farmers and country elevator men and they estimate that 5,000,000 bushels would have been ample to care for the Nebraska requirements. In 1933, Antelope County produced more corn than they suggest was needed. The plan should have been extended to all parts of the country suffering drought. Good neighborliness at home might be shocking in some circles but still seems sound to me. Anxiety for our own unfortunate would seem as commendable as chasing to the ends of the earth to distribute American charity.

In a world in which poverty abounds, in an America in which Milo Perkins, Chief of the Surplus Marketing Administration, says that thousands of American boys are rejected for military service because their health has been undermined "living on an average of a nickel a meal at retail prices," in a world where needs are endless, in such a world it is impossible for me to understand the doctrine of scarcity production and I'm in agreement with you in applauding Henry Wallace's new role of expanding production through hybrid corn. Here's a wish for more power to him. May he produce for health, defense, prosperity, and cut out the nonsense of killing little pigs, plowing under the fruits of nature and, in general, trying to make us wealthier by making us poorer. The change is wonderful and I'm willing to accept it even if I can't understand a policy of paying people to take acres out of production while encouraging the use of hybrids that increase total production faster than acreage reductions decrease it.

An America back at work, an America in which all have a purchasing power great enough at least to have enough to eat would go a long way to solve many of the farmer's most perplexing problems. It seems regrettable that those in authority for the past several years haven't concentrated on this, the main problem, rather than looking for shortcuts.

Your statements with reference to the production of corn in 12 Southern States corresponds closely with those I have before me. Fourteen Southern States—Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Louisiana, Oklahoma, Texas, New Mexico, Arizona, and Arkansas—increased their corn acreage from 27.9 percent of the national acreage in the years 1924–33 to 32.9 percent of the national acreage in the period 1934–40. The increase in corn production in bushels in the same period was from 17.5 percent of the national total to 20.6 percent.

One observer suggests that the impact of the Southern States' increased acreage won't be felt until they go for hybrids. He feels that they will increase their production as they gain more experience with corn and also points out that there has been a slight increase in cattle and hog production in the South. I am not familiar with possibilities of the South in the corn, hog, and cattle field, but hesitate to look with approval on triple-A encouragement of these people to enter what we have been pleased to feel was our productive province. Things have been tough enough for us as it is. Also, here's another instance of paying one group to take acres out of production while permitting another group to enter the field.

You write that my statement that the Government sold 25,000,000 bushels of corn to Great Britain at a price about half of that our needy farmers would have had to pay is untrue and go on to say the corn was "delivered f. o. b. Montreal, Canada, at 50 cents per bushel." Now we are getting some place. We first learned of this transaction through a trade journal. Later mention was made in the daily press. To verify the press reports I wired several Washington sources only to learn that the Commodity Credit Corporation refused to make public the details of the sale. Now for the first time I get definite information as to the price and point of delivery. May I inquire as to your source of information? What department or person provided you with it, and under what date? I should like to hear from you immediately on this point. You state that the corn was delivered f. o. b. Montreal. That seems our Government paid the freight. The freight item is of great importance in this discussion. If the corn originated in Iowa, as is my impression, the freight charges by rail to Chicago and the water rates from there to Montreal could easily amount to enough to mean that the Government sold the corn for around 30 cents per bushel. If the corn went by rail all or more of the way than to Chicago, the charges would, of course, mount. The C. C. C. said last summer that it would not sell corn for less than the loan price of 61 cents plus a year's storage of 7 cents, plus, as I recall, certain interest charges, which means that their price to Nebraskans last summer, provided they would sell at all, was 68 cents per bushel

plus. Accordingly, if the Government paid the freight to Montreal, as you state, you will soon see that my one-half-price statement becomes correct.

But irrespective of all that, even at 50 cents, the corn was sold at less than Nebraskans could buy it. And I'll confess my inability to understand the motives that would prompt our Government to sell corn cheaper to Great Britain than it would to Nebraskans who needed it desperately to feed a few chickens, some pigs, and a couple of milk cows in order to get through the approaching winter. If that be treason I'm guilty and proud of it. Twenty-five million bushels, five times the corn needs to give relief in Nebraska, went to Great Britain at a premium.

By the way, Government agencies have been peddling free oranges, potatoes, grapefruit, and a lot of other commodities about the country and I assume properly so. Why not corn? Is there something peculiarly different about it or about the need of drouth-stricken farmers for it? If so, what? The Butler plan didn't contemplate that it be free but that corn be repaid in kind. Which also recalls your query as to whether the farmers would repay their loans. You wonder if there is any "absolute guarantee that the corn will ever be repaid"? I don't know of anything in this world that is absolute with the possible exceptions of taxes, death, and New Deal deficits but of this I am certain, Nebraska farmers are just as honest as they make them and there are statistics that can be offered in proof if you insist.

I think the farm program has many fine features. I feel that it has done much good for Nebraska. I want to see it continued and strengthened. I should like to see it and the National Government more genuinely interested in American agriculture and not so eager to sacrifice home interests to those abroad. I have hope that some progress is being made.

The triple-A set-up should be established upon a different basis in Nebraska and several of her neighboring States. Fact of the matter is that Nebraska, Kansas, and the two Dakotas are the only States in the Union that have practiced scarcity production. Nature forced it upon them and in a big way. Triple-A figures show that in Nebraska our farm cash income purchasing power dropped nearly one-half in 10 years—to 55 percent in 1938 and 65 percent in 1939. Ours was the greatest loss in the Nation. While that was the situation here, some States made gains as high as 32 percent. We contend that farm benefit payments should be increased in hard-hit areas like Nebraska and reduced in States up to or above normal in purchasing power of farm cash income.

Your statement that the farm set-up is definitely not a relief program might be abruptly challenged by certain heavy Federal taxpayers, were they to hear it. They would wonder just what term you would apply to it, inasmuch as in 1939 it withdrew about $1,000,000,000 from the Treasury. Certainly it is a process of taking from one part of our society and giving it to another. Personally, I am in favor of it, regardless. For 150 years we have subsidized American industry through a system of protective tariffs. The farmer has been paying tribute and would seem at this late date to be entitled to substantial consideration.

It brings no joy to me to note that after 8 years the present farm program has not been able to reduce production in the United States, raise prices, and thus achieve parity (this was its announced program for farm prosperity), and today the American farmer enjoys somewhere in the neighborhood of 80 percent of parity, which means that in this respect he is in no better position than he was back in 1930. Maybe this condition accounts for HENRY'S transfer to the South American scene.

I gain the impression from your letter that the farm program is not subject to criticism, particularly from one not a farmer. All of us in Nebraska are dependent upon the farm and interested in any movement to improve farming conditions. More than that, many of our farm problems are economic and political in nature, and as citizens and taxpayers we would all seem to have a legitimate stake in them and every reason to enter into full discussion.

That farmers are not unanimous concerning the present program seems apparent when one reads the comments of Edward A. O'Neal, southern president of the American Farm Bureau Federation, who, in a recent Des Moines, Iowa, speech, insisted that steps be taken at once to check a trend toward excessive bureaucracy in A. A. A. administration. He was quoted as being afraid that the program would become so costly to administer and would be so tangled in red tape that it would lose its present widespread support among the farmers. I also recall that last summer a Nebraska farm leader was quoted in the daily press as saying, "We have no quarrel with farmers who accept benefit payments. In many cases they have been lifesavers. But we should be working for a real cure that will make compensating hand-outs unnecessary." These statements are encouraging to me, because they indicate that our farm leaders are studying and searching for ways in which to improve our farm program rather than blindly accepting the status quo; maybe I should say HENRY quo.

Unquestionably the farm problem is a difficult one. Unemployment, changes in food demands, scientific advances in farming, the loss of foreign markets, dislocations resulting from the overexpansion during World War No. 1, disparity between the prices paid for goods bought and those sold by the farmer, drought, and many other factors have conspired against the farmer. Solution of our agricultural problems will require our best thought and friendly cooperation.

It has been suggested to me that either you or your son is or has been in the employ of the triple A. I wonder if such a close association might exercise some influence in your attitude toward the matters under discussion.

With reference to your invitation for me to meet and talk with Fred Wallace, may I suggest that I have heard from several sources that he is a splendid chap and that nothing would please me more than to meet and visit with him. As a matter of fact, I am certain that HENRY WALLACE is an A-1 fellow also. All of us have much in common. I rather suspect that our field of agreement would be some 90 to 95 percent with our area of disagreement accordingly rather limited.

And now, even though the subject has just been nicely opened, I must end this letter. In closing, may I say that I'd still enjoy that opportunity to debate.

With kindest regards,

Very sincerely yours,

VAL PETERSON,
Editor, Elgin Review.

[From the Elgin (Nebr.) Review of April 24, 1941]

AS A FARMER SEES IT

(By Jim Squire)

Wanted to do a bit of carpenter work and my saws being in typical farmer condition I decided they needed to visit Mr. Skinner. Took them to his shop and as he tuned them up I talked with him a bit. Sez he, "I enjoy your column in the paper, but I don't always agree with you."

Sez I, "It will be a terrible thing if the time ever comes when we all agree. Life will be pretty dumb and dead and progress will stop."

"Just the way I feel about it," said Mr. Skinner. "I can't learn anything from the man I agree with. The only place I can learn is from the man who knows something I don't or thinks differently than I do."

Which philosophy I should like to call to Mr. Evans' attention. He writes rather venomously in last week's Review concerning Val Peterson's criticism of the A. A. A.'s refusal to loan sealed corn to needy farmers. And judging by last fall's vote, it wasn't just "some small town country editor" who thought things weren't being handled right.

And apparently Peterson and Butler were ahead of Wallace and Wallace in their thinking, anyway. Received a letter yesterday from the A. A. A. Quoting parts of it, "Every farmer should understand that the new food plan and the resulting revisions in A. A. A. are for but one purpose—to convert corn into concentrated foods as fast as possible. One of the immediate ways we can do this is by feeding hogs to heavier weights, increasing dairy production by feeding more grain, and stepping up egg production and farm flocks as fast as possible. For the future we must increase the farrowing of hogs, enlarge our dairy herds, and continue to increase the size of poultry flocks.

"Now is the time to use part of the abundant supply of corn we have in the ever-normal granary."

As for Peterson's salary, you watch him awhile and you'll say he earns it.

Since it seems to be customary to give scholastic attainments, will say I am a graduate of Park Center High School, which has 10 grades.

Also, since when (in this country at least) has it become either necessary or advisable for editors to talk only about their own business? Do people want editorials about linotypes and unpaid subscriptions only? Cannot matters of public policy be discussed? Or is this Russia or Germany now? At least one national farm organization has insisted that the A. A. A. be taken clear out of politics and the administration has consistently refused to do this. Remember those "farm dinners" a year ago in March, with WALLACE and Roosevelt as the featured speakers? Now see who is Vice President.

This column cannot be accused of being anti-A. A. A., since it has received much favorable publicity herein, and I don't wish to see it killed off by unwise or inflexible management. Being above criticism or unable to make use of it is that sort of management. So I am glad to see the A. A. A. reverse itself on this sealed-corn business. True, it leaves Mr. Evans in a bad hole, but if he can take it like he can give it he'll be all right.

P. S. Dear Fred and Val: If I do not see this in your miserable small-town paper this week, I shall get me a rehabilitation loan and start a daily paper in Elgin, with a Sunday comic section containing forty-leven pages. So print it or else.

Hitler's Economic Blueprint of Europe

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

ARTICLE BY JOHN CUDAHY

Mr. RANKIN of Mississippi. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an article written by Mr. John Cudahy, American Minister to Ireland,

1937–38, and Ambassador to Belgium, 1939–40, on the subject of Hitler's Economic Blueprint of Europe.

This article by Mr. Cudahy seems to me to be rather impartial, and it goes into the economic and financial phases of European conditions.

The matter referred to follows:

BERLIN, April 26.—Before leaving home many people spoke to me about the consequences for business and trade in Europe if Germany dominated the Continent after the war.

No one seemed to have any definite ideas on the subject. Speculations varied from predictions of dire economic calamity, the overwhelming majority view, to the belief of a very few that German supremacy might possibly mean a long era of industrial expansion and prosperity, such as in the latter nineteenth century, after the Franco-Prussian War.

My editors asked me to investigate conditions first-hand, to consult with financial and business leaders in Germany, and to talk with officials who are directing the economic policy of the Third Reich and may be charged with the same responsibility if and when peace comes to Europe. I was commissioned, as an inquiring reporter, to get a German economic blueprint. This I have attempted.

I have interviewed businessmen, financiers, and the men who determine the fiscal and commercial policies of the German Government, and have tried to tell of these interviews just as faithfully and objectively as I could. As a reporter, I have no right to pass upon the doctrines enunciated by Nazi leaders, and I have made no attempt to do so.

NATION BANKRUPT IN 1933

Upon the inauguration of the National Socialist government in January 1933 the financial assets of the German Government consisted of $25,000,000 in gold and a meager supply of foreign exchange. Germany owed billions abroad. The truth was that Germany, with 7,000,000 idle, was bankrupt.

Dr. Hjalmar Horace Greeley Schacht rushed to the rescue by creating a system of pegged, fiat money. I remember my first meeting with the finance minister in 1933 and I blush to recall how, schooled in academic economic principles, I assured Dr. Schacht that any fiat currency was bound to germinate self-destruction. But the fiat money system worked in Germany regardless of what textbooks said.

At the outset, Dr. Schacht made a distinction between the internal function of this money and its use as foreign exchange. His controlled mark had no gold or silver to sustain it, but instead was based on production of German industry and agriculture.

Seven million unemployed were put to work in industry, on roads, and public works. A year later came the rearmament program which, according to Hitler's statement, represented an investment of over $22,000,000,000 at the outset of the war. The consequence of this great employment was an increase of national income from 46,500,000,000 reichsmarks in 1933 to 59,105,000,000 in 1939. Money ran from hand-to-hand with a velocity which made unnecessary added volume so that circulation of 5,722,000,000 reichsmarks in 1933 was augmented only to 7,774,000,000 reichsmarks in 1937. There is, however, a striking increase and an evidence of war inflation by December 31, 1939, in the circulation figures of 14,502,000,000.

CREDITS WERE FROZEN

Under the Schacht system, all went well enough as far as the internal aspect of the currency was concerned but, in foreign trade, restraints on purchasing power and prices meant nothing. Beyond the borders of Germany, the reichsmark had no purchasing power and very tenuous credit or exchange value.

Therefore, Swiss creditors decided to freeze a credit in the Central Bank at Zurich against German debtors. This was the origin of blocked credits, controlled currency, and foreign bilateral-barter-trade agreements. France, Great Britain, Belgium, Norway, and Sweden immediately followed the example of Switzerland, and foreign exchange dealing with Germany became a thing of the past. Denied any other means of payments in foreign trade, Germany was forced to balance exports against imports.

The Rumanian bilateral trading agreement, concluded in March 1939, and described by its author as the "economic clinic for a sick continent," is typical of Germany's balancing agreements to meet its deficiency in foreign exchange. This provides for an exchange of German manufactured goods for Rumanian raw materials, i. e., the same business arrangement which once made the Reich the greatest industrial nation of Europe.

Similar agreements have been made with Hungary and Bulgaria, which, according to German planners interviewed, assure Germany adequate food supplies for an indefinite time. The Danubian Valley is the granary of Europe, they say, and the natural complement of Germany's industrial economy.

REICH'S WIDE ORBIT

Bilateral trading agreements also have been negotiated and are in operation with Spain, Switzerland, Italy, and Russia. With Sweden under German control and with Norway, Belgium, industrial France, Denmark, Czechoslovakia, and Poland occupied by German military forces, the realities are that there is little space in Europe which is not within the gross raum, or economic orbit, of the Third Reich.

The author of the agreement with Russia gave me solemn assurance that deliveries of pig iron, wheat, phosphate, oil, and manganese had been entirely satisfactory and in accordance with the terms of the contract, despite difficulties in making transfers from Russian freight cars to Polish narrow gage tracks. I got a shock when I thought of our South and the 1,000,000 bales of cotton which, he assured me, had been brought during the last year from Russia to German textile mills.

Under the influence of these bilateral trading agreements, the foreign commerce of Germany in Europe has grown so fast that it is now equal in volume to what it was before this war, despite the complete loss of British, North American, and South American markets, I was told.

Beyond Europe, I was told by Reich experts, South America is another natural complement for the expansion of industrialized Germany in the field of foreign trade. Far more than Africa—for it will be many years before the primitive people of Africa can develop a demand for the output of German industry—South America has a growing need for the chemicals, electro-technical machinery, glass, porcelain, etc., which Germany can turn out so well.

As these demands of the South American continent expand under the influence of the modern economic era, German engineers with German equipment will dig tunnels, level hills and lay out roads and routes of transport, while German machinery will be installed in South America's growing industrial plant.

Does this mean expulsion of American trade in South America? The German experts I interviewed insisted that it did not. They said that American articles now sold in South American markets were the typical output of American mass production in which the United States has an unusual supremacy—passenger automobiles, trucks, electrical refrigerators, radios, and business machines. I was told the presence of these American products did not mean cutthroat competition with such imports as dyes, cutlery, textiles, etc., which are German specialties.

Statistics demonstrated that German exports in South America, while they have increased during latter years, were now only on the level reached by Germany prior to the Great War. Typical of German-American trade rivalry in South America, they said, was Brazil, where American goods were sold in greater volume than German, with the prospect that this ratio would continue indefinitely.

But the most persuasive argument offered for increased German participation in South American trade was the prospect of the same broad development of an expanding economy from increased purchasing power which was envisaged by the bilateral trading agreements in Europe. The sale of wool, cotton, meat, copper, hides, and other South American raw materials to Germany by using the proceeds of German imports will mean a South American balance with which to buy North American goods in greater volume, I was assured, and thus will all be benefited—Germany, South America, and the United States.

COOPERATION BASIS

The basis of future trade relationships between Germany and the United States must be founded on cooperation, I was told. The Germans were frank in their statements that they saw no relevance between trade and political philosophy. Business was business, based on reciprocal needs, and it was, from their viewpoint, no more logical for people of different political faiths to refuse to recognize each other commercially than for people of different religions to shun one another's society.

It is true, they admitted, that Germany has no gold to offer for its purchases from America, but gold has ceased to be essential. International trade, they insist, in the last analysis always has had its foundation in reciprocity, and the history of dealings between Germany and the United States is convincing proof that these two economies should supplement each other.

From 1890 until 1905 American markets took an enormous volume of German goods until this trade was abruptly curtailed by a prohibitive American tariff policy. But even after that there was considerable trade with a balance favorable to America. German capital invested abroad was in large measure placed at the disposal of American businessmen for development of American enterprise before the World War, they said, and Germany has great need for American agricultural produce such as cotton, lard, tobacco, vegetable oils, and commercial metals.

For these raw materials, exports of dyes, cutlery, electro-technical machinery, and other scientific equipment for which Germany, by long tradition, has acquired a special aptitude, would be the exchange.

WAGE SCALE DIFFERENCES

I confronted the Germans with the great spread between the living standard of the American workman and that prevailing in Germany and the difference in wage scales. In Germany, ordinary labor receives the equivalent of $10 a week and the most skilled craftsman gets only $25 weekly. They themselves stressed the conclusive significance of labor in industry; by their own figures, manufactured output was 91 percent labor and 9 percent raw materials. How then, I asked, could American manufacturers survive inundation of world markets by German industry?

The answer was that one should not judge by present condition, but should rather look to the normal times which prevailed before the World War.

At that time, they said, German wages were only 30 percent lower than those paid in the United States and, with deductions for German social services, there was very little difference between the rates of compensation for German and American labor. The present government in Germany has, as

its primary purpose, improving the lot of the common man, they said, and there was no question but that, after this war, the standard of living for labor would be greatly raised.

This was one of the chief concerns of government in peacetime, I was told by officials of the Ministry of Labor, and the standard of living for the man who worked with his hands in Germany in a better future would be greatly improved. Already measures were in progress to increase wages and these would continue to advance to higher and higher levels.

The economic blueprint spread out by the Germans for my inspection divides Europe into areas of industry and natural raw materials.

The Baltic States are grouped together, as are the Scandinavian countries. France—with two aspects, Mediterranean and Atlantic—is another unit. Spain, Yugoslavia and Italy, with the countries of southeastern Europe, are others.

The men with whom I conferred were economists, men of business and financiers, so no attempt was made to explore the political phase of the future Europe. Yet all of them expressed the conviction that the balance of power doctrine in Europe was inherently vicious and responsible for the recurrent wars which have afflicted the continent during the last 300 years.

Peace and stability, they assured me, could never be maintained by balancing nation against nation. The lesson of history was eloquent with that tragic truth. What was needed in Europe was a German policeman to assert authority and give direction to forces of permanent, tried, authentic strength. All consulted shied from the word hegemony, but they did believe that some constructive power of guidance and control was necessary and that such guidance and control was naturally German.

TRADE BARRIERS EXPUNGED

The picture they drew of the future was one in which suicidal arbitrary barriers to trade were expunged and prohibitive tariffs, quotas, trade controls, and monetary restrictions relegated to memory. On this economic map, the continent would be partitioned into spheres of raw materials and industry. Trade would be free, but not with the freedom of unbridled license. All would be planned and regulated by law, the law of supply and demand of production and consumption, like every well-ordered organization.

"It is all so easy," they insist. "All that is needed is intelligent supervision of distribution." The argument runs as follows: There is great plenty on this earth. Unlimited supplies of raw materials exist in some quarters and unsounded resources for creation of manufactured articles in others. The thing is to balance the two. Then you will have wealth and will raise the standard of all to levels compatible with the progress of civilization.

Modern economy, they declare, is one of expansion. Modern definition of economy is not to economize in the sense of saving, but to distribute purchasing power. According to this theory, every experience since the last war demonstrates that spending, not saving, is at present the source of prosperity. They come back time and again to the driving impulse of capitalizing demand and describe, with great detail, the full amplification of what they mean.

INTERNATIONAL DIVISION OF LABOR

When I raised the question of money, they disposed of that with a light gesture, pointing to the monetary triumph of Germany, where men were put to work and money was issued on the production of their anticipated effort. What Germany has done at home, they say, will be accomplished by German bilateral trade agreements throughout Europe and in this new economy there will be an international division of labor and economic grouping, each area producing in accordance with its capacity and all complementing each other with reciprocal trade relationships under the direction of Germany, with Berlin as the central clearing house.

They describe an economic world in four major blocks: Germany, the United States, British Empire, and bracketed together, Italy and Japan. They do not mention Russia and consider most of Asia, Africa, and South America as fields for development which will require great effort and large expenditure of capital before they can be considered part of the modern economic area. They recognize that within such grouping there exist sharp cleavages in government and political philosophy, but see no reason why this should be a hindrance to harmonious commercial relationship.

The complicated structure of modern economic organization has made each part of the world dependent upon the other for fulfillment, they assert. Europe can live without America, as America can live without Europe, but such mutual isolation will cause hardship to both continents and greater hardship in America with its great surplus of raw materials.

GREAT DOMESTIC PROGRAM

At the conclusion of this war Germany alone plans on spending more than $6,000,000,000 in a great domestic program for building workingmen's houses, reequipment of transportation systems, modernizing of rural villages and farm dwellings, and what Germany needs, the Nazis say, is an example of requirements for all Europe. Materials and labor necessary for reconstruction after this war are enormous, and this is where, they claim, the United States can play a heroic, constructive part for the rehabilitation of Europe and the world.

America is keeping 80 percent of the world's gold, and fabulous riches lie idle in America begging for employment. All this wealth, say the Nazi economists, can be used for the rehabilitation of Europe on the same sound terms with which the wealth of Europe created the wealth of America, not in ill-advised loans like those of the frenzied twenties, but in a spirit of sound business, as a capital investment. All this assumes that Germany will win, but all of the bankers, businessmen, and economic experts with whom I talked appeared to have no question that the dominant position of Germany on the Continent was unquestionable and would remain so.

When I asked what part gold would play in this post-war economy, I was answered by the question: How can Germany, with only $25,000,000 of yellow metal, enter the markets of the world on the gold standard? And before I could attempt an answer, I was asked further to define the present-day monetary function of gold. I explained, in my effort to find a responsive reply to this second query, that the experts of our Treasury Department have been grappling with the problem of our piling up surplus gold supplies for years, and if they have found a solution they have not yet announced it.

APPEALS TO HISTORICAL ARGUMENT

Somewhat defensively I appealed to the historical argument and described how, ever since ancient times in the Orient and among the Greeks, gold has served as the medium of exchange in commercial transactions and no adequate substitute has yet been found. As a measure of valuing possessions, gold has immutable, intrinsic value, is precious, limited in supply, and has always been the object of covetous imagination—qualities essential for a universal gage of wealth.

All this sounded pretty rhetorical when the head of the Belgian commission, passing through Berlin on its return to Brussels, told me how gold and American dollars had been spurned in Moscow. The commission went to Russia 2 months ago and ever since then has been engaged in discouraging negotiations concerning food supplies for famishing Belgium. Belgium has deposited in New York vaults more than $100,000,000 and yet, as this is written, Belgian children are fainting from hunger.

The Belgians went to Moscow confident that American gold was the most popular inanimate object in the world, and they had not the slightest doubt the Russians would avidly accept it for Ukrainian wheat. But they soon found out the Russians were not interested in gold under any circumstances. Completely jolted, they urged that in America gold was still considered of value and could buy things. The Soviets replied that they had gold enough of their own to use on Americans. They were producers of gold themselves, they said, and what they wanted from Belgium were things they did not produce at home, such as more useful metals, machines, cranes, and electrical equipment.

HAD TO GIVE ZINC

So matters stood paralyzed, with the Belgian people begging for bread and the money of the commission begging for them; but no gold argument or appeal could wangle a single grain of wheat from the hard-boiled Bolsheviks. In the end a saddened, disillusioned commission came away with only a promise of 15 days' wheat supplies for which they have given away all the available zinc to be found in Belgium.

It will be 3 weeks before these lean rations reach the empty Belgian mills, and nothing further will follow until the deliveries of machinery arrive in Russia. It takes 15 months to manufacture a crane according to Soviet specifications, and to finish the machines and electrical equipment demanded by this barter-bargain is likewise a long and complicated process. So the prospect for 8,000,000 hunger-languishing Belgians is not a happy one.

This spectacle of destitute Belgium and its bulging purse of gold is regarded by the Germans as a demonstration of the penury of standardized money. The professorial group in Government circles here claims that the test of any money is its buying capacity, and that, judged by this test, the days of gold are finished.

These economic evolutionists offer as an ideal monetary system the Schacht bilateral trading agreements to be expanded into a multilateral system, with the reichsmark as the common denominator of international currency. Berlin would be the financial capital of Europe and the clearinghouse for all international transaction, where debit or credit differences would be liquidated by the Reichsmark instead of gold, with Germany acting as controller.

Opposed to this theoretical view are the majority of conservative men in the National Socialist Party who have had practical business training and whose convictions have been welded in the forge of competitive experience. These men believe that gold is still important in international trade and can perform an important function, although they say it can never assume the controlling role it played before 1918. Its significance, they say, is as a stabilizer of currencies—the basis for settlement of debit and credit differences—but they do not believe that gold will ever again serve as the broad issue basis for currency.

In the same breath they are frank in saying they can think of no substitute for gold in international credit operations. The barter foundation of German bilateral trade agreements can have no capacity for expansion, they concede, but must be limited to specific transactions like the trade of German agricultural implements for the oil of Rumania. In such a deal there can be no purchase without an offsetting sale—an export counterbal-

ancing an import. Therefore, no element of the speculative future can be admitted—the transaction does not of its nature permit the doing of business except by matching goods.

This is a weakness and limitation of all barter arrangements which business-trained men in Germany frankly recognize. They agree that the foreign trade they have perfected is doing business without money and admit that without international money there exists no opportunity for insurance against foreign currency appreciation, such as the hedging operations of the gold standard days.

Then, on foreign exchange markets the value of the Reichsmark was every day registered in the currency of every other country and the German merchant could buy New York cotton 6 months ahead, protecting himself against the rise of American dollars in terms of German money before the delivery date, and likewise safeguarding against the decline of the Reichsmark compared with the dollar.

The United States, they point out, is now the holder of 80 percent of the world's supply, is still accumulating, and soon there will be little if any gold outside of the American Treasury vaults—a situation which proclaims its own futility. How, they demand, can any other country, even Britain, participate in world trade if gold is indispensable and we hold all the cards?

SEE TWO COURSES OPEN

There are, they say, only two logical courses to follow in order to liberate our imprisoned gold and make it circulate in the arteries of world commerce. One method is for us to import more goods than we send beyond our borders and pay for such essential imports in gold. For even the United States has not an economy of autarchy or a complete self-sufficiency and must shop abroad for such necessaries as tea, coffee, manganese, tin, and rubber.

Germany has trade relations with countries which ship these commodities to American markets, and the German suggestion is that the United States in such countries be substituted as a debtor to Germany. They say that in the East Indies the United States buys tin and rubber, and Germany sells machinery. An American importer of tin and rubber, instead of paying his vendor in the East Indies, would pay a German firm which has shipped machinery, and in execution of such triangular arrangements the East Indian dealer would get German machinery, the American would get tin and rubber, and the German would get the dollars which he could exchange for gold. By this means a large supply of our stagnant, useless metal would become useful, unshackled, and set free to work in the markets of the world, to expand trade and go forth on a mission of peace in dispensing prosperity and good will toward benefiting mankind.

Another proposal was that we take our perplexing treasure and put it to work in the reconstruction of war-wasted Europe, where the need will be vast not only for consumer goods but in rebuilding transportation, bridges, harbors, canals, demolished factories, dwellings, and what not. I was candid in saying that I thought this prospect would be met by unreceptive silence among my countrymen, who were warned rather than encouraged by their investment experience in Europe after the last war.

The reply to this was that no one was hitting at a financial saturnalia such as that which occurred in the half decade before 1930, when American bankers, seemingly oblivious of their own security and their debtor's capacity to repay, deluged Germany with their begging billions. What was suggested was a scheme of investment which could be scrutinized with the searchingness American insurance companies use on any commitment of funds for their policyholders.

After this war, which all in Government positions professed to believe would end in a few months, a balance sheet of Europe could, they were certain, stand up to critical inventory which would reveal potential possibilities for American capital with a prospect of profit even greater than that realized by European investors in the half century before the last war, when this continent was the creditor of the western world.

Construction Costs at Camp Edwards, Mass.

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. ENGEL. Mr. Speaker, Camp Edwards is situated on Cape Cod a short distance from the city of Falmouth, Mass. This was a fixed-fee job. The original War Department estimate for Camp Edwards was $7,240,462. On December 31 the War Department estimated that it would cost $29,000,967. Estimates made by the contractor on March 14, 1941, state that the total cost for the work authorized to that date would be $28,560,967 and that the total cost will exceed $29,000,000. I spoke at length on this project before the House on January 16, 1941, in making a preliminary report. My remarks will be found on page 166 and succeeding pages of the CONGRESSIONAL RECORD for that date. The statements at that time were based upon the information furnished me by the contractor and by the War Department. Naturally, there would be some changes in those estimates and figures now that the job is practically completed. In order to make a complete report I will have to repeat some of the statements I made at that time giving the actual figures, whereas the figures submitted to me then were based on estimates.

LAND ACQUISITION

Camp Edwards was a National Guard camp and consists of approximately 19,200 acres of land, all of which was turned over to the Federal Government by the State of Massachusetts for a nominal consideration.

SITE

I visited this camp on March 15, 1941. The site is level and, in my judgment, a good site as far as location, soil conditions, drainage, and other elements are concerned which go to make up a good cantonment site. It was very muddy the day I was there and the men were drilling in mud. My first impression was that this was a faulty condition of the soil or drainage. A closer examination, however, revealed the fact that we had an unusual condition which one finds in that area and on that type of soil during a short period in the spring of the year. The ground had frozen to some depth. When the thaw came and the top portion of the soil thawed the water had no way of draining until all the soil had thawed. As soon as the frost was out of the ground the natural drainage through the sand soil eliminated the wet conditions. The camp is located in a rectangular form in such a way as to occupy the smallest space practicable, reducing the required length of utility lines.

CAMP CAPACITY

This camp originally provided for a total capacity of 26,762 officers and men. Subsequent construction has increased the size of the camp to a capacity of 33,660 officers and men, or an increase of approximately 6,000, or 22 percent. The total number of buildings erected is 1,385, including 471 63-man barracks and 169 170-man mess halls.

CONTRACTOR

The Walsh Construction Co., incorporated under the laws of the State of Iowa, was the contractor on this project. An examination of this contractor's qualifications shows that they have had 41 years of experience in construction work under practically the same management. Among the larger projects which they took part in was the construction of spillway tunnels at Fort Peck, Mont., the Grand Coulee Dam, and the New York City-Delaware Aqueduct. They gave me a list of their construction projects, including various public works for cities, States, and Federal Government aggregating a total of some $83,000,000. They also furnished me a list of railroad work of various types and items, including $103,000,000. If the itemized statement furnished me as to the work they have performed is correct, and I have no reason to doubt it, this construction company, through experience, was qualified to do almost any type of work.

CONTRACTOR'S OVERHEAD

The contractor's overhead costs are as follows:

Engineer and construction quartermaster expenses charged as contractor's overhead	$80,831.99
Fire and police departments	118,989.84
Sanitation and clean-up	60,411.45
General administration and office expense (includes administration, accounting, timekeeping, time checking, material checking, equipment rental checkers, and all general office expense)	756,186.93
Insurance, compensation, public liability, and property damage	321,000.00
Old-age and unemployment taxes	307,514.21
Total of above items	1,644,934.42

It was interesting to note that, in addition to the above taxes, the employees on this job paid out of wages received for unemployment and old-age taxes an additional $113,894. The contractor's overhead as above itemized, including taxes, insurance, and so forth, was 5.7 percent of the total cost of the project.

ARMY OVERHEAD

The Army adds 11 percent overhead to each fixed-fee job which is broken down as follows:

First. Four percent for engineering, including consulting-engineer work; this includes the contract-engineer's fixed fee and overhead which, on this project, was 1.503 percent of the cost of the job.

Second. Two percent for Army overhead; that is, for the Washington office.

Third. Five percent for the construction quartermaster's overhead and contingencies.

The construction quartermaster informed me that his total overhead was $150,000, or seven-tenths of 1 percent. The 11 percent actually charged up on this job for Army overhead, including contractor-engineer costs, amounted to $3,190,000.

ALLOCATION OF ARMY OVERHEAD

The Army overhead of 11 percent amounted to $3,190,000 and was allocated as follows:

I. Four percent to engineering, including the overhead of the camp construction quartermaster. The latter's overhead amounted to seven-tenths of 1 percent, or $150,000.

II. Five percent for construction quartermaster general, including the fixed fee and overhead of contract engineer. The latter in this project amounted to $387,339, or 1.503 percent and contingencies.

III. Two percent for general Army overhead. The field overhead of the Army, including items I and II, equaled $537,339, leaving $2,652,661, or 9.1 percent of total cost, for Washington office of Army for overhead and contingencies.

QUALIFICATIONS OF THE ARCHITECT-ENGINEER

The engineering work was done by Charles T. Main, Inc. Charles T. Main has been a consulting engineer for nearly 50 years as an individual or through partnership or corporation. He has been president of the American Society of Engineers and the American Institute of Consulting Engineers. The six associates who are directors have been with the concern for periods of time ranging from 17 to 35 years. This company has done engineering work on over $50,000,000 worth of contracts and has done consultation work on a great many additional projects, including work for the T. V. A. Mr. F. M. Gunby, one of the directors, who is in charge of Camp Edwards, did everything in his power to furnish me with all the information that I asked for. The architect-engineer's cost, including his fixed fee, inspection work, and all other costs up to March 7, 1941, was $387,339, or 1.503 percent of the construction cost.

CONSTRUCTION QUARTERMASTER QUALIFIED

Three construction quartermasters operated on this project: Maj. H. L. Alger was construction quartermaster up to November 15, 1940. Capt. Karl M. Pattee was in charge until January 30, 1941, and Capt. F. E. Robbins subsequent to that time. I have met Captain Robbins and Captain Pattee and both seemed to be conscientious and efficient officers. Captain Pattee is a qualified construction engineer and worked for approximately 7 years as construction and maintenance officer as well as in a supervisory capacity for the Civilian Conservation Corps. Captain Robbins has also had considerable experience of the same type. Mr. Frederick M. Kissenger, field auditor in the Construction Division, was very efficient, in fact is outstanding. He served 13 years as instructor of actuarial science, accounting, and economics at Temple University. He has been a certified public accountant since 1926.

EMPLOYMENT

The total employment of the contractor's force reached a peak during the week ending November 9, 1940. At that time the total number of employees was 18,343. Of that number 10,151 drew carpenter wages or were carpenter foremen and carpenter superintendents, 5,010 were laborers, laborer foremen, and labor superintendents. The balance on the pay roll were mechanics, clerks, timekeepers, plumbers, electricians, checkers, administrative force, and so forth. From 60 to 65 percent of the men drawing carpenter wages were not carpenters.

ORGANIZATION OF WORK

The job was commenced on September 16. On or about December 1 the entire crew was reorganized. There were 30 sectional superintendents under whom were various types of foremen who had crews under them. The original carpenter foremen had 20 men. This crew was reduced to 12 with a pusher at the head of each group of 12. While there is no doubt in my mind that there was rather a loose organization at the beginning, the contractor claims that when the job was reorganized the foreman of each crew was a carpenter or mechanic. I had many letters giving me information regarding the organization and the fact that those drawing carpenter wages were not carpenters. One carpenter wrote me that he had worked on 4 different carpenter crews. One of the foremen was an R. F. D. carrier, 1 was a day laborer who had worked on the job about 5 weeks, the third was a lobster fisherman and the fourth was actually a carpenter. The lobster fisherman foreman had a crew consisting of himself, a bond salesman, an insurance man, a meat cutter, a gas-station attendant., 3 laborers who were not carpenters, 1 good carpenter, and 1 rough carpenter. I believe, however, that at least a part of this condition was corrected when the crew was reorganized. The carpenter foremen and pushers were appointed by the section superintendent.

WAGE SCALE

The wage scale on this job was originally fixed by the Secretary of Labor under the terms of the Bacon-Davis Act. The original determination was made on August 27, 1940. I am informed by the contractor that the original wage scale was undoubtedly the wage scale of the various unions of the vicinity of New Bedford, Mass., the city nearest to the project. New Bedford is a city with approximately 100,000 population. I have a photostatic copy of the decision and wage scale as fixed and revised by the Secretary of Labor. I do not wish to place the entire scale in the RECORD but will take the crafts which did most of the work, giving the wage rate as fixed on August 27, and then the increase under the supplemental order of September 28. This is as follows:

	Per hour	Increased to—
Laborers, unskilled	$0.625	(1)
Painters	.90	(1)
Pipe layers	.65	(1)
Plumbers	1.00	(1)
Plumbers' helpers	.65	(1)
Roofers	1.10	(1)
Sheet-metal workers	1.50	(1)
Structural-iron workers	1.50	(1)
Truck drivers:		
1½ tons or less	.67	(1)
Over 1½ tons	.71	(1)
Bricklayers	1.25	[2] $1.50
Carpenters, journeyman	1.00	[2] 1.17½
Cement finishers	1.25	[2] 1.50
Electricians	1.00	[2] 1.50
Operators of power equipment, blade graders, 40 horsepower and over	1.00	[2] 1.15
Motor graders, 40 horsepower and over	1.00	[2] 1.15
Tractors, 40 horsepower and over	1.00	[2] 1.15
Plasterers	1.25	[2] 1.50
Plasterers' tenders	.80	[2] .90

[1] No change. [2] Per hour.

The increase made by the Secretary of Labor on September 28 was the equivalent of a 15-percent increase in the total labor cost.

In addition to the above increase made by the Secretary of Labor, the subcontractors increased the rate of pay of electricians, sheet-metal workers, and plumbers, as follows: The original pay for the electricians, fixed by the Secretary of Labor, for a 48-hour week with overtime in excess of 40 hours, would have been $52 per week. The subcontractors revised the schedule up to $84 a week, or 61.5 percent above the regular union scale at New Bedford. Sheet-metal workers would have received $78 a week for the 48-hour week. As revised by the subcontractors they received $90.80 a week, or an increase of 16.4 percent. Plumbers would have received $52 a week under the original scale fixed by the Secretary of Labor, which is a union scale; revised by the subcontractors to $90 per week, or an increase of 73 percent. The increased cost of the job by reason of the 15-percent increase in the original labor scale above referred to by the Secretary of Labor was approximately $1,800,000. The amount of this increase by the subcontractors in the wage scale equaled $200,000. While these were lump-sum contracts, they must have been fat contracts to enable the subcontractors to voluntarily add to the wage scale as fixed by the Secretary of Labor an increase that amounts to this sum. My contention is that this $200,000 represented only a part of the excess cost of these so-called lump-sum contracts. It will be recalled that these subcontracts were not advertised as stated in my speech of January 16, but the bidders were selected by the contractor himself.

The amount of premium paid for overtime was $1,000,000. Carpenters and laborers drew time and a half for overtime and Saturdays, and double time for Sundays. All other trades drew double time for all overtime. The entire crew worked on a 40-hour-week basis. The three items above referred to, that is, the increase in the labor rates by the Secretary of Labor, the subcontractors' increase in the wage scale and the overtime item amounted to $3,000,000, or 10 percent of the total cost of the project.

OVERHEAD, TAXES, INSURANCE, AND INCREASED LABOR COSTS

First. The contractor's overhead costs as itemized, less insurance and taxes, are $1,015,420;

Second. Insurance, old-age compensation, public liability and property damage; and unemployment taxes on the project aggregated $629,514;

Third. 11 percent Army overhead aggregated $3,190,000;

Fourth. Increased labor cost due to overtime and increase in the wage scale by the Secretary of Labor and by subcontractor amounted to $3,000,000. It is interesting to note that the items above specified, that is, increased wage scale, overtime, insurance and taxes, contractor's and Army overhead aggregate $7,834,943 or $594,000 more than the original Army estimate for the entire project.

LUMBER

Approximately 63,000,000 feet of lumber was used on this job. The first 34,056,500 feet were purchased by the procurement section of the construction quartermaster's division at a cost of $1,399,722 or at an average of $41.10 per thousand. The officials at the Washington office informed me that this was the price on the job at Camp Edwards. In addition to this 34,000,000 feet the contractors purchased the next 26,000,000 feet at a cost of $46 per thousand delivered on the job. The lumber was hauled by truck from the railroad siding to the camp, a distance of 11 miles. In January I called the contractor's attention to the fact that he had paid $4.90 more per thousand for the lumber than the Army had paid and that the Army officials in charge had informed me that the price had come down. The contractor contended that the War Department price was the price delivered at the siding and not at the camp and that the haulage was in addition to the $41.10 a thousand that the contractor charged up. I took this matter up again with the contractor's representative when I visited the camp in March. He informed me that the construction quartermaster had ordered him to make a detailed report of all lumber purchased and the cost and also a detailed report of the use of all lumber. He further informed me that he had made a complete report to the construction quartermaster and promised to send me a copy of this report. This he failed to do. The difference between the $41.10 per thousand paid by the Army and the $46 a thousand paid by the contractor is $4.90. The contractor's representative stated that they had a subcontract whereby the subcontractor hauled the lumber from the railhead to the job for $1.85 per thousand. This would leave $3 a thousand still unexplained. I had information that the contractor who had hauled the lumber dumped it on the ground. This was verified by the project manager of the contractor. When I called his attention to the damage that such lumber as siding, flooring, and so forth, would sustain if a truckload is dumped on the ground, he contended that there was very little damage to the lumber.

LUMBER DELIVERIES

Five hundred and forty-two cars of lumber or approximately 13,500,000 feet arrived on the job within 18 days after the date the contractor was ordered to proceed, with 248 more cars in transit at the end of the 18 days. The contractor received his orders to proceed on September 12. On September 16, 17 carloads of lumber arrived at the railhead This lumber continued to arrive daily, reaching as many as 71 cars per day on September 25 with an average of 39 cars per day from September 16 to September 30. During that 2-week period 542 cars of lumber were delivered at the station and, on September 30, 248 more cars were in transit. The record shows that the total gross pay roll for the week ending September 14 was $905; for the week ending September 21 it was $13,890; for the week ending September 28 it was $78,446. It can be seen that this first 13,000,000 feet of lumber arrived before the contractor had an opportunity of employing carpenters or help of any kind. Lumber continued to arrive at the same rate throughout the next 6 weeks. The contractor had lumber to the right of him, lumber to the left of him, lumber in front of him and lumber behind him. In fact, all one could see was millions of feet of lumber. The first bill of lading arrived on September 26 at which time they had already received over 500 cars of lumber. As late as October 14 the contractor was still requesting bills of lading for lumber he had received during the month of September. As a result of this lack of information it was impossible to check the lumber in and impossible to plan the proper distribution of the same which resulted in considerable cost in redistribution of the lumber as the work progressed. One can imagine what happens when one scatters nearly 800 carloads of lumber in less than 30 days over the building area. Lumber had to be moved before sewer lines and water lines could be constructed. It was impossible to proceed with sewer and water lines until after the buildings were more or less complete. It is difficult to realize the confusion that must have resulted from this sort of a policy. The contractor had no opportunity to organize or to prepare for the lumber. Time and help that he should have devoted for planning and building was taken up with moving and removing lumber. No one with any business sense in the construction of a job would permit anything of this kind to occur, and the responsibility must be placed squarely upon the Army officials and the construction quartermaster, and not upon the contractor. It was impossible even to begin to compute the extra cost of moving and removing this lumber, of the delay in putting in utilities, and of the handicap placed upon the contractor because of the method by which this lumber was rushed to the job.

INSPECTION

The quality of lumber was inspected by the Lumber Inspection Bureau, Inc., a Massachusetts corporation operating as a contractor without regard to invoice. For this inspection they received 50 cents per thousand feet. Subcontractors unloaded the lumber from the railroad cars and hauled it to stock piles or job. The truck hauling such lumber was checked by the contractor and construction quartermaster at the railroad when the truck left and later checked on the job, time being kept. The subcontractor was paid $1.85 per thousand feet for this service, which seemed to me to be very reasonable. The lumber was dumped on the job and stock piling was not included. The Government paid for the actual amount of lumber received as tallied without regard to invoice. Lumber inspectors inspected the lumber as to quality, grade, and moisture content. The Lumber Inspection Bureau reported that they had tallied up to February 5 a total of 57,330,920 feet. I quote the folowing from their letter:

> With the exception of two cars which we rejected we believe the lumber as a whole would average 40 to 50 percent above grade called for and not over 2 or 3 percent below grade.

RATIO OF LABOR AND MATERIAL, ETC.

The weekly report ending March 14, 1941, shows that the accumulated expenditures plus obligations on this project was $26,177,036. It further shows that the accumulated expenditures plus obligations for labor up to that date was $11,681,911. This shows a ratio of approximately 45 percent labor and 55 percent material, and other expenses.

UTILITIES

The original Army estimate of the cost of the utilities on this project was $540,000. The actual cost of the utilities now almost completed is $5,751,117, or more than 10 times the original estimated cost and an increase of over 900 percent. The amount of money spent for utilities equals 80 percent of the total cost of the job. One million three hundred and thirty-eight thousand and two hundred and eighty-three dollars of this is for grading and clearing roads and truck parks. Seven hundred and eight-three acres of scrub land was cleared, and to avoid danger of fire all brush and trees were hauled away rather than burned. The above amount also included the cost of the railroad hereinbefore referred to. The following gives an idea of the extent of the utilities constructed:

Water lines (feet)	212,990
Electric-service lines (feet)	1,123,750
Sewer lines (feet)	182,304
Disposal plant (gallons per day)	6,000,000
Pumping station (gallons per minute)	5,300
Water storage (gallons)	1,400,000
Gasoline storage (gallons)	356,000

RAILROADS

Ten miles of railroad was built at a cost of $662,000. One-hundred-pound relay rail being used. The railroad furnished all material under subcontract. The railroad was constructed by the New York, New Haven & Hartford Railroad Co. on a subcontract basis and built on a subgrade provided for by the railroad company. The rails cost $28.75 per gross ton.

POWER SAWS

One hundred and thirty-two power saws of different types were used on the job, both in a central mill and at various sections of the job.

EQUIPMENT RENTAL

The total value of all the equipment on this project was $2,659,512. The total rental paid up to March 7, 1941, was $823,537.70 while the total valuation of the recaptured equipment was $53,394. Approximately 5 percent of the equipment rental was paid to the contractor. The remainder was paid to outside parties.

CONCLUSIONS

I. The original estimate of Camp Edwards was $7,240,462. The actual cost will be $29,000,967, or more than four times the original estimate. Taxes, insurance, contractors' and Army overhead, labor overtime, and wages aggregated $7,834,943 or $594,000 more than the original estimate of the cost of the entire project. This is itemized as follows:

First. The contractor's overhead costs, less insurance and taxes was $1,015,420.

Second. Insurance, old-age, and unemployment taxes on the project aggregated $629,514.

Third. Eleven percent Army overhead aggregated $3,190,000.

Fourth. Increased labor cost due to overtime and increase in the wage scale by the Secretary of Labor by the subcontractor amounted to $3,000,000.

II. Site: The site chosen for this camp is level, has good drainage and the buildings were located in a rectangular form which allows the greatest number of barracks within the smallest area, making it possible to reduce the cost of main sewer, electric, water, and telephone lines. The original estimate was supposed to provide for a total of 26,762 officers and men, the present camp provided for 33,660 officers and men or an increase of approximately 6,000 men. While the camp capacity was increased 22 percent, the cost was increased 300 percent.

III. Eighteen thousand three hundred and forty-three men were employed at the peak of the construction program, 10,151 of whom drew carpenter wages. Sixty to sixty-five percent of the men drawing carpenter wages were not carpenters.

IV. Eight hundred and twenty-three thousand five hundred and thirty-seven dollars was paid in rental for equipment which had an appraised value of $2,659,512. The rental paid equaled 31 percent of its appraised value.

V. Lumber: Sixty-three million feet of lumber was used on this project, 34,000,000 of which was purchased by the construction quartermaster's office at $41.10 per thousand, while the next 26,000,000 feet was purchased by the contractor at $46 a thousand. Both the contractor and the construction quartermaster contend their costs included delivery to the project. The construction quartermaster and the officer in the procurement section contended that lumber had come down in price between the dates that the construction quartermaster made his purchase and the contractor made his. The contractor contended that the Army price did not include delivery from the siding to the job, that it cost $1.85 per thousand to make such delivery. This differential of $4.90 per thousand remains unexplained, despite the promise of the contractor to furnish me with a detailed report.

VI. Lumber deliveries: Eight hundred cars of lumber were delivered to the contractor in less than 30 days, aggregating 13,500,000 feet between September 16 and September 30. The contractor received his order to proceed on September 12 and without giving him an opportunity to organize, lumber was delivered at the rate of 39 cars per day during the first 2 weeks succeeding September 16. On September 30, 542 cars had been delivered and 248 cars were in transit. The record shows that the total gross pay roll for the week ending Septmber 14 was $905; for the week ending September 21, it was $13,890; and for the week ending September 28, it was $78,446. It can be seen that this first 13,000,000 feet of lumber arrived before the contractor had an opportunity of employing carpenters or help of any kind. Deliveries were arriving at an average of 39 cars per day. The first bill of lading did not arrive until September 26, at which time they had already received over 500 cars of lumber. As late as October 14 the contractor had not yet received bills of lading for lumber delivered in September. Lumber was scattered all over the building area, dumped wherever possible to dump it and it had to be moved and removed before sewer and water lines could be constructed. In fact it was impossible to proceed with sewer and water lines until after the buildings were more or less complete. The cost to the taxpayers because of the confusion caused by this method of delivery is difficult to estimate, but was without a doubt, enormous. The responsibility for this must be placed squarely upon the Army officials and the construction quartermaster of the United States Army, and not upon the contractor.

VII. Inspection: The subcontractor who inspected the lumber reports that with the exception of two cars the lumber would average from 40 to 50 percent above grade.

VIII. Ratio of labor and material: The weekly report ending March 14 shows that the accumulated expenditures plus obligations was $26,177,000 and that the accumulated expenditures plus obligations for labor was $11,681,911. Based upon these figures, the ratio is approximately as follows: Labor 45 percent; material and other expenses 55 percent.

IX. Utilities: The original Army estimate for utilities was $540,000. The actual cost is $5,751,000 or more than 10 times the original estimate. This is an increase of over 900 percent over the original estimate. It is also interesting to note that the actual cost of the utilities equaled 80 percent of the original estimate of the cost of the entire project.

Protect Us From the Aggressor

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. HOFFMAN. Mr. Speaker, billions of dollars worth of treasure and, perhaps, before we are through, millions of lives will be expended in an effort to stop the aggressions of Hitler. His brutal murder of hundreds of thousands of peaceful people, his destruction of smaller countries, will forever remain a blot upon the history of the world.

With Hitler triumphant in Europe, here in America every citizen will be called upon to make some contribution, some sacrifice, to end his reign of terror; to free people who are slaves to his ambition.

Brutality, wherever found and by whomever exercised, should meet the condemnation and the opposition of everyone. Only a free, unoppressed, courageous people, fully prepared, can successfully meet this danger which threatens and would destroy us.

But brutal aggressors have no more justification here in America than has Hitler on the world stage. All the talk, the whole crusade, against Hitler and his brutality, his destruction of equality of opportunity, give out the hollow ring of hypocrisy, unless we here at home protect our people from the brutality of aggressors.

Recently, from a representative of a State-chartered labor union at Detroit came two communications, the substance of which I will shortly give you. These communications disclose that again in the city of Detroit, as so often before in that and other cities, men, masquerading behind the mask of a labor union, traitors to the cause of labor, are brutally and aggressively destroying equality of opportunity, attempting to enslave citizens of Detroit and, by the exercise of force, carry on their racketeering schemes.

Although I do not represent the Detroit districts, in fact, live on the opposite side of the State, the following letter came to me on April 7:

HONORABLE SIR: Here are a few facts I, the undersigned, am sending you, and which you as our Representative should know and give us your intelligent support.

I am one of 65 employees in an organization which has been in business in Detroit for 15 years, and have been such employee for the past 8 years.

We have our own employees' union with a charter from Lansing and are 100-percent satisfied.

We know:

1. That we are the highest paid, each in his or her own particular work, among corresponding types of employees in this or any other State.

2. That we work under the best working conditions.

3. That we receive vacations with pay.

4. That we receive bonuses at Christmas.

5. That since company started it has never had a moment's labor trouble of any kind.

6. That our employers are considerate, fair, and thoughtful.

Now men from the American Federation of Labor are trying to force all of us into their organization, and admitting the above facts frankly state they cannnot improve our working conditions nor our wages, that we must pay them $7 entrance charge and $2 monthly, which is their sole interest in the matter.

That if we refuse, they will picket the plant, our customers also, which would close the plant; necessary raw materials could not be delivered, so we would be thrown out of employment, and, furthermore, they even threatened bodily violence if we did refuse.

On behalf of myself and fellow workers, we ask you as our elected representative, if something cannot be done to stop American Federation of Labor's unreasonable, arbitrary, and unnecessary interference with this organization's employees.

Is it possible that we have no constitutional rights to protect us against such gross imposition, that we must submit to their threats, though we have not a single complaint and nothing to arbitrate.

Meanwhile, our employers and ourselves have lost time over visitations of these racketeers, two of whom, we understand, are under Federal indictment under the Sherman Act, and all of us are agitated and upset concerning the matter.

Respectfully yours,

ROYAL O. ROUSE.

445 Field Avenue, Detroit, Mich.

P. S.—A prompt reply will be deeply appreciated.

To that letter I replied in effect that, under the recent decision of the Supreme Court, there was no way by which the picketing of the plant could be prevented and that the Federal legislation which we needed to punish some of the reprehensible acts being carried on by criminals masquerading as labor leaders were amendments to the National Labor Relations Act, the Sherman Antitrust Act, the Clayton Act, and the Norris-LaGuardia Act.

In reply to that letter, came the following communication:

DEAR CONGRESSMAN: This will acknowledge receipt of your letter of the 21st in reply to mine of the 7th and for which I thank you sincerely.

Permit me to add to my previous statements for your information, and to further arouse your interest: I am president of the "New Era Employees' Benefit Association."

As such, I am 100 percent their spokesman, and on their behalf, my own, and as an American, with unquestioned rights under the Constitution of our country, I am heart and soul seeking to secure justice by my own efforts, and through the assistance of those upon whom we have a right to call, and, as I see it, such justice cannot be secured without promptly stopping the extortionate and uncalled-for demands of the racketeers in labor unions.

Our organization or union, with a legal State charter, is within the jurisdiction of the Wagner Act, is not company-controlled, but entirely in the hands of employees, and an election would demonstrate by acclamation that we would be our own bargaining agent if any bargaining was to be done.

There is no need for bargaining or for arbitration, no point being at issue, therefore, we are informed the N. L. R. B. can do nothing toward solution of threats hanging over us.

J. R. Steelman, Director of Conciliation, in Washington, D. C., to whom President Roosevelt turned over the facts I presented to him, referred me to Commissioner L. R. Rye of that Service at 225 Federal Building, Detroit, and he stated: "There is nothing our Department can do."

Thurman Arnold, Assistant Attorney General, to whom Senator PRENTISS M. BROWN presented the facts, also says in his answering letter:

"In view of the recent decision of the Supreme Court in *United States* v. *William L. Hutcheson, et al.*, the activities which are the subject of Mr. Rouse's complaint, cannot be reached by the antitrust laws. Furthermore, since there does not appear to be any present interference with interstate commerce, it would seem that there is no basis for action by the Federal Government under any statute. In my opinion Mr. Rouse's only recourse at this time is to the State authorities."

Our attorney concedes that as the laws and the courts now stand he is powerless to aid in curbing the evil and inexcusable situation.

To get a bird's-eye view of our case quickly, please glance at the attached summary of facts covering what we face.

Learning of a Cleveland situation somewhat similar to ours, though not quite as favorably situated as to employer and employee conditions and relations, I went there, and found as follows:

Under threats and fearsome of results, they knuckled down to A. F. L. racketeers and now their happy situation has been superseded by these conditions:

Employees met the money demands exacted, owners have practically nothing to say as to running their business, an A. F. L. steward is in control, their truck salesmen (who had a union of their own) worked on commissions on sales, and now their earnings are 50 percent less, because their hours of activity are reduced arbitrarily, net profits for company are reduced, and the spirit and enthusiasm previously existent have disappeared in the plant.

It seems to me, and it grows apace in the minds of increasing numbers of the sane-thinking American people that we are fast approaching a tidal wave of such calamitous and evil possibilities that are beyond estimating or picturing.

Every moment lost in taking steps to curb the increasing drift makes more certain a chaotic wallowing that will be beyond all control, and all will be helpless victims.

Sinister international influences are everlastingly at work for selfish, grasping, materialistic motives, caring not a jot for America, its Constitution, its institutions, its people, or its future state.

Blindly we fall into their schemes, while our own internal evils are left unchecked, and those fomenting and spreading them grow more bold in their marauding and heartlessness.

When they boast of their power, when they laugh and sneer at our laws, and speak of envisioning their enormous possibilities through organizing all the grocers, all those who supply them with food products and other household necessities, of being able to dictate to them, to canners, manufacturers and others, prices, employees' wages, hours, etc., it proves how secure they are growing to feel, and little effort is necessary to grasp how great this menace can become.

As an American, I give these thoughts expression, and if they aid, even in small degree to arouse you and others to prompt and practical action, no one will be happier than I.

As an employee acting for a small group of fellow employees, who are happy in their labors in the employment of two Christian, just and considerate men, and as a man—the father of a family, meeting all a citizen's obligations—I conclude this letter, without apologies for the time I have taken, because I believe you are glad as an American to get the common man's viewpoint.

Finally, I conclude with the expression of this hope, that if it is within the bounds of possibility that you, with the assistance of others, will evolve a way to stop these union organizers, so-called, from closing the plant of our employers, seriously injuring the business they have worked up during the last 15 years through hard, honest, ethical work, and from throwing all of us out of employment.

Their uncalled-for and valueless demands are shown on the attached Summary of Facts.

Thanking you, I am,

Respectfully yours,

ROYAL O. ROUSE.

445 Field Avenue, Detroit, Mich.

APRIL 29, 1941.

In the matter of New Era Employees Benefit Association, Royal O. Rouse, president, 445 Field Avenue, Detroit, Mich., and the American Federation of Labor organizers

SUMMARY OF FACTS

1. Employer: Nicolay-Dancey, Inc., 5801 Grandy Avenue, Detroit.

2. Business: Manufacturers of scientifically processed potatoes in chip and julienne form, packed in varied sizes, at varied prices.

3. Years operating: Continuously from 1926.

4. Any labor troubles: Never.

5. Factory: Thoroughly and modernly equipped.

6. Working conditions: Excellent.

7. Union employees' wages: Best in the industry.

8. Overtime: Allowed.

9. Vacation: Allowed salaried and other employees with pay.

10. Bonus: Paid at Christmastide.

11. Awards: On completion of 10 years service each employee is presented with a handsome inscribed present.

12. Picnics or banquets: Given from time to time.

13. Employers' attitude: Always just and considerate.

14. Employees: Formed their own independent local union, secured a State charter, and it is entirely in control of members.

American Federation of Labor organizers demand we must join their organization; that each employee must pay an entrance fee of $7 and $2 each month, while admitting they cannot improve our factory or labor, or wage conditions, and that if we do not, they'll picket the plant, prevent deliveries of raw materials, of products going out, and thus close it up.

To these were added greater threats.

Then, into my office on yesterday came Mr. Rouse and Mr. Crews, both representatives of the labor union. They told me—and, apparently, they are reliable men—that three so-called organizers of the American Federation of Labor informed them that, unless the employees whom they represented paid $7 each as a membership fee and thereafter $2 a month to the American Federation of Labor, the American Federation of Labor would put their employer out of business.

These labor organizers were told by Mr. Rouse that the employees would, if necessary, get the necessary trucking equipment to haul potatoes from the warehouse to the company's plant. This statement was met by the assertion that, if that was attempted, the union, equipped with Buick cars and with plenty of men at its command, would see that the trucks never reached their destination.

The attention of these men was also called to the strength of the union, to the fact that others who had attempted to oppose the union's will had been financially ruined and that some had been beaten.

In view of the recent bat murder in the cleaning industry in the city of Chicago; in view of what recently happened at the Detroit plant, where hundreds of thousands of dollars of machinery necessary for national defense was wilfully and maliciously destroyed—and by the way, such destruction is a felony in the State of Michigan—in view of the beating of many of the Ford workers at Dearborn and considering the fact that the C. I. O. at that time took possession of the public highways of the State of Michigan, these threats made by the A. F. of L. organizers were not idle talk and cannot be so considered.

If the Federal Government, as is apparently the case, will not give protection to American citizens, then I call upon the law-enforcing officers of the State of Michigan to give protection to the citizens of Detroit, who desire, by earning a livelihood for themselves and their families, to stay off of the relief rolls and save the State of Michigan the necessity of caring for them and those dependent upon them. I call upon the law-enforcing officials of the State to give to these citizens of Wayne, who have appealed to me, protection from the aggressors here at home.

I call upon the law-enforcing officials of the State to make investigation and to prosecute, under section 17 of Act No. 176 of the Public Acts of the State of Michigan for the year 1939, any and all men who may have violated the law by attempting to practice coercion against the employees of Nicolay-Dancey, Inc., and who are attempting to gain control of the food supply of Detroit.

Unless we can first put our own house in order; unless we can insure the citizens of Detroit, of Wayne County, of the State, and of the Nation that they shall have that equality of opportunity which the President said must prevail everywhere in the world, there is little use of our attempting to oppose the world aggressor, Hitler.

Against the monster who brings oppression, suffering, and death to the people of the Old World we shall have no adequate protection unless here at home we do away with the parasites, the hyenas, the oppressors, who will destroy the spirit, the courage of those who must bear the burdens of successful opposition to Hitler.

If the potatoes grown by the farmers of Michigan cannot be delivered to this factory, to be there made by these employees into potato chips, until some organization in Detroit has collected whatever dues and fees it may name from those employees who are engaged in changing the farmers' product into a more edible form, then, indeed, the beginning of the end may be seen.

In my own home county, a farmers' cooperative organization, the Hamilton Farm Bureau, has been forced to pay a membership fee of $50 per year and dues of $5 per month for the privilige of putting their own men on trucks to deliver their products into the city of Chicago.

With the Secretary of Agriculture pegging the price of farm products and organizations insisting that the butter, the milk, the eggs, the beef, and other farm products cannot be delivered to the hungry people of the cities, except as they are delivered through members of their organizations, until they have collected their toll, tell me what would happen if the farmers should organize and refuse to deliver, or permit delivery, of food to the cities until their price was paid.

Is it not about time that only those who contribute something of value be permitted to add to the cost of the things we use? Cannot the people of the cities, the people's chosen representatives, who make and enforce the laws, realize, understand, that the imposition of a fee or a charge upon the handling of the necessities of life, when no service is rendered, is just plain racketeering?

A Separate Air Force

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

STATEMENT BY COL. ROSCOE TURNER

Mr. RANKIN of Mississippi. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a statement by Col. Roscoe Turner, who is a constituent of mine, and who is regarded as one of the greatest aviators of all time.

Colonel Turner is an ardent advocate of a separate air force as one of the essentials of our national defense. I hope every Member will take the time to read his illuminating statement on the all-important subject of aviation.

The matter referred to follows:

MUNICIPAL AIRPORT,
Indianapolis, Ind., April 7, 1941.

The Honorable J. E. RANKIN,
Congressman from Mississippi,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN RANKIN: I want you to know that I am very grateful to you for your kind letter of March 28 and all the nice things you have to say. I have been a little slow in answering, but I wanted to get some material together.

No. 1. Aviation personnel are all specialists, and they are all very highly trained in their particular profession—pilots, navigators, radio operators, meteorologists, etc. Therefore, control should be in the hands of similarly trained personnel, so that they understand the problems of the men aloft. For instance, weather forecasting has to be entirely different for aviation than it does for anything else, because of the rapidly changing conditions and the fact that the airplane covers so much territory in such a short time. Therefore, we have had to develop a very highly specialized way for forecasting the weather. Before a man can direct a pilot in the air on how to fly through bad weather and how to control his ship he has to know something of the conditions that a pilot is up against. You can also take the finest navigator in the world, who has been a seagoing man for years, and put him in an airplane, and he will have to rearrange all of his navigation because of the speed with which the airplane travels. Therefore, we have had to develop special navigation for aviation.

No. 2. At present our Air Corps is being coordinated to the ground and sea forces, whereas it should be the reverse. Our ground forces should be coordinated to the Air Corps. For instance, Germany took over Poland, Norway, Belgium, and France, and the Air Corps was the first line of defense. Then came the shock troop, next the tanks and mechanized cavalry, followed up by the infantry to do the mopping up. In the case of Norway, the Air Corps moved up first and the Navy followed. Therefore, it has been plainly demonstrated beyond any shadow of a doubt by the finest military air force in the world that aviation is going to rule the world, so why should we subordinate it because of a few high hats in Washington who have been trained along slower methods of doing things and stayed on the ground all their life, and just because of their greed for power, they are going to subordinate aviation. I assure you that it is because of just personal, selfish reasons that the Army and Navy wish to subordinate aviation. For instance, the Navy wants to hold it down because of the fact that they hate to relinquish any of their power and authority. It also might occur to you that there is a lot more money involved in building battleships than building airplanes, so there is something to think about there, because of the steel industry. The steel industry, as you know, conducts a very high-powered lobby in Washington all the time.

No. 3. Another very good illustration is, you will recall that Commander Rosendahl, who was trained in the lighter-than-air operation and then after his tour of duty, the Navy called him off of his work and put him back on the water as a seafaring man. Therefore, all of this expensive training is for naught, and there was no one else who was capable of taking his place. I can also tell you that if they had listened to him they might not have had so many disasters in the lighter-than-air in the Navy. Since the people of aviation have brought something new to the world in the way of transportation and also in the way of domination (I think I can use this word advisably because the airplane is going to dominate the world, both from a military as well as a commercial standpoint) since we are in this position, I think that the people in aviation certainly are capable of manufacturing and ruling their own destiny a little bit better than someone on the ground who knows nothing about it. The only way that aviation can come into its own and rule itself properly is through the efforts of Congress to separate and take it out from under these people in Washington where it is more or less a political set-up. In other words, the people in aviation are certainly not going to do anything that would hamper their own progress. Whereas the people in other walks of life, give aviation second place in their thoughts.

No. 4. I might tell you something else that will bring this further to a head. An investigation committee was out checking up on accidents and while they were doing this an airplane came in for a landing and one of the men, a high Government official, said that he didn't know that airplanes had lights. It seems to me that if he doesn't know any more about aviation than that, he certainly has no place on an investigating committee trying to find out what causes accidents.

These are the most important points that I have in mind right now, and if I can be of

any further assistance in helping to get us a separate air force, do not hesitate to call on me, and I will be glad to come to Washington any time.

I am certainly very grateful to you again for writing me such a nice letter and for anything that you can do for us in aviation.

Most cordially yours,

ROSCOE TURNER.

Promotion of Reserve Officers

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. VREELAND. Mr. Speaker, a year ago the Reserve officers of the State of New Jersey honored me by electing me as the president of the Department of New Jersey, Reserve Officers' Association. On May 17 of this year I will retire from that position at the State convention in the Essex House, Newark.

This has been a most eventful year for our country in its international relations and, because of this factor, one of the most eventful for the Reserve officer. The National Guard and Reserve officer bill of last year authorizing the induction of the National Guard and Reserve officers into the Federal service has taken from civilian life nearly all of the officers of the rank of captain and lower, greatly deleting the available active men of the organization, making it a most difficult task to carry on. Those remaining, as good soldiers they are, have valiantly shouldered the duties of the younger officer and the organization has continued.

A situation has developed in the service, which I believe is most unfair, but which I am assured will be rectified within a reasonable time, because I know the Army has realized the value of the Organized Reserves. We, as Reserve officers, have indicated our patriotism and desire to be of service to our country by the acceptance of our commissions in peacetime. For years, it has been required that we complete correspondence courses, attend troop schools, and spend 2 weeks at camp, when the appropriation would permit it. During the time of the pacifist tendencies of the people of the United States, in spite of the fact Mr. Hitler was arming Germany, those of the Reserve were not considered too highly in the eyes of the people and in many cases referred to in rather uncomplimentary terms. In spite of the criticism, we carried on and tried under adverse circumstances to prepare ourseives for any eventuality and in most cases at our own expense. We were glad to do it as a patriotic duty to our country and because we were far-sighted enough to realize that some day there might be hostilities.

The time has now arrived when the Reserve officer is being called upon to augment the officer personnel to carry out the program of the expansion of the military. In every case he has given up his civilian life, and in many cases a good job, willingly and without complaint. He is doing his duty and making good use of the training he has obtained in his spare time, greatly filling the urgent need of the Army. As General Marshall said in substance at the midwinter meeting and dinner of the association, the Reserve officer has proven invaluable to the expanded Army and justified the efforts of creating it. The Army has welcomed the Reserve officer and values his service, and I know the Army does not wish to be unfair.

There is, however, a condition existing that is most unfair. Under peacetime regulations a Reserve officer had to wait a given period according to his rank, finish his correspondence courses, and appear before a board before promotion. We see the Regular Army now promoting men regardless of time in grade. We see the National Guard rewarding its officers by promotion without the peacetime requirements, but the Reserve still remains as before. A Reserve officer on active duty does not have time to do his correspondence work; he is learning by doing. In many instances the Reserve officer is capable of doing the work of a higher rank. Why should his ability not be taken advantage of and why should he not be rewarded for achievement?

The National-Defense Program

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. LELAND M. FORD. Mr. Speaker, I would just like to say a word in behalf of our national-defense program.

It certainly is disturbing to me, and to my constituents, to pick up a newspaper—for instance, the Washington Evening Star—and see four items on one page such as follows:

Board Confers With Three Groups on Coal Strike.

House Bill Would Widen President's Priority Power.

Byrd Demands Ouster of Madam Perkins for "Two-Fisted" Man. Charges Secretary Is Serious Bottleneck in Defense Program.

Cantonments Pass Estimates by $338,000,000.

Then I pick up another newspaper and find where 60 out of 61 General Motors C. I. O. unions are to strike. In other papers, I see where men have been killed. I pick up other papers and find pictures of the C. I. O. racketeers with baseball bats, clubs, stones, and so forth, in their hands, ready to shed the blood of those who are willing to work for the defense program of the United States. These are the same C. I. O. leaders that scream for their individual rights under the Constitution of the United States but deny those rights to everybody else. This is only a partial list of the crimes that the leaders of this C. I. O. group have committed. They have committed practically the same crimes and use the same tactics on the rank and file of their own membership by forcing them to join their unions against their will.

I now see by this morning's paper that this same C. I. O. union outfit is going to keep unemployed some 400,000 men who want to go back to work in the coal industry and defense. Any person with a grain of sense in his head knows that this strike in the coal industry is striking directly at the heart of our defense program. How long is it going to take those in charge, or those with authority, to understand that the C. I. O. leadership is not leadership with American ideals, with American understanding, nor is it inspired with the idea to help our defense program or to help labor. Do not those in authority understand, as some of us have been telling them for the last couple of years, that most of these C. I. O. leaders are Russian agents, as the record will disclose? That they are here for the purpose of sabotaging this program and destroying this American form of government, and are operating as a "fifth column" so that they may either destroy this form of government or deliver us to their European bosses, as has been done in other countries? Do we actually have to be destroyed and delivered because certain of our officials lack the intestinal fortitude to do their American duty in the American way?

How much further does this failure, Perkins, have to go to destroy this country? How much further does the Russian revolutionist Hillman have to go to prove to this administration that he is there to sabotage the program for the C. I. O. leaders? What further proof do we have to submit than has been submitted on the Russian-educated Reuther and many others of their leaders?

These Russianized, communized officials who have been welcomed into the heart of our Government, where they can best stick their dagger into the heart of our defense program, prate and prattle of how they have settled disputes. They have settled nothing. They have just used their positions to sell out the country, to agree to every demand that the C. I. O. racketeer leaders have made, and have officially made the "pay off," if I may use the terminology of the gangsters that these C. I. O. leaders well understand, because that is what they are. In every instance where the gangsters have demanded their pound of flesh in additional costs they have received it. Every condition they have demanded has been fulfilled. Any half-witted dumbbell could get into a position where he would say nothing but "yes." Has industry or the public who pays the bill ever had one decision? It has now come to a point where American industry has been delivered into the hands of these Communists. American industry has practically no voice in the management of its own affairs or in the matter of who may be employed or not be employed, no matter how dangerous they may be, and, no matter how much sabotage they may commit, the matter of discharge no longer remains in the hands of business.

Any thinking man is bound to tell you that this is a terrible condition if the facts are really known, and that it is bound to lead to one place only, and that is to delivery of this country into the hands of the Socialists and the Communists.

Now, our administration comes before us for three and one-half billions in additional taxes. Perhaps it is far easier to ask the taxpayer for money than it is to get down to real business and put this Government on a business basis. Perhaps it is far easier to ask the taxpayer for money than it is to stand up to the socialistic, communistic, racketeering C. I. O. leader and tell him that he cannot have absolute control of everything in this country and all the money in it. That would take what might be called American courage.

My people, and I think the people as a whole, are very sick of this whole procedure, and they are very much disappointed in the continued wastefulness of this administration. Thousands of my people have asked me why this administration cannot get real Americans to fill positions in the defense program; why this administration continues to be filled with all those who actually are Communists or fellow travelers, or who have been Communists or fellow travelers. They ask again, why, out of 130,000,000 people, cannot enough real honest-to-God, tried, true Americans be put into responsible positions without resort to Russian revolutionists, Russian Communists, Russian students, and agents of these foreign governments.

I have never had one single person express any confidence in Perkins or Hillman, but, on the other hand, every single individual, both Republican and Democrat, has expressed nothing but contempt. I believe this to be true throughout the great majority of congressional districts, and I think the time is coming when we must rise up and demand the resignation of the type of person such as Hillman, Perkins, and many others in our administration, and, in addition to this, ask imprisonment either in Federal prisons, or in internment camps, of those C. I. O. un-American labor leaders such as Reuther, and many others designated by the Dies committee who are not Americans at all and who are not working for the welfare of American labor.

It certainly is a tragedy in my mind, the way national defense is being carried on, and it is my opinion that if we are ever going to need national defense, as our administration has led us to believe we will, we will find ourselves in the same position as France found itself, the Greeks have just found themselves, and all others of the European nations which actually needed defense. This all has to do with the actual production.

There is another force that is bound to make itself felt. This is the dissatisfaction of the young man of this country who has been drafted and whose every movement is directed by the Government whether they like it or not. The Government tells him when to go to bed, when to get up, when to march, when to halt, what to eat, and what to wear. He knows no N. L. R. B.; he knows no Wages and Hours, and he draws for all this $21 a month. In some instances, he may have sacrificed his business, given up a fine position which paid him more than this, but he has patriotically acquiesced out of his consideration for his country and Americanism. Now we find these jackals, personified in the leadership of the C. I. O., who demand, in many instances, more than $21 per day. These same jackals refuse to work themselves or let any one else work, and refuse to supply the defense instruments and put them in the hands of the young manhood of the country, who are willing to lay down their lives for their country. Does this administration, or anyone with a grain of common sense, think that this young manhood likes this?

My personal thought is that this Communist-dominated leadership is working from many angles. One is to physically destroy or sabotage the defense program, the other is to physically destroy or sabotage the morale of our young manhood by causing them to be dissatisfied, and, in the long run, to create a revolution.

I think the answers to some of these questions are—and they should not be any longer delayed—the jailing or imprisonment of these C. I. O. traitors and saboteurs in high position in our Government, and the discharge of such as Hillman and Perkins.

Windsor Post Office Dedication

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ADDRESS BY HON. HERMAN P. KOPPLEMANN, OF CONNECTICUT

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert my address delivered at the dedication of the Windsor Post Office in Windsor, Conn., on Saturday, April 26, 1941, as follows:

Every man likes to feel that as he goes through life that here and there he builds a sort of monument whereby in the years to come some few people may remember him. Some men give vast sums of money for a school, an art gallery, or a church. Some men construct with their hands and minds priceless works or art and literature. Some men leave their mementos through important engineering works. I have no gifts which would enable me to leave such a trace of my having lived. Yet I do like to feel that here and there during my lifetime I have been instrumental in the accomplishment of a few worth-while things.

And so I try on occasion to build through politics the sort of memorial which will give me a measure of satisfaction and satisfaction and enjoyment to others.

This structure was the last post office I recommended.

I want to add in passing my appreciation to your leaders who cooperated with me in securing this building. I will not name them all, but I must mention Charlie Mahoney, your postmaster; Albert Lennox, your very fine American citizen; Daniel Howard, Carl Goslee, and John Conklin. Their devoted interest to Windsor is an inspiration to all of us.

It probably will be the last post office to be built in Hartford County for many years to come. All money now is being devoted to projects which will strengthen our national defense. Post offices are the gift of a Government at peace to its communities at peace.

Thank God we can dedicate a post office today. The dedication of a post office is a symbol of life as it should be lived in this century of civilized progress. All of us here today are comparing this event marking the development of the first settlement in Connecticut, or anyway, one of the first two settlements in Connecticut, with the events marking destruction of towns and cities centuries older than any in America. The contrast hits us personally when we stop to realize that practically all American citizens are descended from men and women who came to these shores from those same devastated areas in Europe.

What is happening over there is the thing that we never want to have happen here.

What is happening here today is what we want to see happening the world over. There will come a time when the war to preserve our way of civilization will have been won, and then we will start the tremendous task of reconstruction, and the restoration for all people, of the way of living that we have been taught to reverence in our great democracy.

All the towns and cities and villages in America started pretty much as Windsor did. A group of pioneers and their families built a few log cabins, a church, and meeting house. For one reason or another, our cities and villages, starting from scratch in this same way, grew in different directions. From them have grown the metropolises of the country, the mill centers, the cultural centers. There are no skyscrapers in Windsor—no smoke clouds the atmosphere as it rises from chimneys of factories and mills. There are neat streets with neat homes and an abundance of God's fresh air.

There are liberty-loving people who respect each other's rights, each other's way of living, and each other's religion. They combine in a community which symbolizes the permanence of America.

A post office is more than a convenience. It is the central nerve of the town's activities and of the Nation's activities too. For the mail reaches and connects every individual, every business establishment, and every home with every other. The post office is the center of the connecting link. When a town develops from a stamp window set-up in a home to a separate building, devoted solely to the post office's activities, then that town, although it may be far from being a metropolis, takes on the status and dignity of the largest city in the country.

It is on that score that I congratulate you. It is on that score that I share the honor and the felicitations, which today are being given to you.

Last Monday the war headlines shared prominence with the baseball season, which opened in Washington. I was talking to the President that noon. Suddenly he interrupted the conversation and turned to a pile of letters on his desk and said, "I must hurry and sign these, as I am going to the baseball game." I smiled with him and I thought how good it was to be an American when the President of the United States takes time from critical international affairs to throw the ball which opened the 1941 season.

Today our Nation for the first time in its history is training its young men in military camps during peacetime. All the resources of the country are being marshaled for national defense. Cities of ancient cultural

and historical significance in other parts of the world are being leveled to the ground Intrigue and sabotage are destroying friendships between nations and are forming strange alliances between rivals who formerly despised one another. Entire peoples are struggling for their very existence against tremendous odds. The world has capsized, yet here we are gathered together, as though none of these things were happening, to declare again our allegiance to America and to democracy as we dedicate a small but tremendously important post-office building. So long as citizens whose ancestors came from all other countries of the globe can gather together and with the common bond of American citizenship dedicate an American institution, we need have no fear about the permanence and growth of our democracy.

The even tenor of our normal living has not been noticeably disturbed. I wonder if that is the reason that we on the whole, are complacent about the danger that threatens our very existence as a free people.

The great revolutions which have turned the world over in other lands have not touched us. We seem unable to comprehend either their physical wreckage or their political and economic chaos. Sometimes it seems to me that the American people are treating this war as a Roman holiday. Too many people want to know what there is in it for them. A newspaperman recently returned from Europe after many years said to me only this week: "The American people don't seem to realize that the menace to this country is almost as great as it is to Great Britain."

The day may come when we too will have to choose between freedom and enslavement. Will we be physically and morally prepared to defend our freedom? We will if each and everyone of us gives full recognition to the real nature of this struggle which is going on in the world today, and evaluate it for what it is—not a struggle to preserve an empire or to build a new one—but a struggle to preserve our way of life.

Many years ago, before our Republic was founded, a great statesman called upon the Colonies to stand together for independence, and uttered these historical words, "United we stand, divided we fall." There was a time when if the free nations of the world had banded together, aggression would have been resisted. Instead they stood on the sidelines and watched one nation after another fall to the aggressor, wishfully thinking that their turn would not come, and if it did come, they could meet separately and alone. Turkey fears that she will be the next victim. Would Turkey be afraid if she had joined forces with Yugoslavia and Greece 3 weeks ago? Would Belgium, Norway, Denmark, and Holland be occupied countries had they joined forces with England and France before they were invaded?

Four and a half years ago in Chicago, our President called for a quarantine of the aggressors. Some of us thought he was an alarmist. Some called him a warmonger.

There are some innocent people who still believe that we can make peace with the aggressors—that we can adjust our ways to theirs. This innocence is based largely on ignorance, largely on the influence of individuals who would prefer the dictator's way. Some of these individuals represent forces which, from time immemorial, have opposed progress in the way of social and economic reform; reform which would raise the living standards of American citizens; reform which would give every man and woman, no matter how low his station in life, a little of the comfort and happiness which belongs to a freeman.

To a great extent, I have seen these forces at work in the opposition to the New Deal, but long before that I saw them at work in the opposition to reform proposals which, on a smaller scale, were attempted in the State of Connecticut, and in my own city of Hartford.

For example, small, so far as the national welfare on the whole is concerned, but important insofar as it would mark progress, is the Enfield power and navigation project, which is now under consideration by a committee of the Congress. The opposition advances arguments which, on the surface, appear sound and reasonable. But experts of the Government, engineers in the Army and in the Power Commission have thoroughly studied the doubts that they have raised. The question of flood control, for instance, has been thoroughly analyzed, and the Army and Power Commission's engineers have emphatically stated time and time again that construction of this power and navigation dam will in no way increase the flood hazard. Government engineers have been discussing features of the project constantly with the railroad engineers in an effort to work out a plan which will bring about benefits for the people of this region and at the same time win the approval of the railroad.

Every engineering device and experience is being exerted to develop the benefits of this project and at the same time cause no particle of injury to anyone. After all the Government engineers are your engineers, and yet the threat of flood hazard continues to be raised as a bogey to frighten the people against this project. The real crux of the opposition is that the project will develop electric power at cheaper rates, and will bring down the cost of electricity. But the opposition is silent on this aspect. Instead they try to belittle the project by claiming that not sufficient continuous power will be generated to warrant the cost. That argument has been used ever since the first public power project was proposed in America.

We have all seen the flaming advertisements for electric equipment. These advertisements fairly glow with the advantages this equipment will bring the housewife. I want to see the advertisers sell their electrical appliances. I want to see their widespread use in our homes. But I wonder how many homes in my district can afford to avail themselves of these appliances.

I well remember my visit to Switzerland less than two years ago when I found every home—and there are few wealthy people in that small country—fully equipped with electrical utensils and appliances of every description. Over there nature's gifts to the people are developed for the benefit of the people.

But all this struggle, no matter in what direction it tends, is part of humanity's struggle. It has always been this way, and probably always will be this way. And I would prefer that these struggles be resolved in the democratic way, rather than through harsh methods of dictatorship. I prefer that all questions of the day, whether they are small questions or big questions, be thoroughly aired in the public forums, in the grocery stores, and in the post offices.

This priceless gift of discussion and criticism and decision has been taken from most of the people of the world. This priceless gift we must preserve for America.

The first group of settlers in our State spent their first night right here in Windsor. Here they remained to live as free men. The public discussions in your meeting houses, the religious freedom exemplified in your first church, the law and order set up in this community by your first elders, have extended to every corner of the State and beyond. Here you have preserved the vital democratic forces which give strength to all the communities of our Nation—big or little it does not matter. All of them are symbolized by this post office building. With the help of God may it always be this way.

The University of San Francisco

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ARTICLE FROM THE SAN FRANCISCO NEWS

Mr. ROLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article about the University of San Francisco which appeared in the San Francisco News as of April 26, 1941:

[From the San Francisco News of April 26, 1941]

"They built it too far from town * * *"

That's what they said the warm October day of 1854 when one Father Nobili stood in the sun-drenched adobe doorway of the College of the Mission Dolores and watched the retreating forms of his only two paying students making their way across the sand dunes back to the tiny town of San Francisco.

After a scant two years in which debt had piled on debt and creditors obstinately pressed their claims, the little two-story college, flanked by a saloon on one side, and within hailing distance of Mission Dolores on the other, was closing its doors.

Failure though it was, the little college had planted the seed of an idea for the building of a Jesuit school in San Francisco. A year later, in early summer, with the energetic Father Anthony Maraschi, S. J., at its head, a new college, St. Ignatius, came into being.

It stood in the sand dunes on Market Street, between Fourth and Fifth, where the Emporium stands now—and even at that was outside the city limits. A rambling boardwalk wound through the dunes to its doors, and the clamor of the days of the Vigilantes was faint and far away, for those were the days before the city crawled westward.

The years rolled by. Attendance doubled, redoubled, then doubled again. In 1859 the State of California issued a charter to allow St. Ignatius to confer degrees; in 1860 the entire school turned out for "a most enjoyable afternoon" at its first football game.

By 1870 the school had been rebuilt to accommodate the scores of new students. Big news of those days was the gift to the school of a ton and a half bell, ordered but not paid for by the fire department, and the astounding feat of St. Ignatius' Father Neri in illuminating four blocks of Market Street with carbon arc lamps of his own invention—first in the world.

Big news a little later—in 1878—was the moving of St. Ignatius to a new site at Van Ness, Franklin, Hayes, and Grove Streets.

Swank was the word for this latest college plant, whose library was the best west of the Mississippi, and whose gymnasium sported a swimming pool, indoor track, reading rooms, and handball courts.

Workmen put the finishing touches on this last bit of the college in 1905. A year later, on the morning of April 18, 1906, San Francisco Peninsula moved suddenly, as the outflung arm of some sleeping giant might twitch restlessly. There was a thunderous roar and clatter, and then the gigantic whisper of flames destroying half a city, and with it St. Ignatius College.

Well, they couldn't kill San Francisco, and neither could they kill St. Ignatius. A ramshackle row of buildings known as "the shacks" went up at Hayes and Shrader Streets, while the Jesuit fathers planned a new and greater church and college to be built on the windy fog-swept hills on a tract bounded by what are now Golden Gate Avenue, Masonic, Fulton, and Parker Streets.

"You're building it too far from town," the doubters told them, but they built anyway. In 1912 the cornerstone of the new church was laid. In 1926 James Rolph broke ground for the college building. In 1931 St. Ignatius College became the University of San Francisco, though the high school adjoining the college retained the old name.

Second oldest university in the State, alma mater to a host of San Francisco's best "names," University of San Francisco lists some 1,200 students today in night classes and the arts, business, and law colleges.

Head of its faculty is middle-aged, energetic Father William J. Dunne, S. J., who still pitches ball for the faculty on Homecoming Day.

It was of him, and of those other Jesuit Fathers who "built too far out," that former Archbishop Edward J. Hanna wrote:

"They have builded well, and formed generations of enlightened, noble-minded Christian men. Their success in the past is but an assurance of still greater success to come."

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

RESOLUTION OF SERVICE CLUBS OF DETROIT AND VICINITY

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a resolution adopted by eight service clubs of Detroit and metropolitan area requesting the Congress of the United States of America to enact legislation enabling the completion of the Great Lakes-St. Lawrence seaway and power project by removing the existing barriers.

The resolution follows:

RESOLUTION TO THE CONGRESS OF THE UNITED STATES OF AMERICA

Whereas legislation is now pending before Congress of the United States which will enable the completion of the St. Lawrence seaway and power project; and

Whereas the deepening of the St. Lawrence Channel as advocated by President Roosevelt will enable us to make our full contribution to the present needs of our Nation and to participate in the postwar program of world rehabilitation and stabilization; and

Whereas all economic and engineering surveys made by our Government have conclusively proven the feasibility of the Great Lakes-St. Lawrence seaway and power project and forecast a benefit to the entire Nation: Therefore be it

Resolved, by the following organizations: Exchange Club of Northville, Northville, Mich., Trenton Exchange Club, Trenton, Mich., North Detroit Exchange Club, Detroit, Mich., Optimist Club of Highland Park, Highland Park, Mich., North East Exchange Club, Detroit, Mich., Soroptimist Club of Detroit, Detroit, Mich., Kiwanis Club of Allen Park, Allen Park, Mich., Exchange Club of Eastern Detroit, Detroit, Mich., that we do formally and respectfully request the Congress of the United States of America to enact legislation enabling completion of the Great Lakes-St. Lawrence seaway and power project by removing the existing barriers; and be it further

Resolved, That a formally attested copy of this resolution be sent to the President of the United States of America and to the Senators and Representatives in our National Congress.

Respectfully submitted.

EXCHANGE CLUB OF NORTHVILLE.
TRENTON EXCHANGE CLUB.
NORTH DETROIT EXCHANGE CLUB.
OPTIMIST CLUB OF HIGHLAND PARK.
NORTH EAST EXCHANGE CLUB.
SOROPTIMIST CLUB OF DETROIT.
KIWANIS CLUB OF ALLEN PARK.
EXCHANGE CLUB OF EASTERN DETROIT.

DETROIT, MICH., *April 28, 1941.*

Observations of a Realtor-Congressman

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

STATEMENT BY HON. LELAND M. FORD, OF CALIFORNIA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements made by me to the California Real Estate Association at the request of this organization:

Naturally, one of the things that impresses a new Congressman, and should impress everyone, is the tremendous volume of money that is voted in the Budget.

The next impression one receives comes somewhat as a shock when he realizes that every dollar of this money will have to be paid from the only obtainable source of all governmental money, and that is, through taxation. One wonders how long our people can stand up under such excessive taxation. Pursuant to this line of thought, one is then led into wondering how much security there is left in this country. How secure can the property owner be under a government that owes such a vast amount as $45,000,000,000? Expressed in other words, it can be called forty-five thousand million dollars. How secure can any of us be under a bankrupt government?

We may also ask ourselves the question, in connection with national defense, how good is national defense in a country that owes $45,000,000,000? These things strike us very forcefully.

The next thing that impresses one forcefully is this tremendous amount of so-called "regulation of business." I think reasonable regulation of business is all right, but when regulation reaches the point where it begins to destroy business, I think that one may look therein and consider that this regulation, together with overtaxation, is at least one of the answers and the cause of much of our unemployment. Business certainly cannot pay taxes with the same money that it would use to furnish employment to the country.

If one is inclined to think at all, I think, also, they certainly must be impressed with this constant encroachment of Government ownership and control, which amounts to socialism, upon what we have formerly known as our American form of government.

Let us see if this is just merely a statement or whether it is true, and consider and balance the facts. The Federal Government certainly is in the power business; it certainly is in the banking business; it certainly is in the building business; it certainly is in the insurance business; and, all told, there are some 89 types of business that the Federal Government is engaged in. I don't care whether you are a Democrat or a Republican or what your political affiliation may be, I say to you that you have got to consider the Government entering into business and definitely answer correctly what it is. This, then, brings us to the question, Is this, or is it not, socialism, and if it is socialism, how far are we going to let it go? This certainly is the first step toward nazi-ism, fascism, or communism. As a matter of fact, nazi-ism was formerly known as national socialism. In following this thought it might be well to consider what are the effects of these types of government, which always end up in a purely dictatorial, despotic form upon all of its people. When I say all of its people, I mean all, and list a few. Business and industry on one side, employee and labor on the other. They are both lost. The same is true of the property owner; wealth is conscripted and property is confiscated. It might be well for us to consider seriously some of these things and ask ourselves the question, Where are we going, and where do we stop? Labor and business of all types might well ask themselves what its ultimate destination would be under a changed form of government here. At least one thing that we can see would be this: What effects this type of government in Europe has had on these very things, and we might find a solution by asking ourselves a question. Are there any labor unions in Italy, Germany, or Russia? What has happened to business in these respective countries? What has happened to the individual liberty of the people in these different countries? And what has happened to religion? With reference to religion, it, along with many of these other things, has first been restricted, then partly liquidated, and then wholly liquidated. I, as a newly elected Congressman, have been seriously impressed with the encroachment of this socialism upon what we have formerly known as our American form of government, and, unless it is checked, I am wondering what is going to happen to those things which we have heretofore known as freedom and individual liberty. I do not think it is too late to check this thing and stop it and return to our American form of government, and I think the way that it can be done will be by the uniting of the real Democrats and the real Republicans to fight it. I have always stated that the Democrats and Republicans can certainly meet on the common ground of the safety and welfare of their Nation, above all else.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. JENKINS of Ohio. Mr. Speaker, there is much interest being manifested

in the country over the proposal to construct the St. Lawrence waterway project. There seems to be a tremendous lot of opposition to it.

I maintain that at this time this program is not necessary for national defense, and I further maintain that it would be unwise to incur this tremendous obligation when the people are being threatened with a tremendous increase in taxes.

I hold in my hand a petition signed by several hundred workingmen in my district, all of whom are opposed to the construction of this project. Most of these are railroad men. The miners and mine operators and the rivermen and businessmen generally are opposed to this project.

In my service as a Member of Congress I have always tried to do what is for the best interest of the people of my district and what is for the best interest of the country generally. Now is the time to economize in Government expenditure so that we may be in position to provide adequate defense to protect the Nation.

I expect to oppose the St. Lawrence waterway project not because it does not have any merit but because it has not sufficient merit and is not sufficiently needed to justify our spending many millions of dollars in these times when we need this money for other purposes.

Vast Majority of College and University Students Do Not Want War

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

LETTERS FROM CARL SNAVELY AND EDITORIAL FROM THE CORNELL DAILY SUN

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters from Carl Snavely, the well-known football coach at Cornell, and an editorial from the Cornell Daily Sun. I commend the reading of these letters and the editorial, not only to all college students, but to men and women of all ages in America:

CORNELL UNIVERSITY,
Ithaca, N. Y., April 29, 1941.

Hon. HAMILTON FISH,
House of Representatives,
Washington, D. C.

DEAR MR. FISH: The boys of the United States do not want war and do not feel that the United States has any reason or right to become involved in the European conflict. The enclosed editorial and letter to the editor, clipped from the Cornell Daily Sun, give expression to the views of the vast majority of college and university students, regardless of the organized efforts which here and there have secured expressions of contrary emotions.

Undoubtedly, the sentiment of the young men of the United States is overwhelmingly favorable to the Allies, but the desire to sacrifice themselves and everything that Americans hold dear in an insane effort to police, reform, and finance the entire world is almost totally lacking, and I do not believe that it ever will be possible to get their united support for such a program.

In closing, I want to express my personal approval and appreciation of your own efforts to steer America straight through this perilous crisis.

Very sincerely yours,

CARL SNAVELY,
Coach of Football.

APRIL 11, 1941.

President FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: For the first time in my life I am exercising the right of a citizen of the United States to express his views to the highest authority of his country. I do so with hesitancy, realizing that my influence is of infinitesimal importance, but feeling, nevertheless, that it is a part of my duty as a citizen to do what I can in presenting to our leader the feelings of a great mass of our citizens concerning one phase of the critical and perilous situation which our Government is now facing.

The sentiments and motives underlying your foreign policy are laudable in the eyes of practically every American; but, nevertheless, the overwhelming majority of us do not want war, and we are depending upon you and your leadership to keep us out of it, according to your promise. In my contacts with a considerable number of American youth, I find it to be strikingly obvious that, despite expressions of anti-Axis emotions, the young men of America are bitterly opposed to the idea of war. As American involvement becomes more imminent, they are becoming less and less impressed by the theory that this struggle is an inescapable conflict of ideologies, and they are less and less ambitious to become martyrs in a crusade for a vague, impersonal, and visionary cause.

We realize that the present situation may warrant a threatening attitude in our dealings with foreign diplomats and we are aware of certain gratifying developments which seem to have resulted recently from such an attitude on our part in the field of international relations. But, with respectful yet sincere frankness, many of us fear that the broad objectives outlined in your recent fireside chat, commendable though they undoubtedly are, are beyond the limits of practicability and even possibility until human nature has gone through many centuries of further evolution. Regardless of America's great resources, we shall be making a terrible mistake if we assume that it is possible for the United States to police, protect, capitalize, or reform the entire world. An attempt to do so will mean perpetual war and poverty and the loss of all the superior blessings and higher standards of living which now characterize the American way of life.

It is conceivable, although by no means certain, that we might defeat the Axis Powers in battle, but neither side would win in such a struggle. In all probability, and regardless of our wishful thinking to the contrary, such a war would last for years and, at best, its cost in terms of butchery, mutilation, death, destruction, horror, and universal impoverishment would be so great that all previous catastrophes of American history combined would be insignificant in comparison. No home or individual could escape the extremities of sorrow and sacrifice, and we should consider the fact that this sacrifice would be permanent as far as most Americans who are living today are concerned.

Few citizens have paused as yet to visualize the consequences of such an ordeal simply because they do not conceive of it as an actual probability. They may never awake to the danger until it is too late, but before they actively enter the struggle, if they do, I believe that they will rise en masse in bitter and passionate protest against it. It is doubtful that they can ever be thoroughly united in such an undertaking unless America is actually attacked.

Let us arm America to the teeth and defend it to the death. Let us help Great Britain as far as we can without endangering our own existence. But instead of dissipating all our resources in a gigantic gamble abroad, let us marshal our forces for the economic struggle that is to follow this war, no matter who wins. Instead of being seduced by a few visionary and impractical advisers who are clamoring for the supreme sacrifice, mostly on the part of other individuals, let us be guided by the lessons of history concerning wars and crusades and the tragic fate of nations which have overestimated their own powers or their obligations in the control of world affairs, and let us consider the interests of the vast but inarticulate majority of our own people.

Let us not be deluded by the fallacy that we can engage in this war to a limited extent, such as, for example, the convoying of shipping. Once we are caught in this cataclysm there can be no turning back, no halfway measures. We will be committed to a war to the death—a struggle of years and of near extermination for both sides. The American people can escape it. They do not want it. They will never approve it except in the actual defense of their own country and if our leaders venture too far, they should not expect to be excused or forgiven by the survivors of the ensuing ordeal or their children or their children's children or by the historians of the future.

Yours respectfully,

CARL G. SNAVELY,
Coach of Football.

[From the Cornell Daily Sun of April 15, 1941]

STRATEGIC EVACUATION

As Axis military and diplomatic blitzkriegs continue to modify the political face of Europe, Asia, and Africa it grows increasingly important that the American people demand two things of their Nation's foreign policy: That it be judged by its effect on the security and prosperity of our Nation; that it be kept realistically abreast of a changing world and above domination by selfish interests.

Today it is important that we look at our foreign policy in this practical light. Our aims are neither the preservation of the British Empire nor the policing of the world. Our primary interest is in the security and prosperity of our Nation.

Considered from this point of view, it is vital that we withstand the efforts of vicious pressure groups which are operating within our Nation for the purpose of diverting our policy from these true American aims to a course more favorable to other interests. At this time it is obviously important to consider the British "fifth-column" machine as foremost among those in operation, for its demonstrated effectiveness make it a dangerous obstacle working to separate America's foreign policy from America's best interests.

In the past several years it has seemed wisest to give aid to anti-Axis forces in Europe as the best method of protecting the United States. This was however, merely a means to an end. Since this means was first adopted, the world situation has changed, and it becomes vital that we ask ourselves whether the original means is still the best possible for our end. This is a question of the greatest practical concern to the United States and must be decided by practical, clear-thinking men.

In meeting this challenge we must remember that we are in a nation no longer emotionally stable. Our prejudices, biases, and

emotions have been manipulated to a point making it difficult for us to clearly appraise the respective alternatives before us. Yet we must make the decision—our Nation's future rests on it. Moreover we must stand ready to make such decisions for each new development in international affairs.

It is imperative that we ask ourselves at all times not "what is the best way of preserving democracy in Europe, of defeating the Axis, of saving Europe's downtrodden nations"; but instead we must constantly make our policies measure up to the practical standard of "what is the best way of safeguarding the security and prosperity of our Nation." These other ideals may be worthy, admirable, backed up with historical and religious support, but above these stands the fact that, today, we must first secure our own future, and then concern ourselves with the future of others.

We must stand honest to the reality that the Axis victories may make it strategically wise for us to withdraw from our present interventionist course to one of consolidating and improving our position in this hemisphere. We have learned much in recent years from the British about "strategic evacuation," and as American citizens interested primarily in America's future, we must stand ready to perform such an evacuation from our present interventionist policy if Europe's events should make it necessary for our protection.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ARTICLE BY RAYMOND J. KELLY

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Raymond J. Kelly, past national commander of the American Legion, urging the construction of the Great Lakes-St. Lawrence seaway as a twofold national bargain; defense against aggression and defense of our national economy in the competitive markets of the world after the war. The article follows:

Production for the defense of America might well utilize all the machinery of America's production facilities.

Yet a high percentage of those facilities, located in the favored and sheltered and easily protected interior of America, are unused. They are unused because the products of these interior facilities can't get through to the sea.

The production facilities I refer to are in the region of the Great Lakes. The reason the defense output of this region can't get through to the sea is a 48-mile stretch of the St. Lawrence River located in the International Rapids.

This stretch, now limited to vessels with a draft not beyond 11 feet, represents less than 3 percent of the Great Lakes-to-the-sea route and makes that route resemble a sack of meal with a string tied around the middle.

Remove the string and the Great Lakes plants could now be turning out a billion dollars' worth of materials for defense. The cost of removing the string would be approximately that of two battleships.

With the string removed the St. Lawrence route could carry everything but battleships and airplane carriers. As it is the Great Lakes shipyards must be content with small orders for small boats, while most of their productive capacity goes unused. One Wisconsin firm has a contract for submarines, but these must be cut in sections and reassembled on the Atlantic coast before they can take their places as watchdogs of the Nation.

Existing shipbuilding facilities on the coasts of America are already booked solid 2 years ahead. How soon they can hope to complete the requirements of a two-ocean Navy or meet the increasing demands of the United States Maritime Commission is a moot question. Certainly, the adequate defense of America requires that we get all the ships we can as fast as we can get them. And this implies utilizing every possible production facility in America.

It was this urgency which recently led President Roosevelt to say of the seaway: "It is now a vital necessity." The President added that "The United States needs the St. Lawrence seaway for defense. The United States needs this great landlocked sea as a secure haven in which it will always be able to build ships and more ships in order to protect our trade and our shores."

In this attitude the President's judgment coincides with that of every single one of his predecessors since 1911. Every President in the past 30 years has regarded the seaway as a patriotic measure in the national interest, above political and sectional prejudices. A plank in the Republican Presidential platform of 1932 endorsed it. Republicans and Democrats alike, who were motivated by national welfare, have given it their unqualified approval.

It is a defense measure now. But it was not a defense measure when endorsed by Herbert Hoover, Calvin Coolidge, Warren Harding, Woodrow Wilson, and President Taft. It stood, then, on the sole merit of aiding our national economy. Today it has the additional merit of aiding defense. Today it offers us a twofold national bargain: Defense against aggression and defense of our national economy in the competitive markets of the world after the war.

Keep American Boys Out of Foreign Wars

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ARTICLE FROM RIVER FORESTER, RIVER FOREST, ILL.

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint of an article recently appearing in the River Forester, of River Forest, Ill.:

[From the River Forester, River Forest, Ill.]

KEEP OUR BOYS OUT OF FOREIGN WARS, PLEAD MOTHERS

A group of mothers in the River Forest Methodist Church are deeply concerned with this Nation's trend toward a foreign war. They do not believe that the United States of America should seek to police the world, but believe that we should build our own defenses against the political intrigues of Europe.

In addition to writing letters to Congressmen and the President, these women have conceived of a plan of advertising their convictions. In this paper will be found an advertisement containing the pictures of their sons when they were babies. The mothers tell us that they want their sons to build happy homes, develop wholesome communities, make their contribution to our social and industrial life and to worship the Infinite God unafraid.

Very significantly they remind the President of his pledge as late as October 30, 1940, when he said: "I have said this before, and I shall say it again and again: Our boys are not going to be sent into any foreign wars." The women say: "Mr. President, we count on your integrity."

This group of Methodist women are hoping that other mothers in other churches will follow their example and help build a sentiment in this country that will keep us out of foreign wars. Each woman whose son's picture appears in the advertisement, will cut the picture and article from the paper and send it to the President. The women will also send copies of this article to their friends and urge them to take similar action.

NO "FLANDERS FIELD" FOR OUR BOYS

Where "poppies grow, beneath the crosses, row on row."

We bore our sons and reared them that they might breathe the air of freemen and live to build happy homes, develop wholesome communities, help promote a high type of education for all, make their contribution to our social and industrial life, worship the Infinite God unafraid.

If they live, we shall realize this American dream.

If they die, the dream becomes but a tragic memory.

Mr. President, we appreciate your pledge of October 30, 1940: "I have said this before, and I shall say it again and again: Our boys are not going to be sent into any foreign wars."

Mr. President, we count on your integrity.

Respectfully,

Mrs. Richard W. Bock, Mrs. Lotus D. Brennen, Mrs. Owen Davies, Mrs. R. R. Grant, Mrs. Albert C. Hilker, Mrs. M. Homer, Mrs. George G. Jones, Mrs. Sebastian Kmiecik, Mrs. Stanley Kiemke, Mrs. John K. Lankford, Mrs. C. W. McIntire, Mrs. George Minion, Mrs. George A. Nichols, Mrs. Edw. L. O'Brien, Mrs. T. J. Peters, Mrs. Susan Porter, Mrs. Leonard G. Schneller, Mrs. Julius F. Tascher, Mrs. Eliza Taylor, Mrs. Maude E. Waite.

Legislating by Court Assailed

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ARTICLE BY DAVID LAWRENCE

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Law-

rence, from the Washington Evening Star of April 30, 1941:

[From the Washington Evening Star of April 30, 1941]

LEGISLATING BY COURT ASSAILED—SUPREME TRIBUNAL SAID TO HAVE PUT MISSING WORDS IN LAW

(By David Lawrence)

Five Justices of the Supreme Court of the United States—all of them appointed by President Roosevelt—have united in a decision which may well revive the Nation-wide controversy over the Court which developed in 1937.

The charge then was that the old Court "legislated" and that it was, therefore, not liberal. Today the new Court, packed by the present administration, has undertaken more boldly than the old Court or any other Court in history to supply words and text to a statute which were never approved by Congress.

The effect of the decision may be epoch-making in American history. For five Justices—a majority of the Court—say, in effect, that an employer must hire anybody who claims he was discriminated against because of union affiliation when applying for a job. If the Labor Board rules that the employer refused to hire for one reason or another, it does not matter what the evidence really shows—the Labor Board's word is final. More than this, even though the Wagner law specifies what are or are not unfair labor practices and permits the Board to issue an order to cease and desist from such practices, the statute did not give the Board power to think up any kind of punishment it cared to apply.

But the Supreme Court now says a governmental board or commission—not merely the Labor Board but any governmental agency—can apply punishments of their own, irrespective of whether such punitive action is specified by Congress.

This form of administrative absolutism caused a revolt in the House of Representatives and the Senate in the last session when the Logan-Walter bill was passed by an overwhelming vote only to be vetoed by President Roosevelt. The usurpation of the lawmaking power by the highest court in the land comes at a time when the Nation is engaged in a debate on the importance of combating the Fascist system of government-imposed law without recourse to a national legislature.

STONE PRAISED FOR DISSENT

The latest instance, known as the Phelps-Dodge case, revolved around the refusal of the company to hire two men who had been union agitators. They were not employees of the company when applying for jobs and yet the Labor Board ordered the company to hire them and ordered also that back pay be awarded to these nonemployees from the date of their application to the time the Board ordered them taken on by the company.

Nothing in the Wagner law authorizes any such order by the Labor Board. The law speaks of reinstating employees who are discharged because of union activity or connections. But this covers an employee already at work. The Chairman of the Labor Board told a committee of Congress last year that he thought the Congress intended to make the law read "instate," as well as "reinstate," but just forgot.

It now develops that the five Justices of the Supreme Court appointed by President Roosevelt decided to supply the missing word, and it is a mark of credit to that great liberal, Harlan Fiske Stone, Associate Justice, that he did not concur in what the New Deal Justices endeavored to do. This is one of the rare occasions when Justice Stone has been found disagreeing with the New Dealers. In his dissenting opinion, which is also concurred in by Chief Justice Hughes, the following declaration is made by Justice Stone:

"We agree that the petitioner's refusal to hire two applicants for jobs because of their union membership was an unfair labor practice within the meaning of the act, even though they never had been employees of the petitioner [the company], and that under section 9c the Board was authorized to order petitioner to cease and desist from the practice and to take appropriate proceedings under section 10 to enforce its order. But it is quite another matter to say that Congress has also authorized the Board to order the employer to hire applicants for work who have never been in his employ and to compel him to give them back pay."

SUPPLYING MISSING WORDS

If the Supreme Court of the United States can supply missing words in Federal statutes, not merely by contortion of existing language, but actually supplementing the text itself, then the historic form of government which America has enjoyed for 150 years will have vanished.

The extreme of administrative autocracy and absolutism, however, has been reached in another case—doubtless soon to be upheld by the New Deal's Supreme Court—wherein the Labor Board ordered an employer to hire workers who had not even applied for a job or asked to be hired. The board supported its fantastic conclusion by the theory that the workers' failure to apply for a job was caused by a belief that even if they did apply they would probably be discriminated against. This is known as the *Nevada Consolidated Copper Corporation case*, decided on August 24, 1940. Here is a decision based on a conjecture. But what the Supreme Court has just done is to uphold the absolute powers of such governmental agencies. The Court now affirms the Fascist doctrine proclaimed not so long ago by Herr Hitler, namely, that judicial decisions should not be based on written constitutions or specific statutes, but on policy and "public sentiment. It is not what Congress said when it wrote the law but what Justice Frankfurter and his colleagues say Congress should have or might have said which is now the supreme law of the land. There doubtless will be a diminishing enthusiasm in America for a war to save this kind of democracy.

Flannery Longevity-Pay Bill

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

STATEMENT BY HON. SAMUEL A. WEISS, OF PENNSYLVANIA

Mr. WEISS. Mr. Speaker, I wish to incorporate in the RECORD my statement made before the members of the Post Office and Post Roads Committee on Tuesday, April 22, 1941, as follows:

Mr. Chairman and members of the committee, as a new Member of Congress, this is my first appearance before the Post Office and Post Roads Committee, and I am happy that my initial appearance is in favor of a very worthy measure, the Flannery longevity-pay bill, H. R. 1057. I heartily endorse this bill that provides a just reward for the postal employees of the United States Government.

I have always subscribed to civil-service laws, having introduced several such bills while I was a member of the Pennsylvania Legislature, and I heartily subscribe to the principles set forth in the Flannery longevity bill; in fact, I firmly believe the increments are insufficient, and I would not hesitate to vote for a larger pay increase for each 5-year period that a postal employee remained with the United States Government after his first 10 years' service. The pay increments as stated in this bill are so just and reasonable that the committee should promptly and favorably recommend the Flannery measure to the Rules Committee so that we Members of Congress may have the opportunity to vote for same, and promptly send it to the Senate.

Similar principles as H. R. 1057 are now on our statute books affecting the men in the Army and Navy service of the United States Government. Will anyone on this committee dispute the fact that the postal employees are just as vital a part of our National Government as the men in the Army and Navy? There is not a branch of our Government in which a greater trust is imposed on anyone than the postal employees; there is not a more loyal group in our entire Government than the postal employees, and there is not a more industrious group than the postal employees. In all kinds of weather and under adverse conditions, they faithfully perform the services for our great Government.

The Flannery longevity bill will promptly reward the postal employees for faithful and loyal service. It does not help any political appointee, but only rewards employees who have shown their fitness, and who have been in the employ of the Government for a period of 10 years or more. While we are spending billions of dollars to help England and billions of dollars for our own national defense, I do not believe we would be criticized by the taxpayers of America if we appropriated $30,000,000 to reward the postal employees of our Nation by passing the Flannery longevity pay bill. Certainly the postal employees will have to meet increased cost of food, clothing, etc., just like the men in private industry who have just received pay increases, even if only in private employment one day. The Flannery longevity bill grants this little increase to the postal employee to enable him to meet increased prices. I firmly believe that we Members of Congress can perform a worth-while service if we enact this measure into law, and I therefore urge you members of the Post Office and Post Roads Committee to report this bill out favorably and as expeditiously as possible to the Rules Committee. I feel certain that there will be very few of the 435 Congressmen of the United States who will dare oppose this measure to reward the faithful, loyal, and trustworthy postal employees of the United States Government.

The United States Navy

EXTENSION OF REMARKS

OF

HON. THOMAS H. ELIOT

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ADDRESS BY HON. JOSEPH E. CASEY, OF MASSACHUSETTS

Mr. ELIOT of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH E. CASEY,

of Massachusetts, before the New England Council at Washington, D. C., on April 30, 1941:

A year ago when you came to Washington, Congressman J. JOSEPH SMITH, of Connecticut, addressed you upon the state of the United States Army. At that time he made a masterful statement which must have impressed you. His conclusion was, and I quote, "At the present rate of progress we are still several years away from readiness to defend ourselves." Tonight I want to talk to you about the United States Navy. I select this subject because of the fact that you heard about the Army last year and if you learn as much about the Navy tonight as you did about the Army a year ago, you will have a pretty comprehensive picture of our defenses.

Since coming to Congress, I have served on the Naval Affairs Committee, and for the past 5 years I have been a member of the Subcommittee on Appropriations for the Navy. The uncertainty of political life is such that during that short period of time, I have become ranking member of this Subcommittee on Naval Appropriations.

The most important individual in the Navy is the President of the United States. In times of peace, we rarely think of him as Commander in Chief of our Army and Navy. Tonight we think of him thus because our country is in deadly peril and every good American holds himself ready for any call for his services which the Commander in Chief may make. It may call for minor sacrifice of income. It may mean longer hours of labor. For some it may mean the rupture of home ties by enlistment in the armed forces. These are part of the obligations of citizens in a free country when that country is in danger. The man who can summon us to fulfill these obligations is the President—every American's Commander in Chief. What sort of man the President is becomes of vast importance when national peril impends.

President Roosevelt is a sincere, earnest, and patriotic American who understands what Americanism is and is ready to make any sacrifice to preserve it. He has completely foresworn partisanship and is animated by as fine and high a purpose to serve his country in its hour of danger as any man who has ever filled the Presidential office and discharged the arduous duties of a Commander in Chief. He is devoted to the cause of the common man and can appraise the reactions of the average citizen under conditions of stress and strain better than any man of his generation.

Prior to becoming President, he served as Assistant Secretary of the Navy. He thoroughly understands the essentials of high strategy, and in the disposition and employment of naval and military power he is probably the equal if not the superior of any naval authority now living. He has shown that, throughout this present world crisis—the gravest in the world's history—he possesses one quality above all others, and that is the quality of courage. His ability and courage give us assurance that our free way of life will be preserved. The successive measures which he has taken has provided at least a reasonable hope that the march of totalitarianism can be halted.

In 1933 when he took office, he began a naval-building program, the units of which are operating, thank God, with our fleet today. In 1934 an allotment was made to the Navy of $238,000,000 out of N. R. A. funds for the construction of 32 vessels. In 1935 an additional $25,050,333 was made available for the construction of 20 additional vessels. From that time on, the tempo of construction was stepped up, so as to reach a treaty total of underage vessels by 1945.

Congress did not authorize the replacement of battleships, despite the request of the Administration, until the Navy Department, through the passage of the Naval Appropriations Act of 1937, when two were commenced. Two more were laid down in the Naval Appropriation bill of 1939. Two were laid down in the Second Deficiency Act of 1938, two in 1940, and two in the 1940 regular act. All were replacements, designed to keep up with foreign navies.

The present accelerated emergency program began in September 1939. On September 3 of that year Great Britain declared war on Germany. In September 1939 the Navy contracted for 76 vessels; in 1940 for 23; and in 1941 for 629. In September 1939 the number of shipbuilders who had Navy contracts was 6. In the current year, this number was increased to 38. Every ship that is under construction is ahead of schedule. Those that are being delivered are several months ahead of their contract.

All Navy work is being done on a 3-shift basis at the present time. Prior to the emergency, the entire shipbuilding industry was on a 5-day, 40-hour week. In regard to future difficulties, there are a number of materials which may cause a hold-up on production. They are: (1) structural steel; (2) aluminum; (3) probably the most important of all, steel forgings; (4) armored deliveries. We have undertaken the largest naval building program in history without knowing the date of our deadline. The deadline is always tomorrow and we must therefore do as much today as is humanly possible.

From a national-defense point of view, we must consider only on the basis of the worst that can happen to us from the wars raging all around us. The worst that can happen is a combined attack on the Western Hemisphere by all powerful conquering nations from across both our shores. Unless we are prepared for the worst, we cannot hope for the best. In a world dominated by force, America must be so equipped that no combination of powers will dare attack us. The battleship is still the backbone of our Navy, despite criticism which tends to minimize its value because of the increasing strength of aviation. The battleship still rules the seas and will continue to rule the seas for a long time. The striking power of the battleship is great and accurate, and any invasion of this hemisphere would end in failure so long as our battle line remained intact and could engage enemy fleets there. We now have 15 battleships. Up until the present program was put into operation, we had not laid down a single battleship since 1919. On April 9, 1941, there was commissioned the battleship *North Carolina*, the newest and most powerful battleship afloat and the first one commissioned since 1933. This gives our Navy 16 battleships. The naval-building program calls for the completion of 16 more, which will give us a total force of 32 battleships. All of these will not be completed until 1946. Another one, the *Washington*, being built at the Philadelphia Navy Yard, will be commissioned sometime this spring. Three more—the *South Dakota*, being built at the New York Shipbuilding Corporation; the *Indiana*, being built at Newport News; and the *Massachusetts*, being built at the Fore River Shipyard—will probably be finished in 1942. That year (1942) will find us with 20 battleships. Three more—the *Alabama*, being built at the New York Navy Yard; the *Iowa*, being built at the New York Navy Yard; and the *New Jersey*, at the Philadelphia Navy Yard—should be completed in 1943, so that year will find us with 23 battleships. Two more—the *Missouri*, being built at the New York Navy Yard, and the *Wisconsin*, at the Philadelphia Navy Yard—should be finished by 1944, and that year will find us with a total battleship strength of 25. The others ought to be finished by 1946, which will give us a total battleship force of 32, the backbone of a two-ocean navy.

Then there is the aircraft carrier, which operates with the fleet and serves as a protection to our battleships because of its ability to swiftly launch planes, to engage enemy planes and ships, and to scout and bomb long distances from the fleet itself. We now have 6 aircraft carriers. Twelve are under construction. The Bethlehem Steel Co. at Quincy, Mass., is building one, the *Cabot*. Upon their completion, we will have 18 aircraft carriers.

An efficient fleet must have a great number of light and heavy cruisers. With less armor and striking power than the battleship, but with the speed and guns to ward off fast vessels of the enemy (such as attacking destroyer squadrons), the cruiser's value is inestimable. We now have 37 of them. Upon completion of the program we shall have 91 light and heavy cruisers.

The destroyer is perhaps the most useful of all our smaller vessels. Possessed of high speed, maneuverability, and gun and torpedo power, it can rush in on an opposing fleet and break up its effectiveness of fire through well-directed torpedo attack. Its great work in escorting convoys during the World War is well known to most of us, when not one man was lost in transporting over 2,000,000 of our soldiers to France. With its depth charges, the destroyer can spell death to submerged submarines. We now have 159 destroyers. Upon completion of the program we will have 364.

Submarines can be employed both with the fleet or alone to harass the enemy battle line or attack enemy convoys by sneaking into their midst and letting go their deadly charges of torpedoes. We now have 105 submarines. Upon completion of the program we will have 185. All in all, this vast armada will consist of 690 competent vessels instead of the present 322.

The fleet air arm is most important to all present and future naval activity. Upon completion of the naval expansion program we will have 15,000 planes of all types—7 times its current number.

To man this future Navy and to fly these planes, we will need afloat and ashore a total of 33,500 officers and 461,000 enlisted men.

The efficiency and power of the Navy was greatly enhanced by the acquisition of the Atlantic bases. They give us an outer line of defense from Greenland to the Caribbean. These bases prevent the element of surprise being on the side of an attacking enemy. From them our scouting planes can cover the wide Atlantic and discern an approaching foe. From them our ships can more quickly engage an attacker far from the shores of the mainland.

And so the Navy's immediate task is to maintain the outer line of defense in order that you men of industry may continue to supply the democracies resisting aggression and to supply the United States of America, as speedily as possible, with all the equipment which will make it possible to attain a victory of civilization itself.

There you have it—the American Navy. It consists of ships, planes, men, and bases. What does it accomplish in a tangible way? The most important thing it accomplishes is that it will, during our lifetime, prevent this country from becoming a theater of war. It gives to our citizens a feeling of security and peace, born of the knowledge that the awful consequences of war will not be visited upon our civilians or their homes. I think this faith is well founded, because Hitler's terribly efficient machine army has yet to show that it can cross any considerable expanse of salt water.

The maintenance of this Navy will mean greater expenditures, greater efforts, and greater taxes.

This Navy, however, cannot, in the nature of things, be accomplished until 1946. Time, therefore, is our most valuable ally. Our immediate task is to supply the democracies now resisting aggression materials of war in order that they can continue to resist. If that resistance is not successful, I can see

nothing ahead but the maintenance of huge armaments with crushing taxes and the loss of our main surplus market—Europe. If, however, as we all hope and pray, that resistance is successful, then we can look forward to a lessening of the huge cost of armaments and to reverting to the ways of peacetime pursuits.

Let us see things clearly. We are not concerned with any country attaining a national victory or to perpetuate any country's empire. If that were our aim, we would be foolish meddlers. Everyone who sees clearly, knows that this is a war in which the forces of paganism are being impressed not only upon the German Nation but also upon the conquered countries of Europe. World domination is the ultimate goal. It means the death of western civilization. It means paganism supplanting the precepts of Catholicism, Protestantism, and Judaism. It means the end of democracy as we know it. It means, from a material standpoint, economic encirclement. We cannot and must not let this happen.

Let us, therefore, all unite in order that our combined efforts may contribute effectively to the making of a better, kindlier, more tolerant, and saner world.

Flood Control at East Hartford, Conn.

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ARTICLE BY BULKLEY GRIFFIN

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks, I include the following article by Bulkley Griffin pertaining to flood control at East Hartford, Conn., which appeared in the Hartford Times on Saturday, April 19, 1941:

[From the Hartford Times of April 19, 1941]

WASHINGTON

(By Bulkley Griffin)

The pen with which President Roosevelt signed the fifth supplemental defense appropriation bill is now in the possession of Congressman HERMAN P. KOPPLEMANN, Democrat, of Hartford, a gift from the Chief Executive. This was the bill which carried the $1,640,000 for completion of the East Hartford dike project.

The office of the Hartford Congressman is a proper depository for the pen. The flood-control project is in his congressional district. Furthermore, there has been no Member of Congress more outspoken not only in behalf of Hartford flood control but also in behalf of the President's whole New England flood-control program. The President could always count on the support and vote of Mr. KOPPLEMANN.

Representative KOPPLEMANN'S interest in flood control for Hartford dates way back. When he lived on Front Street he had first-hand observation of the floodwaters backing up through the sewers and flooding cellars. One day a young boy, a friend of his, was drowned in one of these flooded cellars. When Mr. KOPPLEMANN came to the Hartford city council one of his first efforts was to secure construction of an intercepting sewer for the protection of Hartford's east side. He carried his project finally to triumph over the lethargy or opposition of some of the richer city fathers, who were not so aroused over the plight of the east side.

His interest in flood protection has continued. When he came to Congress he found it easy to support the New Deal's proposals along this line for New England. He was quick to detect what the administration called the joker in the proposed interstate flood-control compact, the grant to the States of control over any power developed by the proposed flood-control reservoirs. This clause meant, in effect, said KOPPLEMANN, that the private power companies would control the power, and that the consumers would not receive the lower rates that were possible.

The story of that New England flood-control battle is now history. President Roosevelt won victories in Congress and this year in the Supreme Court. The Federal Government does have control over the power, the Court has decreed. Of interest for the moment is the fact that during this long fight, while most New England Members of Congress either supported the interstate compact or were hesitant to take sides, and while former Governors Cross, of Connecticut, and Hurley, of Massachusetts, either denounced the Roosevelt program or sat on the fence, Congressman KOPPLEMANN was one of the very few who consistently spoke and worked for the New Deal's contentions and Federal authority over flood control and power.

Meantime he did not lose sight of Hartford's flood-protection problems. These continued immediate, while the comprehensive New England flood-control plan was bound to consume several years in the attainment. It was right after one of KOPPLEMANN'S talks with President Roosevelt late in 1937 that the latter suddenly made available Federal money for start of the present Hartford dikes program. This was at a time when his political enemies were saying that KOPPLEMANN'S opposition to the proposed interstate compact was depriving Hartford of flood protection. The action of the President answered that argument rather significantly. The Congressman has the pen with which the President a little later signed legislation appropriating funds for the Hartford work which he had begun with some W. P. A. money.

Now the Hartford chapter seems about to be closed. The pen that signed the fifth supplemental defense appropriation bill bears witness that the final money for completion of the East Hartford dikes has been voted. In the pending War Department civil functions appropriation bill that has already passed the House and is now before the Senate committee, with expectation of approval, is the $964,000 required to complete the Hartford dikes—the Park River conduit is the final item—which has been a $4,614,000 project.

The Arsenal of Democracy

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ORATION BY ALLEN PFORSICH

Mr. WEISS. Mr. Speaker, I wish to insert in the RECORD the original oration prepared by Allen Pforsich, a 16-year-old senior of Glassport High School, Glassport, Pa., who has been one of its outstanding orators. He recently won second place in an oration contest conducted by the public schools of Allegheny County. Mr. Pforsich's original oration is a masterpiece, and in said oration he carries out the sound reasoning and the principles set forth by the President in the lend-lease bill—that America become "the arsenal of democracy." With such American youth as Allen Pforsich Americans need not fear the future.

The oration follows:

THE ARSENAL OF DEMOCRACY

(Original oration by Allen Pforsich, Glassport High School, Glassport, Pa.)

Surging over the radio this evening came the startling and terrifying news—England has been defeated; her allies, Greece and Turkey, have been beaten to their knees; Gibraltar, Suez, the Dardanelles—the life line of a once-mighty empire—have fallen. In the Far East, Singapore, Australia, and French Indochina have surrendered to the greedy ambition of warlike Japan. Crafty Russia, seeing the handwriting on the wall, has joined the fellow dictator states in the mad scramble for the spoils of war. Even now hysterical men and women rush into the streets shouting, "The war is over." Yes; the war is over—but in its place chaos and havoc reign.

In Europe, Asia, Africa, over half a world, the people of conquered nations are homeless, starved, diseased, dying. Across the bleak horizon ride the four horsemen of the Apocalypse—War, Famine, Pestilence, and Death—spreading fear and terror in the hearts of men. Cities, mighty cities of mighty nations that towered majestically above a happy populace, have been leveled to the ground. Towns, hamlets, peaceful farms—all stand paralyzed in terrible desolation. Beneath the salty waves lie the ruins of great fleets. A once mighty but now dying empire at long last finds the sun setting on her broad domain; her subjects, mowed down by war's fearful armada, lie prostrate, discarded on life's final ash heap.

And out of the war's debris of war has arisen a sinister, godless horde of men who live by the wild man's creed, "Kill or be killed, crush or be crushed." These were once strong men, knowing no fears, men whose standards and ideals had reached amazing heights. Now they roam abroad in murderous packs like their barbaric ancestors, plundering, pillaging, burning. For powerful men told them lies, and they believed these lies; their leaders, blinded by visions of power and glory, said, "Follow us," and thoughtless men followed them in equal blindness. Men who knew not hatred killed because a few hating men told them to kill. The crimson sword of the dictator has silenced those who dared to understand, those who dared to foresee, those who dared to stand in the way. In man's darkest hour he could see no guiding light; there seemed no help for him who too often had turned in disdain from a helping hand.

But who has won and who has lost? Who can name the victor or the vanquished in this senseless orgy of destruction? We only know that democracy, art, science, culture, civilization itself have fallen, and in their places have appeared false gods and idols, symbols of greed and jealousy—cruel and savage conquerors who rule by fire and sword. Is this the end brave men throughout the ages have fought valiantly to achieve? Has nation risen against nation, and brother killed brother with the ultimate goal in their minds to destroy humanity? Did men of courage a quarter of a century ago die in vain in a war to end all wars? Yes; they died in vain because an inspired victory was followed by

an uninspired peace; they died in vain because their leaderr planned in vain; they died in vain because men of power, like Caesar, scorned the warning of the beggar in the market place.

Many of you, no doubt, are thinking—these things will never be; these are merely the frenzied fears of those whose too active imaginations have been kindled by an all-consuming flame of hysteria. But none of you can deny that the rape of Czechoslovakia and of Poland were no figments of the imagination; that Denmark prostrated herself at the feet of the conqueror, while firing hardly a shot in self-defense; that Norway was overrun from without and betrayed from within. None of you can deny that Holland and Belgium within a few days lay broken and bleeding under the merciless heel of Hitler's mechanized legions; that gay and confident France, secure behind her great Maginot line, defended by one of the finest armies in Europe, had hoisted the white flag of surrender to avoid complete annihilation. None of you can deny that, with a path through the Balkans now opened, the fate of plucky Greece and defiant Turkey may well be sealed. Nor can you deny that gallant Britain, proudest of nations, confident in her will to throw back the invaders, has at last raised her voice in urgent pleas for immediate aid, lest she too be swept aside by a madman's dream of world empire.

And who, indeed, can longer doubt that such a dream has taken shape. We see it unfolding in green-gray waves across the continent of Europe. We see its sinister shadow moving menacingly across miles of ocean to embrace our neighbors to the south of us. We see its symbol, the crooked cross, unfurled in defiance before our very eyes in a land that we like to call our own. Realizing our tragic inability to defend ourselves, we at last are taking steps to build a strong defense. Recognizing that if Britain falls we stand alone, the last bulwark of democracy and freedom in a hostile world. Recognizing this, we have pledged all we can spare that England may not fall.

A few weeks ago our President coined a phrase which well describes the part the United States must play in world affairs: "America must become the arsenal of democracy." Our people have accepted the challenge of their leader, and already the wheels of industry are turning in answer to that challenge. How strong our arsenal will become depends not on just a few of us but on all of us. The actions of Congress must not be delayed by petty bickering or political expediency. Private enterprise, fully awake to a solemn duty, must substitute patriotism for profits. Labor, sensing a chance to gain through the urgency of the Nation's program, must, nevertheless, resolutely turn its back upon that chance. Our arsenal of democracy must become a wholly integrated mechanism, each cog efficiently and effectively performing its separate function.

Friends, I plead not for an indolent, lethargic, self-satisfied America; but rather for an inspired America. We must prepare not only against an invasion of homes by force but against an invasion of minds by propaganda. Individually we may remain the same carefree people who want to continue to enjoy peace, liberty, and the right to happiness. Politically we must cease to be individuals, but become instead implements in the service of an ideal. Mortally we must become a well-organized military unit, quick in self-defense but slow to fight another's war. Let us not for one moment forget the lesson learned a quarter of a century ago when war in all its hellish fury was deglamorized by the slaughter of thousands of unprepared American youths. But we must stand solidly for liberty; we must hold aloft the guiding light toward universal freedom; and we must point the way, finally, to a just and lasting peace.

Then will the God-given concept that right makes might be restored to the peoples of the earth; then will Mars, merciless god of war, be supplanted by the God of peace, tolerance, and brotherhood; then will America, defender of right, friend of the oppressed, become, in truth, the arsenal of democracy.

Rockland Voluntary Aid Society

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

BYLAWS, LIST OF MEMBERS, AND GENERAL OUTLINE OF ORGANIZATION

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bylaws, list of members, and general outline of the Rockland Voluntary Aid Society, Inc.

I am very desirous that the Members of Congress and the citizens of our country examine this plan of giving aid and trust that many communities in the United States will find it advisable to adopt this very worthy and exceptional charitable plan.

The matter referred to follows:

REPORT ON ROCKLAND VOLUNTARY AID SOCIETY, INC., SUFFERN, N. Y.

In December 1940 the Rockland Voluntary Aid Society, Inc., was formed at Suffern, N. Y., primarily to help needy persons who were not qualified for public relief. The society confined its work to those in the immediate vicinity of the town of Ramapo. Due to the publicity the movement has had, especially from the New York City newspapers and national news agencies, the founder of the movement, Anthony A. Cucolo, of Suffern, has received hundreds of requests from individuals and organizations for information as to how such a movement might be started in other places.

Mr. Nidd, local relief head, qualifies all aid given by the society and after investigation either recommends or turns down the case. This system is evident in the attached reports by Mr. Nidd.

It is a remarkable thing that Mr. Nidd, who is in the best position to know, announces there is no known case of want in the town of Ramapo and "if there is it is only because the Rockland Voluntary Aid Society has not heard of the case."

Mr. Cucolo, who came to this country as an Italian immigrant and who worked up in the contracting business to a position of influence in his county, founded the idea. Mr. Cucolo in building the Storm King bypass, created a lasting monument, an achievement which the late Col. Frederick Stuart Greene, for years New York State superintendent of public works, said was the largest project ever attempted in the Hudson Valley.

It was not in recent years that Mr. Cucolo first thought of the idea but back in 1928, before the crash. He discovered that the feeling was growing rapidly that the poor think the rich do not give enough, and the rich think that they give too much. He observed, especially through his intimate contact with labor, that a good percentage of money donated to charity did not get to the needy. He met a philanthropist of national reputation, he discussed his idea with the philanthropist, who said: "It would be a great thing if such an idea could be carried out, but I doubt very much if it can."

The crash came. The general relief plan followed. As the years rolled by Mr. Cucolo realized the sufferings and hardships imposed on those who could not qualify for relief. He knew from school authorities that when the school doctor examined the children many parents were notified of physical defects in their children. Teeth, tonsils, wax in ears, eyesight—many things needed attention. What happened? Those on relief went to the relief head and received proper attention. Those who could afford it acted as promptly. But the good old middle-class family, who refused charity and simply could not afford it, let the matter drag until nothing was done and permanent injury in the child's physical well-being resulted.

Mr. Cucolo was certain that the doctors and nurses in any community would do this work for nothing if it was proved to them it was a real charity case. As one doctor put it, "Tony, the doctors today are doing more than half their work without getting paid. If any doctor knew the case was a truly worthy one he would not hesitate to donate his services."

The barber was consulted and he agreed he would not mind cutting hair for anyone in need if it could be done when business was dull. The shoemakers also agreed to mend shoes for persons who could not pay. Merchants responded with much enthusiasm. However, many of the more important residents doubted if the idea would work.

Under Mr. Cucolo's leadership several of the leading residents in Ramapo met and it was decided to give the plan a trial. The result has been that as residents saw the plan work out in their own neighborhoods they sent in contributions unsolicited and started in working actively for the society. The society has placed dozens of men in jobs.

There is not a doubter in the town of Ramapo today. The citizens feel the relief load of the future will be lighter because persons who were on the downgrade and might become eligible for relief would, with help from the society, never have to go on relief. The old spirit of "help your neighbor" is again in the air at Suffern and the vicinity. People are cheerier and there is a different feeling generally. Fred Nidd has on his books startling cases.

No one aided will ever be asked to repay the society. If a person regains his place in the scheme of things he may repay only by making a contribution to the society so that someone else might be aided.

The method of operation is clearly described in the attached bylaws.

BYLAWS

ARTICLE 1. NAME

The name of this corporation shall be Rockland Voluntary Aid Society.

ARTICLE 2. OBJECTS

Believing that charity is best expressed in action, whether by voluntary monetary contributions or by free services to mankind, a local voluntary organization for the community of Suffern, N. Y., should be formed; this thought has been duly expressed by Mr. Anthony Cucolo of Suffern who is the originator and founder of this movement and it is through his efforts that the Rockland Voluntary Aid Society has been organized.

The sole purpose of this organization is to give support to all those found to be in need, regardless of race, color, or creed. It is to be strictly a nonprofit organization and all funds will be directly applied to charitable purposes.

ARTICLE 3. MEMBERS

The members of this organization shall be as follows:

Any corporation, firm, partnership, association, or individual from 16 years of age and

up, shall be eligible to membership by a payment of 50 cents or more to this organization which shall entitle him or her to a 1-year membership unless sooner terminated as hereinafter provided, and shall entitle him or her to vote at any corporate meeting.

ARTICLE 4. OFFICERS

SECTION 1. The officers of the corporation shall be a president, vice president, secretary and treasurer. The office of secretary and treasurer may be combined as secretary-treasurer. The office of president and vice president shall be elected from the health and welfare committees. The officers shall be elected at the annual meeting of the association in January, and shall take office immediately after their election. The board of directors shall have the right to appoint more than one vice president, who shall ex-officio be a member of the board of directors.

The duties of the president shall be to serve as presiding officer at all meetings.

The duties of the vice president shall be to act as presiding officer in the absence of the president.

The secretary shall keep all records of meetings and attend to all correspondence.

The treasurer shall be custodian of all funds and shall keep a record of all money received and spent, and submit a quarterly report.

ARTICLE 5. BOARD OF DIRECTORS

There shall be a board of directors consisting of not less than 9 nor more than 100 who shall have the right to elect a chairman of their board. Members of the health and welfare committees, and those contributing $50 or more annually shall be eligible to be elected to the board of directors. The president, vice president, secretary, and treasurer shall be ex-officio members thereof. One-third of the board of directors shall constitute a quorum unless 20 or more directors are elected, in which event 9 shall constitute a quorum.

The board of directors shall manage the affairs of the association, subject to the provisions in these bylaws, and shall hold office for 1 year, or until their successors are elected.

ARTICLE 6. MEETINGS

SECTION 1. The annual meeting of the corporation shall be held on the second Monday of January each year.

SEC. 2. A quarterly meeting shall be held on the second Monday of April, July, and October each year.

SEC. 3. Special meetings may be called at any time by the board of directors or by the president and shall be called by the secretary upon the written request of five acting members stating the purpose of the meeting.

ARTICLE 7. ELECTIONS

All elections shall be by written ballot. The officers elected shall enter upon their duties immediately upon their election and shall hold office for 1 year or until their successors are elected or appointed. In case of a vacancy in any office or committee, it shall be filled by the board of directors until the next annual election excepting in the case of a vacancy existing in the office of president when the vice president shall act as president until a president shall be elected at the next annual meeting.

ARTICLE 8. SUSPENSIONS AND EXPULSIONS

Any member of the corporation may be suspended or expelled by the board of directors if, after investigation, the board finds that any member has deliberately and willfully made a profit in any transaction with the corporation.

ARTICLE 9. COMMITTEES

The officers shall appoint the following committees or any other committees to carry out the purpose of this corporation:

A. Health committee: This committee shall consist of doctors, dentists, and nurses.

B. Welfare committee: This committee shall consist of the local welfare officer, school nurses, and a representative of the county welfare office.

C. Sponsoring committee: This committee shall consist of the following members from local businesses and professions: Grocers, restaurant owners, drug-store owners, clothing-store owners, fuel and coal dealers, barbers, cobblers, printers, public utilities, undertakers, and attorneys or any other business or professional person who can be of help in carrying out the purposes of this corporation. The duties of the members of the sponsoring committee shall be as follows: Selling of merchandise or giving professional services to the organization on a strictly nonprofit basis and only when authorized by the health and welfare committee.

The members of any of the above-mentioned committees shall have the right to vote in any annual election.

ARTICLE 10. GENERAL SUPERVISING COMMITTEE

This committee shall be comprised of the president and treasurer. Their duties are to approve and disapprove the recommendations for aid requested by the health and welfare committees. They shall authorize the purchase of commodities or services and order the treasurer to reimburse fellow members of the sponsoring committee upon execution of said orders.

ARTICLE 11. REQUESTS FOR AID

Any member of the organization can refer for investigation to the Health and Welfare Committees any person or family who may be in distress. Any person or family may also directly apply for aid to any member of the organization. These requests for aid will be referred to the Health and Welfare Committees for investigation and promptly acted upon.

ARTICLE 12. REVENUE

There has been heretofore donated the sum of $2,000 which will be duly deposited in a local bank to be designated by the Board of Directors and to be used for the purposes herein mentioned. At no time can more than one-half of the cash balance on hand be spent in any one year, the said cash balance to be determined by the actual cash on deposit after the payment of all liabilities of said corporation as of the 31st day of December in each year.

Donations, no matter how small, will be accepted from the general public, but in no time shall any form of entertainment be allowed for the purpose of raising funds. The sole policy of this organization is to receive only voluntary donations.

ARTICLE 13. ADMINISTRATION

The treasurer shall deposit all money received in the designated bank.

All checks shall be signed by the president and by the secretary or treasurer.

All bills shall be paid within 10 days of the ensuing month; the president and secretary and treasurer shall audit all bills before payment.

The sponsoring committee shall present its bills together with the authorized order to the treasurer for payment.

ARTICLE 14. OTHER CHAPTERS

This society shall have the right to establish or grant permission for the establishment of new chapters in other communities that desire to pattern their organization after this society.

ARTICLE 15. AMENDMENTS

These bylaws can be amended at any regular or special meeting, but the proposal for such amendment shall be brought up by motion for consideration at any meeting; however, the vote on such amendment shall not be taken until the subsequent meeting. For amendments to be carried, it shall be necessary to have a two-thirds vote of members present.

The following is a list of officers and committees:

E. A. Scala, M. D., president; Fred B. Nidd, first vice president; Alonzo E. Williams, second vice president; Timothy G. Mullane, secretary; Louis J. Carissimi, treasurer.

Board of directors: Anthony Cucolo, chairman; Henry von L. Meyer, Sr.; Albert E. Arnove; Julius Boeschen; Ed. Botta; James Van W. Brown; Nicholas J. Carissimi; W. Van Alan Clark; James J. Fava; Louis Goldberg; David Greenstein; Samuel Greenstein; Herman F. Imwolde; Williard A. Lynch; Frank Maloy; Pincus Margulies; Henry von L. Meyer, Jr.; William E. Miele; William Mills III; James J. Brown; Perley Morse; Walter Naumann; Thomas F. O'Brien, Sr.; James J. Fava, Jr.; Anthony Cuculo, Jr.; Congressman Matthew J. Merritt; John C. Petrone, M. D.; Reuben G. Riggs; Ralph Rogo; Joseph Rosenfeld; Anthony Scarr; August H. Temple; Wilbur W. Ward; Ralph Saldutti; Stanley Baird; LeRoy Smith.

Sponsors: Helen Wanamaker; Joseph Vilord; W. Frank Markle; Dr. Royal F. Sengstacken; Dr. C. P. Hussey; Dr. A. J. Maged; Dr. Frank J. Errico; Dr. Howard F. Maged; Dr. J. G. Veith; Dr. Robert F. James; Helen Heffner; Mary McCarten; Martha Henry; J. K. Patterson; McPhillips Bros.; Whritner Lumber Co.; August Garifalos; Fred DeLibero; John Procaccio; the Mart Shop; Joe Levine; Rogers Drug Store; Paret & Lamouree; Tribune Press; Ramapo Valley Publishing Co.; Rockland Light & Power Co.; Rockland Gas Co.; Joseph Driscoll; Wanamaker & Carlough; Patsy Marinelli; Levine's Drug Store; Washington Market; Gattuso Bros.; the Globe Store; Jimmie's Diner; Eureka House; Anthony Fiorentino.

Food for the Hungry

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

RESOLUTION OF ST. JOSEPH COUNCIL, NO. 2272, KNIGHTS OF COLUMBUS, WEST POINT, NEBR.

Mr. STEFAN. Mr. Speaker, today I received from the officers and members of St. Joseph Council, No. 2272, Knights of Columbus, West Point, Nebr., resolutions indicating their hopes that some of our surplus food be distributed to the hungry and needy people in Europe. In order that all Members of Congress may have an opportunity to read these resolutions I include them herewith:

KNIGHTS OF COLUMBUS,
ST. JOSEPH COUNCIL, NO. 2272,
West Point, Nebr., April 25, 1941.

Hon. KARL STEFAN,
House of Representatives,
Washington, D. C.

DEAR MR. STEFAN: St. Joseph's Council, No. 2272, Knights of Columbus, at its last regular meeting, unanimously adopted the following resolution:

"Whereas the European war has brought and will continue to bring increasingly great distress and suffering to the innocent peoples of Finland, Norway, Holland, Belgium, Poland, and other small nations of Europe and

normal food supplies have been curtailed, destroyed, or commandeered, and it is inevitable that unless additional food supplies are soon made available, millions of people in these countries will be brought face to face with famine and pestilence; and

"Whereas the members of this organization have thoroughly examined the proposals of the National Committee on Food for the Small Democracies, under the direction of Herbert Hoover, and believe that they present a logical and safe plan to alleviate unparalleled distress, and believe further that it embodies the highest principles of Christianity and is most worthy of the support of the American people: Therefore be it

"Resolved, That this organization heartily endorses the plan; and

"Whereas the experience of the last war demonstrates that this plan can be put into effect without any military advantage to either side, and whereas, before further plans can be laid, the cooperation of the Government of Great Britain in permitting the vital food supplies for the stricken nations, to pass through its blockade must be secured: Therefore be it further

"Resolved, That we urge our Representatives in the Congress of the United States to use their utmost influence, both with the Congress, and with the President of the United States, toward securing the cooperation of the government of Great Britain, in furthering the proposals of the National Committee on Food for the Small Democracies."

Sincerely yours,

ST. JOSEPH'S COUNCIL, No. 2272,
KNIGHTS OF COLUMBUS,
JOSEPH BOSHECK,
Grand Knight.
LEO J. SCHMITT,
Recording Secretary.

Rockefeller's Anguish

EXTENSION OF REMARKS
OF
HON. BERNARD J. GEHRMANN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. GEHRMANN. Mr. Speaker, after great travail John D. Rockefeller has decided that we shall enter the war "to the limit and at any cost."

In his recent letter to Mr. Arthur Hays Schulzberger, publisher of the New York Times, Mr. Rockefeller says:

> It is my firm conviction, arrived at in anguish of spirit, that the people of the United States should see this conflict through; that we should stand behind the British Empire to the limit and at any cost.

I, too, want to aid the British Empire to the limit. That limit short of war, short of financial prostration, short of criminally depleting our own defenses to the extent that we cannot protect ourselves.

I want to aid Britain and the embattled democracies, but not at all costs to the Nation. I refuse to sacrifice 5,000,000 young Americans, to ruin our economy, to saddle generations of our offspring to oppressive debts. And to finally sacrifice the great system of government for what purpose? To back up Mr. Rockefeller's oil diplomacy? To leave the Nation in shambles in order that his oil empire may be preserved intact?

Fellow Americans, there are some burning questions to be answered in connection with Mr. Rockefeller's great anguish of spirit.

When has his corporation and their subsidiaries ceased supplying gasoline and crude oil to the Axis partners?

At any cost, Mr. Rockefeller? That implies a sacrifice of wordly goods in addition to our manhood. I suggest you take the initiative.

How about the sales of Standard Oil and Humble? How about the shipments to the Axis from Humble's Aruba? What has been the activities of Standard-Vacuum in the Orient in fueling the bombers of the Japanese aggressors so that they can murder thousands upon thousands of Chinese civilians in open cities?

Does Mr. Rockefeller disclaim all liability in connection with the operation of Standard Societa Italo-Americana Pel Petrolio?

We must concede that no profit is now being made by Mr. Rockefeller from Deutsch-Amerikanische Petroleum-Gesellschaft. But why? Because of unfavorable exchange rate and difficulty of communication. Has this corporation been written off Standard's books? No.

If we are to effectually help Britain and China and other countries—and God knows we all hate Hitler and want to stop him—then we must cease furnishing war supplies to the Axis—not only as a government but as businessmen—and this includes Standard Oil and subsidiaries. I suggest Mr. Rockefeller's anguish, which is now mental by his own admission, take more material form and that he and his organization cease helping the ruthless partners of the Axis.

In looking over the map of the empire of the Rockefeller clan, it is easy to see why he is ready to get in this war at all costs. Making allowances for his fine philanthropies, he must still bear the terrible indictment of the American people for urging us into a war for which we are unprepared and which we do not want.

It is propaganda such as this, which is given full throat by big business and designed by such men as Winthrop Aldrich, of the Chase National Bank, and brother-in-law of Rockefeller, that is attempting to lead us into chaos and dreadful disaster.

The last war made 16,000 millionaires. This coming war bids fair to do the same. What is going to be the reaction of the debt-ridden, dispossessed farmer, the tax-burdened worker, who has had to sacrifice every gain made after years of struggle, the ordinary citizen, who have given up their sons, sacrificed their American standard of living, and for what? So that big business and the huge cartels they operate can grow fabulously rich.

What about the millions of young men who will die on the coast of Portugal or at Dakar if we declare war?

When this reaction takes place in an awakened America I am eternally grateful that I shall not have to answer their grim charges.

Must They Starve?

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

ADDRESS OF MSGR. ROBERT P. BARRY

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Msgr. Robert P. Barry, personal representative of his eminence, Cardinal O'Connell, over radio station WMEX, Boston, Mass., April 25:

On the occasion of his eighty-first birthday, his eminence, Cardinal O'Connell, voiced the sentiment of thousands of Americans when he said, "I cannot help feeling tremendous pity for the poor suffering people of Europe. It is heartbreaking to think of the millions who are now facing starvation. As a humble priest of God, a lover of the blessed charity of our Saviour, Jesus Christ, I cannot understand why the experiment may not at least be allowed to be made to help Mr. Hoover in his wonderful Christian noble plan of feeding the starving populations, to save the people of Europe."

Many of us, like Cardinal O'Connell, cannot understand why the experiment Mr. Hoover proposes should not at least be tried. For the stark fact is that 37,000,000 people—half of whom are children—in the small invaded democracies of Europe, face famine and pestilence and living death. These people are not enemies, but our friends, and Britain's friends. As Britain's allies, they have already experienced all the horror of modern warfare; they have been bombed from the sky, their homes have been destroyed, their cities and towns and villages wrecked and pillaged; and now they know the ignominy of subjection to armies of occupation; now they know war's most dreadful aftermath—hunger. Many of us, who are Britain's truest friends, are profoundly disturbed by the present policy she is pursuing with regard to these helpless people. We would be disloyal to her best interests and the realities of this crisis, if we did not utter solemn warning now.

America is Britain's partner in the present war. Our sympathy for Britain and our "all out" aid to Britain are based on the premise that Britain is the champion of Christian civilization, out to defeat the brute force of paganism, of which Hitler is the symbol. But Christianity cannot be championed by those who harden their hearts and steel themselves against the appeal of starving innocents. Such an attitude is contrary to our Master's will. It denies the basic principle of His teaching, which is compassion. It also challenges the idealism of the British cause.

Already it is being said here in America that to speak of saving Christian civilization, at the same time condemning the small democratic nations of Europe, who also have fought the brute force of paganism, to famine and decay and pestilence, is mockery. Already the great moral issue has been raised, and America, the great humanitarian nation of the world, and the only nation in the world that undertakes great humanitarian works, is loathe, indeed, to accept the principle that the starvation of her lifelong national friends—starvation of the blood kin of 15,000,000 American citizens—constitutes a le-

gitimate weapon of war. These things are being said by those of us who love Britain and believe in Britain. We see her producing a condition from which she and the cause of democracy will suffer for years to come.

Why is this so?

First, with food enough to sustain life, the small democracies of Europe will keep their faith; they will have the will to continue passive resistance so far as they can while in subjection, and to rise in revolt when the opportunity comes.

Starved, they cannot do so. Nowhere in the entire history of famine has revolt due to famine ever been recorded. Strength is needed for that. Where there is the horror of slow hunger it is only disease that runs riot. Disease and hate. Hunger breeds terrible hates.

With Germany continually dinning into their ears that their condition of starvation and disease is due to the British blockade, that such food as they obtain is given to them by Germany, the time will come when, instead of regard for Britain and America, there will be fierce hatred of Britain and America—the two great democratic nations—because not even an attempt was made to save them. We will be held everlastingly responsible for being indifferent to their pleas for life now. And Britain will be remembered as the nation determined to let her friendly neighbors starve on the mere suspicion that food might reach Germany.

The feeding experiment that Mr. Hoover proposes for Belgium is amply safeguarded against German benefit in any way whatsoever. It stipulates that the Germans must not only cease requisitioning native food but must give food to Belgium. Germany is required to agree that the neutral commission in charge of the feeding program has absolute control and direction of all Belgian food supplies, native as well as imported. Germany has agreed to these stipulations and has made her first contribution of 20,000 tons of grain and 20,000 tons of potatoes. If Britain agrees as well, the hungry children of Belgium can be fed. And if the experiment works in Belgium, then a similar food relief program will be launched in the other democracies—and 37,000,000 will be fed. If Britain were to allow the test to be made in Belgium, and Germany were to break her pledged word, the program would cease instantly. Then the world would know that full responsibility for the starvation of these people was Germany's alone. Britain would not be blamed, because she could not be blamed. Her sincerity could not be questioned, or shortsightedness of policy on another count.

Which brings me to the discussion of another reason for questioning the wisdom of this policy of Great Britain. It relates to the fact that by blockading food from her Allies, Britain is unwittingly forcing manpower into the service of Germany. This is especially true of Belgium.

During the last World War, when the Hoover commission was permitted to feed the Belgians, it is a matter of record that the Belgian men, set to forced labor in Germany, refused to perform their tasks because they knew their women and children and their aged dependents were being cared for at home. Brand Whitlock has recorded the story of their martyrdoms; of how thousands of them died rather than obey German orders; they could refuse to obey them then because no harm would come to their families; and they did refuse, as free men.

Not so today. If a Belgian laborer in Belgium or Germany performs the task set for him by the Germans, his family gets food. If he refuses, his refusal causes his family to starve. I wonder how many men—however brave and patriotic—could be brave and patriotic at the price of torture to their helpless and innocent loved ones? I thank God that I am not put to the test. And I cannot find it in my heart to condemn the Belgian father who works for Germany today in order that his wife and children may have bread.

Some will say that Germany is responsible for their plight and is therefore responsible for feeding them. This Germany has begun to do. She is already sending bread grains to Belgium, but there are other foods that Germany cannot provide because her own supply is insufficient—i. e., the so-called fats.

Others will say that Germany cannot be relied upon to keep any agreement. It is true that no regard for her word and no feeling of compassion can be expected to influence Germany to keep any agreement she may make. But there is evidence that Germany fears one thing—pestilence. She knows that typhus, virulent influenza, and other epidemics stem from areas of starvation and that they have no respect for nationalities or national boundaries. In the first World War Germany kept similar engagements. She is doing so now in respect to Poland. We believe that she will do so with respect to Belgium and the other occupied countries, if only because of her fear of the spread of disease.

A great body of opinion throughout the country believes that something should be done to enable the people in the occupied countries to obtain food in a way that will not be of military advantage to Germany.

Over 800 of the Nation's leading men and women have expressed approval of the program by becoming members of the National Committee on Food for the Small Democracies; many of them are from Massachusetts. In more than 2,000 communities over the country, local committees are seeking to spread information regarding the situation in those countries and the program in their behalf. Over 3,000 public bodies by formal resolution, and hundreds of thousands of individuals by their signatures, have given their approval to this program.

I feel sure that many of you are wondering how you can aid in bringing it about so that the people in the small democracies of Europe can receive enough food to sustain life without contributing to the military advantage of Germany. There is a way in which you can help very materially. If you belong to an organizttion that has not yet formally approved the program in behalf of these people, you can aid by bringing it about so that it passes such a resolution, a copy of which should be sent to the Boston office of the Committee on Food for the Small Democracies, in room 549, Little Building, or to the national office at 420 Lexington Avenue, New York City.

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

RESOLUTIONS BY LOUISIANA ORGANIZATIONS

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to have printed in the CONGRESSIONAL RECORD two resolutions, one adopted by the Baton Rouge Lodge, No. 490, Benevolent and Protective Order of Elks, and the other by the One hundred and thirty-ninth District Conference of Rotary International, relative to strikes in defense industries.

The resolutions in question are as follows:

Whereas it is apparent that a national emergency exists due to strikes in industrial plants vital to the national defense; and

Whereas President Roosevelt has proclaimed that this country has become the arsenal for all the democracies; and

Whereas contracts for national defense aggregate billions of dollars, and work thereon is being delayed because of strikes in industrial plants, causing a serious menace to our safety: Now, therefore, be it

Resolved by Baton Rouge, La., Lodge, No. 490 of the Benevolent and Protective Order of Elks, That we condemn the delay in national defense caused by these shut-downs of industrial plants, with contracts for the Army, Navy, and Air, that we deplore the delay in carrying out these contracts, and demand that our National Government order these industrial plants to start work at once, and that it fix the responsibility for these strikes and shut-downs and deal severely with those responsible therefor; be it further

Resolved, That copies of these resolutions be sent to President Roosevelt, our Senators and Congressmen, and the press.

I certify that the above resolution was adopted unanimously by Baton Rouge Lodge No. 490, Benevolent and Protective Order of Elks, at a regular session held April 16, 1941.

[SEAL] L. F. RUAUD, *Secretary.*

Whereas President Roosevelt has proclaimed that our country has become the arsenal for the democracies; and

Whereas contracts for national defense aggregate billions of dollars, and work thereon cannot be begun or speeded up because of strikes and the shutting down of plants, causing a serious menace to the safety of the democracies; and

Whereas, irrespective of the merits of the strikes, we declare that national safety demands that drastic steps be taken immediately by the Government to put an end to this dangerous and destructive condition: Now, therefore, be it

Resolved by the 45 Rotary Clubs of the One Hundred and Thirty-ninth District in conference assembled, That we condemn the delay in national defense caused by these strikes and shut-downs of plants with contracts for the air, Army, and Navy; that we deplore the delay in carrying out these contracts; and that we urge our National Government order these plants to start work at once upon these contracts; and that it fix the responsibility for these strikes and shut-downs and deal most severely with those responsible therefor; be it further

Resolved, That copies of this resolution be sent to the President, Vice President, Speaker of the House, Senators and Congressmen from Louisiana, and the press.

CERTIFICATE

I, the duly elected and qualified secretary for the One Hundred and Thirty-ninth District Conference of Rotary International, said conference composed of delegates from 45 respective Rotary clubs situated in the communities located within said one hundred and thirty-ninth district, do certify that the above and foregoing resolution was unanimously adopted by said conference in convention assembled at Baton Rouge, La., on the 22d day of April 1941.

M. D. HENDERSON,
Secretary, One Hundred and Thirty-ninth District Conference, Rotary International.

Approved:

J. A. WELCH,
Chairman, One Hundred and Thirty-ninth District Conference, Rotary International.

The South's Challenge and the Nation's Challenge to You and Me

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

ADDRESS OF HON. CLYDE T. ELLIS, OF ARKANSAS

Mr. PETERSON of Florida. Mr. Speaker, pursuant to consent granted, I include the following able address made by my colleague, Hon. CLYDE T. ELLIS, Representative from the State of Arkansas, at the State convention of the Young Democratic Clubs of Florida at St. Petersburg, Fla., in my district on March 28, 1941:

I am honored on this occasion and I am happy to be in your beautiful State—the State of HARDIN PETERSON, LEX GREEN, PAT CANNON, JOE HENDRICKS, and BOB SIKES, and of Senators ANDREWS and PEPPER, your able and effective delegation, your friends and mine, in Congress.

You and I are southerners—and we are also Americans. We are met here as the true sons and daughters of the new South.

Fourscore years ago we were involved in a great conflict testing whether this Nation should continue as one or two democracies. Today we are involved in an even greater, though less tangible, conflict testing whether democracy itself shall live.

The challenge of the Colonies in '76 and '89 was met—principally by the youth of those days—and conquered. Thirty-three of the 55 signers of the Constitution were under 45 years of age, 22 were under 40, and 4 were under 30. That challenge—whether the people are capable of governing—has recurred to us in all its fury. Youth is daring, and we, as the young men and women of this day, must dare to meet it. The people of Yugoslavia, led by its youth, have within the last few hours given to the world a dramatic and noble example.

We as Democrats, you and I, are heirs to the oldest and most illustrious political party in power in any nation; heirs to a sacred philosophy of government that will stand with Christianity, for its ideals are Christianity. As such beneficiaries we assume the responsibility of preserving, for the world if necessary, government founded on the brotherhood of man.

If we were Republicans our responsibilities would be none the lighter, except that they are not the party in power.

While it is true that the economy of Florida, like that of my district in the Arkansas Ozarks, is partially dependent upon northern tourist dollars, and while it is true that Florida has escaped many headaches common to the South, yet we are inextricably bound together in a mesh of southern traditions and economies and discriminations that make us one. Between the South and its proper development lie certain barriers common to all Southern States.

Our safest course is to acknowledge the truth—face the fact that the South is "the Nation's economic problem No. 1"—and as young, progressive Democrats dedicate our lives to the task of doing something about it. To do less is to be unworthy of our priceless liberties, wrought from tyranny in the blood of our forebears.

In our 13 Southern States live 37,013,087 people (1940); 97 percent native-born.

Our birth rate exceeds that of any other section, and we are the only States producing for the Nation substantially more than our death toll. We are the only bright spot in the picture of a nation growing old because of the rapid decrease of its birth rate and the constant increase in its life span. And yet we are not outgrowing the other sections. Too many of our young men and women, finding no room in our economy for themselves, migrate North and East and West. Thus one-fourth of our natural increase in sons and daughters—our most precious resource—is exported annually.

EDUCATION

There are 6 children to every 10 adults in the South, as compared with 4 children to every 10 adults outside the South. The South must educate one-third of the Nation's children with one-sixth of the Nation's school revenue. As evidence that we aren't able to do a creditable job of it, the latest figures show that only 16 percent of our school children are in high school, as compared to 24 percent in States outside the South.

THE SOUTHERN ECONOMY

Every section is primarily agricultural, industrial, or commercial. Neither alone, but a combination, provides the safest and most wholesome all-round economy.

Herein the South is deficient, for ours is an agricultural and raw-materials economy, exposed to the ravishings of exploitation.

In 1939 the Nation's per capita income was—and these are the latest figures—$536. The South's per capita income was $314. Florida's was $457. Yours was the highest of the Southern States, but deduct your $250,000,000 tourist income and yours would have been only $322, or barely above the average. The figure in my State of Arkansas was only $244. In the Nation only 20 percent of our people depend directly upon the soil for a living. In the South 42 percent depend directly upon the soil. In Florida the figure is 20 percent, the same as the Nation.

Commerce, capital, and industry have long been highly organized for their own welfare. They fix their own prices and control their own markets. You and I pay them annually unseen billions in the form of such intangible subsidies as the high protective tariffs and because of such barriers as those existing in the freight-rate structure. Even labor is so highly organized that it now sells its product, and rightly so, into a protected market. Agriculture alone of the "big five" still lies barren and unprotected.

AGRICULTURE

Agriculture in Florida and the South, like everywhere else in the world, is more than just an occupation. It is a way of life. Just now the picture confronting us has both a dark and a bright side The dark side is that agricultural commodity prices are still only 87 percent of parity. When a farmer sells a dollar's worth of his product—as compared with the prices of 1909 to 1914—he receives for it not a dollar but 87 cents. Not only in those five so-called basic commodities covered by the parity payments—cotton, corn, wheat, tobacco, and rice—but in practically every other crop grown on American soil, we have a surplus. Furthermore, our farm exports, which had already dwindled down to below 10 percent of the total production, have been virtually destroyed by the war.

But the bright side is that we are standing at the dawn of a new day in agriculture, a day in which the lands of Florida and the South will play a new role. Two factors have made this possible.

First, we have passed from an age of scarcity to an age of plenty. For the first time in the history of the world man is able to produce—thanks to science—enough that everybody could enjoy a comfortable living. In ancient times those with plenty acquired it by, in some manner, taking away from those at the bottom.

Plans are under way to spread throughout the earth a new slogan something like this, "In the democracies no one shall go hungry." It will be a double-edged sword. It will contrast the conditions of democratic with totalitarian peoples, strengthen our morale, and inspire us to a new yearning for the better things of life. To the subjected peoples menaced by the pangs of hunger and want it will emphasize their inferior status and inspire them to a yearning for the same unfettered freedom. It is that yearning which constitutes the most effective weapon for the Serbs and Greeks and the lack of it which contributed most to the fall of France.

Secondly, we are in the process of bringing about a revolution in diet. Scientific studies in food reactions on even our mental aptitudes, our outlook upon life, and the mass psychology have been under way for years. We have now learned, as you know, that we have been destroying by the milling process the most valuable content of the natural grain of wheat. Within a few days new flours will appear on the market with the thiamin not only restored but with other vitamins added. Late discoveries in mental attitudes intensify our concern over our failure to consume sufficient fruits and green substances. British stores of fruits and fruit juices are very low. Eggs, dairy products, and meats are also vital and are likewise scarce in England. An effort will be made within the next few months to export to the Isles, and to some extent to the conquered countries, vast quantities of these essentials.

But no less interesting to us is the fact that there exists in our own diet, yes, yours and mine, a grave deficiency in these same foods, due not alone to low incomes but also to lack of education.

It is estimated that 50 percent of the American boys now being rejected in the draft have nothing wrong with them but the effects of poor diet. Great Britain has just completed a most interesting experiment. She took at random 1,000 rejected boys, placed them under proper diet for 60 days and sent them back for reexamination. Eighty-five percent passed.

In the United States today an Army meal costs 21 cents. The average American meal costs 10 cents. To bring the average American meal up to a minimum of the Army standard in fruits, eggs, dairy products, and meats would add a net $2,000,000,000 annually to our farm income. Add two billion to the farmers' total cash sales income of $8,354,000 for last year, for these particular commodities, and the South will show new life.

Herein lies hope if you and I are equal to the occasion.

Already cotton is no longer king. Last year income from livestock alone in the 10 Cotton States exceeded that from cotton. Our cotton exports will fall this year from 6,000,000 bales annually to approximately 1. Even though our own consumption is rapidly increasing and will likely reach a record in 1941 of 9,000,000 bales, the Surplus Commodities Corporation will have to purchase another half-million bales, and the A. A. A. program will have to pull the yield down to 11,500,000 bales—and still we will have left on our hands 1,000,000 bales to add to the present surplus.

Great Britain won't need any of our surplus wheat, except what Canada can supply, and will be able to take very little of our tobacco—unless, of course, we force some of these commodities upon her. We are confronted squarely with the problems, first of improving our diet by education and equalization of opportunity, and, secondly, of shifting our quantities of production from those crops which in the past have depended upon foreign trade to commodities essential to our menu.

Can we, you and I, meet this challenge?

INDUSTRY—BARRIERS

The greatest gap in the South's economy is the lack of its proper industrial development. It is evident from your Brookings Institution survey report of the Florida fiscal situation, released this month, that one of your greatest difficulties is the lack of proper industrialization—that is, the industrialization locally of at least those natural resources found within your borders as contrasted with their removal from the State at raw-material prices.

The per capita income of any State in this Union is almost the exact inverse ratio of the percentage of its population depending upon agriculture. No section exceeds the South in those minerals, fuels, and raw materials normally required for industrial development. In addition to practically every mineral, we have two-thirds of the Nation's oil and gas deposits and one-fifth of its soft coal.

There are two monstrous barriers to the South's normal industrialization, and even to her proper commercial and agricultural development: (1) high power rates, and (2) high, discriminatory freight rates.

HIGH POWER RATES

North of us and east of my State, the Tennessee Valley Authority seems to have provided the answer to the high power barrier. Using only the natural resource, the falling waters of the Tennessee that had been wasting themselves to the sea down through the ages, the Authority today is delivering to the people electricity at a rate they can afford. Their rates average barely half as high as mine in Arkansas and far less than half as high as yours in Florida. The private companies operating there are making more money than ever before. Industries, including defense industries, are moving into the T. V. A. faster than the T. V. A. can supply the power, and so there has come to that area a prosperity heretofore unknown.

It is estimated by the Federal Power Commission that in the South there are today over 3,000,000,000 kilowatts of undeveloped hydroelectric power.

Our rivers should be harnessed now. Thus would come cheap electricity to every community of the South.

The Federal Power Commission, as you know, is now publishing annually the typical electric bills of all cities in all States. I hold in my hand here the Commission's report on typical T. V. A. bills. If we turn to Tupelo, Miss., for instance, we will find that there 25 kilowatt-hours of residential service cost 75 cents, 100 hours cost $2.25, and 250 hours cost $4.25. By way of comparison, I quote you here the rates of one of your larger cities—and I have selected one from among those with the lowest rates in Florida. In that city 25 kilowatt-hours cost you $1.91, as compared with the 75 cents of Tupelo; 100 kilowatt-hours cost you $6.08, as compared with the $2.25 of Tupelo, and 250 kilowatt-hours costs you $10.08, as compared with the $4.25 of Tupelo. Your commercial and industrial rates are proportionately high by comparison. Although your rates are a little higher in Florida than elsewhere in the South, nevertheless, high rates prevail throughout the South, except in T. V. A. They prevail because of this process of exploitation by the absentee-owned, Wall-Street-controlled Power Trust monopoly. Last year the people of Florida used 1,017,436,000 kilowatt-hours of electricity, for which you paid $31,344,182. Now, under the Tupelo, Miss., rates—the T. V. A. rates—you would have paid for that same current $13,597,189, and you would have saved $17,746,993. And, for the benefit of those who would charge that T. V. A. rates are unfair, may I point out that if you had paid the prices prevailing in Ontario, Canada, where they have an old, old hydro system, this same current would have cost you $11,932,640, and your savings would have been $19,411,542. Furthermore, the figures actually show that over in Tupelo and throughout the T. V. A. area, where the per capita income is much lower than yours, the people are using more than twice as much current as you are using—because the rates are low.

In the 13 Southern States last year as compared with T. V. A. rates we were exploited in overcharges a total of $156,465,243. This is our tribute to the power lords as their "indentured servants" down here in this economic dominion of the Northeast.

I say these things to you because we have got to do something about it, and because we will do something about it.

It is unfortunate that you of Florida have but very little potential hydro power, and that you have no deposits of coal, gas, or oil for power production, but it is fortunate that to the north of you, and within easy power range are billions of kilowatt-hours of potential hydro production and vast deposits of coal to supplement that in any amount.

Plans are now under way in the Congress to start some of these developments and to have others ready to go when the war is over; but there is tremendous opposition, and many of the companies that are bleeding the South by this process are using the very funds that they extract from us to fight the South in its effort to achieve this development.

The power situation in Florida affects that in my own State of Arkansas at this minute, in this way: When the Aluminum Co. of America stepped up its operation a few days ago at Alcoa to 24-hour production it required 150,000 additional kilowatts. T. V. A. could supply only 80,000. Seventy thousand had to be found somewhere else. T. V. A. turned to the companies operating in North Carolina, Georgia, Alabama, and Florida. They could supply only 35,000 kilowatts. T. V. A. was under contract to supply the Arkansas Power & Light Co. 35,000 kilowatts on an exchange agreement, so in order to furnish the other 35,000, T. V. A. virtually cut Arkansas off.

It has been my honor to introduce in the Congress at this session an administration-sponsored measure known as the Arkansas Valley Authority bill to develop the Arkansas, the Red, the White, and the St. Francis River basins, covering approximately one-tenth of the United States, along the line of the T. V. A. It would cover part or all of every Southern State west of the Mississippi and would vitally improve conditions throughout the South.

You have here in Florida one of the world's richest phosphate deposits. Nothing is more essential to life nor to a prosperous agriculture than phosphate in the soil. The deposits are scarce in the world and our soils are rapidly becoming depleted. You have many phosphate companies operating here now but if you had the cheap electric power to break those phosphates down into the highly concentrated superphosphates lately developed in T. V. A., there would be huge additional profits for your State.

As we go along it well to remember two things that we are prone to forget: One, that a power system is essentially a monopoly granted and tolerated by the people in return for reasonable service—which in the future their failure to render shall be implied as a request for their passports—and two, that developments such as T. V. A. will in the end cost the Nation nothing.

DISCRIMINATORY FREIGHT RATES

The second of these barriers is high freight rates. The freight-rate structure built up by the railroads over the decades past to favor the industries of the North and East is an unscientific conglomeration of figures apparently made purposely unintelligent for public consumption. They have, for instance, different and dissimilar rates between each two points in the United States.

Your rates on industrial shipments originating in Florida are 40 percent higher than those on commodities originating north of the Ohio and east of the Mississippi. The rates on those originating in my State average 75 percent higher.

With apologies for so many figures, I give here a specific example. Suppose you ship from Atlanta to Chicago, a distance of 731 miles, 100 pounds of typical first-class freight. Your rate is $2.10. But suppose your competitor in New York City ships the 100 pounds to Chicago, 890 miles or 159 miles farther, his rate is $1.67 or $0.43 per hundred cheaper than yours.

Or suppose you ship the 100 pounds from Atlanta to Louisville, 449 miles. Your rate is $1.66. Suppose your competitor in New York City ships it. This distance is 852 miles—nearly twice as far—and his rate is $1.64, or 2 cents less than yours.

We have recently obtained slight reductions on some commodities, but we haven't scratched the surface yet. The Interstate Commerce Commission has the power through a crude process of law to order rate reductions, but those orders are few and far between.

These barriers—high power rates, high discriminatory freight rates, and others—are walls of servitude which cannot endure. If they persist, some young generation of intelligent and daring southerners will rise up and destroy them.

WE OPERATE BY POLITICAL PARTIES

We, of course, must operate through political parties. Thus are we most effective. Let us turn the spotlight of our two great parties on these problems, not historically but objectively. I give you, first, a picture as suggested by the columnist Jay Franklin:

Once there were two hairy mammoths, with long, curved tusks, inquisitive noses, and gluttonous appetites.

One was cavorting around the Siberian tundras in the Pleistocene era, stuffing his tummy with Alpine poppies and similar delicacies left by the retreating glaciers. Lord of all he surveyed and concerned only with his own immediate contentment, he defied all danger signals. The glaciers had been retreating steadily for thousands of years, hadn't they? What cared he if the birds were flying south? Snug in his warm woolen coat, he refused to believe the glaciers were on the move again.

Just the other day they dug him out of an iceberg, hair and all, frozen solid, taken by surprise in an unfair caprice of nature, which apparently had no further use for giant mammoths and had decided that the Pleistocene age was over.

Then there was the other creature, the American Tycoon (genus G. O. P.) who cavorted among the lush savannahs of laissez-faire, stuffing his maw with rugged individualism, corporate mergers, special privilege, and other Wall Street delicacies left behind the retreating forces of mercantile philosophy. For generations the grass had grown greener, the pastures wider, and there seemed no reason to believe that eventually the entire world might not become this creature's playground. He merely smirked at the rising tide of unemployment, he laughed at Hitler and possible world revolution. These things would pass—they always had. He had big cash reserves, laws and judges, and philosophies which provided him with a thick coat against the storm. He would not believe that the climate of public opinion had changed and that human nature had rung down the curtain on the age of rugged individualism and industrial laissez-faire.

They'll dig him out some day from the cold iceberg of history and they'll marvel at how he was tolerated so long among the monopolies and want and inequalities of opportunity which he created.

We have seen this creature trample and exploit the South since the War between the States. We have seen him sink the Nation's battleships after World War No. 1, rather

than be taxed a little to sustain them. We have seen him permit millions to go unemployed and cold and hungry and we have seen him keep hands off while we lost our homes. We can still hear him bellow forth, as the people slipped the iceberg down upon him in 1932, "grass will grow in the streets of hundreds of cities."

Eight years have passed and we have seen him struggle, through a policy of negation and obstruction, to make his boast come true. Last fall we heard again his trumpet warning that if we did not resurrect him, "this way of life will pass." We have seen him oppose rearmament and give aid and comfort to the dictators.

But the people did not resurrect him and the grass did not grow, and this way of life did not pass—and shall not pass—and we shall not comfort the dictators.

The Democratic Party is traditionally of the people and for the people. Thomas Jefferson and Andrew Jackson settled that. The last few years have been no exception.

We took over in 1933 a stunned and desperate nation and we set about at once to rebuild and restabilize it from within. In every town and every country-side stand enduring monuments to the democracy we put to work. Look at them. There is our bank deposit insurance; there are our idle men employed; there are new roads and streets, legion huts, community buildings and schools; there are the N. Y. A., C. C. C., and new vocational training programs; there are farm credit, farm security, soil conservation, reforestation, surplus commodity marketing, and the A. A. A.; there are rural electrification, Federal and United States Housing, and the Home Owners' Loan Corporation; there is social security; there are new flood control and rivers and harbors programs, T. V. A., Grand Coulee, and on and on—a new Army, a new Air Corps, and a new Navy—all this under the administration of that gallant democrat, humanitarian, and friend of the South, your leader and mine, Franklin D. Roosevelt.

We may make mistakes but they won't dig us out of an iceberg.

CONCLUSION

Tonight, as government by the people faces its supreme test throughout the earth and as the freedom of all non-Axis nations faces peril, let us as Americans resolve to meet, at any cost, the challenge of defending our democracy and its ideals, and then, as internal discriminations and economic injustices threaten to enslave great sections of our country, let us as southerners resolve also to fight like Jackson at New Orleans to rid the South of all known barriers and to make democracy work.

Rhode Island Declaration of Independence

REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. FORAND. Mr. Speaker, I rise today to invite the attention of the House to the importance attached by the people of Rhode Island to the date May 4. On Sunday, May 4, we of Rhode Island will celebrate the one hundred and sixty-fifth anniversary of our State's declaration of independence from the British Crown, and we extend to you, Mr. Speaker, and to every Member of the House, a very cordial invitation to join with us at exercises to be held in Statuary Hall, here in the Capitol, at 2:30 o'clock. These exercises will be held under the auspices of the Rhode Island Society of Washington, D. C.

The smallest of the American Colonies, Rhode Island, speaking through its general assembly, announced 2 months ahead of the other Colonies, through a solemn declaration of independence, that it could no longer tolerate the tyrannical abuses to which its people had been subjected by the government of George III, King of Great Britain.

The State of Rhode Island and Providence Plantations, which is the official name of the State, has an area of only 1,300 square miles—1,067 square miles is land and the rest water—has a coast line of 400 miles that is washed by tidewater. Yet it boasts of a population of 713,346 persons, as shown by the Sixteenth Decennial Census, taken April 1, 1940.

We of Little Rhody, as our State is popularly known, like to think of our State as the cradle of religious liberty in America, and we look with respect and admiration upon its founder, Roger Williams, for bringing that honor to us.

Banished from Massachusetts for his political and religious opinions, to escape deportation to England, Roger Williams fled, in the rigors of the New England winter season, to the shores of Narragansett Bay, and there he founded Providence, now the capital city of our State.

His soul's desire was to do the natives good. He was an idealist and a philanthropist. His most pronounced characteristic was his love for his fellowmen, whether English or Indian. He was a friendly man. He had faith in democratic government—the rule of the people. Throughout his life his appeal for the settlement of every dispute was to reason, not to force. The religious liberty or freedom of thought that he demanded for himself, he extended to all who sought refuge with him from the theological and political rigidity of the Puritan commonwealth.

Is it any wonder, therefore, that the inhabitants of the Colony of Rhode Island, believing in and practicing the principles of its founder, arose on May 4, 1776, and declared their independence from the tyrant rulers from overseas?

I include at this point in my remarks the full text of the Rhode Island declaration of independence, and I invite all of you to read it. I am sure that everyone who reads that historic document will draw from it much inspiration applicable to these trying days through which we are now passing.

AN ACT OF INDEPENDENCE BY THE COLONY OF RHODE ISLAND AND PROVIDENCE PLANTATIONS, PASSED BY THE GENERAL ASSEMBLY AT THE OLD STATEHOUSE IN PROVIDENCE, MAY 4, 1776

An act repealing an act entitled "An act for the more effectually securing to His Majesty the allegiance of his subjects in this, his colony and dominion of Rhode Island and Providence Plantations." And altering the forms of commissions, of all writs, and processes in the courts, and of the oaths prescribed by law

Whereas in all States existing by compact, protection and allegiance are reciprocal, the latter being only due in consequence of the former; and

Whereas George III, King of Great Britain, forgetting his dignity, regardless of the compact most solemnly entered into, ratified, and confirmed to the inhabitants of the colony by his illustrious ancestors, and till of late, fully recognized by him, and entirely departing from the duties and character of a good king, instead of protecting, is endeavoring to destroy the good people of this colony, and of all the United Colonies, by sending fleets and armies to America to confiscate our property, and spread fire, sword, and desolation throughout our country, in order to compel us to submit to the most debasing and detestable tyranny, whereby we are obliged by necessity, and it becomes our highest duty, to use every means with which God and Nature have furnished us, in support of our inviolate rights and privileges, to oppose that power which is exerted only for our destruction.

Be it therefore enacted by this general assembly, and by the authority it is enacted, That an act, entitled "An act for the more effectually securing to His Majesty the allegiance of his subjects, in this his colony and dominion of Rhode Island and Providence Plantations," be, and the same is, hereby repealed.

And be it further enacted by this general assembly, and by the authority thereof, it is enacted, That in all commissions for offices, civil and military, and in all writs and processes in law, whether original, judicial, or executory, civil or criminal, whereon the name and authority of the said King is made use of, the same shall be omitted, and in the room thereof, the name and authority of the governor and company of this colony shall be substituted in the following words, to wit:

"THE GOVERNOR AND COMPANY OF THE ENGLISH COLONY OF RHODE ISLAND AND PROVIDENCE PLANTATIONS

"That all such commissions, writs, and processes shall be otherwise of the same form and terms as they heretofore were; that the courts of law be no longer entitled nor considered as the King's courts; and that no instrument in writing, of any nature or kind, whether public or private, shall, in the date thereof, mention the year of the said King's reign."

Provided, nevertheless, That nothing in this act contained shall render void or vitiate any commission, writ, process, or instrument heretofore made or executed, on account of the name and authority of the said King being therein inserted.

While celebrating this historic event, it is fitting that we should pause to pay a special tribute to the author of that great document, Jonathan Arnold.

Had he contributed nothing else to the life and history of the United States than his draft of the Rhode Island Declaration of Independence, his descendants would

be fully justified to proclaim him a great man.

But he did much more for his country. A cursory study of his life shows that he was a member of the General Assembly of the Colony of Rhode Island at the time he wrote the declaration of independence.

He was a physician. Possessed of great organizing ability, he was made Surgeon General in the United Colonies under George Washington.

He was a Member of the Continental Congress from 1782 to 1784, and his claim to fame in that connection was his declared policy of independence. When an attempt was made to impose secrecy on the Members as to what occurred, he declared he would not be bound—that he wanted the right to let his constituents know what was going on.

When he left Congress he became a lawyer and finally become chief justice of the Supreme Court of the State of Vermont.

We take pride on this occasion to pay tribute to the memory of this great man who so distinguished himself in the fields of medicine, public affairs, and law.

We pause furtner, Mr. Speaker, to pay our respects to a distinguished descendant of Jonathan Arnold—his great-great-grandson, the Honorable THEODORE FRANCIS GREEN, now the junior Senator from Rhode Island. Like his illustrious ancestor, he is a native of our State, and we are all proud of the unselfish and outstanding service he has rendered and is now rendering to his State and country as a member of the Rhode Island General Assembly, as Governor of the State, and now as a United States Senator.

That the declaration of independence by the general assembly was not an idle gesture but the result of a well thought out and carefully determined plan of men who had been subjected to a long series of abuses and intolerable treatment is attested to by the constitution they drew up and which the people of the State adopted. I quote a few excerpts:

[Excerpts from the Constitution of Rhode Island]

We, the people of the State of Rhode Island and Providence Plantations, grateful to Almighty God for the civil and religious liberty which He hath so long permitted us to enjoy, and looking to Him for a blessing upon our endeavors to secure and to transmit the same unimpaired to succeeding generations, do ordain and establish this constitution of government.

All free governments are instituted for the protection, safety, and happiness of the people. All laws, therefore, should be made for the good of the whole; and the burdens of the State ought to be fairly distributed among its citizens.

Whereas Almighty God hath created the mind free; and whereas a principal object of our venerable ancestors, in their migration to this country and their settlement of this State, was, as they expressed it, to hold forth a lively experiment, that a most flourishing civil state may stand and best be maintained with full liberty in religious concernments.

We therefore declare that no man shall be restrained, molested, or burdened in his body or goods, nor diqualified from holding any office, nor otherwise suffer on account of his religious belief; and that every man shall be free to worship God according to the dictates of his own conscience and to profess and by argument to maintain his opinion in matters of religion; and that the same shall in nowise diminish, enlarge, or affect his civil capacity.

Every person within this State ought to obtain right and justice freely and without purchase, completely and without denial, promptly and without delay.

In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury; to have the assistance of counsel in his defense, and shall be at liberty to speak for himself; nor shall he be deprived of life, liberty, or property unless by the judgment of his peers or the law of the land.

The citizens have a right in a peaceable manner to assemble for their common good and to apply to those invested with the powers of government for redress of grievances or for other purposes, by petition, address, or remonstrance.

The right of the people to keep and bear arms shall not be infringed.

The New Tax Bill

EXTENSION OF REMARKS

OF

HON. HARRY SAUTHOFF

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. SAUTHOFF. Mr. Speaker and Members of the House, I have studied the statement of Mr. John L. Sullivan, Assistant Secretary of the Treasury, and also the statement of Mr. Colin F. Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, over the week end so that I might get a clearer understanding of the suggestions offered for the new tax bill. I have several suggestions to make for the committee's consideration.

First. I feel that it is decidedly unfair to the taxpayer, particularly those who will find the new tax bill quite a heavy burden, to force them to give a substantial share of their earnings while wealthy newspaper corporations are being subsidized by the Government. I therefore feel that the second-class mail matter should be put on a paying basis. I appreciate that there are many small daily and weekly newspapers that cannot afford to make such a payment. I therefore suggest that daily and weekly newspapers having a circulation of not to exceed 7,500 or 10,000 should be exempted from this particular provision, but I do feel that it is an injustice and an inequality to tax the man who is struggling along on a modest income, trying to support a wife and a couple of children, trying to pay his insurance policies, and trying to buy a home, and use part of his money to grant a subsidy to the Chicago Tribune, the New York Daily News, the New York Times, the Washington Star, and many other prosperous newspaper corporations.

Second. I also feel that the taxes on radio broadcasting stations should be substantial. Such stations are virtually a monopoly which is granted by the Government and protected by the Government through its licensing features. Why should such a monopoly, granted and maintained by the Government, not contribute liberally to the Government's support? Personally, I would be very happy to give the Government half of my earnings if the Government would grant me a license for a broadcasting station.

Third. One more recommendation and I have finished. The taxpayer making a net income up to $4,000 or $5,000 a year, who has a wife and three or four children, usually obligates himself not only for life insurance but also for health and accident insurance, sometimes for the annuity type of insurance in addition to the foregoing, and also buys a home ranging in price anywhere from $5,000 to $10,000. All these obligations fix his income in certain channels for years to ccme, and if the Government places upon him a very substantial increase in his taxes he will have to drop some of the other things in order to meet his obligation to the Government. It would seem to me that we could raise a very appreciable amount with the newspaper and broadcasting-station tax which would help in relieving the lower-income producers of their additional burdens by a substantial amount.

METHOD OF PAYMENT

Obviously it would be to the interest of the Government to have a steady stream of revenue flowing in as a result of these tax measures. Usually payments are made on a yearly or quarterly basis. It would, no doubt, be a distinct advantage to the Government to have a monthly system of payment on income taxes, but in the ordinary course of events that would involve a huge amount of bookkeeping and mean considerable added expense. This we want to avoid.

For the taxpayer monthly payments would be a blessing, for the taxes which he has to pay to the local municipality, to his State, and to his Government fall too closely together. If the Federal payments could be spread out over a year, it would, no doubt, aid him in accumulating the money and meeting his obligation to the Government.

Our new tax bill will, no doubt, reach millions who have never yet paid a Federal income tax. Hundreds of thousands, if not several millions, of these taxpayers do not have checking accounts or bank accounts of any nature whatever. Furthermore, they do not have a savings account on which they can draw when their taxes are due. They are the smaller income groups that are paid weekly or monthly and usually have many places to pay their salaries when they receive them. Many of the taxpayers in these groups buy on the installment plan. Therefore, if we could devise some method by which they might pay a little out of their weekly or monthly salaries as

they earned them, they would not have much of a problem about their tax at the end of the year.

Therefore I make the suggestion to the committee for its careful consideration that revenue stamps be printed in the denominations of $1, $3, and $5 and be placed in the post offices throughout the United States so that the small taxpayer may be able, without any expense or difficulty, to go to his post office and purchase a $1, $3, or $5 stamp, as the case may be. He can put that stamp in a folder and in due season will have purchased sufficient stamps to pay his tax.

This is a benefit to the taxpayer because it does not burden him with a lump-sum payment on the 15th of March. It is also a benefit to him because he will save a little as he goes along.

To the Government it will be an advantage because there will be revenue flowing in steadily throughout the year, and also it will be an advantage because the tax will be collected, which in many cases otherwise will never be collected by the Government.

I trust that the committee will give this matter earnest and careful consideration, as I feel it is worthy of time and attention.

Men of Athens

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. PIERCE. Mr. Speaker, we are all well aware that Demosthenes, the great orator of ancient Greece, won his fame in his orations trying to arouse the Athenian people against Philip of Macedon. The history has been well told many times, but nowhere have I seen it as well told as recently in two editorials in the Oregonian, a newspaper of Portland, Oreg.

Mr. Speaker, I ask unanimous consent to extend my remarks and to include these editorials.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The editorials referred to follow:

[From the Oregonian, Portland, Oreg., of April 21, 1941]

THE GREEKS HAD A NAME FOR IT

Quite as the musical ear, in listening to the latest opera, isolates strains from earlier music; so the historical eye, in scanning the morning paper, detects in the contemporary scene much shameless imitation of things gone before.

Regard the news of the past week end. Herr Hitler, well along in his job of uniting Europe—a task which he claims to have had to undertake by force because the democracies had failed to accomplish it by peaceful means—has assertedly celebrated his birthday with his troops in the field. They batter their way down through the Hellenic peninsula. And meanwhile, here in the United States, Wendell Willkie and the Most Reverend Gerald Shaughnessy of Seattle, Catholic bishop, have been engaged in a cross-country argument over isolation and intervention. Personalities have obscured the issue, but that seems to be the story underneath. Should the United States consider what is happening in Europe and Asia as vital to itself, or should it keep more strictly to itself? Mr. Willkie and Bishop Shaughnessy are, in the last analysis, symbols of viewpoints.

Now, consider how familiar all these strains are to the historian. One such historian, Frederick H. Cramer, sat down recently and wrote his charges of plagiarism for the benefit of the magazine Foreign Affairs. The April issue carries the article under the title, "Demosthenes Redivivus."

Three and a half centuries before Christ the Greek peninsula and its hinterland were the modern world in miniature. The area, due to chopped-up topography, was divided into city states, some democracies, some military dictatorships. Athens, Sparta, and Thebes were traditionally of greater power than most of the others. Now a king of Macedon, to the north, named Philip, who had learned the secret of the phalanx during a stay in Thebes—exactly as Germany secured the tank from Britain in the World War—began a career of conquest. He had secretly perfected great numbers of troops in this latest military device. He was, however, a practical fellow. He softened his opponents by the "fifth column" method whenever and wherever possible. No war except as a last resort. And always he was careful to avoid battle on two fronts. Disunion of the enemy was his unceasing technique.

Philip's idea was to unite the Greek people whether or no, arguing that the democracies had failed.

Down in rich and comfortable Athens, as Philip progressed, the people and their leaders divided into isolationists and interventionists. Demosthenes became the spokesman for the latter—the Roosevelt-Willkie of his time. The three most famous orations ever delivered by man, the Philippics, were devoted to the attempt to stir democratic Athens to the positive action of going to war with Philip while there still were allies. On the other hand, there were those in Athens who cried that Demosthenes was a warmonger, who said that Philip only wanted living space, and that when he had achieved it Athens could do business with him. Don't be saying bad things about him, they counseled. They objected to war taxes, argued against military expenditures that threatened inflation, fought proposed conscription for the army and for labor. One Aeschines was an eloquent Senator Wheeler of his day. They appealed to all the instincts of evasion among the wealthy Athenians, and cried traitor at those who appealed for "union now" with Thebes. So Philip sardonically advanced, reducing the city states one by one because Athens could not bring itself to assume the leadership of a defense league. And in each place he set up a Quisling government, to the humiliation of decency and patriotism. Finally he overawed the Phocians, who guarded Thermopylae; and with that pass, close to the walls of Athens, in his hands, it was all up with Athens. Too late the people realized their comfort must be defended. They marched out at last, without allies, and were done to death at Chaeronea.

[From the Oregonian, Portland, Oreg., of April 25, 1941]

"O MEN OF ATHENS!"

Permit us to pursue a little further the matter of what was said and done in ancient Athens when Philip of Macedon began his series of conquests, reducing the Greek city-states one by one, by a nice coordination of panzer phalanxes and "fifth columnists." It really is too utterly utter, if you know what we mean.

The Athenians, as we have pointed out, promptly divided into interventionists and isolationists (the latter including the appeasers). Demosthenes was the spokesman for the interventionists, and his friends supported the Committee to Defend Athens by Aiding the Olynthian Confederacy, while Phocian, and in time Aeschines, backed the No Foreign War and the Athens First organizations. And to begin with, Demosthenes had much the worst of it, because the initial conquests by Philip (of such places as Byzantium and Rhodes) seemed very far away, and the Athenians were fat and placid and did not want to be disturbed. They said Philip was only after living space and wanted to reunite the Macedonian people. Demosthenes replied that such was not the case. He declared that Philip was a man whose sole desire was glory, and that he would not be stopped in the pursuit of glory except by superior force. To which the interventionists snorted "phooey." They said Philip was the tool of his business interests, that this was just another imperialistic war, and that presently business could be done with him.

The Athenians did, however, agree to aid short of war for Olynthia (a city near the present Salonika), and at the very end they decided to convoy. But the convoy arrived just after the city had fallen. (Philip returned Olynthia, by the way, to pasturage.)

This turn of affairs, of course, brought Philip considerably nearer the gates, and the matter of "union now" with Thebes began to be debated in earnest. There is no record, as Frederick H. Cramer observes in his article on the subject in the current issue of Foreign Affairs, that the interventionists thought to demand that Thebes and Macedon state their war aims. (Folly, as he remarks, has made strides since those days.)

But the isolationists did arise in the forum and call attention to how many times Athens had warred with Thebes, even in the immediate past. They demanded to know why Thebes had never given dominion status to India. (Pardon us if we get a little tangled at times.) And hadn't Thebes sold the last League of Nations down the river? Indeed, they demanded sternly, what Athenian would be such a weakling—so unpatriotic—as to refer to Thebes as the first line of defense for Athens? Never! Athenians had fought Thebans at Concord and Saratoga, and knew them for black-hearted rascals with an objectionable accent. Besides, the Theban diplomats were career men with whom it was dangerous to sit down at a green table, because you always lost your pants. This, they repeated, was just another imperialist war, and the way to save democracy was to make democracy work at home. That is, whitewash more walls and build new waterworks. Presumably Philip would be so impressed that he would sheer away in humblest amazement. Defend the Attic Doctrine, O Men of Athens, and don't let the Theban propagandists slicker you.

Icarus, the young man who attempted a nonstop flight from Crete to Syracuse, had fallen into the sea and been lost this long while, but there were other forward and admired young men of Athens to argue that perhaps Philip represented the wave of the future. And plenty of people were willing to attend, because many of the wealthy feared the loss of their property more than the loss of Athens, while many of the rest were merely poor at mathematics, and could not weigh the difference between the gamble today, with allies, and the gamble tomorrow without them.

It is a sorry tale with an unhappy ending, in that Athens fell and never again attained greatness until the year 1941—and then a tragic greatness. But we recount it because we suspect that upon scrutiny it will turn out to bear certain lessons for the present. At least it would seem fair to conclude that whether or not Athens should have gone to war on behalf of Olynthia, or should later

have tried to form closer relationship with Thebes, at least it should have shifted its W. P. A. from whitewashing walls to defense work, and it should have cut down its automobile production more than 20 percent. It should have trained and built for the hour of crisis without reservation. It should have recognized Philip for what he was—destruction on the march. Athens was a fool, and so are we.

The Strike Situation

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 23, 1941

LETTER FROM E. BLUMHAGEN, SPEAKER OF THE OKLAHOMA STATE HOUSE OF REPRESENTATIVES

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I am pleased to include herewith as part of my remarks a timely and thought-provoking letter I have received from my personal friend, Hon. E. Blumhagen, popular and brilliant young speaker of the House of Representatives of the eighteenth session of the Oklahoma Legislature.

The strike situation wherein hundreds of millions in defense contracts are involved, has reached a serious, if not an alarming, state. The public is demanding that the national-defense program must not be delayed, crippled, or slowed down on account of strikes and lock-outs or for any other reason or excuse. As one who has supported labor 100 percent on all occasions I feel that Speaker Blumhagen has expressed the opinion of the vast majority of the citizens of Oklahoma and the Nation with reference to this disturbing and perplexing problem.

The communication in question follows:

MARCH 13, 1941.

Hon. JED JOHNSON,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. JOHNSON: I am writing to you as an average citizen of Blaine County, Okla., concerning a matter that, in my opinion, should receive the immediate and earnest consideration of the Congress of the United States. I had the good fortune to be present at a meeting the other night composed of a good number of outstanding citizens of Blaine County. At that meeting the question of what at this time constitutes the greatest peril to this country was discussed. Spontaneously and almost without exception, it was the opinion of those present that the attitude of organized labor toward the national-defense program greatly endangered our national unity and jeopardized seriously the entire defense program.

I am naturally sympathetic toward labor and toward the people who comprise that great group commonly referred to as the laboring class. I commend the present administration for its sympathetic attitude toward the problems of labor. I do not believe that labor has achieved anything to which it was not truly entitled. I believe I speak truthfully when I say that my record in the Legislature of Oklahoma has on the whole been favorable to labor. Yet I do not believe that labor is justified in its present attitude toward the national-defense program. Our Government has said to certain of its citizens that they must go into the Army for a year's training. It makes no difference what our business or profession may be, all of our citizens are gladly and willingly making the sacrifices necessary to train themselves so that they may be able to take an active part in the defense of our country. I myself am registered; and if and when in the opinion of my country my services are needed, they will gladly be made available. In view of all this, it is difficult to understand why our Government should tolerate this great series of strikes on defense projects by labor. Personally, I doubt that there has been any serious deliberate effort on the part of the employers engaged in defense production to deal unfairly with labor, but be that as it may. I have no brief for an employer who seeks to deal unfairly with labor, for I believe that he should be dealt with summarily, but not in a manner that a strike does.

I believe that the laboring class of people should welcome the opportunity to be a part of a great program of national defense to the end that we may preserve our American institutions and our American way of life. I believe that labor is probably not fully aware of the seriousness of the national emergency, for I can't believe that labor is any less patriotic than any other group, yet a continuation of the present attitude of organized labor can have but one effect, and that is to create the impression that it is not willing to subordinate its interests to those of the common good.

I know that it is said that we should not undo the social progress that has been made in the last 8 years. However, any action taken during a national emergency could not and would not be construed as a precedent in ordinary times. Just the same as my interests as an individual must and should be subordinated to the common good, the interests of labor should and must likewise be so subordinated. I urge you, therefore, as my Congressman, to take the position that strikes on national-defense projects will not be tolerated. I grant you that labor is entitled to the assurance that employers will not exploit them during this emergency, but surely proper relations can be maintained between employer and employee without cessation of production activities.

Respectfully yours,

E. BLUMHAGEN,
Speaker, Eighteenth Legislative Session.

At War's Crossroads

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EDITORIAL FROM THE COLUMBUS (OHIO) DISPATCH

Mr. VORYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to refer you to an editorial which strikes the note of leadership which has been sadly lacking here in Washington—a keynote of courage combined with common sense—eyes on the stars but feet on the ground. I hope this American practical idealism will guide the President as we stand at war's crossroads.

The editorial follows:

[From the Columbus (Ohio) Dispatch of April 25, 1941]

AT WAR'S CROSSROADS—IS AMERICA FACING DANGER OF BEING MISLED?

Another debacle in the steady march from Narvik through Dunkirk to the Aegean Sea is clearing the last effective British fighting force from the continent of Europe save that sturdy handful holding the rock above Britain's lifeline at Gibraltar.

Adolf Hitler, hated by all free peoples, sits entrenched in the Berlin hub of the German wheel, its tire of steel encircling a subjugated domain such as Napoleon only dreamed of but never accomplished.

At this moment that domain is free to produce food and airplanes and tanks and guns—necessaries of life and munitions of war—without interference by strikes and indecisions, so long as he sees fit to keep his combat divisions in the field for conquest.

Neither futile wishful thinking nor sympathy for kindred peoples in dire distress, nor bombastic promises of aid by a friendly but confused administration in Washington, can becloud the fate of Czecho and Poland, Austria and Hungary, Denmark and Norway, Belgium and Holland, the mighty France, Bulgaria and Rumania, Yugoslavia, and Greece—Greece the bravest of the brave for centuries uncounted—all of which have fallen before the faultless preparation and mighty driving forces of the Nazi war plan and its mass machinery.

This is no time for recrimination against the new colossus of Europe.

This is no time for idle speculation over how far he plans to go.

Nor is this the time for elation and false hopes over casual allied successes which may have no bearing on the ultimate outcome of the titanic struggle.

This is no time for fear nor apathy nor indecision; certainly no time for recklessness and for confused national leadership whose motives and intent and purpose are hidden from the American people under a smoke screen of promises inconsistent with their capacity for fulfillment and doubtful as to the wisdom of their conception.

All of this does not mean that the British people are beaten; far from it.

It does not mean that the American people are afraid.

To the contrary, they are courageous, sympathetic, generous, purposeful, and powerful.

They are not pinching their pennies, either for aid to others or defense for themselves. They are willing to sacrifice, to pay until it hurts, and pay again and again and again.

They are not shrinking from any responsibilities, but they will demand, if not already aroused to it, a reasonable measure of effectiveness in their aid to others, and a full measure of defense for themselves.

President Roosevelt having taken everything pertaining to the war and defense into his own hands, had the world's greatest opportunity to exercise wise leadership.

The President and his close advisers, the minority saber-rattling element in the Army and Navy group in Washington, with all the bureaucrats and warmongering hangers-on, are under increasing scrutiny at the bar of public opinion.

Can they retain the confidence of the American people when airplanes are offered to England before our airplane factories are built; when naval vessels are actually given, and more promised, while our own Navy is crying for ships not yet laid down in incompleted yards; when tanks and guns are promised to belligerents while our own conscripted

army of boys has scarcely seen a tank or a modern field gun, a bomber plane, or a hand rifle?

Can they retain the confidence of the American people with a leadership which cabled King Peter a promise of aid 14,000 miles away with the panzer divisions quivering on his borders and his domain torn by internal strife; when, within a fortnight after that promise, King Peter is a fugitive on foreign soil and his country absorbed by the Axis?

Will that type of leadership make of America a laughing stock in Berlin and Moscow and Tokyo and Rome, where respect for American sanity and fear of a united American might should prevail?

Standing at the crossroads of the World War, the American people, unafraid and purposeful, will do well to get down on their knees—not to Berlin, not to London, not to Tokyo, and not to Washington—but to the Overruler of them all, praying that American leadership be guided back to clarity of vision, sound purpose, sane procedure, and an abiding faith in the principles which have made America strong and great.

Pennsylvania State Legislature Observes Americanization Day

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

ADDRESS OF HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA

Mr. VAN ZANDT. Mr. Speaker, May 1 was celebrated throughout Pennsylvania as Americanization Day, due to a resolution passed by the House of Representatives of the Commonwealth of Pennsylvania.

As a prelude, on April 30, at noon, 1 hour was set aside by the house of representatives to formally observe the occasion. In the presence of the Governor and his cabinet and other State dignitaries I had the pleasure of sharing the speaking assignment for the program with my colleague, the Honorable FRANCIS J. MYERS, of Pennsylvania.

Under leave to extend my remarks therein, I include the following address delivered by me on the subject Americanism:

Mr. Speaker, members of the house of representatives, and fellow Americans, it was with a sense of deep gratitude that I accepted your kind invitation to address you on such a momentous and unique occasion. As a Member of the Congress of the United States you and I have much in common. We are charged with grave responsibilities in discharging our trust as legislators for a free people.

It is noteworthy that this body of duly elected representatives of the great Commonwealth of Pennsylvania pause in their deliberations to give expression to the basic ideals on which this Nation was founded. Your action is comparable to that of Congress, when on the birthday of George Washington the National House of Representatives pays tribute to the Father of our Country by reading and meditating on our first President's Farewell Address.

Gentlemen, in my capacity as a Member of the Congress of the United States I congratulate you on your exemplification of true Americanism. By your example you have demonstrated that the zeal and patriotism of the early colonists who founded this great Commonwealth still burn brightly in the heart of every Pennsylvanian. It was on Pennsylvania soil that the breath of life was given to this great Nation. At Philadelphia were adopted the Articles of Confederation; there the Declaration of Independence was written and signed; there the treaty of peace that ended the Revolutionary War was ratified; and there also the Constitution of the United States was formulated. Today Independence Hall in Philadelphia stands as a mighty monument commemorating the birthplace of this Nation, and it truly depicts the Quaker City as the cradle of American liberty.

We as Pennsylvanians have a proud heritage in the patriotic fervor that permeated our forefathers. Their contribution to this great Republic is one of the brightest pages in the history of our great Nation. The courage and valor displayed at Valley Forge, Brandywine, and Fort Necessity spurred on the gallant stand that caused the Union forces to make Gettysburg the turning point in the Civil War and has since transformed its hallowed ground into a national shrine. The torch of freedom given to us at Gettysburg has been carried aloft by loyal Pennsylvanians through the Spanish-American and World Wars.

Today, as the war clouds gather over this last peaceful nation, Pennsylvanians, true to their traditions, are rallying to meet the challenge to the American way of life. The tramp of marching feet resounds in all of our 67 counties as Pennsylvania youth respond to the call of their country. Industries hum with activity as they strive to break all production records in their determined effort to supply the needs of an adequate national defense.

In short, Pennsylvania—the keystone in the original 13 States—is truly today the cornerstone of our national-defense efforts.

Here in Pennsylvania we have room for only one "ism"—true Americanism—an Americanism that keeps strict faith with every word in the Bill of Rights and in every line of the Constitution. We believe in the kind of Americanism that gives you and me the right to express our opinions, to approve or disapprove, to commend or criticize, as we see fit.

Our Americanism gives us a legal right to meet under the same roof as coworkers in the ranks of labor, as farmers in our local granges, as businessmen in our chambers of commerce, as fraternal brothers in the Masonic order, or the Knights of Columbus, Eagles, Elks, Odd Fellows, or Moose.

We recognize and cherish the spirit of Americanism which leaves our newspapers free to print anything that does not conflict with the laws of libel or decency. As business leaders, laborers, or farmers, we appreciate the right that is ours to publish our own periodicals without the heavy hand of a censor to tell us what we, the people, are allowed to read. We realize that a free press must be available to all, and that if we deny it to those with whom we disagree today, it may be likewise denied to us tomorrow.

As taxpayers and law-abiding citizens, the Americanism we advocate gives us the privilege of presenting our petitions to the highest court in the land if we feel we have been wronged. We insist as true Americans that nothing shall interfere with that right.

If our public servants, our duly elected representatives in our town councils, our county and State legislatures, or in the Congress of the United States enact laws contrary to our ideas we believe in the kind of Americanism that grants every citizen the opportunity to petition our lawmaking bodies for corrective legislation. We want that opportunity as individuals. We want it as farmers, laborers, lawyers, doctors, or bankers, if we feel our mutual welfare is being endangered.

In 1620 our Pilgrim Fathers migrated from England in search of individual liberty. One of their most important objectives was to establish homes in a new land where they could cling to the religious faith in which they believed. The Americanism we know teaches us that the blessing of religious freedom must be ours forever if America is destined to survive. There is no compromise with this fundamental truth. You and I would be repudiating Americanism if we should deny our neighbor the right to walk with his Lord and his God in his own way.

Tolerance for the rights and privileges of others is the essence of Americanism applied to religious freedom, free speech, free press, or other individual liberties. There must be freedom for all or freedom for none. Those who would have America half free and half slave are traitors to the spirit of Americanism.

Let us keep this fact uppermost in our mind at all times—Americanism is not something you can sell for a price nor is it something you can take off and put on when you own a certain kind of uniform. Americanism is a way of life—a way of living, and not something you acquire by paying membership dues in a secret society.

The real Americanism that we know, feel, and breathe in Pennsylvania is the Nation's gospel. Can any one of us look on the world today and fail to thank God for the blessings of our form of government? We are the most fortunate of nations. Nowhere else today is there a people so free to pursue life, liberty, and happiness. Yet this blessed privilege is abused by many so-called Americans and efforts made to destroy it in various ways.

Today Americanism is being challenged by enemies within and without. There are insidious forces at work within our own country who are seeking to undermine the basic ideals of the American form of Government. These political termites are tirelessly gnawing at the pillars of the Republic. They are encouraged by indifference on the part of many lukewarm Americans and by the active work of foreign governments.

Regardless of how false and dangerous are the political philosophies of the Communist, the Nazi, Fascist, or any other group, we must admit reluctantly that the advocates of these new-fangled political concepts are fired with a fanatical zeal and enthusiasm that staggers the imagination.

This nationalistic frame of mind has transformed into a mighty military machine a nation that in 1918 was conquered and subdued. For 7 years prior to the present war, you and I read in the newspapers or witnessed in the news reels the systematic effort employed to arouse the national consciousness of the second greatest industrial nation in the world—Nazi Germany.

We saw legions of German youth depicted in brown shirts and raising their hands in salute to an insignificant Austrian paperhanger, now held in abject contempt by the nations of the world as the "Beast of Berlin"—Adolf Hitler.

Today those same youths are the sparkplugs in the blitzkrieg that has reduced 14 countries in succession to a state of servitude.

Let us dwell for a moment on the activities of other nations since the year 1920. When we look back we now recall with vivid recollection that while Hitler pursued his program the remainder of the world was content to take everything for granted and be lulled into a false sense of security. When the rude awakening came, we found that not only other nations but even ourselves were unprepared for this new challenge to the peace and security of the civilized world.

Through the grace of God, we, as a nation, have been spared actual combat with the ruthless forces now overrunning the plains of Europe. Meanwhile, we are engaged in a feverish effort to build an adequate national defense at the earliest possible moment. Such a gigantic task provides a real testing ground and an opportunity to view the principles of true Americanism at work.

The need for a united nation devoid of any partisan motives was never more apparent as we shoulder the burden of providing an adequate national defense.

What we need is more enthusiasm and zeal for Americanism. If the dictator nations can muster loyalty and enthusiasm for their bloody and lustful regimes, what is there to prevent America from casting off her lukewarm attitude and experiencing a revitalization of American principles and ideals?

The crying need of the hour is for every American, regardless of creed, race, or social position, to be inspired by the courage and fortitude of those brave patriots to whom Valley Forge and Gettysburg proved the acid test of their patriotism and found them unafraid and glorious in their victories.

We fellow Americans may have honest differences of opinion in regard to many questions, but there can be no compromise on the fundamental principles of Americanism.

Our tolerance as a Nation, intended as a blessing, has been seized upon by subversive groups to promote their own gospels of hate and oppression. To those alien parasites let us in unmistakable terms serve notice that their presence here among a free people will not be countenanced. Let the Communist return to Russia and face the secret trial and consignment to an unmarked grave by the light of the moon. Let the Nazi, Fascist, and their kind return to the fatherland, where the principles of human liberty have been discarded and where no man dare call his soul his own.

There should be a mass movement on the part of every legislative body to provide the means of transportation to these base ingrates who, while enjoying the privileges and blessings of America, are in the same breath laboring incessantly to uproot and destroy every vestige of liberty and freedom. Let them demonstrate their sincerity for godless Russia and Nazi Germany by departing from our shores, and every loyal American will utter a prayer of thanksgiving.

In similar fashion, I hold no brief for the lukewarm American, but instead regard him with contempt. The day of reckoning has arrived, and he must remove his cloak and stand revealed in his true light as a pussyfooter and one who accepts the blessings of American citizenship with no thought of assuming its duties and obligations.

Today America is for Americans, and let such a slogan be on the lips of every school child, preached from the pulpits of the Nation, and inscribed on every heart.

In this critical period of world history let us evaluate the many blessings that are bestowed upon us by citizenship in this great Republic. Let us join with the distinguished minority clerk of the national House of Representatives, William Tyler Page, in subscribing wholeheartedly to the lofty sentiments contained in his famous composition entitled "The American's Creed":

"I believe in the United States of America, as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a Republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I, therefore, believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

The Garand Rifle

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

NEWSPAPER DISPATCH FROM FORT BENNING, GA.

Mr. SPARKMAN. Mr. Speaker, we have from time to time heard criticism of the Garand rifle and of its selection by the Army as the standard rifle for our troops. There recently appeared in the public press a very interesting news article. Under leave to extend my remarks I am including this article in the belief that it may be read with profit by us all. It is not only interesting, it is instructive:

FIRING GARAND RIFLE, ROOKIES SOON MARKSMEN—QUALIFY IN "UNDREAMED OF" NUMBERS; CONTROVERSIAL ARM IS SUPERIOR

FORT BENNING, GA., April 24.—A soldier's rifle is a personal and vital arm. Especially for a United States soldier, it is a symbol of his national heritage—of wars and wildernesses won. At least it should be. Military leaders know it would be a bad thing if men lacked pride and faith in their rifles, and there were some misgivings about replacing the simple and reliable Springfield (model 1903) with the more intricate and frankly less dependable Garand, a semiautomatic.

But nobody was quite prepared for the hullabaloo that arose about a year ago and which has been fanned again by publication of unfavorable excerpts from a report of competitive tests made by the Marine Corps.

Visiting camps in the south, this reporter heard selectees and National Guard men, who had not fired the Garand, wondering whether Washington bureaucracy was about to hand them an inferior weapon. They said they had seen no answers to criticisms they had read.

Here at Fort Benning, home of the infantry school for officers and of the policy-shaping infantry board, are all the answers about the new primary arm of our fighting forces. They're not exactly official but you could call them authoritative, because the officer I interviewed is Col. T. S. Wessles, rifle instructor at the infantry school, test officer during part of the Garand's 15-year development, and an exceptional marksman who several time has gone to the National Rifle Matches at Camp Perry, Ohio.

SHOOTS MORE EASILY THAN SPRINGFIELD

Sitting in his office, Colonel Wessles rapidly took apart a Garand (now known as the M1, meaning model 1) and explained how it works. This is the main idea: About 2 inches from the end of the barrel, and at a right angle to it, is a hole smaller than the lead in a pencil. Part of the expanding gas which is driving the bullet goes through this vent, whams into a tiny pistol, which in turn pushes back the breech mechanism, ejects the old shell, and puts in a new one as it closes. All quick like a mouse. The rifleman doesn't have to work a lever or bolt; he just aims and squeezes the trigger.

The reason the Army and Marine Corps adopted the M1 is that it can fire from two to three times as many aimed shots per minute as the Springfield. Every phase of modern warfare is a race for superior fire power, and no foreign nation has an infantry rifle that can throw anything like the amount of lead that the Garand does.

Down to the last screw and spring, the Garand has 71 parts, the Springfield 94. But Colonel Wessles said there are more important parts in the M1, and that it really is more complicated. Hence it is somewhat less reliable. "But you just can't get the same standard of absolute dependability in a semiautomatic that's possible in one you operate by hand," he added.

He probably was thinking of tests by the Marine Corps board in which guns were doused in gooey mud, dragged through sand, and sprayed with salt water. The Springfield still could be fired. The Garand, with more intricate parts and closer tolerance, often jammed. Regarding actual breakage of parts, though, the officer declared that ordnance mechanics on the range are no busier making repairs than they were when the famed Springfield was used.

The front end of the Garand recently has been altered slightly to avoid a wabbling flip that was given to the tails of bullets as they passed the gas vent. The M1 is about as accurate as the Springfield and was especially commended for accuracy by the sharpshooting marines. There is no trouble with fouling. Colonel Messles said that in a test of the new front end, a rifle was fired 5,000 times without cleaning.

Naturally, any fast-shooting hand weapon gets hot during sustained fire. The colonel said he has shot the Garand until the wood around the barrel burst into flames, but it kept on working all right.

THE GARAND'S ADVANTAGES

He named some specific advantages: 1. The M1 uses a clip of eight rounds instead of the Springfield's five. At the last shot, the clip is ejected with a resonant bong.

2. The M1 is easy to take apart and clean in the field.

3. The sights are in every way stronger and superior. Adjustment is closer and easier. Elevation and windage are changed by thumb screws that click, and each click represents 1 inch to each 100 yards of range.

4. The trigger stays in adjustment better than the Springfield's.

5. The shell ejector is sturdier, surer than the Springfield's.

6. A rifleman can conceal himself better with the Garand because he doesn't have to raise a hand above the level of the barrel to operate a bolt.

7. The Garand has about one-third less recoil.

Performance of the M1 in the hands of troops should settle the controversy about it, but the Army has no official statistics so far. At Fort Sam Houston, Tex., I was told that more than 90 percent of selectees and other recruits were qualifying as marksmen or better with the Garand. That is a proportion previously undreamed of.

Here at Fort Benning, the score is even higher among classes of officers—many of them reservists who haven't fired a rifle in years. Colonel Wessles said that of his last class of 185, who had scarcely any practice because of bad weather, 70 rated expert riflemen, 52 sharpshooters, 63 marksmen, and only 3 failed to qualify.

EASY TO HANDLE IN RAPID FIRE

When we went out on a range to shoot a Garand I soon learned its advantages in rapid fire, which is the part of the record course which used to ruin the scores of most novices who shot the Springfield.

With the old rifle you were supposed to shoot 10 times a minute at 200 yards. The new rule, for the Garand is 16 shots a minute. Colonel Wessles, though, began by loading and firing 4 clips of 32 shots in 60 seconds, and scored 154 of a possible 160. At any slower rate of fire he seemed never to miss. My best target was 15 bull's-eyes and 1 in the adjoining 4-ring—2 clips fired in 44 seconds. As one who used to like to shoot

the Springfield, I was especially impressed with the Garand's soft recoil and the way it kicks straight back, with very little wavering of the sights from the target.

Presently Lt. Col. G. A. Pollin and his son came by. George Pollin is a normal-sized 13-year-old who never had fired a .30-caliber rifle. He lay down and, with 1 clip at slow fire, plunked off 6 bull's-eyes and two 4's. Some other visitors were Lt. and Mrs. C. B. Wolfe. She wasn't dressed for the muddy firing line, but she stood up and blazed away with the 9-pound rifle and didn't mind the recoil.

Incidentally, having heard various Army men pronounce "Garand" in every possible way, I asked Colonel Wessles, who knows the inventor. Proper pronunciation is with a hard "G," as in the first syllable of "garage," and with the accent on the "and."

Two Warnings

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. DWORSHAK. Mr. Speaker, we are in a world crisis, which requires sane and deliberate thinking on the part of Americans. It is alarming to observe the forces of publicity which are being utilized in an effort to distort developments confronting our Nation today.

I have confidence in the ability of our people to act wisely in meeting this challenge, if they can resist the sinister influences of propaganda. In this connection, it is timely to recall the warnings of two outstanding Americans, whose advice is worthy of consideration now. Under leave to extend my remarks, I submit the following admonitions to our people.

Mark Twain said:

A few fair men on the other side will argue and reason against the war with speech and pen and at first will have a hearing and be applauded, but it will not last long; the others will outshout them. * * * Before long you will see this curious thing: The speakers stoned from the platform and free speech strangled by hordes of furious men who in their secret hearts are still at one with those stoned speakers but do not dare say so. And now the whole Nation, pulpit and all, will take up the war cry and shout itself hoarse and mob any man who ventures to open his mouth, and presently such mouths will cease to open.

George Washington said:

Excessive partiality for one foreign nation and excessive dislike of another causes those whom they actuate to see danger only on one side and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests.

Mr. Speaker, no convoys, no war.

Objectives of the Regular Veterans Association

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

OUTLINE ADOPTED BY THE FOURTH NATIONAL CONVENTION

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I place in the RECORD the objectives of the Regular Veterans Association as adopted by its fourth national convention:

NATIONAL DEFENSE

A highly trained and well-equipped Army, capable of defending the entire Western Hemisphere.

A two-ocean Navy, capable of meeting and destroying any possible combination of enemy naval forces.

Repeal, modification, or amendment of all existing State laws that prevent citizens of such States who are serving in the Army, Navy, Marine Corps, and Coast Guard from voting.

R. V. A.'S EDUCATIONAL PROGRAM, 1941, AS ADOPTED BY THE FOURTH NATIONAL CONVENTION

1. Privileges of hospitalization of all United States veterans' facilities for former Regulars of the military and naval service. Amendment of public law No. 2, Seventy-third Congress, so as to permit any person having an honorable discharge from any of the regular services to be eligible for admission to the various Veterans' Administration homes.

2. Increase in pensions to widows and dependents of deceased Regulars who have died of service-connected disabilities.

3. Elimination of regulations which prevent members of the United States Soldiers' Home and of the United States Naval Home from receiving their full pensions while residing in these homes.

4. Upward revision of the present pay scale throughout the Regular Establishments.

5. Increase in the quarters and rental allowances for all retired personnel to $30 per month.

6. Provisions for retirement privileges for enlisted personnel of the Regular Army after 25 years of service.

7. Opposition to any law that will permit States or local political subdivisions to apply sales taxes to sales made in post exchanges or similar stores on military and naval reservations, ships, or stations.

8. Retention of the reenlistment allowance until it can be replaced by satisfactory pay schedules.

9. Good-conduct medals for all honorably discharged Army enlisted men.

10. Continued preference to all honorably discharged veterans of the Regular Establishments under all rules and regulations promulgated by the United States Civil Service Commission, and a law that will require this Commission to publish all eligible lists and to make appointments from the list in order of merit, with no eligible passed over without legal and adequate reason therefor.

11. Preference to all honorably discharged regulars in admission to C. C. C. camps and on W. P. A. jobs.

12. Elimination of the so-called green ticket of the Coast Guard.

13. Adoption of a uniform salute to the flag for civilians and soldiers alike.

14. Equalization of charges to all veterans residing in United States Soldiers' Home and United States Naval Home.

15. A voice in the management of the Soldiers' Home for enlisted men of the Army, who own and support the home, and preference for employment at this home to veterans of the Regular Army.

16. Increase of $10 per month in amount now being paid hospitalized regulars.

17. Equalization of pay and allowances among the services.

18. First pay grade, pay and allowances, and rank for first sergeants of the Army and Marine Corps.

19. Brigadier general rank for our Army Chief of Chaplains.

20. Lieutenant general rank for the Commandant of the Marine Corps.

21. Removal of legislative restrictions on Army post exchanges.

22. Permanent noncommissioned officers' warrants for noncommissioned officers of the Army, with promotions based on merit as evidenced by tests, records, and examination.

23. Placing the fixing of Army noncommissioned officer strength in the hands of the Secretary of War.

24. Making the purchase of Government life insurance by military and naval officers and enlisted men possible at any time during active service instead of 120 days after acceptance of rank or enlistment.

25. Educational institutes for the Army and Navy whereby correspondence, educational, and vocational courses may be made available to personnel of the Army and Navy similar to personnel of the Marine Corps, Coast Guard, and United States Army Air Corps.

26. A law to extend the date of expiration of enlistment of personnel under treatment in hospitals.

27. Reduction in hospital rates for dependents of Coast Guard personnel from $3.75 per day to $1 per day.

28. Adequate pensions for dependents of deceased retired regular officers and enlisted men.

29. Pensions for service-disabled Regulars to equal that of wartime rates.

30. The same allowances for enlisted men of the first three grades throughout the Army, Navy, Marine Corps, and Coast Guard.

31. The pay and allowances of their wartime rank upon retirement be given to warrant officers and enlisted men who served during the World War.

32. Retirement pay for ex-temportry commissioned World War officers of the Coast Guard and Navy be similar to that provided for the Army.

33. Legislation looking toward the increase of appropriation for land and sea border patrol.

34. Retired Army men to be entitled to hospitalization.

35. Cancelation of the existing list of eligibles for appointments to warrant officer in the Army be opposed.

36. The Navy and Coast Guard veterans who served abroad in time of war or during peacetime expeditions be entitled to campaign medals.

37. Credit for purposes of longevity pay for service in the National Guard, Regular Army Reserve, Navy Reserve, Marine Corps Reserve, and Coast Guard Reserve.

38. Three-quarters retirement pay with certain minimums for career enlisted men of the regular services.

39. Complete overhaul and modernization of the entire pay, pension, and retirement systems of the Regular services.

40. Chief warrant officer rank for the Army, with all enlisted men of the first three grades being given opportunity to qualify.

41. Authorization to transportation companies to reduce rail and bus fares to 1 cent per mile for all officers and enlisted men while on furlough or while traveling at their own expense.

42. A minimum monthly pension of $50 for all Regular veterans with arrested tuberculosis.

43. Full credit for all service in the Army, Navy, Marine Corps, and Coast Guard for retirement and logevity purposes.

44. Uniform charges throughout the Army, Navy, Marine Corps, and Coast Guard for the hospitalization of the dependents of all officers and enlisted men.

45. Pensions for dependents of deceased retired officers and enlisted men.

46. Denial of public office and voting privileges to all who advocate change or overthrow of our form of government by use of force or internal disturbance.

47. Immediate deportation of all aliens who by speech or act advocate or encourage anti-American doctrines, internal disturbance, or change in American laws or institutions or in any way attempt to meddle with American economic or political affairs.

EDITORIALS FROM THE CHATTANOOGA NEWS-FREE PRESS

Mr. KEFAUVER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include two editorials that recently appeared in the Chattanooga News-Free Press entitled, "Why Not Stop German Bureau?" and "Germans Sacrilegious."

I am in full accord with the conclusions reached in these editorials. We cannot place the full strength of this Nation in a struggle against the enemy and at the same time permit distribution of the enemy's propaganda. I see no answer to the demand that the activities of the German Bureau be stopped.

The editorials follow:

[From the Chattanooga News-Free Press]

GERMANS SACRILEGIOUS

Blood-boiling is a dangerous business in warm weather, but this editor suffered an involuntary attack of the ailment yesterday when the periodical Facts in Review, from the German Information Bureau, of New York, came to the desk. The book is full of the customary insidious propaganda, notably with various pictures and articles to demonstrate that the Germans are feeding the peoples of the conquered nations and helping them with their agriculture.

Of course, everyone who keeps up with the times, knows that these peoples are not being fed by the Nazis but are making pitiful appeals to the United States to escape starvation. Furthermore, anyone who has studied the German psychology knows that if these peoples are being aided in making their crops, the Germans will eat the lion's share—or shall we say the swine's share—of the products.

What made the blood to boil, however, was a beautiful spring-flower picture on the inside cover, and opposite it an article headed "Easter in Germany"—with a lot of bunk about how all over Germany "Easter bells jubilate, singing of His glory."

The Hitler government has been trying to eliminate Easter and "His glory" for years, and it is disgusting sacrilege for a German propaganda sheet to try to include Easter and a stab at religion in its poison.

More and more we feel that Facts in Review, and all the score or so of publications given out by this bureau, should be suppressed.

[From the Chattanooga News-Free Press]

WHY NOT STOP GERMAN BUREAU?

We are always willing to listen to both sides of any controversy. We have studied the international situation in vain for any justification for Adolf Hitler's campaign to subjugate a continent, perhaps the world, in the name of the "superior race," the Teutons. We have tried to find any elements of human progress in Hitler's brutal Nietzsche philosophy and his contempt for Deity. It isn't there. Whatever historic and current-day basis for complaint there may be found against England and its allied countries—whether they are genuine democracies or not, or whether even our own country is a real democracy or not, the so-called democratic governments must have our support. These governments have a background of religion and human values. If they are imperfect now, they hold within them, by their very structure, the possibilities of improvement; but in nazi-ism is only slavery, giving all one's liberties for a crust of bread and a bit of cloth to wear.

Therefore, we feel the time has come for a definite, total break with nazi-ism, and under such a break the German information agency in New York, of whose propagandizing efforts a McCallie School official complained in the News-Free Press of Sunday, should be eliminated from the American picture. We trust that Representative ESTES KEFAUVER may be able to interest official Washington in eliminating this agency from the mails.

These propaganda sheets, often handsomely illustrated brochures, boosting nazi-ism and carefully glossing over its brutishness and defiance of God, are received often in this office. For us, they only serve as inflammatory material to make us more eager to witness the end of Hitlerism; but to less determined people who have not studied both the psychology, the aims, and the methods of the fiend of Berlin they might easily plant seeds of doubt as to the justice of America's position.

County Commissioners of Blair County, Pa., Endorse Townsend Plan

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

RESOLUTION OF BOARD OF COMMISSIONERS OF BLAIR, COUNTY, PA.

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I wish to include therein the following resolution adopted April 9, 1941, by the Board of County Commissioners of Blair County, Pa.:

We, the undersigned members of the board of county commissioners, county of Blair, State of Pennsylvania, believe something must be done to provide adequate pensions for our deserving senior citizens, and, at our regular meeting have adopted this resolution:

"Whereas the members here assembled believe that a national uniform system of old-age pensions should be adopted throughout the United States of America; and

"Whereas the propcsals embraced in the Townsend bill (H. R. 1036) will greatly relieve, if not entirely abolish, unemployment, and will provide to the people the American standard of living; and

"Whereas the various States of the Union are finding it difficult to raise a sufficient revenue to finance the payment of adequate pensions to the aged; and

"Whereas that a universal tax be levied and moneys so raised shall be divided pro rata and paid to all citizens of the United States who have attained the age of 60 years and over: Now, therefore, be it

"*Resolved*, That we most respectfully urge upon the Congress of the United S'ates of America to consider the basic principles of the Townsend bill (H. R. 1036) now in committee; and be it further

"*Resolved*, That one copy of this resolution be forwarded to each of the following: The honorable ROBERT L. DOUGHTON, chairman of the House Ways and Means Committee; the Honorable JAMES J. DAVIS, Senator; the Honorable JOSEPH P. GUFFEY, Senator; the Honorable JAMES E. VAN ZANDT, Congressman."

CHAIRMAN, BOARD OF COUNTY COMMISSIONERS,
HERBERT S. BOLGER,
D. S. BRUMBAUGH,
Commissioners.

The American Sugar Market Should Be Saved for the American Sugar Producers

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. HILL of Colorado. Mr. Speaker, I want to call the attention of the Members of this Congress to a Sugar Division Agricultural Adjustment Administration regulation regarding sugar quotas, which will be found in the Federal Register of Tuesday, April 15, 1941, page 1919. The table shows the additional prorations in terms of pounds, raw value of sugar, which is additional raw sugar to be imported because of the inability of the Philippines to supply their 1941 market quotas. This deficit of 146,464,000 pounds of sugar, raw value, was allotted to various countries throughout the world, and in so doing the Department of Agriculture deprived the American beet- and cane-sugar producers of an increased acreage which should have been given to them in 1941. When you consider that

the Department of Agriculture allotted only an acreage of 114,000 for 1941 to the State of Colorado, as compared to 142,000 acres for 1940 and a 10-year average for Colorado of 145,000 acres, you begin to realize what this Administration intends to do for our beet industry.

Taking one county in Colorado—my own county, Larimer—we find the reduction in acreage for 1941 is 35 percent below the 20-year average and 28 percent below the 10-year average. The entire county district was allotted only 11,805 acres for 1941, while the Fort Collins district alone for 10 years has averaged 12,290 acres. The two factory districts in Larimer County have each planted annually more acreage than is now allotted under the 1941 contract for both of them.

Sugar production is one crop which is not produced in surplus quantities, as the limit of our production has been about 26 percent to 28 percent of our annual consumption. Just why the beet and cane growers should be penalized to assist foreign countries is a question the Congress should have answered by both the Agriculture and State Departments.

In past wars and national crises the farmer always has stood in the front rank in the support of his Government, not only in the production of food but also in the sacrifice of his sons. Who is able to say, under the present world conditions, that the price of sugar might not increase to the heights it reached in the past war, which in some instances was 33 cents per pound? Should this condition arise the laboring man and the average American family would have to pay the penalty for the mistakes in the direction of our agricultural policy. What is the use of voting large sums of money for parity payments and at the same time pursuing a policy of prohibiting farmers from producing sufficient acreage of nonsurplus crops to meet the demands of our own American markets?

Little excuse can be offered by Members of the Congress for the situation now existing in the sugar-beet and cane industry. Early in the session the Congress had an opportunity to pass legislation that would have relieved this situation; but no action was taken simply because certain departmental heads, and I call to your attention that they are not the duly elected representatives of the people, offered stiff opposition to the reallocation of the sugar from the Philippines. The situation is critical and we should act without delay to change the Sugar Act to permit unlimited production of beet and cane sugar during this world crisis.

I attach the table as issued on April 15 by the Acting Secretary of Agriculture:

Additional prorations (in terms of pounds, raw value)

Country:	
Argentina	42,207
Australia	590
Belgium	852,170
Brazil	3,466
British Malaya	75
Canada	1,633,662
China and Hongkong	834,236
Colombia	774
Costa Rica	59,640
Czechoslovakia	762,393
Dominican Republic	19,308,640
Dutch East Indies	612,063
Dutch West Indies	19
France	507
Germany	339
Guatemala	969,710
Haiti, Republic of	2,668,541
Honduras	9,939,029
Italy	5,070
Japan	11,608
Mexico	17,465,350
Netherlands	630,830
Nicaragua	29,595,003
Peru	32,180,972
Salvador	23,767,903
United Kingdom	1,015,360
Venezuela	839,703
Subtotal	143,199,860
Unallotted reserve	3,264,140
Total	146,464,000

The St. Lawrence Waterway and the American Farmer

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. McGREGOR. Mr. Speaker, I note that Secretary Morgenthau has recommended the discontinuance of the C. C. C., the N. Y. A., and various other departments that he calls "nonessential for defense" in order that the Budget might be reduced $1,000,000,000.

Some time ago the United States and Canada entered into an agreement known as the St. Lawrence waterway treaty. This waterway, to my mind, will cost the United States Government $1,000,000,000, and certainly by the furthest stretch of the imagination would not come under the category of a defense project. Not only this, the United States by this agreement abandons its ancient contention that Lake Michigan is an American lake. This body of water has become forever, through this new agreement, an international body of water, which belongs to the St. Lawrence watershed instead of to the Mississippi watershed.

The construction of this waterway would, in my opinion, cost the Canadian Treasury only about $38,000,000. Most of the construction work will be done in Canada, which means that Canadian engineers, Canadian labor, and Canadian materials will be used. I would respectfully call the attention of the Members of Congress who are interested in Canadian sovereignty to article 5 of the St. Lawrence Waterway Treaty. This article protects Canadian sovereignty over all structures lying on the Canadian side, even though these structures have been built with United States money.

I would also call the attention of the Members of Congress to one of the articles of the St. Lawrence Waterway Treaty which states that all British shipping in all parts of the Empire shall have the right to navigate in the Great Lakes and St. Lawrence waterway for all time. This means that all British ships, as well as all Canadian ships, shall have access through the deepened water channels to the head of Lake Superior. The Great Lakes become the Mediterranean Sea of North America. The waterway will thus provide a direct route for the shipment of grain, flour, coal, and other commodities between interior Canada and Great Britain. We thus will have Windsor, Hamilton, Toronto, Kingston, Montreal, and Quebec on an invaluable imperial trade artery connection with the mother country and in direct competition with the United States.

I respectfully call the attention of the Members of Congress who are real and true friends of the American farmer to these facts.

The Farm, America's First Line of Defense

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

RADIO ADDRESS BY HON. CLIFFORD DAVIS, OF TENNESSEE

Mr. DAVIS. Mr. Speaker, under leave to extend my remarks, I include therein an address delivered by me over the network of the Mutual Broadcasting Co., May 1, 1941, at the National Farm Youth Foundation, Dearborn Inn, Dearborn, Mich. The foundation was honoring the first-place awardees of area competition at the end of the National Farm Youth Foundation's first year of free scholarship in farm management and engineering. Classes included 10,000 young men between the ages of 18 and 25 from throughout the United States, living or working on American farms.

The address follows:

Mr. Chairman, Governor Van Waggoner, ladies and gentlemen, Theodore Roosevelt once stated that "No nation has ever achieved permanent greatness unless this greatness was based on the well-being of the great farmer class, the men who live on the soil; for it is upon their welfare, material and moral, that the welfare of the rest of the nation ultimately rests."

We are certainly living in an unsettled and constantly changing world today—a world in which science and industry are making great strides, even as our social and economic structure undergoes vast changes.

Underlying all science and development, however, is one basic work which always must and will be done. We are speaking of farming, which is the world's oldest occupation but its newest science. Since this country has more than $63,000,000,000 invested in 7,000,000 farms which produce an annual average estimated market value of $10,000,000,000, it can readily be seen why farming is our greatest industry.

It is frequently asked "To what extent do metropolitan centers depend on agriculture?" Those in the cities often look upon rural communities largely as places from which they receive food and materials and to which they can sell goods manufactured in cities. This is true to a great extent, but the farm population does more than this. During the 10-year period between 1920 and 1930 the farmer sent several billion dollars to the cities. For example, to settle estates as the result of the death of parents, farm people paid their city relatives $4,000,000,000. Farmers paid city dwellers $8,000,000,000 in interest on loans. Farmers who rented land paid $10,000,000,000 to persons in cities who owned the land. In many other ways the farmer has helped in no small way in building up and sustaining the economic life of this great country.

Enough for the industry of farming. How does this gigantic resource back of American democracy form our great line of defense?

During the present feverish struggle for supremacy of a group of nations over the rest of the democratic world and its way of living armies are crushing everything before them; staff officers are poring over plans for attack or strategic retreat; armament plants go on 24-hour schedules; those articles which we have considered essential to the enjoyment of life are relegated to the background only to have their places taken on the great assembly lines of our manufacturing plants by tanks, planes, shells, and guns. These are all extremely essential in waging a modern war; yet, food, and food alone is the basis for any defense. Without it, planes, guns, high explosive shells, and other instruments of destruction are useless, and, since farms supply our food needs, plowshares, not bombs, will eventually decide the issues.

Lack of food is taking its toll in many European countries. Nazi Germany is gradually finding that no nation or nationality can be successfully ruled whose stomachs are empty. We are constantly receiving reports indicating an undercurrent of unrest among the conquered, spurred to almost rebellion due to hunger and starvation.

In conquered Europe food is no longer an economic end, but a political means to subjugate and even annihilate nations. After conquering a country Hitler demands that all German soldiers be fed by the country in which they are stationed. He then proceeds to divest that country of its remaining food supply. A million pigs and 200,000 cattle were taken from occupied France. As a result, this country is in drastic straits. The great population shift from occupied to unoccupied France has forced her to strike out for food regardless of the consequences to others. The Swiss paper Volksrecht stated that 800,000 tons of wheat were removed to Germany. Germany rules its conquered peoples mercilessly by rationing their food supplies according to th degree of complacency with which these peoples accept their new masters. In Poland, where Hitler seems determined to wipe out every vestige of the Poland that was, famine stalks on every hand.

Mussolini learned in Africa that food was necessary for his armies. He reviewed many well-fed soldiers in Rome and bragged about his army; but when he sent it to Africa, loaded down with guns and ammunition, he learned again the great lesson often repeated in history, "No army is greater than its food supply." Much of the failure of the Italian effort in Africa was due to poor and inadequate food.

The ability to keep Spain from joining the Axis Powers has been predicated largely on the fact that Spain is poor and needs food supplies greatly. The knowledge that food and financial aid can be best obtained from America has kept Spain neutral.

Even Britain is having her food difficulties. Approximately 200,000,000 bushels of wheat is needed. At the beginning of the war only 12,000,000 acres were under cultivation. About 5,000,000 more will be cultivated by 1942.

Just this year (February) it was announced that a German-Belgian commission had negotiated with Russia for food supplies for conquered Belgium. In February Russia tried to exchange a million tons of grain for Norwegian aluminum. Germany interfered with this because they are determined to regulate all food supply for Europe, since it is finally upon this supply they must depend to assist in holding all they have conquered. In other words, there is a direct relationship between the economic and political problems of the world which must be taken into account in this mad race for the supremacy of democracy versus totalitarianism.

A nation with food is still the most powerful factor in the present conflict. Despite the credit which will be given to arms and munitions, and as has been said these are important, very important, yet the trump card in the game of war will be the food resources of the United States, providing this country realizes this advantage and bends every effort to organize rural America to the task of feeding the world.

The more acute the food problem becomes in Europe, the greater becomes the strategical strength of the United States. The food power of our Nation will be a greater factor in the final outcome of this world conflict than land, sea, or air power. The ultimate strength of any nation is its ability to deal advantageously with the victors in any conflict. America's future as a world power lies not only with its basic wealth that finds its origin in the soil to finance the materials of warfare, but its future lies in its ability to open its stores of food and again become the Nation to which the world turns for subsistence.

Strictly military forces are not sufficient alone to whip the world, but an agricultural structure can be built sufficiently powerful to dominate the policies of the world. Once again the real power of a nation depends upon its food plus wealth created from the land. But food is the basic element in any economy.

During the last World War America started equipping the farms too late for effective work. This will be repeated if a constructive program is not devised to make possible the development of an American agriculture sufficient to not only meet the great adjustments necessary in taking care of home consumption on such a basis that every American will receive the type of food necessary to his well-being but will develop a domestic market sufficient to meet the great demand made upon it now and in the future by Britain and those democracies who are striving to maintain the great democratic line of defense. If Hitler should win this war, and we certainly do not expect him to, he would also need the food supply of the New World.

Great attention, public interest, and anxiety has been focused on those industries which are making implements of war. Every effort has been expended in a retooling program sufficient to place us in a position which is necessary to help the democracies win in this struggle. Yet few of us realize that if we are to supply the food necessary for the defense of our ideals we have a job of tooling up for agricultural defense. This is essential just as it is for our industries to enlist the cooperation of their tool rooms and supplies before they are in a position to swing into full production.

Since the foods we need are of a nature best produced on the so-called family farm, it naturally becomes important that tools adaptable to general farming be made available as quickly as possible and in the greatest possible quantities. This cannot be accomplished unless everyone is acutely aware of the fact that practical plans must be made for our agricultural defense effort, just as plans have been made for our industrial defense effort.

Few are conscious of the fact that the real scarcity of production tools and materials has not yet occurred. There are two good reasons for this. The first is that industry has been busy tooling up, with the result that the real demand for materials has not yet been felt. The second reason is the fact that management in general does not realize the difficult material conditions they are about to face. When this is realized there will be a mad scramble for material.

The steel market is now feeling the impact of British buying, which was delayed until after the passage of the lease-lend bill. The pressure on the market for raw materials will be increasingly great unless priorities are established to enable the manufacturers of farm equipment to secure adequate steel and other raw materials, as well as perishable machine tools required to fabricate the equipment so sorely needed. Such action is necessary if the American farmer is to be put in a position to do his part in national defense.

During its lifetime, America has derived a majority of its leadership from men and women whose background is that of small towns and farms. They learned of the true values of life from the land—on the land. American clear thinking, soundness of judgment, and resourcefulness have come largely from persons who have grown up with those essentials at the very seat of fundamentals which is in the rural communities of this Nation.

The one outstanding difference between America and other nations of the world is the individualism found in this democracy. Vitality and initiative have marked America's forward progress. Those characteristics have stemmed from the land; from the rugged independence that has flowed from a rural background, and from an educational system which has encouraged those worth-while things in democratic life.

If our way of living is as important and essential to us as we say it is then we must continue all effort to stop the migration from the farm of those to whom we look to carry on our American ideals—American farm youth.

There are four fundamental factors which will assist in accomplishing this:

First. To so cut the cost of farm products that farming can be made prosperous without increasing the cost to the consumer.

Second. To make farming attractive to youth and so largely stop the drift from the land.

Third. To assist all industries through a prosperous agriculture and to stimulate greater industrial use of farm products by cutting costs, thus increasing the total farm market.

Fourth. To lay the foundation for a greater national security.

Our national economy must be a flexible one. Such flexibility can be attained by blending industry, agriculture, and transportation into smaller and more flexible units. To carry this out successfully smaller cities, villages, and rural communities must of necessity become the hubs of our national economy.

You ask, "What part can youth, particularly farm youth play in this movement?" Farm youth in the past has supplied the life blood to the great cities. The job now is to place these young people and the value they represent on family farms; in commercial businesses necessary to rural communities, and in industry made available to them in the heart of agricultural areas.

If this is done, and it can be done, we can accomplish—

1. A flexible national economy which will insure greater security for all.

2. Young people from farms—some of America's finest stock—will be able through

greater opportunity for constant employment, to marry and become heads of families, thereby perpetuating rural families which are the backbone of this Nation.

3. Ownership of land can be returned to active farmers as a result of definite steps taken toward proper training of prospective farm owners and the rendering of financial assistance to youth.

4. Between 1920 and 1930, $30,000,000,000 in value and money—approximately one-third of the gross farm income—went off the farm as a result of migration to the cities and the loss of farm ownership. A flexible economy will retain this wealth in future years in rural communities. As a result, rural America will find most of its ills rapidly disappearing. To accomplish this however it is necessary that farm youth find opportunity close to home.

5. Such a national economy will result in the management of rural affairs returning to local communities where they are best understood.

This is a big job but let us repeat it can be accomplished if a prompt and right start is made by—

First. Educating and training farm youth so that they are prepared to make good in the occupations they choose.

Second. Finding adequate vocational opportunity for these young people.

Third. Making available financial assistance through normal channels to purchase farm land and small businesses in rural communities.

Fourth. Encouraging manufacturing establishments to decentralize into smaller communities. Many men who were formerly from rural communities and are now keymen in great manufacturing institutions can be induced to give valuable assistance to the communities of their youth.

Fifth. Having freedom of farm and business enterprise that will bring a proper financial return to good managers.

Sixth. Encouraging a greater percentage of our population to live off the fruits of their own enterprise, instead of depending upon the enterprise and industry of others.

In the development of a program such as this suggested we must depend upon men who understand our country as a whole, while at the same time are familiar with local farming, industrial, and commercial conditions as well.

Our young farm men can accomplish these aims if they have the support of those older and more experienced than they. May we quote Mr. (Henry) Ford in announcing the establishment of the National Farm Youth Foundation. He said, I believe in mixing the old and the young. The generations should mingle. When I was a young man all my friends were older men. They had everything to teach me. There is a way for older men to be of help to younger; and when this becomes widespread we will have found more than a few bright boys—we will have discovered a bright up-and-coming generation."

This National Farm Youth Foundation, of which you young men present and the thousands listening in (if broadcast) are members, is the outgrowth of this philosophy and the feeling that the young farm men of this country are interested in remaining on the farm and that they will make good if but given a chance.

Industry and agriculture have joined hands to broaden the opportunity for farm youth.

Your foundation, established a year ago by the Ferguson-Sherman Manufacturing Corporation, with the active cooperation of Mr. Henry Ford and Mr. Edsel Ford, had as its objectives:

1. To give young men who plan to stay on the farm knowledge and training in what to grow, how to grow it profitably, how to conserve the resources of the soil, how to manage labor and machines, how to market farm products, and how to finance the entire operation. Such education to prepare these young men to become better farmers, more successful landowners, and better citizens.

2. To train young men who prefer to enter business for better service to the agricultural community. To help them prepare to become the merchants, bankers, public officials, and leaders of rural communities.

The sponsors hoped and believed that the foundation would fill a real need among the young of the farms, many of whom have been able to see little ahead except manual labor; that by taking full advantage of the foundation membership these young men would gain a new picture of the science and business of farming—a new vision of the opportunities that exist on the land; that the education, training, and experience offered would give them better preparation for farm ownership and for agricultural leadership; that by this opportunity they would be better able to prevent a break in the family circle; that no longer would they feel the need to seek opportunity in crowded industrial centers; instead, that they would help make the farm a still better place to live, a more attractive place to raise a family, and a place of greater opportunity for the future.

Let's now look at the record. Although only in its first year, 10,000 young farm men between the ages of 18 and 25 are active members of the Foundation. Within the first 9 months about 5,500 of these had successfully completed their educational training—over 100,000 examination papers were successfully completed. This represented approximately 550,000 hours of study.

Hundreds of your members have traveled from 25 to 200 miles per week to attend their classes. What has been their reaction? Let us quote from just a few of the letters received:

John H. Timken: "I have learned a great deal at our Foundation meetings. The lessons received are worth the time spent and the 68-mile trip."

Don Harrington, New York: "Believe me when I tell you this is the biggest thrill of my life."

Clyde Linder, Colorado: "With every lesson I feel more and more secure in looking at this business of farming as my future."

Earl Bowser, Ohio: "This program will keep a lot of young men on the farm who would have otherwise gone to the city. It has given me a lot of encouragement in the way of staying on the farm."

Charles Carson, Jr., Michigan: "I wish you knew how much this course means to me. It's really made a wonderful difference in my work in managing my father's farm."

Lloyd A. Engstrom, Nebraska: "In the past few years the industry of farming had become a drudgery to me. Things had been going downhill rapidly. My hopes of attaining success in life had almost vanished. But the sun has risen once more. Things have become brighter and more clear to me. It has renewed my courage, my hopes, and my strength to go forth in life and help my fellow men to make America a better place to live in."

Frank Graves, South Dakota: "All of us in our class, I believe, have been shown that farming can be profitable. Some of us believed that farming was profitable, but we were somewhat like a ship without a rudder—shifting to the right and left of our course. But now, we of the first class are about to go to work with a determination to get things done."

J. F. Boyd, Jr., Mississippi: "Being a member of the Foundation has convinced me that I will be much better off by staying on the land than many boys who are going to the big city."

You young men present have carried out your past year's work so successfully that you are being honored today for that achievement and have been awarded position with your sponsors and after additional training will return to your own communities to better serve the American farmer. Hundreds of others will eventually be placed in positions of responsibility as a result of their activities in the foundation. The greater number will remain on the farm better able to make a definite contribution to the development of American agriculture.

The thousands of young men enrolled this past year, and the thousands to be enrolled this year, will some day be the heads of farm families and history clearly indicates that the strength of American agriculture has been in the family. American agriculture will develop new family circles, new land ownerships, and most important, the ability to successfully manage and engineer the farm operation. The accomplishment of this will bring about eventual prosperity and a greater appreciation of the advantages of rural life.

The high morale of our Nation springs from long generations of men and women who have consistently battled the viscissitudes of nature to create the wealth of this Nation and its food and our young people are the Nation's greatest wealth and our great line of defense in perpetuating our worthwhile democratic way of life.

The Young People of America Are Most Concerned in the Fight to Preserve the American Way of Life

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

ADDRESS OF HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. MICHENER. Mr. Speaker, pursuant to the permission granted me to extend my remarks in the RECORD, I include an address by Representative JOSEPH W. MARTIN, Jr., Republican leader of the House and chairman of the Republican National Committee, before the annual convention of Connecticut Young Republicans at Waterbury, Conn., and broadcast over the Columbia Broadcasting System on Saturday, April 26, 1941:

It is a real pleasure to come to Connecticut and join in this enthusiastic conclave of Young Republicans. No one knows better than I the tremendous power of action inherent in the ranks of the thousands of earnest, eager, patriotic young men and women who are enlisted under the Republican banner.

Because I do appreciate the part the Young Republicans had in our labors of last fall, and because I realize what they can do next year, I have named a special committee to further organize and develop the Young Republican movement. You of Connecticut may well be proud that one of your own members, Samuel F. Pryor, Jr., vice chairman of the Republican National Committee, has been selected to head this drive. Out of the efforts of this committee, I am sure, will come a real fighting organization of Young Republicans which will have a very

important part in the Republican victory which is coming in 1942.

I cannot let this occasion pass without paying a tribute to a distinguished member of our party; one who is impressing the Nation with his outstanding ability as a debater; a man of keen judgment, who will battle fearlessly for any cause he believes to be right. I refer, of course, to Senator JOHN DANAHER.

One of the tragedies of the last campaign was the defeat of your brilliant Governor, Raymond E. Baldwin. I am glad—but not surprised—to learn he is courageously continuing the battle. The careful reconsideration of the good people of Connecticut undoubtedly will rectify the mistake of 1940 and return him to the Governorship in 1942.

These are dark days in the world. Many nations seem to have gone into an utterly mad carnival of war and destruction. Fighting, or preparations for fighting, occupy the attention of all peoples, except, perhaps, some of the so-called uncivilized tribes of Africa and the South Seas.

Peace—a word which once blessed most of the world—can no longer be spoken with assurance anywhere on the globe, as men rush to battle to kill each other, as the so-called civilized countries spend huge sums for insane and ghastly mass murder and destruction.

Our Nation stands on the very verge of this war. This world madness will surely bring, regardless of the final military result, a terrible economic disaster. Unless there is a powerful, vigilant, and fearless minority constantly on guard in this country of ours, we may lose our personal and political liberties here at home. Unless we are alert, we may see the end of constitutional government. We must be vigilant if we would preserve the two-party system. We must carefully watch each step that is being taken, lest there come an end of that balanced Government which has given America more freedom, more happiness, and more prosperity than has ever been attained by any other people on the face of the earth.

Now, let us make the issues clear. I am not here making charges against any particular individual or party. We are trying to face realistically and with sound American common sense fundamental facts which cannot be brushed aside by a gesture or rendered less dangerous by our trying to close our eyes to their menacing potentialities. We are here today dealing with conditions, not theories. We are considering principles, not personalities. We are scanning the signs of the times and policies of government, not the likes or dislikes, the preferences, or the prejudices of persons, mistaken though they might be in their choice of methods by which to perpetuate democracy in the world or in America. A grave danger faces the people of this country. I believe I would be doing less than my duty if I did not raise my voice to warn against it.

This danger, rampant in the world, menaces us along with the rest of the free men and women of the human family. War is a deadly poison which spreads by contagion. Its deadly effects, so far as free governments are concerned, ramify and operate through economic channels as terribly as through gun barrels or by blasting bombs. The cannon and the bomb bring sudden death, but the economic and social diseases which follow in the train of war's madness are lingering maladies which torture men and peoples to a slow and horrible death, with awful suffering along the way.

We must at all costs, young Republicans, save our American way of life. Yours is the greater stake in that issue. It can be done. I am confident it will be done. The American people are becoming aroused. The people are long-suffering and slow to act, but when the American people make up their mind and reach a conclusion, when they determine upon a course of action, theirs is the voice of final resistless power and authority. They will do the job.

No single group in America has a deeper or more vital interest in the preservation of the American way of life than have the young people. No single group can do more for the preservation of the American way of life than the millions of young Americans who want—and are entitled to—a chance to be educated; to get positions in which there is an opportunity to advance; a chance not only to live but to be happy while living; to enjoy the advantages and comforts of life; to contribute their share toward making this a better land to live in.

The great Republican Party—and the Republican Party is a great party—wants, it is eager, to enlist your aid in the continuance of the tremendous battle we have been waging and which we shall continue to wage until success is achieved—the battle to preserve the American way of life.

Our American way of life is based upon the most profound concepts of the Infinite of which man is capable. Fundamental truth, as we understand the word, underlies every idea embraced in that way of life which we call the American way. Therefore, if we have the will and the courage to persevere in this great cause we are justified in believing God will bless our efforts.

We attain the American way of government—and therefore of life—by political devices. Proposal, disagreement, discussion, compromise—those are the factors of our way of government. Power shifts from one party to the other; men succeed other men to posts of responsibility in administration, but the principles of the American way are fixed; they are stable; they are unvarying; we propose, we disagree, we discuss, and we compromise—always recognizing the individual's inalienable rights; always according a full measure of respect and consideration to the views and the rights of the minorities. So, then, in considering the preservation of the American way we must of necessity consider the political measures by which the American way is effectuated.

We made excellent political progress last year under very difficult conditions. We have improved our position in numerous elections held since last November. Twenty Republican State governments; more than 1,100 Republican county governments, and a substantial minority in Congress give us a firm foundation upon which to build for further success in 1942 and a great victory in 1944.

We have been hearing much of late about national unity. The American people want national unity. We Republicans in Congress will, of course, cooperate fully in support of measures which we believe will build a strong national defense and strengthen the security of the American people.

Complete national unity comes only through honest cooperation and fair dealing. It cannot be complete if one great group in our country is denied a part in arriving at the decisions and is asked merely to ratify decisions reached by a selected few. Unity is not possible so long as the dominant party insists upon taking full advantage of the Nation's emergency to strengthen its grip on the controls. Unity cannot be complete when favoritism is shown in the awarding of contracts; in the spending of the people's money; in giving any one group in our country special consideration over any other group; in pursuing a partisan spirit in appointments.

I repeat, we must have national unity if we are to emerge safely from our grave situation. Every man, woman, and child in the Nation must make sacrifices to this unity. Yet, in all candor, unity—complete unity—depends upon one man—that man is the President of the United States. He must, through words and deeds, inspire the people with confidence. In this grave hour he must not be the leader of a party. He must be the leader of his country. He must name men and women to direct our national defense because of their experience, ability, and standing in the Nation; not because they are loyal friends for whom he has an affection; not because they are New Dealers; not because their appointment will be of party advantage. The men and women to direct our defense efforts must be selected solely because of their fitness to do the particular job for which they are chosen. Any other course is a blow against our national security, and will make vastly more difficult the attainment of national unity.

Now let us consider for a moment the recent appointment of Harry Hopkins to the post of supersupervisor of the greatest spending program of all time—aid to Britain and her allies. In all sincerity I ask, "Is he the best-fitted man for this great post?" The Boston Post, a great independent Democratic newspaper, says:

"He comes to this job with none of the training commonly required for even a far less important position.

"He will regulate vast buying of war materials, yet he has never been either a purchasing agent or a soldier. He will allocate contracts for some of the mightiest war machines ever conceived by man, and he probably has not the faintest idea of their construction, their functions, or their eventual employment."

Thus comments a Democratic newspaper which would like to support the administration.

And let me quote an article by Frank Kent in a great independent Democratic newspaper, the Baltimore Sun. Said Mr. Kent:

"If his (the President's) purpose is to make Mr. Hopkins the real boss, then the situation is indeed frightening. No unprejudiced person can look at Mr. Hopkins—this has nothing to do with his health—and believe he measures up to the job. No informed man can review his record, either before 1932 or since, and consider him equipped by training, experience, ability, or physique for so huge a responsibility. It is not surprising that there should be widespread perturbation over the President's act. Here is a job which clearly calls for a strong, competent, experienced man. He has selected a weak, inexperienced, notoriously incompetent man, whose chief claim to fame is that as W. P. A. Administrator he wasted more money than any other public official in history, and permitted an agency for the relief of human misery to become saturated with politics to the point of a national scandal. Mr. Roosevelt has said the first thing is to win this war, and the idea of the lease-lend bill was to do exactly that. It is not an unfair statement to say that it would occur to few besides the President that Mr. Hopkins is the kind of man with whom to win a war."

The other day a department official visited one of our Army camps. He went to suggest certain work to be done. An Army officer said he could name several persons competent to do the work. The official said this was not necessary; he put his hand in his pocket and brought out a list of persons whom he said must be hired. That is political job grabbing at its worst; it will be bitterly resented by the American people.

All groups are expected to pay the taxes for defense; all groups are required to send men into the draft; all groups are expected to fight and, if necessary, to die for the country. All groups should have an equal chance for work, and not have the selections made by one or two politicians, who will choose only their own personal friends or supporters.

This sort of incident is not helpful to creating the unity and morale we need. My object in pointing this out is for corrective

purposes. We must clear the national defense of the political job grabbers.

I know it may sound old-fashioned these days to talk about the need of efficiency and economy in government. But it won't be old-fashioned to mention those matters much longer. Necessity will force drastic economies in some of our peacetime activities. The defense efforts will require vast sums. The Nation will be hard pressed, beyond our present conceptions, to carry the burden. Heavy taxes will be imposed which will shock the people; and they will, after a while, insist upon rigid economy in both our peace- and wartime expenditures.

The administration has failed to give us any leadership in reducing the expenditures of the huge political bureaucracy in Washington and scattered over the whole United States. Only when the people who pay the bills insist that we must have real economy can we expect it from the present administration—if then. We have in the last 8 years lost sight of the value of money. We talk of billion-dollar expenditures as glibly as formerly we talked of thousands.

Have you ever stopped to think just how much money a billion dollars really is? No human can comprehend it! Here's an illustration:

If one of you young persons began to count dollar bills at the rate of 100 bills a minute, and kept at it 8 hours a day, 5 days a week, with no vacation and only 5 holidays, how long would it take you to count—simply to count—a billion dollars? It would take you more than 80 years, if you didn't lay off a day of sickness, took no vacations, and only five holidays a year—provided you lived that long.

When the appropriations and authorizations already granted Mr. Roosevelt to spend have been spent, the national debt will have been increased by more than $50,000,000,000 since he assumed the Presidency. At the rate I have just outlined, if a man had started counting dollar bills about the time the great pyramids of Egypt were being built and had counted until now, he would just be finishing up the counting of $50,000,000,000. But words become futile. We become dazed by the magnitude of these figures.

The time is not far off, my young friends, when this Nation will become much more conscious of the spending than it has been in the past. The next tax bill will attend to that. We must begin to think of how, where, and when we can save in peacetime spending if we are to complete our defense preparations and still avoid national bankruptcy, economic chaos, and the wreckage of our governmental, political, and social systems.

In addition to preparing for war, we must plan for the aftermath of the war, which may well be far more terrible than the war itself. The Republicans in Congress are preparing a program which we hope to present to cushion the shocks of the post-war period.

As we face these trying days, I do not despair. We know well the pitfalls and perils ahead. But we will win out. I have supreme faith in the hopes, the ambitions, the sound sense of the common people of America.

You can trust the people of America to do the right thing. They will not be deceived by "fifth columnists" or the propagandists of alien doctrines. They will rally to sound, sane government. We will survive and emerge a more robust and more powerful America.

In all this travail, America will find her soul. A new America will come forth; an America whose people will be stronger of character, more self-reliant, a people more eager to work and to build, a more courageous people who, like their forefathers, will overcome all obstacles and bring to pass finer and better conditions.

My young friends, out of these grim, dark days comes a real challenge to you whose ambitions and hopes lie before you. Rally under the flag of the party of Abraham Lincoln to meet the perils of this grave hour. Once before the Republican Party was given the task of preserving a united country. We will do the job again.

We will rescue America from its perils. We will save constitutional government. We will preserve private enterprise and opportunity for all. We will give every group of our people equal rights and equal justice.

We will bring America back to financial solvency and a new birth of political freedom. No party could be entrusted with a greater responsibility or be given a greater opportunity for service than will ours in the next few years.

America challenges us. Let us meet that challenge with courage and patriotism.

Aspects of the International Situation

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EXPRESSIONS FROM CITIZENS FROM THE STATE OF WASHINGTON REGARDING ASPECTS OF THE INTERNATIONAL SITUATION

WHAT ARE WE FIGHTING FOR? WHY SHOULD WE ENGAGE IN ACTS OF WAR IF WE ARE FIGHTING FOR PEACE? IF OVER 80 PERCENT OF THE PEOPLE OF AMERICA OPPOSE GOING TO WAR, WHY DO DIPLOMATS AND INTERNATIONALISTS TRY TO PROVIDE PROVOCATION FOR WAR? LET US CURE OUR OWN ILLS BEFORE ATTEMPTING TO DIAGNOSE THE ILLS OF OTHERS

Mr. COFFEE of Washington. Mr. Speaker, my offices are in receipt of hundreds of provocative, intelligent, and scholarly letters from constituents within the State of Washington who expatiate their unalterable hatred of war in the strongest language and their indignation at the prospect of being involved.

These thoughtful folks set forth their views relative to the critical international situation and express their opinion as to the steps which they believe should be taken by their beloved country to keep out of war and to keep our ship of state on the level keel of the future. Overwhelming are the arguments against employment of the United States Navy as convoys. The plain citizens of the United States do not want to convoy because they fear it will furnish an excuse to warmongers and their camp followers to engage in wars in Europe and the Orient.

The letters speak for themselves.

ROOSEVELT HIGH SCHOOL,
Seattle, Wash., April 22, 1941.

Representative JOHN M. COFFEE,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE COFFEE: You have my every encouragement to vote against making America the arsenal or the larder of democracy. I believe that it should be our policy in national affairs to make America the home of democracy. That is America's destiny.

This is practically a quotation from Robert M. Hutchins' speech made over the Mutual Broadcasting System, March 30, 1941; however, it expresses my thoughts better than I can put them myself. Seldom do I write to my Representative, but I will write letters all year if I can prevent our trying to save the world for democracy again.

As Hutchins said, "What are we fighting for?" We certainly do not want to preserve the British Empire. They wouldn't even settle for air bases until we gave them 50 destroyers. Further, I don't believe we can push down the world's throat the four principles of freedom, which our President said we should give to the world. If we fight to give freedom of press, freedom from fear, freedom from want, freedom of worship to others, we become dictators by so doing.

If we had perfected our form of government to the point that we could show the people of the world what freedom really means, we wouldn't have had 12,000,000 unemployed during the depression. Neither would we be proud of the fact that 250,000 babies had been born last year without medical care. How about the sharecroppers in the South, and the poor, starved coal miners in Harlan County, Ky.? If our President really is a democrat, can't he and his advisers find some way to bring back prosperity besides priming the pump, or as he seems to be doing now, arming to the teeth?

If we are going to continue a democracy, it looks to me that we had better start now and make this the home of democracy.

My family have been here in this country since 1776. We fought the British then so that we might have these freedoms of which the President speaks. I still think we have a long way to go in bringing them into actual existence. God bless you, and give you the strength to keep your powder dry until you see the white of their eyes. Let's make it the home of democracy now. That is what I am teaching the kids here.

Very sincerely yours,

SAM N. GLASS.

MARITIME FEDERATION OF THE PACIFIC,
Seattle, Wash., April 15, 1941.

Congressman JOHN M. COFFEE,
Washington, D. C.

DEAR SIR: Please be advised that Washington District Council No. 1 of the Maritime Federation of the Pacific, representing 15,000 members of maritime and fishing unions in the Pacific Northwest, is seriously concerned over the contemplated elimination of intercoastal shipping. We have been informed that one of the first steps to be taken in the aid-to-Britain program resulting from passage of H. R. 1776 is to be sale of all intercoastal ships to Britain and other belligerents.

There are some 113 ships regularly engaged in carrying freight between the east and west coasts of the United States; over 7,000,000 tons being transferred yearly by water carriers. Were this to be done, it would be disastrous to business and the general public welfare, particularly on the Pacific coast. It would mean a serious dislocation of commerce and business. Thousands of seamen would be thrown out of work. Earnings of thousands of longshoremen and other water-front workers would be drastically reduced.

In addition, it would mean a rise in prices of a good many commodities. At the present time, most bulk freight is carried by water between the two coasts; this includes practically all lumber and lumber products, grain, flour, steel products, etc. The railroads would be able to move this freight, but their rates would be considerably higher.

We cannot feel that this sacrifice, with the economic and commercial dislocation which would result therefrom, is worth while. We are dubious, first, that "all-out aid to Britain" would in any manner whatsoever aid democracy; and, second, that Great Britain needs these ships in order to carry out her war. Lloyds of London, a world authority on shipping, in their recent report stated that Great Britain at the beginning of the war owned and controlled 8,977 ships, with a tonnage of

21,001,925 tons. In addition, when Norway, Denmark, Holland, Belgium, and France were absorbed by the Axis, Great Britain secured from these countries additional tonnage amounting to 12,320,685 tons, which make a total of 33,320,000 tons. This does not include the millions of tons Great Britain herself has built since the war began, nor does it include the million tons she has received from the United States.

Further, we are fully aware that by no means all of this tonnage is being used to carry on the war. Much of it Britain is using for regular business and the carrying on of strictly commercial and money-making shipping; it is being used in direct competition with American shipowners and taking the jobs of American seamen.

Despite this President Roosevelt sought and received an appropriation of $7,000,000,000 for national defense, $629,000,000 of which is to be used for buying or building ships, vessels, boats, water craft, supplies, materials, spare parts, and accessories to Britain. In addition to this tremendous tax burden we now face the prospect of losing all our intercoastal ships, which would have the serious aforementioned results.

Under this program we are depleting our merchant fleet to such an extent that we cannot transport raw materials needed in our own commerce and national-defense program, while at the same time British shipowners and financial interests are extending their control over the world's trade routes. Such a program means the bread and butter of a good many thousand maritime workers.

In view of the recent activities of the Army and Navy Departments, we are also seriously disturbed over the obvious plans of the Army and Navy to transport enormous numbers of troops outside the United States. The Associated Press on March 11 reported that the Government is gathering "a vast transport fleet that in a national emergency could move more than 250,000 soldiers at one time to any point in the Western Hemisphere or beyond," and stated that the Government had at that date already acquired passenger ships totaling 270,000 tons with a capacity for 75,000 men.

In the light of these events, are we still to naively believe that the lend-lease bill is not a war measure, that American soldiers will not be sent outside of the United States to fight in a foreign war, and that American ships will not be used as convoys to deliver the huge ship and war orders to Britain?

We are told that we must give "all-out aid to Britain" for the cause of democracy. We see no semblance of democracy in Great Britain nor in the countries she controls, where hundreds of millions of inhabitants live in virtual servitude. Neither do we see any semblance of democracy in the moves which have been consummated by our own administration during the past few months. We find the pages of the daily press replete with threats by industrialists and high governmental spokesmen threatening to break strikes, force governmental mediation, emasculate our trade unions, destroy our civil rights.

We want to build and maintain our democracy, not become a pawn in the imperialist war of power politics of Europe.

Since the war emergency arose, labor and industry have been asked to sacrifice alike for the cause of national defense, and what do we find? Statistics show that profits of United States Steel leaped from a $7,000,000 deficit in 1938 to a $102,000,000 profit in 1940. General Motors jumped profits from $102,000,000 in 1938 to $195,000,000 in 1940. Profits of Bell Aircraft increased by 3,000 percent in 1940 over 1939. Bethlehem Steel increased 97 percent; Douglas Aircraft, 275 percent; General Cable, 235 percent; General Steel Casting, 19,560 percent; Vultee Aircraft, 1,370 percent, and so on down through practically every industry. Yet we are told, in the face of these figures, that there is to be no profiteering during this war.

We have not forgotten that in the last World War 17,000 brand new millionaires were created as a measure of their sacrifice, together with several billionaires.

We see Members of Congress repeatedly giving lip service to the needs of the American Merchant Marine as a means of securing higher profits for money-making shipbuilders and operators. As the shipbuilding industry reaches boom heights reminiscent of World War I, the American public is treated to the spectacle of congressional floor leaders pleading for still higher terms.

Are we to accept without question or protest these huge profits on the part of industry and the close collusion of the United States Maritime Commission with the shipping interests to promote higher profits as the measure of sacrifice on the part of industry?

It is ironical when compared to what is and will in the future be expected of labor in the way of "sacrifice." For the past few months labor has been continuously attacked and slandered, both in the legislative bodies in Washington and the several State legislatures. Labor has been requested to work longer hours; refrain from striking, regardless of what conditions prevail. The very fundamentals of organized labor have been attacked—the right to collective bargaining and the hiring hall. Various attempts have been made to place the men who sail our ships under the jurisdiction of shipping commissioners, which would destroy our organizations.

We see the Department of Justice attacking union leaders, as exemplified by the persecution of Harry Bridges. We find every militant action by organized labor in an attempt to protect the living standards of the workers branded and condemned as "sabotage." There is a revival of the time-worn criminal syndicalism laws, resurrected from the musty archives of various State legislatures. There is a Nation-wide persecution of all minority parties which are opposed to the administration program.

During the past years we have seen the same events which are now taking place here, as outlined above, happening in Germany and France. We witnessed labor's rights curtailed, dictator control established, opposition parties and movements destroyed, civil liberties abandoned, and the living standards of the people broken down by excessive taxation. Such is not democracy; it is the very foundation of fascism, and we are opposed to it.

When billions of dollars are appropriated, not as a gift to foreign nations but for the welfare of the American people, and when the efforts of the administration are directed toward bettering the living conditions and the future of the American people, then we shall have true democracy. We shall have and enjoy true democracy when the democratic rights of the people are upheld by our representatives in Congress. They include the right to strike, bargain collectively, hiring halls, the right to freedom of press and speech, and the protection of civil liberties. These are the rights guaranteed to the American people under the Bill of Rights; they are the essence of democracy, and we shall fight to preserve them.

Very truly yours,

JOSEPH HARRIS, *President.*

TACOMA, WASH., *April 28, 1941.*

JOHN M. COFFEE,
House of Representatives,
Washington, D. C.

DEAR MR. COFFEE: I am now 20 years old, the same age at which my mother was hearing of a war in Europe and thinking of it as vague and far away; was seeing her childhood friends marching off to war, unable to believe that some of them would not return. Then came the time of waiting, reading, wondering.

Now here am I hearing of a war in Europe whose great disasters do not seem so vague. My friends are not marching off to war as yet, but they are looking forward with distaste to a year's training in the Army. However, most of them would not be fearing it so much if there were not the thought of war in the near offing.

I don't proclaim to know how to solve this problem, but I do know—and so do my many friends—that we don't want war.

I have just finished 2 years of college. I am now working on a small but progressive community paper. I have studied journalism and want a chance to go far in this field. I and my folks have made many dream plans for my future. Just now America has obtained a high standard of living which is within the reach of most of its citizens. In school I learned how to make a budget, how to buy a house on the F. H. A. plan, and to look forward to a happy life. I thought my only battle was going to be one of matching wits—not guns.

All of my friends and myself are puzzled—at a loss. We don't want war. Even if the Axis Powers win and change our economic system some, we girls don't want a period of waiting at home, wondering whether our boy friends, brothers, sweethearts, or husbands are going to come back to us.

The boys don't want to suffer through the miseries of another war, and then through the great depression that would probably follow.

Boys that are in college now have planned their courses to help them in following the career in which they are interested. Now they are afraid to plan.

We are hearing of what our President is doing. We object to our country's heads going ahead and involving us deeper and deeper into the war. So many things are being kept from us. It doesn't seem just to us that we should not be asked for our opinion, yet how can we give it?

Some have said, "Write to your Congressman," so I am writing to you. This is my plea to you, to Congress, to the President of the United States—remember our future, we who will fight and wait, remember that we don't want war.

Sincerely yours,

ROSALIE SIEGLER.

A Plea For Peace

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. RICH. Mr. Speaker, under leave to extend my remarks, I herewith insert a statement as follows:

DEAR MR. PRESIDENT: Last fall when you were campaigning for reelection you stated in Philadelphia on October 23, 1940:

"To every man, woman, and child in the Nation I say this—your President and your Secretary of State are following the road to peace. We are arming ourselves not for any foreign war. We are arming ourselves not for any purpose of conquest or intervention in foreign disputes. I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars and will not send our Army, Naval, or air forces to fight in

foreign lands outside of the Americas, except in case of attack'."

Mr. President, you are now sending our ships into the danger zone that you established under the Neutrality Act. Why do you do so? Germany said she would sink any vessels in the danger zone; and if she does and they are the United States vessels, you will claim we are attacked and then you will be responsible for us getting into war. Do not do it, Mr. President, for the sake of America and the American people. Mr. President, the American people want no European war We want peace. We sent the boys across the ocean once to make the world safe for democracy. What a miserable failure it has proven to be. "Do not do it again," is the plea of the great mass of American people. To get into a European or Asiatic war will not bring anything but misery and poverty. Use our good offices to settle the war by peaceful means; that is the only way for us to act, and we must do it now.

Peace by arbitration, peace by acting under the Golden Rule. Let us preserve our form of government and our freedom.

Resolution Opposing Involvement of the United States in Foreign Wars

EXTENSION OF REMARKS

OF

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

RESOLUTION OF THE MINNESOTA CONFERENCE OF THE AUGUSTANA SYNOD

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Minnesota Conference of the Augustana Synod at its eighty-third annual convention held in Gloria Dei Church of St. Paul, Minn., consisting of Lutheran pastors and laymen, representing a constituency of approximately one hundred thousand members, as follows:

1. We, in these days of stress and strife, are more than ever thankful to God for America, its free institutions, its form of government, and the American way of life.

2. We endorse the remarks and observations of Dr. Emil Swenson, the president of the conference, as contained in his report, relating to the present international situation.

3. We pledge all of our energies, talents, and resources to the preservation and defense of our country and its democratic form of government.

4. We are opposed to the United States of America becoming involved as a belligerent in the wars of Europe.

5. We are opposed to this country sending its Navy, its Army, or any of its defense forces to foreign seas or shores to take part in the present war.

6. We call upon and expect our chosen leaders and representatives to keep their solemn pledges to not send our American boys to fight on foreign soil.

7. We commend those courageous men in Congress who have opposed the involvement of this country in foreign wars, and at the same time urge them to advocate and support all measures which will tend to conserve and husband our national resources for such use as may be necessary for the full, complete, and adequate defense of our country in case we are attacked.

8. That copies of this resolution be sent forthwith to the President of the United States, the Governor of the State of Minnesota, to the Senators and Representatives in Congress from the State of Minnesota, Wisconsin, North Dakota, and South Dakota, and to the press.

9. That we pray to God for peace.

Unwise Antifirearms Legislation

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

LETTER FROM THE NATIONAL RIFLE ASSOCIATION

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the National Rifle Association of America:

NATIONAL RIFLE ASSOCIATION OF AMERICA,
Washington, D. C., April 30, 1941.

The Honorable EDWIN A. HALL,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN HALL: One of your constituents, Mr. Lawrence Briggs, has forwarded us a copy of your Washington News letter dated March 31, and a copy of your radio speech of Tuesday, April 1, concerning unwise antifirearms legislation.

May I take this opportunity to express the appreciation of the quarter of a million organized rifle and pistol target shooters of the United States for your outspoken support of their viewpoint in this matter?

I believe you will be interested to know that we have received information from a reliable, conservative source close to one of the groups which has been agitating for registration of all firearms, to the effect that an attempt may be made to include such a registration provision as a rider on one of the urgent deficiency appropriation bills which Congress is passing without too minute examination of details in connection with the national-defense program. Because such an attempt at new legislation in connection with an appropriation bill could be thrown out on a point of order if caught by any Member of the House, the thought occurs to me that an attempt might be made to incorporate such Federal registration of firearms in the pending tax bill.

Fortunately, the House Ways and Means Committee has on several occasions in the past granted extensive hearings on such proposals and has rejected them. It is possible that Mr. DOUGHTON'S committee might for that reason refuse to consider a tax for the registration of firearms in connection with the new tax bill. However, in view of the source from which our information was obtained, we believe it is important to closely examine all new tax bills and appropriation bills which may come before the present session of the Congress. Consequently we are passing this information along to you for whatever it may be worth. Our previous experience with the proponents of this type of legislation has indicated clearly that they are not averse to stooping to sharp methods in an effort to put their ideas across.

Again thanking you for your active interest in this important matter, I am

Cordially,

NATIONAL RIFLE ASSOCIATION,
C. B. LISTER, *Secretary-Treasurer.*

Certain Government Departments Should Be Removed From Overcrowded Washington to More Centrally Located Chicago

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EDITORIAL FROM THE CHICAGO DAILY TIMES

Mr. SABATH. Mr. Speaker, under the permission obtained to extend my remarks, I insert a timely editorial appearing in the Chicago Daily Times of April 28, which relates to the subject matter of a short speech I made this afternoon on the unfortunate overcrowded condition of hotels, restaurants, and housing in Washington. The article more fully explains the need of relief to congested Washington by removal of certain departments of the Government to the more centrally located cities of the country, and sets forth the advantages that the city of Chicago offers in this connection to the Government and to the public.

No one can dispute that Chicago, being centrally located as it is, would be most economical for the departments, and a better place for Government employees to work and live in.

The article follows:

[From the Chicago Daily Times of April 28, 1941]

BACK TO THE FARMS

The imposing Department of Agriculture Building in Washington is one of the biggest office buildings in the world. Its many acres of floor space are divided into 4,500 office bays. And in spite of the size of its main building, the Department of Agriculture sprawls over 25 others in Washington.

When Washington was chosen as the Nation's Capital the United States was a thin line strung from Maine to Georgia along the Atlantic seaboard. Washington was ideally located, about midway between Portsmouth, N. H., and Savannah, Ga.

There is no purpose to be served in reviewing the way the Nation spread until the Capital finally came to be at one of the country's extremes rather than its center. Nor do we suggest that the Capital be removed to some interior point. Both tradition and investment firmly anchor the seat of government on the banks of the Potomac.

But Washington is terribly overcrowded. Plans are now being made to build five or six additional Government buildings. A chronic housing shortage plagues Government workers and others who live in the District of

Columbia. The city is sprawling into Virginia and Maryland. Rents are sky high and real-estate values towering dizzily.

There is no end in sight. The prospects of war, our actual involvement, if we do get in, and the post-war era of readjustment all will add to the complications of Government and to the size and number of Government agencies. And 10 years is the least time anyone could prophesy for this war-induced growth.

We don't see why it is necessary to concentrate all of the major functions of the Federal Government in one spot remote from a majority of the American people. We don't see why it isn't entirely feasible to distribute, far more widely than is now done, certain departments, bureaus, and agencies which could operate satisfactorily outside Washington.

For a starter we suggest that the Department of Agriculture, or at least a good part of it, ought to be located right here in Chicago. In fact, we've got a site for a Department of Agriculture building all picked out—just west of the post-office building on the new Congress Street superboulevard. We'd even like to have that only the start of a Government plaza extending west from the postoffice. There are other Federal agencies which could be located on Congress Street. And a new State office building could go up in the same row.

CHICAGO IS CENTER OF FARM LIFE

From the national standpoint, certainly the farmers of the whole country would be a lot closer to that department of government most affecting them if Agriculture were here rather than in Washington. Chicago is concededly the greatest farm market center in the world. Isn't it logical to have the Government agency dealing with farmers and farm products located here too?

This isn't the only department which might well be located here. Why not have the Department of the Interior somewhere in the interior of the Nation?

Then there are such agencies, just to name a few, as the Civil Aeronautics Authority, the Bituminous Coal Commission, the Interstate Commerce Commission, the Social Security Board (already half in Baltimore), the Bureau of Mines, the Inland Waterways Commission, Office of Indian Affairs, National Mediation Board—for railway labor problems—and the Veterans' Administration. There are a good many reasons why they might well be located in Chicago, near the Nation's center.

Of course, it probably would be necessary for the top policy-making executives to remain in Washington. But it would be simple for them to commute by plane or train between Washington and Chicago when necessary. And it would be cheaper to build Government buildings here and cheaper for Government employees to live here.

Jefferson's Ideals

EXTENSION OF REMARKS

OF

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EDITORIAL FROM THE MINNEAPOLIS TIMES-TRIBUNE

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Times-Tribune of April 28, 1941:

[From the Minneapolis Times-Tribune of April 28, 1941]

JEFFERSON'S IDEALS

Congress paid appropriate attention to the birthday of Thomas Jefferson a few days ago. The House paused to hear Mr. RANKIN of Mississippi read the first Jefferson inaugural address, delivered in 1801. Jefferson, revered as the founder of the Democratic Party, was truly a great apostle of democracy with a small "d," and in this brief address he commended its principles to the people of the infant nation.

Jefferson did not call it democracy. He expounded "federal and republican principles," but he gave us on that far-off day one of the best expositions of democracy ever heard or read. Some honest men, he said, fear that a republican government cannot be strong. He challenged their fears.

"I believe this, on the contrary, the strongest Government on earth," said the third President on that March day 140 years ago. "I believe it is the only one where every man, at the call of the laws, would fly to the standard of the law, and would meet invasions of the public order as his own personal concern. Sometimes it is said that man cannot be trusted with the government of himself. Can he, then, be trusted with the government of others? Or have we found angels in the form of kings to govern him? Let history answer this question."

Jefferson set forth then his ideals of government, ideals still worth striving for if never perfectly attained. They corresponded in the main to the "freedoms" found in the Bill of Rights, and found their climax in these words: "A wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicities."

The words of Jefferson were well worth the attention of Congress, far more profitable than nine-tenths of the current speeches dealing with the specific problems of today.

Plasterers' Wages

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

LETTER FROM CONSTITUENT

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent me by a constituent with regard to wages paid plasterers:

APRIL 10, 1941.

Hon. LELAND M. FORD,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR LEE: In my letter to you dated April 4 I stated that on defense subjects at San Diego, on Saturday time and a half was paid on time and a half. The contractor who gave me that information was in town this week and advises me that he is not paying time and a half on time and a half. He is paying on a 9-hour work day regular time for 6 hours and time and a half for the additional 3 hours, and on Saturday he is paying time and a half, as all Saturday time is rated overtime. The result is that for plasterers with a base rate of $1.50 an hour, 5 days a week, the daily wage is $15.75, and on Saturday it is $20.25.

Our soldiers in uniform are going to be indignant at the exempted boys receiving almost as much a day as the men in uniform receive a month. I hope that you and your associates will probe this situation fully.

Pope Pius XII Plea for Prayers for Peace

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. TENEROWICZ. Mr. Speaker, on April 25 there appeared in the Washington Post an appeal by the Pope of Rome for prayers for peace. He has asked the world to set aside the month of May as a month dedicated to peace so that tranquility may soon be restored to a war-torn world. I would like to ask permission that his letter be embodied as part of my remarks:

VATICAN CITY, April 24.—While we are fully confident that the faithful and especially children under guidance of their parents, will be mindful of our invitation of last year and will gather before the altar of the Most Blessed Virgin, the Mother of God, during the coming month of May to invoke peace for anguished and afflicted humanity, we desire nevertheless through the medium of this letter addressed to all.

As the bitterness of war increasingly distresses and crushes the hearts of men, and as dangers of every sort, threatening so many nations become more appalling, we confidently express the wish that the faithful raise minds and hearts in prayer to heaven whence alone, in the midst of such profound mental perplexity and material disorder, can come hope of better days

If our prayers and aspirations have not as yet had the result which we ardently desired, our trust in God must not be lessened on this account, but we must all continue with constant and perservering devotion to be "patient in tribulation, instant in prayer" (Romans 12:12).

Expiation and charity—the signs of God are hidden from us but we are certain, although innumerable and grave offenses call down avenging justice of heaven, the Lord nevertheless is "father of mercies and God of all comfort" (II Corinthian 1 : 3), and we know His love and benevolence for us is boundless.

But there is still another motive for our trust and hope for we have at the throne of Almighty God the most amiable Mother of God and our mother who, through her all-powerful intercession, can certainly obtain for us all the favors she asks of Him.

Let us then place ourselves and our problems under her protection that she may make our prayers and aspirations her own and enhance the value of works of expiation and charity which we must offer in a generous nature to satisfy the Divine Majesty.

May she dry all our tears, strengthen us in all our sufferings, console us in all our sor-

rows and, in lightening these afflictions, enable us with hope of eternal reward to bear them more easily.

If in calling to mind our sinfulness, we feel ourselves unworthy of her maternal affection, let us lead our children in ever increasing numbers to her sacred shrine, especially during the month of May, that they may plead our cause—those little ones with innocent souls and lips unstained, who in their limpid eyes, seem to mirror and reflect something of the splendor of heaven.

United with us in prayer, let them petition that wherever covetous greed now holds sway, there the reign of love may soon prevail; that where now the spirit of reprisal persists, forgiveness may be exercised; that for discord among men there may be substituted loving harmony which reconciles and unites them; and, finally, that where now deep enmities are aroused, unhappily provoking widespread disorder, there may be effected new ties of friendship which will calm the hearts of men and bring to the universe tranquility of an order founded on justice.

Comfort for suffering—let these little ones implore of the most amiable Mother of God heavenly comforts for all those who are suffering and particularly for refugees, exiles, and prisoners, and for wounded in hospitals; let them ask of her perseveringly with their innocent voices that the duration of this awful misfortune be brief so that after having "rightfully suffered for our sins we may at least be relieved by comfort of divine grace"—Roman breviary for fourth Sunday in Lent—and that therefore there may soon return to earth resplendent rays of universal, substantial, and lasting peace which, in order to conform to the inviolate demands of justice and charity, will not conceal germs of discord and rancor, nor embody causes of future wars, but which, by effecting a fraternal, harmonious union of nations bound together in friendship and by helping all peoples to enjoy the fruits of their labor in tranquil freedom, will accompany and lead them with hope and confidence along the paths of their earthly pilgrimage toward the heavenly fatherland.

Meanwhile, we charge you, our beloved son, to make our wishes and exhortation known to all in the manner you deem most opportune, and first of all, to sacred pastors who will certainly wish to bring them to the attention of the flocks entrusted to their care.

In pledge of divine grace, and in testimony of our benevolence, we must cordially impart apostolic benediction to you, our beloved sons, and to all those, especially children who will receive this, our exhortation, with ready and spontaneous devotion.

Mr. Speaker, a few days ago the National Catholic Welfare Conference issued the following statement following a series of meetings held here in Washington by their board, comprised of 10 archbishops and bishops of the Catholic Church:

The will of America today is set on peace, not war, as the aim of our defense program. The strongest defense weapon with which we can equip the American soldier is a clear vision of the kind of peace that constitutes our ideal. An august voice has sounded again and again in an America still at peace, as well as in a Europe already at war, applying to the conditions of our day the Gospel message of peace on earth to men of good will.

It is significant indeed that the authoritative spokesman for widely divergent Christian groups in a great nation now at war has publicly accepted these five points as basic principles for a just peace and commended them to the consideration of their government. (The five-point peace program as outlined by Pope Pius XII.) This action is an inspiration to all who have the cause of true Christian peace at heart. Those who so lightly dismiss high-minded statements of principle as hopelessly idealistic in what they would call a world of hard facts, can find no comfort in the pronouncements of the Pope. But those who long for a world in which men and nations can, if they will, open their hearts to Christian truth, and mold their lives on the Christian principle find heartening support in his brave words. That, he and his predecessors have repeatedly said, is a spiritual bulwark of national defense for every people that loves peace and true freedom.

No armament for national defense for peace can be strong which lacks the spiritual armory of prayer for peace. Even though the news of the day seems to offer little prospect of an early peace which will be just according to Christian or even humanitarian standards, we know that "the hand of the Lord is not shortened that it cannot save, neither is His ear heavy that it cannot hear" (Isaiah lix). In the spirit of Christian brotherhood, therefore, we shall pray, first of all, for the victims of cruel war in all lands. In the same spirit, too, we shall pray for an early peace; we shall pray for a world-wide peace; we shall pray for a peace not based on the oppression or the destruction of peoples but for a peace which will guarantee the rights and the honor of all nations and satisfy their vital needs. And in our prayers we shall not forget fervently to beg God to guide and strengthen our President, our Congress, and all our civil authorities in the overwhelming responsibilities of this tragic hour.

Mr. Speaker, the National Catholic Conference referred in their communication to the five-point peace program as given to the world by Pope Pius XII on Christmas 1939 and which has since been the topic of universal discussion. For this reason we believe it well to repeat the recommendations given in his message:

Amidst the strife and tumult of varied world happenings, imperturbability of spirit is that real joy which resides in the power to withstand the storm through trust in God. We unite with Christ, principle, and fount of every grief and joy.

Where others lose themselves, where the waters of affliction and desperation submerge souls in cruelty, those who trust in Christ can do everything and, in harmony with order and the justification and magnificence of God, rise above the disorders and storms of the world with equal courage and order.

The indescribable disaster of war, which Pope Pius XI, with profound and extreme regret, foresaw and with the indomitable energy of his noble and most high spirit wished by all means to avert, has broken out and is now a tragic reality.

Before this tremendous war, an immense bitterness overcame our souls, sad and troubled that this holy feast of Christmas, this feast of the Prince of Peace, must be celebrated to the funeral roar of cannon and under terror of flying war missiles, in the midst of menaces and dangers of armied navies.

It seems that the world has forgotten Christ's message of peace—the voice of reason. We of the Christian brotherhood have been obliged to see a series of irreconcilable acts, irreconcilable both in regard to international rights and to principles of national rights and to the most elemental sentiments of humanity, acts which show in what chaotic and vicious circles has the sense of justice been deviated from useful consideration.

In this category are premeditated aggressions against a small, laborious, and peaceful people on the pretext of a threat which neither exists, nor is desired, nor is possible.

Atrocities and illegal use of means of destruction even against noncombatants, refugees, old people, women and children, and disregard of human dignity, liberty and life are acts which cry for the vengeance of God, as does ever more extensive and methodical anti-Christian and even atheistic propaganda, mostly among young people.

To preserve the church and her mission among men from every contact with such anti-Christian spirit is our duty, and this is also our sacred and intimate wish as the father and teacher of the faith.

With anguished worry we are forced to contemplate the accumulating spiritual ruin before us—accumulating because of confusion of ideas which, more or less voluntarily, shades and distorts truth in the souls of many people, whether they be involved in war or not.

We therefore must regard with alarm the tremendous amount of work that will be necessary when a world tired of fighting wishes to restore peace—to break down the walls of aversion and hatred which have been built up in the heat of the strife.

Aware of the excesses to which that way of life leads, and of the political doctrines and acts which ignore the laws of God, when the disputes became critical we attempted, as you know, with every endeavor and to the last moment, to prevent the worst and to persuade men in which hands power lay and whose shoulders bore the grave responsibility, to abstain from armed conflict and so to save the world from incalculable disaster.

These efforts, and those coming from other influential and respected sources, failed to produce the hoped-for effect, chiefly because of deep and apparently irremovable distrust—distrust which had grown in recent years and which had raised insurmountable spiritual barriers.

The problems were not unsolvable, but this distrust, originating in a series of particular circumstances, stood in the way with almost irresistible force and to such an extent that there no longer was hope for promises made or for the maintenance of possible amicable conventions.

Finally every effort to promote a peaceful solution became hopeless. There was nothing left but to try to lighten the burdens of war, although the effort to bring Christian charity to regions where the most urgent need of it would be felt was obstructed by difficulties not yet overcome.

With indescribable anguish we watched this war initiated and proceeding in such unusual circumstances.

If up to now—excepting the bloodstained soil of Poland and Finland—the number of victims may be considered fewer than was feared, the total sorrows and sacrifices have reached such a point as to inspire great anxiety in those concerned with the future economic, social, and spiritual condition of Europe, and not of Europe alone.

The more the war monster strives for, swallows, and allots itself material means which are placed inexorably at the service of war needs—mounting from hour to hour—the more acute becomes the danger, for nations directly or indirectly struck by the conflict, of what we might call pernicious anemia, and they are faced with the pressing question, "How can exhausted or weakened economy, at the end of the war, find means for economic and social reconstruction among difficulties which will be enormously increased, and of which the forces and artifices of disorder, lying in wait, will seek to make use in the hope of giving the final blow to Christian Europe?"

Such consideration of the present and future must cause much concern to the leaders and sane members of every people, even in the fever of the war, and cause them to examine the effects of the aims and justifiable end of war.

We believe those who with watchful eyes consider these serious potentialities and the possibility of which an evolution of events will, notwithstanding war and its horrible accompaniments, hold themselves wholly pre-

pared to define clearly, so far as they themselves are concerned, the fundamental points of a just and honorable peace at the opportune moment; and that they would not flatly reject opportunity for negotiations, whenever the occasion presents itself, with the necessary guaranties and security.

First. A fundamental condition of a just and honorable peace is to assure the right of life and independence of all nations, large and small, strong and weak. One nation's will to live must never be tantamount to a death sentence for another. When this equality of rights has been destroyed, injured, or imperiled, the juridical order requires reparation whose measure and extent are not determined by the sword or selfish, arbitrary judgment, but by the standards of justice and reciprocal equity.

Second. That order, reestablished in such a manner, may be tranquil and durable—the cardinal principles of true peace. Nations must be liberated from the heavy slavery of the race for armaments and from the danger that material force, instead of serving to protect rights, become the tyrannical violator of them.

Conclusions of peace which failed to attribute fundamental importance to disarmament, mutually accepted, organic and progressive both in practice and spirit, and failed to carry out this disarmament loyally, would sooner or later reveal their inconsistency and lack of vitality.

Third. In any reordering of international community life it would conform to the rules of human wisdom for all parties concerned to examine the consequences of the gaps and deficiencies of the past; and in creating or reconstituting the international institutions, which have so lofty a mission, and at the same time one that is so difficult and full of the gravest responsibilities, they should keep present before them the experiences which poured from the inefficacy or defective operation of similar previous projects.

And, since it is so difficult—one would be tempted to say almost impossible—for human weakness to foresee everything and assure everything at the time of the drafting of treaties of peace—when it is difficult to be entirely free from passions and bitterness—the establishment of juridical institutions, which serve to guarantee the loyal and faithful fulfillment of terms, and, in case of recognized need, to revise and correct them, is of decisive importance for an honorable acceptance of a peace treaty and to avoid arbitrary and unilateral ruptures and interpretations of the terms of these treaties.

Fourth. A point which should draw particular attention if better ordering of Europe is sought concerns the real needs and just demands of nations and of peoples as well as of ethnical minorities; demands which, if not always sufficient to form a strict right when there are recognized or confirmed treaties or other juridical titles which oppose them, deserve at all events benevolent examination to meet them in a peaceful way and, where it appears necessary, by means of equitable, wise, and harmonious revision of treaties.

Once true equilibrium among nations is thus brought back and the basis of mutual trust is reestablished, many of the incentives to resort to violence would be removed.

Fifth. But even better and more complete settlements will be imperfect and condemned to ultimate failure if those who guide the destinies of peoples, and the peoples themselves, do not allow themselves to be penetrated always more and more by that spirit from which alone can arise life, authority, and obligation for the dead letter of articles in international agreements; by that spirit, namely, of intimate, acute responsibility that measures and weighs human statutes according to the holy, unshakable rules of divine law; by that hunger and thirst for justice which is proclaimed as a beatitude in the Sermon on the Mount, and which has, as a natural presupposition, moral justice; by that universal love which is the compendium of and most comprehensive term for the Christian ideal, and therefore throws across also a bridge to those who have not the benefit of participating in our own faith.

We do not fail to recognize the grave difficulties which interpose themselves against the accomplishment of the aims which we have traced in broad outlines in a desire to lay foundations for, to put into effect, and to preserve—a just international peace.

But if ever there were an aim worthy of the concourse of noble, generous spirits, if ever there arose a spiritual crusade which with new truth sounded the cry "God wills it," it is truly that high aim and this crusade—to lead peoples back from the muddy gulf of material and selfish interest to the living fountain of divine law, which alone is powerful and gives that morality, nobility, and stability of which a lack has been felt far too long and which is gravely needed to repair the damage done to most nations, to humanity, and to those ideals which are at the same time the real ends of peace based on justice and love.

We wait for and hope that all those who are united to us by the bond of faith, each at his post within the limits of his mission, will keep both mind and heart open, so that when the hurricane of war ceases and is dispersed there will rise up in every nation and among all peoples farsighted and pure spirits, animated by courage, who will know how and will be able to confront the dark instinct of vile vengeance with the severe and noble majesty of justice—the sister of love and companion of all true wisdom.

Mr. Speaker, the Catholic Church is asking that as a Nation we pray for peace. But this is not a Catholic problem, nor a Protestant problem, nor is it a Jewish problem — it is a universal problem. Agonized voices of men, women, and children throughout the world are looking to America for us to remain at peace. The President of the United States and the United States Congress are besieged with please that we remain out of the world conflict. The forces of destruction of the Old World eagerly seek to engage us in their age-old struggles for supremacy, and selfishly urge us to fight, in many instances brother pitted against brother.

The first encyclical of Pope Pius XII, presenting his views on the function of the state in the modern world, is a masterpiece, and I would like to quote here a few brief excerpts:

EXCESSIVE NATIONALISM

The first of these pernicious errors, widespread today, is the forgetfulness of that law of human solidarity and charity which is dictated and imposed by our common origin and by the equality of rational nature in all men, to whatever people they belong, and by the redeeming sacrifice offered by Jesus Christ on the altar of the cross to His Heavenly Father on behalf of sinful mankind.

NATIONS ENRICH UNITY

And the nations, despite a difference of development due to diverse conditions of life and of culture, are not destined to break the unity of the human race, but rather to enrich and embellish it by the sharing of their own peculiar gifts and by that reciprocal interchange of goods which can be possible and efficacious only when a mutual love and a lively sense of charity unite all the sons of the same Father and all those redeemed by the same divine blood.

ALL RACES EQUAL IN THE CHURCH

Those who enter the church, whatever be their origin or their speech, must know that they have equal rights as children in the house of the Lord, where the law of Christ and the peace of Christ prevail.

PATRIOTISM

Nor is there any fear lest the consciousness of universal brotherhood aroused by the teaching of Christianity, and the spirit which it inspires, be in contract with love of tradition or the glories of one's fatherland or impede the progress of prosperity or legitimate interests. For that same Christianity teaches that in the exercise of charity we must follow a God-given order, yielding the place of honor in our affections and good works to those who are bound to us by special ties.

TOTALITARIANISM

The idea which credits the state with unlimited authority is not simply an error harmful to the internal life of nations, to their prosperity, and to the larger and well-ordered increase in their well-being, but likewise it injures the relations between peoples, for it breaks the unity of supranational society, robs the law of nations of its foundation and vigor, leads to violation of others' rights, and impedes agreement and peaceful intercourse.

A GREAT COMMONWEALTH

A disposition, in fact, of the divinely sanctioned natural order divides the human race into social groups, nations, or states, which are mutually independent in organization and in the direction of their internal life. But for all that, the human race is bound together by reciprocal ties, moral and juridical, into a great commonwealth directed to the good of all nations and ruled by special laws which protect its unity and promote its prosperity.

RESPECT FOR RIGHTS—FIDELITY TO COMPACTS

Such principles demand respect for corresponding rights to independence, and to life and to the possibility of continuous development in the paths of civilization; they demand, further, fidelity to compacts agreed upon and sanctioned in conformity with the principles of the law of nations.

The indispensable presupposition, without doubt, of all peaceful intercourse between nations, and the very soul of the juridical relations in force among them, is mutual trust. The expectation and conviction that each party will respect its plighted word, and are ready to enter into discussion and to avoid recourse to force or to threats of force in case of delays, hindrances, changes, or disputes, because all these things can be the result not of bad will, but of changed circumstances and of genuine interests in conflict.

BASIS OF NEW ORDER

Once the bitterness and the cruel strifes of the present have ceased, the new order of the world of national and international life, must rest no longer on the quicksands of changeable and ephemeral standards that depend only on the selfish interests of groups and individuals. No, they must rest on the unshakable foundation, on the solid rock of natural law and of divine revelation. There the human legislator must attain to that balance, that keen sense of moral responsibility, without which it is easy to mistake the boundary between the legitimate use and the abuse of power. Thus only will his decisions have internal consistency, noble dignity, and religious sanction, and be immune from selfishness and passion.

EFFORTS TO PREVENT WAR

What has already happened and is still happening was presented, as it were, in a vision before our eyes when, while still some hope was left, we left nothing undone in

the form suggested to us by our apostolic office and by the means at our disposal, to prevent recourse to arms and to keep open the way to an understanding honorable to both parties. Convinced that the use of force on one side would be answered by recourse to arms on the other, we considered it a duty inseparable from our apostolic office and of Christian charity to try every means to spare mankind and Christianity the horrors of a world conflagration, even at the risk of having our intentions and our aims misunderstood. Our advice, if heard with respect, was not however followed.

WORLD RECONSTRUCTION

This she (the church) knows—that the truth which she preaches, the charity which she teaches and practices, will be the indispensable counselors and aids to men of good will in the reconstruction of a new world, based on justice and love, when mankind, weary from its course along the war of error, has tasted the bitter fruits of hate and violence.

CHARITY TO WAR VICTIMS

A vast field opens up for Christian charity in all its forms. We have full confidence that all our sons * * * will be mindful in imitation of the Divine Samaritan of all these who, as victims of the war, have a right to compassion and help.

THE HASTENING OF PEACE

Whatever we can do to hasten the day when the dove of peace may find on this earth, submerged in a deluge of discord, somewhere to alight, we shall continue to do, trusting in those statesmen who, before the outbreak of war, nobly toiled to avert such a scourge from the peoples; trusting in the millions of souls of all countries and of every sphere, who call not for justice alone but for love and mercy; above all, trusting in God Almighty.

PRAYER

Pray everyone; pray uninterruptedly: "Pray without ceasing." In this way you will put into practice the sublime precept of the Divine Master, the most sacred testament of His heart, "That they all may be one" (St. John); that all may live in that unity of faith and of love from which the world may know the power and efficacy of Christ's mission and of the work of His church.

Mr. Speaker, during this month of May, when we are asked to concentrate on a lasting peace, I believe we should begin our planning for a permanent organization bent on eventual peace negotiations. The time to negotiate for an enduring peace is now—not after our rich wealth and resources have been sunk in the seven seas or strewn to the four winds—and after the flower of our young manhood lie buried in many lands. We may differ as to which method we should employ in undertaking negotiations, but the nations across the oceans are looking to us to stop this wholesale destruction of human life and property, and they are praying that it may be soon.

Those who wish to embroil this Nation in the quarrels and hates of other nations become enraged with Americans who insist they do not wish to participate in the destruction of human beings or become victims of a war machine; but it seems to us that unless we stop now before millions of our young men have been sent overseas, we may find ourselves too late with our prayers and wishes, and instead of having as our country the richest on the face of the earth we will have the most impoverished and the most desolate.

Late Senator Morris Sheppard

EXTENSION OF REMARKS

OF

HON. CHARLES L. SOUTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

ADDRESS BY HON. FRITZ G. LANHAM, OF TEXAS

Mr. SOUTH. Mr. Speaker, a few evenings ago, in the presence of a large group of Texans assembled here in the city of Washington, my colleague, Hon. FRITZ G. LANHAM, delivered an exceptionally eloquent and impressive tribute to the late Senator MORRIS SHEPPARD. I ask unanimous consent that it be printed in the RECORD.

The address follows:

Mr. Toastmaster, meeting as we do as fellow Texans, proud of the history and traditions which in their worth and inspiration have afforded us an exceptional heritage, it seems fitting that for a few moments tonight we should pause in solemn contemplation to pay tribute to the memory of a late lamented and beloved friend whose illustrious career of service proved him true to that priceless heritage from the fathers. At such a time and with such a purpose, I feel impelled to adopt as my own the supplication of lines of a beautiful poem by Lord Tennyson:

"I would that my tongue could utter
The thoughts that arise in me."

Words have not been coined to speak the language of the heart. There is no vocabulary for love. It finds its manifestations in sentiments and emotions and in deeds which can but poorly betoken the impulses so deeply felt.

Our fellow Texan, MORRIS SHEPPARD, has departed to a better and a perfect sphere, but he lives and will continue to live in the hearts of his family, his friends, and his countrymen, who can never forget his distinguished service, but who will remember even more vividly his unfailing gentleness and kindliness.

In the State capitol at Austin there reposes appropriately a portrait of this celebrity of our Lone Star State, but his portrait which hangs on the walls of our hearts is one more fondly cherished, a likeness of his Christian spirit which so illumined his path that others, too, could see the way to the goal of beneficent accomplishment.

Though his record was one of conspicuous and laudable attainment, well known to all, and needless now to be recited, it is this temporary parting from the man, the friend, the loved one, even more than the cessation of his notable work among us, which impresses upon each of us a sense of irreparable loss. The artist in every worth-while endeavor is greater than the product of his brush.

What is the mission of man? We are taught in Holy Writ that he is made in the image of God. In the light of this revelation, one may best exemplify one's worth as a man by preserving in its glory that wonderful image. And how is this image manifested? Surely in a miniature presentation of those three outstanding attributes of Deity—power, knowledge, and vision.

True power is altruistic ambition at work, fulfilling a laudable task.

True knowledge is the reward of the assiduous searcher for truth, who finds in his zeal the golden treasury of its worth.

True vision is the guiding light of a useful life, leading to a happier humanity and a better and brighter world.

MORRIS SHEPPARD, by his industry and purpose, acquired and practiced that trinity of graces. They are the distinguishing traits and accomplishments which characterized the labors of the pioneers of our State and Nation. In appreciative appraisal of those pioneers, MORRIS SHEPPARD was not merely their ardent admirer but their faithful and worthy successor. He leavened his work with that other heavenly attribute of love, and love in full measure was the boon returned to him by a grateful people. "Out of the heart are the issues of life," and out of his heart came the friendly and helpful spirit that will remain with us all as a benediction. Tennyson was right when he said:

"Howe'er it be, it seems to me
'Tis only noble to be good;
Kind hearts are more than coronets
And simple faith than Norman blood."

To that "land that is fairer than day" MORRIS SHEPPARD has been called to his reward. And as we reflect upon the promised entrance to that world of glory, surely with reference to our beloved and lamented friend we may find an appropriate thought in the sentiment of the epitaph at the tomb of John Howard Payne:

"Sure when thy gentle spirit fled
To realms beyond the azure dome,
With outstretched arms God's angels said,
'Welcome to heaven's home, sweet home.'"

And may I be forgiven if I add in feeble lines of my own what I conceive to be the message of love and confident hope our hearts would utter in parting from a comrade so dear:

"Goodbye, good friend;
In God's good time,
In God's good clime
We'll meet again.

"And in that land
Where we shall know
No pain or woe
We'll understand."

The Contrast in Bridges' Trials

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EDITORIAL FROM THE SANTA MONICA OUTLOOK

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica Outlook of April 25, 1941:

[From the Santa Monica Outlook of April 25, 1941]

THE CONTRAST IN BRIDGES' TRIALS

It is a most remarkable reflection on Madam Perkins, of the Labor Department, and her

Dean Landis investigation of Harry Bridges, that it failed to bring to light the overwhelming evidence of Bridges' connection with the Communists which is available in the present trial.

The facts existed then as now, but no thorough effort was made to secure them. Not until the Justice Department turned loose the F. B. I. on the inquiry were they brought to public knowledge.

This plainly is proof either that Madam Perkins did not want to have Bridges convicted or that she was incompetent in not knowing how to proceed. Either one alternative or the other is true. In either case, the official indifference or incompetence, whichever it was, is indefensible and unpardonable.

The abundant evidence in the present Bridges trial leaves no doubt in the public mind of the close relation of Bridges with the under-cover campaign which the paid agents of Moscow have been conducting for years in America. Aside from Mr. Bridges' connection, it reveals a magnitude of communistic propaganda and organization which constitutes a very grave menace to America's future. The undermining of American ideals and institutions has been going on for years without a word of interference from the Government.

It is high time the people moved in this matter. Meanwhile, Madam Perkins, apparently by the grace of Mrs. Roosevelt, continues to be President Roosevelt's Secretary of Labor.

Patrolling Means Shooting War

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 14, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, President Roosevelt said not so long ago that "convoys mean shooting, and shooting means war."

Convoying—of the old kind—has been abandoned to a great extent. When supply ships or cargo ships traveled in convoys, they were more or less a collection or group of cargo ships with naval vessels operating to the rear of them, in front of them and on each side of them. In convoy formation these cargo ships could not zigzag in the darkness without running lights, without danger of collision.

Recent practice is to let the cargo ships zigzag their own way across the ocean, the advantage being that with the ships widely separated enough only one ship was a target, and that ship, zigzagging, was frequently moving off its course of the moment. Meantime, a patrol of war boats is ranging the waters. These patrol boats make it exceedingly dangerous for any submarine to put its periscope above the surface. Yet it is necessary periodically for submarines to come up and run on the surface in order to recharge their batteries for undersea work.

In the present war, no submarine commander will run the risk of coming to the surface to hail a ship to determine what flag it flies. The American destroyers, which the President traded to Britain, and the other American boats which have been transferred to the British flag and service are, of course, exactly like their American counterparts, both in appearance and in machinery operation and propeller sound. The result is that under the new order in which the American naval boats are patrolling as far as 2,000 miles out from our shores, they must necessarily operate in waters in which German submarines could expect to be found, and the result necessarily must be either that the German submarine commanders will have to refrain from firing on any boats whose propellers they might hear, or of making the mistake of hitting an American war boat. If the latter should be the case, the incident necessary to plunge this Nation into a shooting war will have occurred.

There can be no question, if we are to face this situation frankly, that the patrol operations of the Atlantic Fleet two or three thousand miles offshore necessarily involve increased hazards of some such "incident" as an American war boat being struck by a German submarine torpedo.

Mr. Roosevelt's order to the Atlantic Fleet is unquestionably designed to aid in the delivery of machines and munitions of war to Great Britain and her allies. The German Government may be expected, of course, to regard the operations of our Atlantic Fleet as hostile operations. Whether by design or mistake, one of our boats gets hit by a torpedo or an aerial bomb and is sunk, we will be in a shooting war the cost of which in blood and agony and money to the American people no man can foresee.

Regardless of how we view the situation, it would seem both common sense and essential that the American people know the implications and the potentialities of this new policy of sending our fleet two or three thousand miles offshore to operate. It undoubtedly means a shooting war in the near future.

Passamaquoddy, Florida, and the St. Lawrence

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

Mr. BENDER. Mr. Speaker, a few years back Uncle Sam embarked upon one of the greatest engineering experiments in the history of mankind. It was a project truly worthy of Hollywood's choicest adjectives, "colossal," "terrific," "super-super." Up in Maine the folks were excited. Their Government down in Washington was going to harness the tides. The tides are still unharnessed, and Passamaquoddy is now only a memory. A few mere millions were sunk in the mud, but they were speedily forgotten as the Washington merry-go-round whipped furiously off to newer and still more intoxicating pleasures.

Some of us remember, too, the Florida ship-canal proposal. It was going to cut a channel across the northern end of Florida to encourage commerce and bring the more abundant life to thousands of men and women down South. That one got into the moving-picture news reels. We saw wonderful pictures of a huge dried-up ditch, with a good deal of rusty looking machinery along the sidelines. By the time it had disappeared from the picture it was not even regarded as a potential celery patch.

The St. Lawrence waterway proposal, whatever its merits may be, comes along as a fitting successor to the grandiose schemes concocted by the febrile imagination of the New Deal. Like both of the other projects, a feeble effort is being made to link its construction with a national-defense build-up. The utter puerility of this endeavor is apparent at the merest glance. Two other arguments have been invented to reinforce the recognized weakness of the defense position. Washington sources "close to the President" have urged the St. Lawrence waterway as a potential producer of hydroelectric power on a tremendous scale. Then, too, they argue that the St. Lawrence development would enable us to build shipyards on the Great Lakes beyond the reach of air raids.

An examination of each of these arguments is certainly in order before Congress votes the huge sums necessary for this project.

To consider the defense suggestion is to recognize its futility. By even the most optimistic estimate, the St. Lawrence job would take some 4 years for completion. If we are still in the defense "emergency" then, our entire economy will be far out of line. The St. Lawrence project will be only a minor matter in comparison with our entire defense machinery. Every defense "expert" believes that a 4-year period will take our efforts completely beyond the realm of practicability. We cannot work now on defense projects so far removed into the future.

As for the hydroelectric power position, it has been frequently pointed out that at Niagara Falls there stands an idle power plant capable of generating more electric current than anyone believes necessary for the Great Lakes area. What possible justification can there be for a new plant under such a state of affairs?

As for the third assertion with respect to the construction of oceangoing vessels out of the reach of bombing planes, the answers seem all too obvious. We know enough about the tremendous progress of aviation to realize that no man may set limits today upon the range of military planes tomorrow.

And this is where the debate stands for the present. We have a choice before us. Is it more useful to spend our funds for the construction of this waterway than to spend them for the construction of more planes, ships, tanks, and guns? Would Winston Churchill, answering this question for us, choose the St. Lawrence waterway or would he choose the weapons of war?

This is no time for another Passamaquoddy. It is a time when every dime spent should be expended for essential defense purposes. Let us not squander funds in time of danger which we have

husbanded carefully in time of peace. Let us not undertake a project in a day of emergency which we have refused time after time to undertake in days of calm and considered judgment.

Digest of International Law by Green H. Hackworth

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

STATEMENT BY STATE DEPARTMENT

Mr. SHANLEY. Mr. Speaker, for those who think that international law is dead the following abbreviated statement from the State Department on the forthcoming publication of Legal Adviser Hackworth's volume will be interesting.

It ought never to be forgotten that one of the most marked and historical cleavages we have in the realm of man's progress concerns the words of Grotius. Of him it was rightly said, "In gathering the materials of international law, he had to go beyond national treaties and denominational rests for a principle embracing all mankind." From his time it became possible to make politics "a matter of principle and of conscience so that men and nations differing in all other things could live in peace together, under the sanctions of a common law."

The statement follows:

DIGEST OF INTERNATIONAL LAW, BY GREEN H. HACKWORTH, LEGAL ADVISER OF THE DEPARTMENT OF STATE

There are being released on April 28 the first two volumes of the new Digest of International Law, by Green H. Hackworth, who has been the Department of State's legal adviser since 1925.

The last preceding Digest on International Law prepared in this country was that by John Bassett Moore, published by the Government in 1906. The new digest does not revise earlier digests or incorporate material published in them; instead it deals with material and events originating in the period subsequent to 1906 which have hitherto not been covered by a study of general scope. The work will be of immeasurable value to officials of the Government in providing precedents and background for the formulation of decisions on questions of law and policy currently arising, as well as to others who are interested in or who deal with matters pertaining to international law and related subjects. The material has been selected largely from the vast accumulation of diplomatic correspondence of the Department of State; statements by foreign offices and treatise writers; pronouncements by judicial and administrative tribunals, national and international; international agreements; legislative enactments, etc.

I

Volume I contains five chapters. Chapter I deals with the general nature of international law; its sanction, its source, its relationship to municipal law, its development, and efforts looking to its codification.

Chapter 2, relating to states and their governments, deals with the nature and classification of states, the rights and duties of states, and kinds of governments. It includes a section on mandates, a subject peculiar to the period in question.

Chapter 3 treats of the "recognition" of states, of governments, and of belligerency. It covers the methods, prerequisites, conditions, and effect of recognition, also the effect of nonrecognition.

Chapter 4, on territory and sovereignty of states, deals with methods of acquisition and loss of territory, effects of changes of sovereignty, and with certain changes in the Territorial possessions of the United States in the period covered, etc.

Chapter 5, on national jurisdiction and territorial limits, has to do particularly with boundaries, rivers, straits, bays, etc., and the marginal sea, including problems arising in connection therewith.

II

Volume 2 contains at the outset a chapter on national jurisdiction, covering such subjects as the supremacy of the territorial sovereign; authority over persons and property within the national domain; legal remedies; police and other regulations relating to such matters as freedom of speech and of the press, religious freedom, and the practice of professions; martial law (not to be confused with the law of war which is covered in a later volume); punishment for crimes committed outside the territorial jurisdiction; jurisdiction over foreign vessels in territorial waters; the inviolability of territory; and the duty of states to restrain injurious agencies.

Chapter 7 relates, on the other hand, to the exemptions from territorial jurisdiction of foreign states, their sovereigns, their military forces, vessels of war, other public vessels and property, and of state agencies or instrumentalities. It reviews the rights of the United States in extraterritorial countries, and explains their present status. Finally, the chapter deals with the subject of asylum as another type of exemption from territorial jurisdiction.

Chapter 8, the final chapter in the volume, is devoted to the subject of the high seas and connecting waterways. It discusses the important subjects of freedom of the seas, nationality of vessels, and interoceanic canals.

The manuscript for four additional volumes is practically completed. It is intended that there shall be, in all, seven volumes with an additional index volume. Since the basic expense of printing this work is borne by the Department of State, the Government Printing Office is able to offer the book to others at a nominal sum ($2 for vol. 1 and $1.75 for vol. 2) covering only the cost of running off additional volumes for sales purposes.

Political Refugees Coming to America From Europe

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1941

Mr. BECKWORTH. Mr. Speaker, I wish to quote nine paragraphs from a statement issued by the State Department, December 18, 1940; the statement pertains to political refugees seeking to come to America:

Persons coming for permanent residence must under this law secure immigrant visas; those coming for a temporary stay, visitors' visas; those who desire to pass through the country en route to another country, transit visas. The granting of visas is under the jurisdiction of the Department of State.

Persons arriving on visitors' visas are under the law permitted to remain a temporary period. Those arriving as transients are limited to 60 days. If the privilege is not extended the person is supposed to leave the United States or be deported. The extension of privilege and the steps looking to departure or deportation are under the jurisdiction of the Department of Justice.

Obviously it was legally impossible to accept them all. The laws of this country prescribe the number of persons to be admitted as immigrants. Applications far in excess of the legal limit had already been made by other persons and from only a few countries of Europe were immigrant visas available. That, however, did not prevent the demand, but it did add to the congestion.

Spontaneously there developed in this country movements to save to the world the brains, the character, and the spirit which motivated these distraught persons and to facilitate their departure for this country. The names of some were well known to the American public because of their literary, musical, or artistic achievements, their political doctrines, their scientific contributions, or their capacity for organization—but there were many others whose names were not known who had been leaders of thought and directors of movements in entire accord with American social and political philosophies. The sentiment to save these persons from becoming derelicts or from death developed into committees organized by sympathetic and understanding Americans.

Visitors' visas are granted provided the person can return to the country of his origin or can leave for a third country; provided further that the person intends to do so—for otherwise he would be an immigrant intending to live here; and that he will not become a public charge while here.

Consequently, the committees requesting visas for certain persons were required to give assurances to the Department of State that they would make every effort to arrange for the departure of the person if admitted and that he would not become a public charge while here.

Transit visas are granted to permit a leisurely stay in the United States while traveling to or awaiting accommodations to travel to another country and with similar conditions.

Consequently, the committees asking visas of that character were requested to give those assurances before the visa could be issued.

Those assurances were satisfactorily given in each case, and the name and other essential data were telegraphed to the consuls abroad. The various committees recommended a total of about 2,000 names. Each name was checked against official Government information lists, and only about one dozen of those names were found to be of persons whose presence here would be prejudicial to the best interests of the United States. For the rest, visas were authorized. About 1,000 have actually been issued abroad. Of the balance, some have been only recently dispatched, some applicants are in hiding or under assumed names for their own protection, some are inaccessible to the consuls, and some have removed from the consular district to another district and are still being sought.

Since the statement of the State Department of December 18, 1940, indicated that the "names of some of the political

refugees were well known to the American public because of their literary, musical, or artistic achievements, their political doctrines, their scientific contributions, or their capacity for organization," I, on January 10, 1941, requested the State Department to prepare a list of the political refugees referred to in the Department's statement of December 18, 1940. Those on the list seeking admission to this country were sponsored by various organizations in the United States. I also requested the State Department to state to me the occupations of the political refugees approved for admission to this country by the President's Advisory Committee for Political Refugees, the date and kind of visa issued to each, and the Consular office involved. Incidentally, it should be borne in mind one coming here on a visitor's visa is expected to remain here for only a temporary period.

At no time in the history of our country has it been more important to the welfare of this Nation to be double sure that those who are permitted to enter this country are 100 percent true to our form of government. Lukewarm believers in democracy walking bowlegged with suggested changes, changes which find their inception in the mind of those who advocate a new order are not safe people to have in this country. Many of those who at heart believe in communism, nazi-ism, and fascism will reluctantly say they are opposed to our form of government, but they will enumerate countless changes which in their opinion should be made. Often it is found, when the proposed changes are examined and evaluated, that they are nothing less than disguised excerpts borrowed from authoritarian doctrines. How important it is to know not merely something but much about the background of any person who comes to this country from any of the countries whose people have accepted communism, nazi-ism, or fascism; in fact, we should know much about any person who is permitted to come to America now. No more Trojan horses are needed here. In this connection, the summary provided me by the State Department infers that no information is currently available concerning 40 of the first 1,000.

The authorities of the State Department have been kind enough to make a list—available now—of the first 1,000 cases recommended by the President's Advisory Committee for Political Refugees; they have also provided an interesting summary pertaining to the first 1,000 people. It is revealing to note what vocations have been followed by some of the people; one discerns, for example, only 3 of the first 1,000 people are farmers.

The summary mentioned follows:

The following is a summation of occupations of the first 1,000 refugees whose names were submitted by the President's Advisory Committee on Political Refugees. (The following was complied according to the latest information available.) Of this number, 697 have received visas.

Members of families (includes children, mothers, students, and widows)	472
Journalists, writers, and authors	90
Merchants, businessmen, traders, industrialists, manufacturers, and bankers	89
Jewish leaders and rabbis	72
Attorneys and lawyers	32
Editors and publishers	27
Professors and teachers	25
Artists, art dealers, and lecturers	17
Physicians and doctors	15
Government officials (includes judges, army officers, etc.)	15
Secretaries, stenographers, and clerks	14
Engineers, chemical and electrical	9
Social workers	8
Business managers	8
Labor leaders	7
Chemists	6
Musicians and composers of music	5
Photographers	4
Carpenters	4
Farmers	3
Film producers and writers	3
Dentists	3
Salesmen	2
Printers	2
Actors	2
Statisticians and research workers	2
Furriers	2
Fashion designers and dressmakers	2
Nurses	2
Locksmiths	2
Architects	2
Electricians	1
Radio broadcasters	1
Petroleum refinery employees	1
Concert singers	1
Soldiers	1
Plumbers	1
Real estate agents	1
Economists	1
Interpreters	1
Mathematicians	1
Librarians	1
Machine draftsmen	1
Metallurgist-accountants	1
Egyptologists	1
No information	40
Total	1,000

Processing Tax on Wheat

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

LETTER TO THE PRESIDENT

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ADAMS, OREG., *March 28, 1941.*

Hon. FRANKLIN D. ROOSEVELT,
President, United States of America,
Washington, D. C.

MY DEAR MR. PRESIDENT: Having read an article in a recent magazine wherein it was stated that you and Secretary Morgenthau were opposed to anything in the nature of a processing tax on the farm crops which are covered by the present farm program, I feel that I should write and let you know how one farmer (and there are many more of the same mind) feels about the matter.

In the days of the Federal Farm Board, the chairman of that organization, Mr. Alexander Legge, spoke in this county and urged us wheat farmers to curtail our production. At that time we had no program to hold the farmers together and accomplish that end, and, of course, it was not done.

Under the present program, it could be done if we do not make the loans on the surplus crops too high. For the past 3 years the wheat loans have been a floor under our wheat price. They have enabled the farmer who was not complying with the program to plant his usual acreage to wheat and get along on about the same level as those who are planting under acreage allotments and receiving the parity and conservation payments.

We feel that the noncomplier is just riding on the coattails of those who do comply and would like to see the program changed enough to make it advantageous to be in compliance. This could be done by keeping the loans as low or lower than during recent years and passing a law, or amending the present law, to provide for a certificate plan to raise the funds for parity payments.

We realize that the only thing that has kept 50 percent of the farmers in this county from going broke is the fact that we had the wheat-allotment program of 1933–35 and the programs which have followed it, with approximately 97 percent of our wheat farmers complying with the present program.

We also know that the percentage of compliance is not so large in some counties, but if loans were lower and parity payments higher the fellows on the outside would probably come in.

We are unafraid of regimentation, but are afraid of conditions which may develop if our wheat is not kept under control.

We have State and Federal taxes on gasoline and no one is hurt. The funds are used to pay for roads, and the one who is on the road most of the time wears out the road and pays more tax than the one who stays home most of the time.

If under uncontrolled conditions the wheat grower cannot subsist, where is the wrong in placing a processing tax on wheat to assist the farmer who grows it?

A. R. COPPOCK.

An Unfortunate Controversy

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EDITORIAL FROM THE OSHKOSH (WIS.) NORTHWESTERN

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oshkosh (Wis.) Northwestern:

[From the Oshkosh (Wis.) Northwestern]

AN UNFORTUNATE CONTROVERSY

It is to be regretted that President Roosevelt, nettled by Colonel Lindbergh's recent address, in which the famous flyer and aviaton expert said Great Britain could not win the war against the Axis totalitarian powers and that the United States cannot win the war for England, regardless of how much assistance we extend, should have departed from calm and temperate statements to accuse Lindbergh of being another Vallandigham. Indirectly, but unmistakably, the President

branded Colonel Lindbergh as a "copperhead," a term that intimates treasonable utterances.

History records that Vallandigham, an Ohio Congressman, made speeches during the progress of the Civil War that upheld the Confederate South. As a result of his speeches this traitor to the North was conducted over the lines to the Confederacy.

Because Colonel Lindbergh disagrees with the Roosevelt administration's foreign policy and the President's methods of helping Great Britain to win the European war was no excuse for smearing the noted aviator as a "copperhead." The application of the "Vallandigham" classification and approbrium was uncalled for and beneath the dignity of the office the President holds.

Since when has there been any restriction against free speech in a free and peaceful nation? And since when has it become treasonable utterance to discuss peace and express individual opinions on the conduct of our Government officials?

Colonel Lindbergh acted wisely and moderately, under the circumstances, in sending a letter Monday to President Roosevelt resigning his commission as a Reserve officer in the United States Army Air Corps. The President had implied that Lindbergh was useful no longer as a Reserve officer; had questioned his loyalty, character, and motives. Hence the colonel took the only action suitable—to withdraw into private life.

Thus services that might have been exceedingly helpful in the present national-defense program will be lost to the Nation, and a controversy has arisen that is likely to have exceedingly unpleasant repercussions and influences detrimental to national unity.

We believe the Chicago Tribune expresses the situation pertinently in this editorial view of the matter:

"Col. Charles A. Lindbergh has resigned as a colonel in the United States Army Air Corps Reserve. He sent his resignation to the Secretary of War and explained why he did so in a letter to Mr. Roosevelt. To Mr. Roosevelt, the colonel said he had hoped he might exercise his rights as an American citizen to place his viewpoint before the people of the country in time of peace without giving up the privilege of serving his country as an Air Corps officer in the event of war.

"Mr. Roosevelt told the reporters last week that Colonel Lindbergh had not been called for active service because the Army had no place for Vallandighams. Vallandigham was a northern traitor in the Civil War. Mr. Roosevelt's remarks in stigmatizing Colonel Lindbergh as a traitor to his country must have been resented by all fair-minded people and by everybody who was not unbalanced by passions.

"No man of honor could submit to such reflections upon his loyalty and upon his character and, as Colonel Lindbergh said, he had no alternative. He was forced to resign, and the Air Corps having refused to take advantage of the services of America's most intelligent and best-informed aviator now loses him, at least for the duration of this precarious peace. It may be that Mr. Roosevelt has made it impossible for Colonel Lindbergh to serve his country as he desired, even in time of war.

"These are costly consequences to flow from intemperate and unjust remarks. Mr. Roosevelt's habit is to question the character of any citizen, no matter how devoted, who opposes his foreign policy. He endeavors to close debate by calling the opposition silly, uninformed, dishonorable, and treasonable. The country is at peace in theory, if not in fact. The rules of conduct which apply in wartime are not imperative now. It is, rather, imperative that there should be full and free discussion of issues before decisions are made.

"Colonel Lindbergh has the Congressional Medal of Honor. That is another reply to Mr. Roosevelt."

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. LAMBERTSON. Mr. Speaker, it's Woodrow Wilson Roosevelt. Mark ye well, mark ye well!

The Chief told our Governor that convoys were as out of date as muskets.

GUFFEY, the bachelor, wants the convoys. Senator, tell it to Mother's Day.

Franklin complains because Lindy does not chirp about democracy. Think of it.

We would rather fly with the "Lone Eagle," with his wings clipped, than with Maj. Alexander P. de Seversky.

"The people are too damn dumb to understand."—Hopkins. So we will call them patrols and not convoys.

Travel in the United States has been greatly increased in the past 2 years—one good thing to come out of their war.

Can 81 percent, according to Gallup, resist the 19 percent and the British? No other question is important. Unfortunately, it has resolved into a one-man decision.

I am not in favor of dissipating our strength in the defense of nations abroad. If we get into this war, our democracy will be lost in its aftermath.—O. P. May.

London issues exclusive report that our President will go on the air with an important message about the middle of May. Ten Downing Street ahead of 1600 Pennsylvania Avenue.

They have turned loose on the unsuspecting public a flood of warmongers who are endeavoring to whip up sentiment for joining the slaughter in Europe's eternal wars.

I am sorry Washington has felt so belligerent. We really never had reason for it and we now have no plan to enforce democracy. We are fast getting out on a limb.—George C. Adriance.

Rockefeller has come out for war. The Rothschilds have been for it from the beginning. The Du Ponts and all their in-laws are for it, too. Wars always make the rich richer and the poor deader.

Eire's Bases and Premier Churchill

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1941

STATEMENT BY WINSTON CHURCHILL

Mr. SHANLEY. Mr. Speaker, in all the discussion over the naval bases in Eire which are desired by the British Government there are some aspects of this matter which ought to be remembered in passing judgment.

The present most powerful of British personalities, Premier Winston Churchill, uttered thoughts on the whole subject in 1938, which are timely reminders of his foresight and his reasoning. At the time he was a member of Parliament and he spoke as such on May 5, 1938, when the Eire bill was up for disposition:

We are going away; we are giving up these ports, and giving to this other government the right as well as the power to forbid our reentry. You had the rights. You have ceded them. You hope in their place to have good will, strong enough to endure tribulation for your sake. Suppose you have it not. It will be no use saying, "Then we will retake the ports." You will have no right to do so. To violate Irish neutrality should it be decared at the moment of a great war may put you out of court in the opinion of the world and my vitiate the cause by which you may be involved in war. If ever we have to fight again we shall be fighting in the name of law, of respect for the rights of small countries—Belgium, for instance—and upon the basis and within the ambit of the Covenant of the League of Nations.

When we are proceeding, as we should be in such unhappy circumstances, upon the basis of law and equity, how could we justify ourselves if we began by violating the neutrality of what the world will regard, and what we are teaching the world to regard, as the independent Irish Republic? At the moment when the good will of the United States in matters of blockade and supply might be of the highest possible consequence, you might be forced to take violent action against all law and accepted usage, or alternatively you might be forced to sacrifice Ulster, or, in the third place, do without the use of these almost vitally important strategic ports. What is it all being done for? What are the new facts which have led to this sudden departure? To me, it is incomprehensible. To the world, to all the hungry aggressive nations, it will be taken as another sign that Britain has only to be pressed and worried long enough, and hard enough, for her to give way. If that is so, by that very fact you will bring the possibility of war nearer and you will lessen your resources for dealing with that danger. You are inviting demands from every quarter. You are casting away real and important means of security and survival for vain shadows and for ease.

Why the Overton Formula Should Be Adopted

EXTENSION OF REMARKS

OF

HON. JOHN F. HUNTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

OPINIONS OF PROF. AL PHILIP KANE OF THE GEORGETOWN LAW SCHOOL

Mr. HUNTER. Mr. Speaker, whatever else might concern us if the matter of the fiscal relations between the Governments of the United States and the District of Columbia were less bound together, the

only question that merits our consideration at this time is whether the House of Representatives should now express its approval of the principle embodied in the so-called Overton fiscal formula.

I put this question to Prof. Al Philip Kane, of the Georgetown Law School. His answer is as follows:

Yes; and in order to determine what the House should do in this matter it is necessary to answer these questions:

1. Does the United States owe an obligation to defray any part of the expense of maintaining the District of Columbia?

2. If so, does the Overton formula provide a fair, equitable, and acceptable plan for the discharge of that obligation?

These questions will be answered in the order in which they were posed.

THE UNITED STATES DOES OWE AN OBLIGATION TO DEFRAY PART OF THE EXPENSES OF MAINTAINING THE DISTRICT OF COLUMBIA

True it is that if the city of Washington had been established on the banks of the Susquehanna, as many of the Members of the First Congress contended it should be, and not on the shores of the Potomac, as it actually was, the area now comprising the District of Columbia would probably still be a rural appendage of the Maryland town of Georgetown and a county neighbor of the Virginia city of Alexandria. Certain it is that the Congress of the United States would not be concerned with its local problems of administration and revenue.

We must start, then, with an admission that the city of Washington is what it is primarily, if not exclusively, because of the presence here of the Federal Government. In that Government the city found its genesis; from that Government it received its form and substance; by that Government its growth and development were directed; and upon that Government its very existence depends, for if the Government should suddenly decide to sacrifice its investments here and to move its headquarters to another location the city would quickly become a town of empty buildings and of hollow values.

At the same time, however, we must remember that the Federal Government could not have been and would not be what it is now had it not been for the sanctuary which the District of Columbia (be it Susquehanna or Potomac) provided for it. The constitutional provision for the establishment of a Federal district wherein Congress was to have exclusive legislative jurisdiction was not inserted in our supreme charter by accident or because of a special prescience on the part of the founding fathers. It was placed there for the very practical reason that local politics had egregiously interfered with the operation of the Continental Government and destroyed in large measure the effectiveness of the Articles of Confederation. The draftsmen of the Constitution had learned by a very enlightening experience that the central government had to be free of local prejudices and local politics.

The only hope of salvation for the developing nation appeared to be the establishment of its home in virgin territory where everything would be subject to its control and subordinate to its interests. This expedient was adopted. Fortunately, it worked well. Both city and Nation prospered; and today we have a beautiful and expansive municipality housing a tremendous governmental machine.

Consequently it is ridiculous to talk of determining the amount of the Federal Government's contribution to the expenses of the District of Columbia in terms of a comparison between assessed values of publicly as compared with privately owned real estate, because in the final analysis substantially all property values in the District are dependent upon the presence here of the Federal Government.

It is nevertheless true that the Federal Government and the District government are not two distinct entities but are mutually complementary organisms comprising one single body. One could not be what it is without the other. One gives of its substance to the other. Each is but a different phase of the other. When the Commissioners of the District of Columbia perform a governmental function they are acting not by virtue of any inherent powers of sovereignty, but merely as agents of the Federal Congress assisting the Congress in the discharge of the duty imposed upon Congress by the Constitution to furnish an adequate and satisfactory system of government for the District of Columbia.

At the risk of being charged with being guilty of oversimplification we may bluntly state the principles controlling the responsibility of the Federal Government in these few sentences:

1. The Federal Constitution confers upon Congress the exclusive right to legislate for the District of Columbia.

2. This has been interpreted as giving the Federal Government the right of complete governmental control over the District.

3. Where there is a right of government conferred, the law imposes a correlative duty.

4. This duty is an important one because the welfare, the independence, and the integrity of the National Government are dependent upon it to an extent not ordinarily realized by the citizens or comprehended by Congress.

5. The duty imposed on Congress in this instance (and one which it cannot conscientiously shirk) is the duty to provide for the District an adequate system of government which, if it is to have the slightest relationship to democratic forms, must be based upon principles which are fair and equitable to the Federal Government and the rest of the Nation, and fair also to the people who reside in the District.

6. This means that the Nation should not be gouged for the benefit of the District, and that the people of the District should not be expected to bear an unreasonable tax burden for the benefit of the rest of the Nation.

7. Evidence produced by various agents of Congress and of the Federal Government has been introduced before this and earlier Congresses showing that the people of the District of Columbia are now bearing a tax burden which is at least average for cities of comparable size. Accordingly, it may be said that they are bearing a fair and reasonable tax burden.

8. Evidence prepared by the Acting Auditor of the District has been introduced before subcommittees of the House and Senate within recent weeks which shows that even though this tax burden be borne (as it is, cheerfully) there still must be a deficit if the city is to be properly managed and improved considering its position as the Capital of the Nation and the model city of the world.

9. The minimum responsibility of the Federal Congress in the premises cannot be less than a duty to supply the difference between the reasonable cost of furnishing an adequate system of government for the District and the amount which will be yielded by the people of the District in the discharge of their reasonably adapted tax burden.

Some Members of Congress have expressed difficulty in understanding why the Federal Government should "contribute" to the expenses of the District of Columbia. The use of the word "contribute" is indicative of a failure to understand the relationships between the two governments as developed in the foregoing propositions. The District does not grovel or snivel, Lazarus like, at the Federal trough. It does not ask for a largess or a donation. It merely tells the Federal Congress that it is doing its part of the mutual job and reminds the Congress of its own obligation to do the rest.

It thus appears that the fiscal problem is not what the District wants Congress to do but what ought to be done by Congress if it is to discharge its constitutional obligation. The primary responsibility is not on the District but on Congress to furnish good government for the District. From this it should follow clearly and without doubt that the annual establishment of a lump-sum "contribution" having no relation to the practical necessities of the case and having no direct relation to the difference between the reasonable cost of government and the reasonable tax yield in the District does not amount to a proper discharge by Congress of what it should do under its constitutional grant of power and responsibility.

Elsewhere the particular inequities of the present system have been elaborated upon and developed. The validity of many of the criticisms of the present situation cannot be gainsaid. Washington does have to maintain a clearer city, with wider streets and better bridges. It does have to furnish fire and police protection for tremendous Federal investments. It is required to have a much more extensive system of parks than other cities of comparable size; and it is true that, while there was an increase of only 12 percent in the assessed value of all real estate located in the District during the period 1930–38, the value of tax-exempt property owned by the Federal Government increased 35 percent during the same period, thereby indicating that there is a constantly diminishing amount of taxable property which must bear the burden of the cost of government, which is constantly increasing, thereby increasing the tax burden of the individual property owner and particularly of that rare bird, the individual who has his domicile in the District of Columbia. It is true that the Federal Government buys park property (thereby taking it off the tax rolls), takes the title in its name, and requires the District to reimburse it for the purchase price. It is true that the District pays to maintain the Zoo and the National Park and Planning Commission and other purely national enterprises. The instances could be multiplied over and over again, but the multiplication of such arguments merely provokes controversy and renders impossible a dispassionate study of the situation.

The stark reality of the matter is simply that Congress has the upper hand and that, if it wishes to disregard what it ought to do in favor of what it is willing to do, the people of the District of Columbia are completely at its mercy. Congress has the power of a Hitler or a Stalin as far as District taxes or finances may be concerned. It can exempt from taxes whomever it pleases. It can make the taxes as high or as low as it pleases. It can raise the Budget or lower it and add new items, whether needed or not and whether desired by the District people or distasteful to them. The Congress can either discharge its duty or abdicate its responsibilities when it has a duty to act. It becomes in this case a tyrant because of its lethargy.

We therefore waste time when we select particular instances of inequity. Inequities must exist if the fiscal relationship is not sufficiently flexible to meet changing conditions, for the simple reason that the governmental necessities of the Federal and District Governments do not expand and contract on any fixed or direct ratio either absolutely or in relation to each other. Therefore it is only by introducing a principle which permits some flexibility that the inequities can be eliminated or even reduced.

The poignancy of our problem is brought out by a simple illustration. The current defense program involves an expansion of governmental activity. It requires a sudden growth of the District of Columbia. It necessitates the extension of water and sewer facilities into hitherto undeveloped portions of the District. It probably involves an expansion of the Surveyor's office, the Building

Inspector's office, and other branches of the District government. Finally, it demands an increase in school, recreational, and hospital facilities. Where is the District to obtain the funds to finance these improvements? The only possible sources are taxation and the Federal Government. Ultimately, the District may be better off, because the capital expenditures are made, but the immediate beneficiary of the expenditures is the Federal Government. The needs of the Federal Government have created the needs of the District. Today's needs of the District for schools, playgrounds, and hospitals are not those of an independent, self-sufficient community but of an important and necessary adjunct of the Federal Government.

The Federal Government should realize that the District is not a poor relation which must be accepted and condoned, but is its own good right arm. It is hampering its own activities when it fails to provide flexibility in the fiscal relationship between itself and the District.

In the light of the foregoing example, it is interesting to observe that the Acting Auditor of the District testified at a joint hearing of subcommittees of the House and Senate District Committees on March 6, 1941, to this effect:

"It is evident that the maintenance and operating cost of the District government is increasing at the rate of approximately $700,000 annually, and that the funds available for capital improvements are decreasing," and brought his testimony to a close with this language:

"The conclusion is that since it apparently is not possible to curtail the maintenance and operating cost of the District, capital improvements will decline unless additional revenue is produced or some formula adopted which would result in larger Federal payments toward the expenses of the District government."

DOES THE OVERTON FORMULA PRESENT A FAIR AND EQUITABLE PLAN FOR THE DISCHARGE OF THE CONGRESSIONAL DUTY?

I think that there has been no better statement of what the relationship should be between District and Federal Governments than that contained in the report of the joint congressional committee of 1915 (Senate Document No. 247, 64th Cong., 1st sess.), namely:

"Nothing is clearer to us than it never was the intent that this District should bear all the extraordinary burden of expense incident to its plan and occupancy as a national city. * * *

"Our unanimous conclusion is that the rate of taxation in the District should be fixed and certain; that the Congress should pursue a definite policy of regular and liberal appropriation, having in view not only the permanent moral and physical advantages of the city but also its preeminent beauty and grandeur as the municipal expression of the Nation's home and its people's pride."

I do not see how it is possible to set an accurate appraisal on the services which the District performs for the Federal Government or on those which the Federal Government performs for the District. It is physically impossible to appraise the value of the real estate occupied by the Federal Government for the simple reason that the property has no value to anyone else and no value at all (at least in the aggregate) unless the Government occupies it. You cannot set a value on a man's heart apart from the man, because he cannot function without it.

If this matter were purely academic, it could seriously be disputed whether it is within the realm of human capability to devise a formula for Federal participation which could be proven by mathematical calculations to be a fair and reasonable one. I should certainly be distrustful of a formula which claimed such virtues on the ground that it would be a moral impossibility to include mathematical rigidity and fairness and equity in the same general concept. At best, any formula must be merely a rough approximation.

The Overton formula places Federal participation in the annual expenses of the District on a percentage basis, the percentage to be used for a given year by taking the ratio that the land owned by the United States Government (less certain excluded types) bears to the total landed area in the District. For the current year, that would place Federal financial responsibility at 21 percent of total expense of maintaining the District government.

I must confess that at first this seemed to me to represent a rather niggardly participation, although it calls for an increase from the 13-percent participation provided by the present lump-sum appropriation. Accordingly, if I were disposed to oppose the formula, it would be on the ground that it did not make a sufficient provision. Having studied the District finances and having seen the Federal appropriation reduced first from 50 percent to 40 percent of the total and then reduced to the crumbs-from-the-table plan of lump-sum allotment, I was distinctly afraid that it was just a slight palliative for a slightly aroused congressional conscience. I must admit, however, that this feeling was based on intuition and sentiment rather than on any cold logic.

After giving the matter much thought, I believe that the Overton formula is at least worth testing in the crucible of experience. Neither government can afford to permit the disgraceful annual quibbling over the amount of the Federal participation to continue indefinitely. Neither government can afford to have a system so complicated established that it would bring all the horrors and headaches of *Smythe* v. *Ames* over into the field of government. Establishing a formula on the basis of real-estate values is impracticable. Increasing the tax burden is impracticable, especially in view of situation respecting domicile in the District. A fair distribution of personal-tax burdens in the District of Columbia is virtually impossible in the light of recent decisions of the United States Court of Appeals for the District, holding that a person who has lived in the District upward of 20 years continuously and who has no dwelling place elsewhere is nevertheless not domiciled in the District. The Overton formula has the virtues of simplicity and ease of application. It rests on a basis of reasonableness. It is apparently acceptable to the Commissioners of the District. It is superior to any other plan as yet proposed.

I believe that it should be adopted.

Pan American Studies—Gauld on Brazil

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

ARTICLE BY CHARLES ANDERSON GAULD

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks, I submit for the RECORD an article on Brazil by Charles Anderson Gauld, in the April 1941 issue of the Journal of Geography. Mr. Gauld is a specialist on Brazil and Spanish America at the Library of Congress. He joined the staff of our national library in 1938 after 7 years of study at the three leading universities of the Pacific coast, including the State University of Washington in Seattle. Mr. Gauld is a member of the Descendants of the American Revolution, a progressive group whose ideals differ as much from those of the conservative Daughters of the American Revolution as the aims of the tories did from those of the founding fathers.

Mr. Gauld's grandfather was the late Gen. T. M. Anderson, noted military figure in the State of Washington, for whom Mount Anderson in Olympic National Park was named. He is a kinsman of the Honorable R. C. Anderson, first American Minister to Colombia, who was named United States delegate to the first Pan American Conference, called by Simón Bolívar. Anderson's death in 1826 while en route to Panama prevented our being represented at that historic gathering, prophetic of the many inter-American conferences since, and of the efforts to attain hemisphere unity for democracy and defense against reactionary European imperialism.

Recently Mr. Gauld has written a number of articles on Latin America, emphasizing the significant cultural and economic contributions throughout this hemisphere of the Negro, and the strategic importance of the No. 2 nation of the Americas—Brazil. Both the Negro and Brazil have received too little consideration in the United States, even with the recent increase in interest in Hispanic American culture and solidarity for the development and defense of the New World. There is also a need to stress the importance of the participation of labor in pan Americanism to make it a democratic people's movement. If good-neighborism remains the property of officials and of big business, it will fail.

The article follows. It gives factual background data on much of the ground I covered in my two speeches on Brazil in the Appendix of the CONGRESSIONAL RECORD, pages A1171 and A1916.

[From the Journal of Geography for April 1941]

BRAZIL TAKES A CENSUS

(By Charles A. Gauld, Library of Congress, Washington, D. C.)

Brazil took its fifth general census in the fall of 1940. Our greatest New World neighbor skipped the count scheduled for 1930, the year of the revolution in which Getulio Vargas and his cowboys from the southernmost state of Rio Grande do Sul swept into Rio and national power. The last census was in 1920, when Brazil had about 30,000,000 inhabitants.

Some 45,000 enumerators in Brazil's 3,300,000 square miles will count an amazingly diverse population of possibly 43,000,000 people. So isolated are some villages of the far interior grasslands and mountains and the Amazon jungle, that it will take weeks for the returns to reach Rio. Many Indian settlements on the smaller tributaries of the Amazon, over 2,000 miles from the Atlantic, can be reached only by launch and canoe. Some of the naked Indians of the innermost jungle, in the heart of the South American Continent, have scarcely seen a white man since the collapse of the wild rubber boom 25 years ago. Occasionally census enumerators may have run grave risk of fever, accident, and even harm by Indians who were victimized and enslaved by rubber seekers 30 years ago. As during many periods of United States history, the Indian found

only disease and death at the hands of the white man. Scattered through 2,000,000 square miles of hills, grasslands, and tropical rain forests, mostly along lonely rivers, are the remaining pure Indians of Brazil. They were not counted in the censuses of 1872, 1890, 1900, and 1920. No one knows how many there are, but they are usually estimated as well under a million. It remains to be seen how many will be counted in this census.

THE CENSUS TASK

For weeks the returns will pour into Rio de Janeiro from enumerators who have visited homes in all the different sections of Brazil. Earliest probably will be the returns of cosmopolitan Rio. Past censuses have all dealt more fully with Rio as the national showplace and capital, than with any other part of Brazil. Next may come the returns from the prosperous industrial and agricultural states nearest Rio in south Brazil. There are the States of Rio de Janeiro and Espirito Santo with their light industries and sugar and coffee plantations. Just inland from them is Minas Gerais, one of the world's great mining areas. The census will show Minas Gerais to resemble Texas and California in size and diversity. With doubtless over 7,400,000 inhabitants, it is Brazil's first state in population and its second in coffee, manufacturing, and nearly everything else.

In the far south are Paraná, Santa Catarina, and the gaucho State, Rio Grande do Sul. From this State of pampas and fine herds of cattle comes President Vargas, since 1930 the strong man of Brazil. Most impressive of all will be the statistics from the State and city of São Paulo, the heart of south Brazil and of the nation. São Paulo is the richest and most dynamic of Brazil's 20 states, producing a greater proportion of Federal Government revenue than any other half-dozen states. São Paulo city, the country's business capital, is often called "the Los Angeles of South America." These southern States are in the Temperate Zone with cattle, agriculture, and industrialization like parts of our South and Midwest. They alone are connected with Rio by both rail and steamship lines, federally owned.

NORTH BRAZIL

Slower to be enumerated may be the north and northeast of Brazil. The northeast has a densely populated coastal plain, for centuries characterized by big sugar and tobacco plantations, run by the labor of millions of Negroes. Its historic ports are noted for colonial churches and old buildings. Here the Dutch for a few decades seized and profitably ran an enormous sugar plantation colony until driven out in 1654. Nieuw Amsterdam was then but a village. From the bulge of Brazil that juts out toward Africa into the South Atlantic to the Amazon jungles are the part-Indian states of north Brazil. Their capitals are all seaports, several of which France tried to seize, along with the mouth of the Amazon, at the very time she was settling New Orleans. Needless to say, if either Holland or France had succeeded in holding tropical northern Brazil, the census would have a very different task.

The hilly interior is isolated and retarded, suffering in large areas from droughts and a lack of rail and motor roads. Its cattle, cotton, and tropical products give northern Brazil little wealth and commerce for the census to record. Industries and big cities are few in this least-favored region, over whose sun-baked towns fly the planes of the rival airways of Germany and the United States.

SOUTH BRAZIL DOMINANT

The census data will show indirectly that Rio, Porto Alegre, and São Paulo and the industrialized states of southern Brazil control the nation's economic life and destiny. In this region comparable to our Northeast, are most of the banks, cultural institutions, factories, and major cities. To them have migrated many Europeans and generations of young Brazilians in search of careers, just as young Americans seek opportunity in our National Capital and chief cities.

COMPARISON WITH UNITED STATES

The 45 questions asked of individuals and families resemble those in our census and will bring out certain interesting social and economic differences between the American and Brazilian peoples. When the returns of both censuses are analyzed, it will be clear that Brazil and the United States are several decades apart in economic development and the resulting social effects.

For example, Brazil has the population and level of industrialization of the United States 90 years ago. Most Brazilians live in rural communities, raise large families, and have poor transportation facilities except by water—just like North Americans in 1850. Brazil in 1940, however, has far fewer foreign-born than this country in 1850 or 1940, because Brazil received in the past century but 4,600,000 immigrants. This is only a small fraction of the immigration to the United States. As a result of war and starvation and chaos in Europe during the next decade, Brazil's 1950 census, if not interrupted by internal troubles of its own, may record the presence of a considerable number of new immigrants. People are badly needed to populate its largely empty interior and as additions to its small class of educated and skilled farmers and workers.

RACE MIXTURE

Brazil's census will differ from ours in one interesting respect, namely race. We are overly-precise in listing all non-Caucasions as such, even to the point of labeling as Indian or Negro those who are three-quarters white. Brazil lacks this Anglo-Saxon preoccupation with race, having inherited Portugal's tolerance in race relations. As a result of 4 centuries of mixture of Portuguese colonists with Indians, Negroes, and those of mixed blood, Brazil is the world's most unusual melting pot.

Brazil's census is not expected to show race mixture very clearly, any more than the previous ones. (Vera Kelsey's "Seven Keys to Brazil," 1940, which is excellent on race mixture, says that since the creation of the republic in 1889, mention of race has been avoided in Brazilian censuses largely in deference to the former slaves, the last of whom were freed without bloodshed or bitterness in 1888.) Several million of the estimated 43,000,000 Brazilians who are partly Indian or in part Negro may be listed as Caucasian.

Why not? In the first place, the officials would have too much difficulty specifying and determining complex combinations of Indian, Caucasian, and Negro blood. Furthermore, few educated Brazilians, knowing our prejudices, care to publicize details of large-scale miscegenation, about which they feel some embarrassment. They realize that their country may have only about 14,000,000 whites, or a third of the population. Most of the whites live in dominant South Brazil.

Contrastingly, there are possibly 16,000,000 Brazilians with a noticeable amount of Negro blood, amounting to, roughly, 40 percent of the nation. We have some 13,000,000 Negroes and mulattoes, who form only 10 percent of our 130,000,000. In Brazil the most numerous group is the mulattoes and persons of three-way mixture. There are many nearly pure Negroes in northeastern Brazil, which is the Black Belt. It is a great plantation area, racially and culturally comparable to our Black Belt of the deep South, but with fewer whites. Gilberto Freyre, the eminent authority on northeastern Brazil, feels there are practically no Negroes there without some admixture of Indian or white blood.

COMPARISONS WITH SPANISH AMERICA

In northern Brazil, between the bulge and the Amazon Valley, are most of the possibly 6,000,000 persons of mixed Indian and white descent. The few pure Indians are numerically unimportant. The Indian forms a far greater element in the total blood stream of Brazil than in North America, but a lesser amount than in most Spanish-American countries except Uruguay and Argentina.

Brazil, unlike Mexico, Central America, and the Andean nations, is definitely not an Indian-and-mestizo nation. Racially it more closely resembles the Caribbean Islands, where Negro blood has for centuries been prominent or predominant. In Cuba, the Dominican Republic, Haiti, and Puerto Rico there is almost no Indian blood, as the Indian died off before 1550 and the hardier Negro appeared as the plantation laborer. The 1940 census will not be very helpful in understanding Brazil's racial composition, but out of these diverse elements Brazil is fusing a new race under the tropical sun—tolerant, talented, and richly endowed with the things of the spirit.

WHITES IN BRAZIL

More accurate in the census will be the information obtained on the national origins of white Brazilians. Heads of families, their wives, and any living grandparents will be asked the country of origin of themselves and their parents. This may somewhat alter the writer's table of estimates based on five years of reading:

Portuguese descent	5,500,000
Italian or half Italian	3,800,000
German or half German	1,100,000
Spanish, Slavic, Syrian, etc	3,600,000
Estimated total	14,000,000

It will be noted that most white Brazilians are descendants of immigrants from fascistic countries. Many of these Brazilians have relatives living under totalitarianism. They form the dominant element in Brazil, whereas we in the United States like to think we are farther removed from European ties and influences.

An examination is now in order of the possibly 14,000,000 whites in Brazil whose national origins the census will disclose.

As Brazil's mother country, little Portugal has sent it the most settlers from Europe. Indeed, for years Portugal's chief export was peasants. Its kindly and pleasant people have gone to Brazil in a steady stream for four centuries. Most left Portugal pious and illiterate and with little or no capital to invest. Today they have no powerful fatherland behind them. Many in Brazil became rich, educated, and progressive. A great number have through hard work risen to the middle class. But others of Portugal's immigrants live in nearly the same poverty and ignorance and on the same bad diet of manioc meal, rice, and beans as the millions of Brazilian peasants and townspeople of mixed race. In general, the five or six million Brazilians of pure Portuguese ancestry have a love of culture, a zest for life, notable talents in music and literature, and exceptional freedom from race prejudice.

Since Brazil became independent of Portugal in 1822, however, Italy has contributed even more peasants to Brazil than has Portugal. In many years toward the end of last century, the number of Italians arriving in southern Brazil was several times as great as the total of all other colonists. Like the Portuguese, most of the Italians came poor and illiterate from a backward homeland. They have readily merged with the predominant population of Portuguese descent in south Brazil.

The German migration, chiefly via Hamburg, was small but steady. For a century Germans have been gradually expanding in numbers and influence in Brazil's important southern cities and agricultural zones. Many German-speaking Brazilians originated in Austria-Hungary and in eastern Europe's Lutheran colonies of Germans. Most have tended to retain their language and customs, and their farming and business ability. Some

non-German Brazilians have intermarried or sent their children to German schools, influential in a land of over 70 percent illiteracy. There may be somewhat over a million German-Brazilians, but there are nearly four times as many of Italian or part-Italian ancestry. Both groups have made significant contributions to Brazil's development. The German-Brazilians have been the more successful in diversified farming and trade, and because of their education and better health they are more prosperous than the masses of mixed blood in northern Brazil. (For the same reasons, German-Brazilians are important from a military viewpoint. Most Brazilians dread a Nazi victory.)

In recent decades several thousand Japanese have gone annually to Brazil. Like our capable Japanese-Americans in Hawaii and California, they are fine truck farmers and shopkeepers. Most live in rich São Paulo State. There are fewer than 270,000 in all Brazil. Interestingly, they are generally from Kyushu, the isle of Japan most visited by Portuguese merchants and missionaries in the sixteenth century, when Brazil was in its infancy as but one among Portugal's many colonies, for its brief empire was the first on which the sun never set.

Some Brazilians dislike their Japanese fellow citizens, despite the fact that thousands of them are good Brazilians, adopting the language, customs, and Christianity. In fact, most of Brazil's citizens of Slavic, Italian, Syrian, and Teutonic origin have similarly adopted Brazilian culture, adding distinctive qualities to the national life of Brazil in the same way that our later immigrants have become Americanized, enriching life in the United States.

The census will show the distribution and blending in Brazil of the descendants of the 4,600,000 European colonists since independence. About 80 percent have been Latins from lands now Fascist. Some 2,500,000 went to São Paulo state alone, as it has been rapidly expanding since 1890. Over a million Italians went to this state. The census may show that they and their children comprise over 2,000,000 of the state's 6,500,000. Some of them are rich. The tallest building in Brazil, towering over São Paulo's busy downtown triangle, bears the Italian name Martinelli. Brazil's chief chain of factories is Italian-owned.

We North Americans may well look forward to the publication of the fifth Brazilian census. With the decline of France and Italy in the coming post-war chaos, Brazil may supersede them as the greatest land of Latin culture.

(Americans reading the census figures will think that São Paulo and other Brazilian cities are larger than they really are. This is because Brazil customarily gives the population, not just of the city limits, but of the city, all its suburbs, and the surrounding area of the "municipio," equivalent to a county here. Not realizing this, United States writers will perhaps continue to make the error of not allowing for this or pointing it out.)

A Democracy of Responsibility

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ADDRESS BY THE VICE PRESIDENT

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting address delivered by Hon. HENRY A. WALLACE, Vice President of the United States, before the New York Young Democratic Club, Inc., at the Astor Hotel, New York City, on April 30, 1941, on the subject, A Democracy of Responsibility.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to address the New York Young Democratic Club tonight. These are days when thoughts of country must come first. You will therefore pardon me, I hope, if the things I say are just as appropriate for all Americans as they are for young Democrats. It is wise for all of us in the United States to think about the ties which bind us closely together in one great Nation, regardless of creed, race, region, or political party. It is a bad time to think of the things which separate us.

Men and women under 40 years of age find themselves faced with unusually heavy trials and suffering. All the young people in the free democracies of the world are being tried as with fire to see if they are heroes or quitters; to see if they have the courage, the intelligence, and the vitality to maintain their freedom. Those of us who are over 40 years have the advantage of having been close enough to World War No. 1 to understand, as a result of our experience, the forces which are now moving to make the world such a hellish place. We know the forces which created nazi-ism. We are not surprised that the agents of Nazi Germany should take advantage of every opportunity to stir up conflict and confusion, so as to soften us in the United States for easy conquest, as they have softened and conquered other free nations.

Yes, it is difficult for those who are under 40 to realize the kind of world into which they have been born. They have suffered, because so many have been unable to find jobs. And in the case of those who found jobs there were many thousands who got wages so low that they thought they could not afford to get married.

Among those who had jobs at good salaries are many thousands in the military service today who were obliged to leave their homes to accept Army pay, which in many cases is only one-fifth or one-tenth that which they received in private life. It is easy for young folks to reach the conclusion that world events are discriminating against them.

Young people a generation ago approached World War No. 1 with an air of eagerness and excitement. War in those days still had wrapped around it much of the old-time atmosphere of romance and adventure. The young people today see things straighter. They know the present war, which only one nation wanted, and for which only one nation was prepared, and which only one nation really started, is a pure horror. It is like the nightmare of a deadly disease. It is horrible because it is an attack not only against the bodies of men but also against their minds. It is creeping across the world, moving in on one free nation after another, first by psychological poison, lies, corruption, and discord; then by the storm of fire and steel; and, finally, in the last stage, by the terror of slavery under the gestapo. The Nazis, by bluster and bluff, reinforced by hard work and enthusiasm, have spread their deadly power over most of Europe and Asia. Time is running short. Much as we hate the choice, the issue of slavery or war may be forced upon us as it has been forced on others.

As each one of us looks at the terror which is abroad in the world and sees the hurricane blowing our way, he asks, "What can I do to carry my share of the responsibility for the safety of our country?" For some the responsibility has been laid down by law. They are now in military training. They will defend the independence of the United States, if need be, on the field of battle. But the vast majority of the young people of this country will find their responsibility in other lines. Their job is to carry out their civilian duties, just like those of us who are older. If the civilians want to avoid either war or slavery, they must do one thing supremely well, and that is to produce to the limit, as quickly as possible, the guns, the planes, the ships, and all the other things that help produce planes, guns, and ships. Maximum production will strengthen those nations which are still fighting the Nazi horror overseas.

I am proud of the fact that in 1941 the United States will produce 22,000 defense planes, as compared with 4,500 in 1940—but this is not enough. I am proud that this year we are making a third more steel than last year—but this is not enough. Our growing production has put heart in all the free people of the world, and has brought hope to those who lie under the Nazi terror. But we have just begun to produce. We must put our backs into the job and make such a record as will convince the Nazi leaders that we mean real business and that we are not merely playing at production in a half-hearted sort of way. Young men, old men, managers, and workers—we are all in the same boat. Women have a very special part to play, because so much of the courage and endurance of the human race is theirs. They pushed us to victory in World War No. 1, and they can do it again.

The responsibility for work and still more work rests on every man and woman in defense industry. But work in itself is not all. On every citizen rests the responsibility for promoting the harmony, the unity of purpose, and the determination that will make for efficiency and success. Let me illustrate by speaking of the settlement of strikes.

You have heard of the delays that were caused by workers in the defense industries, and you have heard of the delays that were caused by corporations that dickered with the Government for weeks and months before they would sign a contract for defense production. You have heard demands that the Government crack down on labor and crack down on industry. But we in the United States believe that before we crack down on our fellow citizens we should have patience to listen to either workers or manufacturers who want to be heard. We have faith that the best efficiency in the long run comes from free and willing cooperation. But in time of great emergency like the present the people of the United States have the right to demand sincere and earnest effort from both labor and management to settle all differences among themselves or with the Government with promptness and good will. There is as great patriotism in working overtime to settle a defense contract or strike as in working overtime to rivet the wing of a fighting plane.

You can do a service to our country on the very front line of our defense by building good feeling, not only between management and labor, but also between Christian and Jew, between white and Negro, between Protestant and Catholic, and even between Democrats and Republicans.

The Nazis count more than anything else on getting us bogged down squabbling among ourselves. Your answer to the Nazi agents is to do your job in whatever position you may be. It is up to you to cement the brotherhood of freemen, that is the heart and soul of America. Whether you work through an organization or as an individual, it is your duty to work every day on this great job of strengthening our American brotherhood.

When I use the word "America," I am doing so in the big sense, the true sense, to indicate this whole hemisphere. Love of liberty and belief in the dignity of the human soul characterize the latin culture south of the Rio Grande just as truly as they do our own culture in the United States and Canada. The Latin Americans by nature hate the very

essence of nazi-ism, and they are eager to see us in the United States demonstrate in a truy big way our ability to produce enormously and speedily of those products which will insure peace or freedom to this hemisphere and the entire world. We cannot let our brothers to the south down.

We must develop with the greatest possible speed a democracy of responsibility capable of expressing itself in unprecedented production. If this does not come to pass, our political and economic democracy will go the way of last year's birds' nests.

And so I say to you: Keep yourself strong and healthy, both physically and mentally. It is going to be fashionable to be in good health. Get the necessary sleep, food, rest, and exercise so that you can work harder. If you read, listen to the radio, or go to the movies, do these things in such a way that you can work harder. Whether you are in the Army or in civilian defense, I want to say to you that the emergency is now sufficiently great so that your strength belongs to your country. If you use that strength to the utmost now to produce, you may be able to prevent either war or slavery from coming to this hemisphere.

When we win the war, as I am confident we can by producing to the limit, we shall be confronted with the problem of the peace. Twenty-five years ago we won the war and lost the peace, because we were not ready to do our part in fighting against human suffering and poverty. This time, as we take up the heavy burden of winning both the war and the peace, we must assume the responsibility of laying broad and deep the foundations of freedom, comradeship, good will, and mutual service, so that in the world to come there can be a permanent peace in which no nation can cause fear of aggression. Those who preach defeatism in this hour of world crisis are enemies of the human soul. Peace will come to the world, not as the result of bowing in slavery under the yoke of the Nazi terror, but as the result of freedom from nazi-ism and all it stands for. Long as it may take, we shall win our freedom from the threat of nazi-ism, and thereafter we shall build a peace that will endure.

Dedication of Woodrow Wilson Birthplace

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered yesterday by the President of the United States in dedicating the birthplace of Woodrow Wilson, at Staunton, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are meeting here today to dedicate a new shrine of freedom. By this action we are bearing true witness to the faith that is in us—a simple faith in the freedom of democracy in the world.

It is the kind of faith for which we have fought before—for the existence of which we are ever ready to fight again.

I can think of no more fitting place in all the land for Americans to pledge anew their faith in the democratic way of life than at the birthplace of Woodrow Wilson. In this quiet Presbyterian manse first saw the light of day one whose whole active life was dedicated to the cause of freedom, to the conquest of fear and to the liberation of the eternal spirit of man from every thraldom imposed by force.

Woodrow Wilson was fortunate in his birthplace and favored in his parentage and environment. This was a home of plain living and high thinking and wherever the family moved in the migrations incident to the religious calling of the father they carried with them ideals which put faith in spiritual values above every material consideration.

In the tragic conflict which the world witnesses today and which threatens everything we have most loved as a free people, we see more clearly than ever before the unyielding strength of things of the spirit. All of recorded history bears witness that the human race has made true advancement only as it has appreciated spiritual values. Those unhappy peoples who have placed their sole reliance on the sword have inevitably perished by the sword in the end.

Physical strength can never permanently withstand the impact of spiritual force.

Woodrow Wilson's whole career was a triumph of the spiritual over the sordid forces of brute strength. Under his leadership this country made great spiritual progress.

Of Woodrow Wilson this can be said: That in a time when world councils were dominated by material considerations of greed and gain and revenge he beheld the vision splendid. That selfish men could not share his vision of a world emancipated from the shackles of force, and the arbitrament of the sword in nowise detracts from its splendor. Rather does the indifference of hostile contemporaries enhance the beauty of the vision which he saw and enlarge the glory of the world he sought to rebuild.

He will be held in everlasting remembrance as a statesman who, when other men sought revenge and material gain, strove to bring nearer the day which should see the emancipation of conscience from power and the substitution of freedom for force in the government of the world.

It is good for America that this house in which Woodrow Wilson was born will be preserved for us and for many future generations. In this valley of Virginia it will remind America that his ideals of freedom were wide enough to support democracy in all the world. He taught that democracy could not survive in isolation. We applaud his judgment and his faith.

War and Peace

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

RADIO ADDRESS BY HON. HENRIK SHIPSTEAD, OF MINNESOTA

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio speech made by me on the question of war and peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, I am glad to have the opportunity to talk to you for a few minutes this evening on the question of war and peace.

Public officials in every country going to war say they go to war in the interest of peace. We have a terrific propaganda to get us to go into the World War which is now being fought. The program of getting us into the war has been carried on under a mask and slogan of keeping us out of war. That was the program before election, but since election you do not hear anything about "short of war."

Their propaganda for the lend-lease bill was based on the same claim. They said it was a bill to keep us out of war.

They have said they did not want convoys to convoy ships into the war zone, because that would mean war. Now they say they want convoys, even though it means war.

Now they are not talking about aid "short of war." Now they do not say that they are for peace. Now they do not say they are opposed to convoys. Now, when they have the legislation and the money, they are for war on the part of the United States, and now, over the radio and the news reels and in the newspapers, they complain that 85 percent of the American people do not understand them and do not agree with them about going to war.

They say they can't get this country into the war until the people understand and believe what they have been saying all the time. They say that the mind of the general public in the United States is so confused.

I ask you, can anyone wonder that the state of mind of the American people is in a state of confusion? Of course, the people's mind is confused because they believed these men were telling them the truth. The people made the mistake of believing what they were told both before election and after election. And these commentators and propagandists are disappointed because the people have intelligence enough to remember what they were told before election and what they were told after the election. But in view of what they are now told, they are beginning to suspect the honesty of these propagandists. Now they are beginning to understand they never intended to keep you people out of war.

First they succeeded in repealing the Neutrality Act. Then they kept the war issue out of the campaign by saying they would keep us out of war. Then they succeeded in passing the lend-lease bill.

Now, of course, they are more frank. They think the time now has come to shove you in.

It is not necessary for me to repeat the words they have said, because you all know they have said the things that I have intimated here, and far more. Some of the leaders now state openly to the public that they lied and that they had to lie in order to fool the people.

Mr. Herbert S. Agar, editor of the Courier-Journal, of Louisville, Ky., one of the most influential and persistent members and agents and lecturers of the committee called "All Aid to the Allies Short of War," spoke in Boston on March 13, on the occasion when an honorary degree was conferred upon him. What he said on that question is quoted, in part, in the New York Times of March 14; and I read from the quotation in that paper:

He said "that there had been too much lying by the supporters of the lend-lease bill in the United States Senate and in the press."

As one who had taken a leading part in supporting the bill, Mr. Agar said that he preferred Senator WHEELER's analysis of it.

He quoted Mr. Wheeler as denouncing the measure as "not a bill to keep America out of

war but a bill to enable the President to fight an undeclared war on Germany."

"That is precisely what it is," said Mr. Agar, "and if its defenders had defended it on those grounds, we would have won 2 weeks sooner.

"One side kept saying in the press and in the Senate that this lease-lend bill is a bill to keep America out of war. That's 'bunk.'"

And then he continues:

"And I think that failure to say except what a thing means is an illustration of why our democratic world is being threatened now."

Of course, democracy is breaking down when public officials and creators of public opinion lie to the people.

Mr. Agar is a very competent, well-known witness who has lectured not only in Minnesota but on many radio hook-ups and in many States for this committee organized to get us into the war under the published slogan "All aid short of war."

No one is in better position to know than Mr. Agar that his companions to get us into the war lied. He is too intelligent a man not to have known it all the time. Why didn't he state before election what he said on March 13? Why didn't he state it before the repeal of the Neutrality Act? Why didn't he state it before the passage of the lend-lease bill? Now he says that Senator WHEELER and other so-called isolationists' definition of the bill was right, when they said it was a "bill to get us into war."

Now, with all this background of prevarication, of bunkoing the people of America, they now complain that there is a lack of unity amongst the people for going to war. How can you expect unity of 130,000,000 people based on a foundation of deliberate deception—deception by organized minorities in control of avenues of information, like newspapers, radio, and the movies, and also deliberate deception by men in high public office who have sworn their loyalty to our Constitution and in so doing have taken an oath to confine their activities within the authority granted them in that supreme law of the land.

American unity and defense cannot be built on a foundation of broken promises undermining the faith of a great people.

Testimonial Dinner to Hon. Vincent Dailey

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ADDRESS BY HON. JAMES A. FARLEY

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable James A. Farley at a testimonial dinner given to Vincent Dailey by the New York Young Democratic Club, Inc., at the Hotel Astor, New York City, on April 30, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. FARLEY. May I at the outset extend my congratulations and my hearty approval of the program of the New York Young Democratic Club in selecting each year a notable Democrat of the Empire State to pay tribute to him and his achievements at a State-wide testimonial dinner. I was privileged to be an honor guest on a similar occasion. Governor Lehman, Attorney General Jackson, and other eminent New Yorkers have been recognized in a like manner.

I am happy indeed that the members of the Young Democratic Club have chosen my good friend Vincent Dailey as their honor guest of this year, and in recognition of the distinguished service he has performed for the party have made him the beneficiary of this delightful occasion. No man in the State of New York has contributed more generously of his time and efforts to advance the Democratic cause, and no man in our State has attained a more enviable record of successful accomplishment.

During the last 10 or 15 years it has been my privilege to appear at many testimonial dinners here and throughout the country. I have enjoyed them all very, very much, because they were dinners given as a tribute for close personal friends of mine in various fields of endeavor, friends for whom I have a very high regard. But I know of no dinner of this character that I have ever attended that gave me the same degree of pleasure as does my presence at this gathering for Vincent Dailey this evening.

The attendance here of so many men and women in this crowded ballroom is evidence of the fact that there are thousands who feel as I do, and if this hall were twice as large it would not be possible to accommodate the host of friends of Vincent Dailey who want to pay him the tribute he is entitled to receive for his services to the Democratic Party in the last 10 or 12 years.

I had never met Vincent until 1930, and during the campaign that year for the reelection of Governor Roosevelt, he was of material assistance to me in traveling through the State, giving me reports and advice on the conditions as he saw them. As far as I know, he had no political experience up to that time. But his reports indicated that he was a keen observer and the information that he submitted satisfied me that he was the type of man I wanted to have associated with me in my efforts in behalf of the Democratic Party in the State of New York. He has remained with me and the State committee down through the years.

He was one of my most responsible and confidential advisers in the famous 1932 convention in Chicago, and during the campaign that followed, he acted for me, directing the work of the Democratic State Committee while I was serving as national chairman. In the New York campaign that year and in the national campaign of 1936, he gave the same unqualified support and direction. In the campaign of last November, the campaign of 1940, he directed the activities of the Democratic State Committee in a manner that won for him, I am sure, the respect and confidence of many who up to that time had failed to fully realize his true worth and service to the party.

Vincent Dailey has been my right arm down through these never-to-be-forgotten years. He has a spirit of loyalty that knows no bounds, a characteristic that is recognized by everyone who comes in contact with him. He is an extremely frank person, a realist who states the facts as they are. The one quality I like to see, and which I appreciate more than any other in public or private life, is the attribute of telling the truth. That is a thing I like about Vincent Dailey. He will always tell you the truth, let the chips fall where they may.

Somewhere I recently read a characterization that reminded me of Vincent—he is always busy, yet never hurried; always pleasant, yet never effusive; always reserved, yet never disdainful. In short, he is a splendid representative of the party organization.

These are momentous days in the history of this Nation. We are all concerned about our country and its future, concerned because of our love and affection for it. We are jealous of its progress in the past and, of course, jealous of its preservation as a nation. It is, therefore, essential that we work together as a unit. Regardless of what differences we have or may have had, regardless of anything that may have happened in the past, it is our imperative duty as American citizens to give to the President of the United States and those who surround him our wholehearted support and cooperation in their tremendous responsibility. It is our fervent hope that God will guide them in their efforts.

We have gathered here this evening to honor a splendid American. We are Democrats in a partisan sense, but we are also democrats in the broader implication of the word and adhere with unwavering loyalty to the ideals of our Republic. In the days that are to come, there will be serious responsibility placed upon our party leaders, and we are fortunate to have men like Vincent Dailey in positions of trust and confidence.

In honoring him, the Young Democratic Club of New York has added laurels to its distinction. Knowing Vincent as I do, for he is my personal friend as well as my political associate, I am sure that he is overwhelmed, and if he had his way about it he would prefer to be sitting here and taking part in this demonstration for someone other than himself. The party will never be able to repay him for his loyal devotion to its cause, but I am sure that he derives full and complete compensation in being permitted to serve the party of his fatih and adoption.

May I in closing extend my heartiest congratulations to you, Vincent, and at the same time express the hope and sincere wish that you will be spared for many, many years so that we may continue to work together in the future as we have in the past to advance the cause of the party we love so much.

Taxation and Nondefense Spending

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

RADIO ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by me on the Washington Evening Star Forum, Monday, April 28, on the subject of the new tax bill, the necessity for curtailing nondefense spending and the obstacles to our preparedness program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this hour of national peril, what is the supreme obligation of an American citizen to his country—to this country that has given to generations of Americans in the past and, I pray God, will give to all future generations, more peace, more happiness, more contentment than have ever before been enjoyed by the citizens of any great nation. Our supreme obligation today is to prepare this country to be so invincible and so strong as to overwhelm any attack that may be made upon it, and at the same time to continue to give aid in greater and greater amount to Great Britain.

This is the job we have set our hands to do. It is a colossal task. Before it is successfully

accomplished, it will require the united sacrifice of a united people. And upon our success or failure depends not only the future security of free and democratic people everywhere, but also the future preservation of organized government as we know it and desire it.

As our financial contribution to this emergency, we here in the United States are immediately faced with truly gigantic public expenditures. Already $40,000,000,000 has been appropriated by your Congress for our own defense and for aid to England, and we continue to appropriate more and more as time goes on. As we authorize military expenditures in such colossal amounts, your Federal Government continues nondefense spending on the same extravagant standard as has characterized the New Deal spending policy of the past 8 years.

There is now before the Congress of the United States a new tax bill, in which you and all citizens of America have a greater interest than in any previous tax legislation, as this provides for the imposition of new and additional taxes such as the American people have never before experienced. The United States Treasury has asked for tax legislation to provide three and one-half billions in new tax collections. This is to be added to the existing tax levies, which are at present yielding $9,000,000,000 making a total levy of twelve and one-half billions to be paid by the American taxpayers to the Federal Government alone in the coming year.

TAX LEVY NEARLY DOUBLED

The magnitude of this tax levy is emphasized when we recall that this is nearly twice as much as were the peak tax collections for the last World War, when six and one-half billions were collected in 1920. Except in 1920, and the present fiscal year, this tax levy will be more than twice as much as any levy in any other yearly period of our history. But this is not by any means all that the taxpayers must pay in the form of taxes in the coming year. To this twelve and one-half billions of Federal taxes must be added $4,000,000,000 of State taxes and another five and one-half billions of local taxes. So next year, we, the American taxpayers, must pay our proportionate shares of tax bills aggregating $22,000,000,000. This is one-fourth of all the wages, the earnings of corporations, the dividends, royalties, rents, interest, and individual gross incomes of all of our citizens—one-fourth of all the elements of national income.

This $22,000,000,000 over-all tax bill means an average collection of nearly $200 in the coming year from every man, woman, and child in America. At this rate, the average family of four must pay $800 in taxes, after paying their own living expenses and other obligations.

To state it another way, this $22,000,000,000 annual tax levy is more than twice the total yearly value of all the products of agriculture, including the products of the forests and the products of the mines. That is to say, it is more than twice the value of all the new wealth that comes each year from the soil, under the ground and from the forests. And even with this staggering burden of taxation, your Federal Government in the next year will be able to pay only one-half of its probable expenditures. That is, for every dollar collected in taxes another dollar will be added to the public debt.

We all recognize that taxes in the main must come from productive business. The Government may confiscate the property of the wealthy and deplete all reserves of wealth, but this will pay only a fractional part of our present expenditures. In the final analysis, taxes will be paid, as the President once expressed it "out of the sweat and toil of every man who labors." That is to say, taxes mainly must be paid out of business transactions and operations, placing a burden directly upon every one who buys and every one who sells, either by direct or hidden taxes.

PRAISES MORGENTHAU STAND

I congratulate and commend Secretary Morgenthau for advocating this increase in taxation. In the situation that confronts us, it is imperative to increase the Federal revenue as a check to the evils of uncontrolled inflation and to avoid the possibility of an insolvent Government, burdened by debt beyond the ability of the people to finance.

The new taxes will be a grievous burden to bear. The heavy hand of Uncle Sam will reach into every home, into every business, into the pockets of every American who buys or sells. It will add to the cost of every one's living, but it is a sacrifice that we must make. While spending great sums for national defense, when employment and profits are increasing, this is the time to collect the taxes to pay in part for these emergency expenditures. When the war ends, it is not likely we can continue to pay huge taxes. In the intensity and excitement of these stirring days, never let us forget that when the present war is over, when the vast expenditures for military and defense preparations cease, every sign points to a world depression such as has never before been known, and the implications and far-reaching consequences of which are terrifying to contemplate. After the war, those in foreign nations who have bought our goods will be unable to do so, because of their impoverishment, and here in this country we will face tremendous unemployment, with a public over-all debt which will certainly reach $100,000,000,000, and maybe more.

In the support of this tax bill, for the first time since the administration adopted the policy of deficit spending and pump priming to promote business recovery, your Government and the administration are taking a realistic view of our financial condition. It would have been much better, I think, if there had been greater taxation during these past years of deficit spending, or, better still, if the spending had not been so great.

Under our democratic system of government, the only effective resistance to public spending is the imposition of taxes. We have on one hand groups of citizens demanding public spending. These demands can be held in moderation only by the protests of the taxpayers who must pay the bill. This is the usual process of our democracy. It is the system the American people followed since the beginning of our Republic until 8 years ago when we adopted the fallacy of trying to purchase prosperity with borrowed money. Tax-conscious citizens, alert and vigilant to public extravagance, provide one of the most effective balances inherent in our constitutional democracy. Under New Deal spending for the past 8 years, this protection has been inoperative, as the Government, instead of exacting taxation for current disbursements, at least in major part, consistently spent during this long period $2 for every dollar received from taxation, and thus has accumulated a public debt of great proportions. The result is that the average person in America has not been made conscious of unprecedented expenditures, as one-half of the expenditures were financed by the issuance of Federal bonds, and not from taxation.

RESPONSIBILITY ON CONGRESS

I have always confidently believed that if taxes had been levied currently to cover the expenditures of the vast sums for the past 8 years the protests of the taxpayers would have been so vehement and politically effective as to have prevented much of the waste and extravagance that have occurred. It has truly been said that "the power to tax is the power to destroy," and a great responsibility now rests upon the Congress to distribute and equalize this terrific burden of taxation so that the least possible injustice, hardship, and interruption to business will result.

While the Treasury does not estimate it as high, I confidently predict that in the coming fiscal year the Federal Government will spend a total of $25,000,000,000. In fact, the authorizations and appropriations already made are nearly twice that amount. Productive capacity is the only restriction on even greater expenditures. That is to say, the capacity of our manufacturing plants to produce war materials of every character and description—ships, tanks, airplanes, guns, and other military supplies.

The ominous events in recent weeks in Europe, happening with lightning rapidity, are acting as a spur and incentive to more immediate and greater military expenditures for our own defense and aid to England.

Roughly speaking, this $25,000,000,000 of expenditures for the next fiscal year will be divided as follows: First, eight billions of appropriations for so-called peacetime or nondefense spending. Second, perhaps as much as five billions will be spent for aid to Great Britain. The remainder will be spent for our own defense and the operation of our military establishments.

When you and I, in our private affairs, face the need of an unexpected and unprecedented expenditure, which is of such a vital character that our failure to provide the funds endangers those things near and dear to us—perhaps the very existence of our loved ones—we look around and reduce as we can our spending for those things less essential—those things we can very well do without, until the emergency that faces us is over. Your Federal Government is faced with such emergency, but is not doing this very obviously wise thing.

Even though you have heard to the contrary, your Federal Government is not decreasing its nondefense spending but is continuing to spend in the same reckless and extravagant way that has placed upon you the huge public debt which now constitutes a first mortgage on the property of every citizen of our Republic.

NO ACTUAL REDUCTION

The Budget submitted by the President to the Congress in January embodied no actual reduction in nondefense spending, although by changing the totals in classifications the impression was conveyed that such a reduction had been made. For example, the new Budget eliminated from nondefense spending the entire and complete cost of the operation of the Army and Navy. We have always had an Army and a Navy, and we always will. If the normal cost of the Army and Navy is restored to the Budget classifications as submitted by the President, you will find in the Budget estimates a decrease of only $59,000,000 in nondefense spending, as compared to last year. And even this estimated reduction, inconsequential as it is, has since been wiped out by deficiency appropriations, so that unless strong leadership develops and an aroused public opinion demands it, acting upon the Budget as submitted by the President, there will be no reduction in nondefense spending for the coming year. If increases made to the farm appropriations by the Senate over and above Budget estimates are finally enacted, your Federal Government will spend more for strictly nondefense spending than in any peace year in our history, excepting in 1936, when the soldiers' bonus was paid.

Our nondefense spending can and should be reduced by $1,000,000,000. You, the taxpayers, who are now being asked to make the sacrifice at the call of patriotism by paying greatly increased taxes, should demand that every extravagance, every unnecessary nondefense expenditure be eliminated, and that the savings thus realized be given to national defense.

Under the President's Budget, for example, $1,478,000,000, will be spent for unemployment relief during the next year; spent during a period when reemployment will soon reach a goal, as predicted by Chairman Knudsen in his testimony the other day, where "there will be no unemployment in this country next fall." Yet the Budget rec-

ommends nearly $1,500,000,000 for unemployment relief, which is four times as much as was spent for relief in 1933, the low ebb of the depression.

A year ago I proposed in the Senate a reduction of 10 percent in nondefense spending, including the salaries of Senators and Congressmen. It was defeated by a majority of two. We, the American taxpayers, cannot go on a strike. Our Government can force us to pay taxes assessed against us, or take over all our property and all that we have. But under our democratic processes of government your voice can and will be heard in Washington, if you demand of your Representatives and of your President that there be a reduction in all expenditures of a nondefense character; a reduction of at least $1,000,000,000, which I assure you can be accomplished by efficiency, by the elimination of duplicated agencies of government, by a reduction in the top-heavy and constantly growing Government personnel, and by the elimination of luxuries in government, and by curtailing some activities that can be spared at this time, without doing injury to those essential services which a government should perform for its people. To me it is inexcusable that in the face of these tremendous necessary defense expenditures, at a time when the call is being made to the American people to sacrifice by paying such taxes as have never been known in our history, we should continue to spend at Washington as much or more for nondefense spending and continue our free, easy, reckless spending.

REDUCTION IN BUDGET ASKED

It is not enough for the Secretary of the Treasury to oppose appropriations above the Budget. This is commendable, and for this he should be congratulated, but the Budget itself should be reduced. As that Budget was submitted to the Congress by the President, the President can revise his estimates to accomplish a substantial reduction in this nondefense spending. The mechanics of appropriations by Congress are not generally understood by the public. The only composite and coordinated statement of Federal expenditures comes from the President in the submission of his Budget recommendations to the Congress. Appropriation bills then come before Congress singly, one for each of the departments. Only the appropriation for each department is considered at one time. Budget reductions can be recommended in the light of the whole and applied where they best could be absorbed.

Let me say before I conclude that our program of national defense is not progressing in a way essential to guarantee our security. The country would be surprised to know how few modern military planes, how few heavy tanks, how few ships, how few big guns America has produced since the European war began 20 months ago, and how meager is the production of essential war equipment scheduled for the months ahead.

We may pass a dozen lease-lend bills, but the huge task this country has set its hand to cannot be accomplished without total sacrifice on the part of all of our citizens.

Those who pay taxes must sacrifice by paying heavier and heavier taxes. Industry and businessmen must make their contribution by devoting their industrial output, when necessary, to essential war equipment at the expense of their normal business. Then, too, we must have no war profiteers in this emergency. Our boys must sacrifice by training for military service. Those who labor must sacrifice by working longer hours on defense projects and not interrupt those hours by unnecessary strikes. We can tolerate no bottlenecks in our program of total preparedness.

We must first recognize that no nation has ever successfully accomplished military preparedness by working 40 hours a week. We have before us the tragic fate of France. France worked 40 hours a week, and Germany worked under her totalitarian government as much as 80 hours a week. The result was that France was overwhelmed by the most stupendous military machine and military equipment the world has ever known. In the face of the fall of France 3 months later, we reduced our workweek to 40 hours. Our industry is geared in the main to a 40-hour week with, of course, some exceptions; but even this short workweek is being interrupted by continuing new strikes in vital industries.

Labor has its proper privileges. I want justice done to every laboring man, but interruptions of work caused by bickerings and jealousies among unions should not be tolerated at the expense of the security of our Republic.

I believe in the right of labor to collective bargaining. I know the vast majority of American workmen are patriots to the heart and do not countenance the willful acts of a small minority; but for the good of America and for the credit of labor, defense strikes must be stopped and stopped quickly.

The Mediation Board appointed by the President has no power to act. It has no power even to investigate strikes unless a certification is first made by the Secretary of Labor. It is impotent to deal with any situation, no matter how grave, unless first requested to do so by the Secretary of Labor.

Recalling that the Secretary of Labor never found cause to disapprove sit-down strikes, is it reasonable to wonder whether the Dykstra board ever will be allowed to proceed to its proper functions?

In the meantime there is a tragic loss of time in giving aid to Great Britain—aid which the country is demanding, aid which the Congress of the United States has directed should be given in unstinted measure.

What Congress should do and must do quickly is to vest the Mediation Board with full power to investigate the strike situation throughout the country, to endeavor to prevent strikes before they occur, and then to give the Board authority to enforce its own decisions. Until this is done, we have only the hope of an aroused public opinion to prevent the continued strikes in vital defense industries, but this public opinion, although now aroused throughout the length and breadth of America, has been impotent to force those who are responsible for the strikes to abandon their purpose and work for the common good of our Republic. And I say this with equal reference to industry and to labor, whichever may be responsible for this tragic delay in our preparedness program.

FORGETTING POLITICS URGED

It is a farce that in this time of national peril a board should be created without power even to investigate unless some other agency of the Government first allows it to do so, and then, even after such certification is made, the new Board has no power to enforce its own decisions except that of persuasion, which has already been tried and failed.

Political considerations should today be forgotten; all authorities should act with promptness and courage to meet this menace which has arisen to our security and welfare. This is no time to hide behind the cloak of a public act which the people of America are told is designed to accomplish a given purpose, and then refuse to give the agency created the power and authority to accomplish that purpose.

Tonight the Nation stands on the verge of a tie-up of all business, due to the bituminous-coal strike called by John L. Lewis. This strike has existed for 28 days, and during that 28 days coal production to the amount of nearly 50,000,000 tons has been lost. All coal reserves are nearly exhausted, and all industry faces a shut-down.

Madam Perkins, the Secretary of Labor, did not certify this strike to the Mediation Board until 23 days after the strike began, and during this period bitterness and disagreement rose which made the task of the Mediation Board doubly difficult so that no progress in settlement of the strike has been made.

Is John L. Lewis bigger than the Secretary of Labor? He may be, but he is not bigger than the Government of the United States in this hour of national peril. Before this emergency is over I predict that the American people will not tolerate any man or group of men, whether it be a powerful labor leader or a powerful industrial magnate, to stand as an obstacle to the essential work of our national preparedness. Unless these obstacles to our preparedness program are removed by those in authority, in some way, somehow, the American people will do what is imperative under our democratic form of government to clear the path for such quick and expeditious action as will best protect our country in this hour of national peril.

STRIKE COMPROMISES ASSAILED

For weeks and months our Government has compromised with the strike situation in defense industries, with the result that the menace to national security continues and grows. A National Mediation Board is appointed with no power to act or even to investigate until Miss Perkins gives permission, and then it has no power to enforce its own decisions. Madam Perkins, as Secretary of Labor, has shown such ineptness and inefficiency as to add greatly to the general confusion. It is time for stern and firm action, and for someone to speak in all the majesty of the Government of the United States of America in this hour of great national crisis. It is as futile as it is absurd to continue to talk about giving greater and quicker aid to Great Britain unless we are willing to do the things to produce quickly the military equipment Britain so urgently needs.

The one man who can speak for the American people is Franklin D. Roosevelt, our President. All he would have to say is that strikes in defense industries must stop at once; that we cannot longer tolerate any interruptions in our own defense and our aid to Great Britain either from capital or labor. Such an announcement would receive an overwhelming public acclaim. The President would unite America as we must be united if we are to do our part.

In millions of homes tonight in conquered democracies in foreign lands bitter regrets and self-recriminations fill the hearts of people who were once free and are now slaves because they did not recognize their dangers; because they were unwilling to change their accustomed mode of living; because they would not give up their luxuries; because they preferred the soft and easy life to that of sacrifice and self-control. Can we here in free America give tangible demonstration that a democracy can be efficient and effective; that a democracy can be strong and hard if need be; that a democracy can act firmly, wisely, and expeditiously? I pray God we can.

Credit Unions Aid National Defense

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

RADIO ADDRESS BY HON JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the

RECORD an address on the subject Credit Unions Aid National Defense, delivered by me over station WOL at Washington, D. C., on May 1, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thirty-two years ago a new institution was born on American soil. It was a humble and experimental institution. It was intended to be operated by common working people for their own benefit, and its plan was simple. It was based on the idea that working people could do more for themselves by putting their spare earnings together than by using them separately. With everyone in a given group putting aside just a little from his weekly pay, a common fund would soon be built up from which anyone in the group could borrow when he needed money.

Thus the participants in the plan were stimulated to save more steadily, and, at the same time, they freed themselves from the usurer and the loan shark when they had to make a loan.

The new institution took the name "credit union." It received legal status through special State laws, first in Massachusetts and then some years later in my own State of New York and elsewhere. Eventually all but six States passed such laws. Seven years ago Congress provided for Federal chartering of credit unions and thus put the stamp of Federal approval on the plan.

For awhile after they were started back in 1909, credit unions spread slowly. Then it gradually dawned on the working people of America that this was just what they had been looking for. One section after another saw credit unions take root and flourish. Churches endorsed them and set up credit unions of their own. The Post Office Department formed 300 credit unions for its employees. Teachers found the plan an excellent device for financing themselves. Factory workers, railroad men, telephone operators, police and firemen, hotel employees, department store clerks, all increasingly came to set up and operate their own credit unions.

When the Federal Government took up the idea in 1934, the credit-union movement received the final stimulus to set it into high gear. Progress and expansion continue month by month and year by year. Fully 3,000,000 working men and women are now enrolled in credit unions Every working day sees 3 to 4 new credit unions started. Every week more than 10,000 new members join. Last year these humble pay-roll workers of America, through their credit unions, loaned each other $300,000,000, and not a penny was contributed by the Government or by an outside agency. Directly or indirectly, every cent came from the nickels, dimes, and dollars which these enterprising rank-and-file workers spared from their pay envelopes.

But my purpose tonight is not to tell in detail how the credit unions have grown into a national institution. Rather, I want first to extend a word of greeting from the Nation's Capital to all the millions of credit-union members and friends of the movement. And then I wish to answer briefly the question rising insistently in many minds. "How can our credit union help out in the national emergency?"

My answer is simple. But it really goes beyond the credit union itself and applies to the individual working man and woman, especially to the one who feels that his freedom, his aspirations, his standard of living are vitally involved in the world struggle of today and tomorrow.

When such a one asks, "What can I do in my little way to help the cause of national defense?" my answer is, "You may be called upon to do many things in the future. But one thing you can do here and now. You can make yourself ready for any such future service by getting your personal money affairs straightened out. Clear up your debts. And above all, start building for yourself a good reserve of savings."

"At first glance that may seem to be a curious way of rendering patriotic service. But let me remind you of two things: The first is, that in preparations for defense there is a money front for the Nation as well as a military front or a production front. We must draw on the savings of all our people for the billions necessary to protect ourselves and our liberties. You make yourself a soldier on this front when you pile up your savings.

"The second point is that the whole strength of a nation lies in the spirit and morale of its people. Many factors contribute to morale. But not the least of them is the ease of mind that comes to a man when he finds himself with a healthy and growing savings account, or other property, and when he can reflect that his family will not be left penniless if he should be taken away.

"He lives and works with more freedom and more initiative when he has such a safeguard. Multiply his state of mind by 130,000,000 and you can see how vastly more effective our whole national effort will be if our individual citizens see to it that their own money affairs are in good shape and they can give themselves fully to the task in hand.

"There is one further point that should be made that requires a long-range view. Wages and income now are on the upswing. But undoubtedly there will come a time of readjustment when defense expenditures taper off and we must work our way back to a normal, stabilized economy.

"Money saved now will be our cushion for the shocks of such a change, both personally and nationally. Every dollar you can save now is a patriotic dollar, adding to the safety of our country, and adding as well to your own comfort and well-being."

Such would be my counsel to the individual worker. And those considerations point the way to service for the credit union. In fact, they offer an exceptional and unique opportunity for social and patriotic service. Not an institution in the country is in a better position, perhaps none so good, to help and encourage popular saving for defense and peacetime purposes.

The credit union is made up entirely of working people, mostly of very moderate income. They feel that it belongs to them. It has no other purpose than to work for their benefit. It has its office among them, on the factory premises or otherwise conveniently close by. It operates at the very root of the national economy. How could there be a better agency, then, for maintaining the national morale at a high level through a universal encouragement of thrift and sound financial health?

This question is increasingly important: "What special steps can a credit union take to fulfill its responsibilities? At a time when the rest of the Nation is turning rapidly toward national effort, is it fitting that the credit union should satisfy itself with a mere business-as-usual routine?"

If I may assume, for a moment, that I am talking directly to the tens of thousands of officials of the credit unions of the United States, I, indeed, recommend strongly a vigorous program pointed toward aiding the national mobilization for defense.

There are many things to do. For Federal credit unions a special new avenue of usefulness has recently been opened. The Treasury Department has designated credit unions, operating under Federal charter, as issuing agents for the sale of defense-savings bonds. That means that Federal credit unions may keep a supply of these bonds on hand at all times and sell them to credit union members and to the general public.

This is a priceless opportunity for directly useful work. I would urge every Federal credit union not to lose a minute in getting under way. As President Roosevelt last night reminded us the sale of these bonds is to reach down to the individual and the family in every community, and the possession of a bond will be tangible evidence of the partnership between the Government and the people. Federal credit unions, in the plants where they operate, are the nearest of all agencies to the worker when he gets his pay. They should be the first to offer him the chance to make his partnership with the Government an active one.

A great many credit unions still cover only a fraction of their membership field. Is it not possible to improve this situation? The increased use of credit union facilities would open the door of thrift to tens of thousands of additional people. In every other way, I recommend that the credit union seek to realize the full possibilities in its own field. Its achievements are no longer to be measured merely in terms of benefits to individuals. They now add their little to the grand total of national strength, at a time when such strength is more vitally needed, perhaps, than ever before.

In themselves, credit unions are a shining example of the beneficence of democratic processes. They are one more of the proven experiments in better living which spring continually from our basic democracy. Under totalitarian conditions they would wither and die. They will not fail to join, with all other American institutions, in whatever heroic effort may be needed to preserve the great unselfish principles which made their existence possible.

All-Out Demand Requires All-Out Effort, Says Senator Mead in ORT Dinner Address

---

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ADDRESS OF HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the ORT dinner held in the Astor Hotel, New York City, on April 27, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has made me happy to be able to accept the invitation to dine with you this evening because I have the highest regard for the accomplishments and objectives of the American ORT Federation.

I have attended numerous ORT functions in the past, and I have been impressed with the vocational and humanitarian activities continuously carried on by your Federation.

It is refreshing to be here in this genial atmosphere. Under such friendly, neighborly circumstances, I am reluctant to turn to any discussion of a serious nature. But no one can be in Washington without sensing the utter seriousness of current circumstances. It is difficult to find any substantial note of encouragement or optimism out of the news reported daily from the continent of Europe. To those who espouse the

cause of democracy and representative government the brutal realism of the fall of 15 nations under the ruthless heel of the dictatorships is a fact impossible to absorb without utmost anxiety.

We are gearing our Nation to the highest possible pitch of production in this gigantic defense effort. There can be no alternative. It is an all-out demand that requires an all-out effort. There can be no compromise with necessity and the defense program is the most vital necessity in our entire national history.

In this all-urgent drive for defense, the ORT plays its role. It also looks to the future when its long-range planning will prove invaluable to reconstruction programs that are bound to come. The thousands of men and women trained in the ORT trade and farm schools and industrial workshops will be equipped with skills that will be required to rebuild a devastated Old World.

You who are supporting ORT are doing your part in the essential task of preparing for what we all fervently pray will be a better day for all of the world.

Tonight I wish to leave with you a few thoughts about our responsibilities as good citizens and about the role of all of our patriotic people in this serious emergency.

True Americans, who subscribe to our most fundamental doctrine, namely, that all men are created equal with certain God-given rights (including life, liberty, and the pursuit of happiness), are inherently opposed to class hatred, racial prejudice, and religious intolerance. The concepts of totalitarianism, which would classify one race as a superrace, are contrary and repugnant to our fundamental philosophy.

We are a nation of many races and many creeds, welded together by a common bond which is a mutual respect for human rights. We believe that one man is born no better than another and that no man can achieve happiness without individual freedom and the right to live an unmolested personal, political, and religious life.

We have seen the rise of despotism and the spread of intolerance becloud the governments of many lands. Today we observe the infection of intolerance contaminating a widening area across the seas. Even within our own shores we can find evidence of anti-minority agitation. We should initiate an all-out effort to stamp out these prejudices wherever we find them to exist. They breed and thrive in the distorted, abnormal, and anti-American minds of groups who constantly seek a toehold in this country and in other democracies in this hemisphere. We can abolish intolerance and bigotry and racial prejudice, which form the first line of offense against democratic institutions, by bringing their authors into the glare of public attention, and hence into universal disapproval.

We can get an example as praiseworthy and patriotic as did the Colonists of Washington's era by our devoted loyalty to the cause in which our Republic is so much concerned.

Democracy can repel with relative ease the direct attacks upon it, but it is the attack by indirection and subterfuge that catches us off guard. The hidden hand of the despot seeks in cunning and devious methods to accomplish its purpose of crippling democracy.

At this time I wish to make reference to one absurd allegation that is part and parcel of this insidious infection, bred and spread by anti-American influences. Recently we have been witnessing covert acts and charges that identify the anti-Semitic. Jews in Europe have for the past several years been suffering another sporadic wave of persecution. They have been driven from their homes, from their businesses, from their synagogues, and they have been stripped of their material possessions and of their human rights. They have been powerless to effectively resist because they are a relatively small minority.

It is most unfortunate that anti-Semitism finds any encouragement in America. Nevertheless, its manifestations crop up now and again in this defense crisis. Only recently Governor Lehman, of New York State, found it necessary to name a special committee to investigate discrimination against minority groups in employment on defense projects.

The possibility that skilled workmen may be denied an opportunity to serve their Nation in defense activity because they belong to any minority group or come from certain European ancestry may seem remote to you, but it is not entirely fiction.

The allegation to which I make particular reference is a popular charge, nurtured and cultivated in some instances by anti-Semitic groups. I think you may have heard in one way or another that the Jews in America have never taken a large part in the military defense of the Nation, and that they have been traditionally unwilling to engage in military service. The most cursory examination of American history will brand this charge as false.

It might be well for us to review some of the facts so that we will be able to stop this calumnious whispering campaign in its tracks. The first Jewish settlers that we know about landed on the shores of New Amsterdam only 34 years after the Pilgrims landed at Plymouth Rock. This group sought refuge from persecution in Brazil. One year after this first group landed, Asser Levi, a member of this group, refused exemption from military duty and joined the militia, which served as the Army in that early period. From that time on—from 1689—we can credit the Jews in America with an unusually splendid record of military duty. They have participated in every war in which this Nation has been engaged, and they have done so to an extent far in excess of their ratio to the general population. Twenty-four Jewish officers served under General Washington. Among them were four lieutenant colonels, three majors, six captains. The names of Major Nones and Major Franks are credited with outstanding service during the War of the Revolution. Many other Jewish patriots aided in financing the cause of the Colonies. Perhaps the best known of these was Haym Solomon, who contributed a large share of his wealth toward the cause of independence. It is interesting to note that years later his son served as a captain in the War of 1812.

During the War of 1812, although the Jewish population in the United States was extremely small, we find that important military contributions were made by Jewish officers and soldiers in the Regular Army.

Many people do not realize that 10,000 Jewish soldiers fought in the Civil War. About 6,000 of this number defended the Union cause. It is important to remember that these 10,000 Jewish soldiers were drawn from a total population of about 150,000 in this country. That is an exceptionally large percentage, but it is typical of the record in all of America's military conflicts. Nine generals, 18 colonels, 40 majors, 200 captains were among the Jewish officers of the Civil War. In addition to the direct military service, A. G. Myers was Quartermaster General of the Confederacy. Judah P. Benjamin was, in turn, Attorney General, Secretary of War, and Secretary of State; David D. Leon was the first Surgeon General of the Confederacy.

It might be recalled that the first soldier to enlist in the Spanish-American War was a Jew by the name of Maurice Juster. This valiant soldier was the first man to fall in the Battle of Manila. Fifteen Jews went down with the *Maine* at Cuba, a large number of Jews served in the Navy during that war. Among them were at least 20 Jewish officers and Rear Admiral David Taufsig.

A quarter of a million Jews served the United States in the World War. This was nearly 5 percent of the total number of men under arms in the United States. When you hear the fallacious and absurd charge that Jews are not patriotic military participants, you might point out that, while they then constituted only 3 percent of the population of this country, they provided 5 percent of the total number of men under arms in the World War. It is interesting, too, to know that the relative proportion of Jews in the combatant branches of the armed forces was far greater than in the noncombatant branches. There were 7,929 commissioned Jewish officers, and of this number 32 were colonels, 39 lieutenant colonels, 340 majors, 1,201 captains, 4,802 lieutenants, and, of course, large numbers in lesser ranks. Three thousand five hundred Jewish soldiers lost their lives in the World War; 12,000 were wounded.

Today these same high percentages of Jews are in military training, and should the defense of this country require their active service they will prove patriotic and able soldiers.

It seems to me that it is the responsibility of each of us as American citizens to be quick to spike charges against the patriotism of any of our people when those charges are patently fraudulent. To reflect on the character of the race and religion of a group which has rendered such heroic service in the defense of the Nation is not only scandalous but dangerous. If we permit whispering campaigns of this character to endure, we will unconsciously contribute to the very end which the enemies of democracy hope to attain.

The very essence of this democracy is the protection which it affords to all people of all nationalities and religions to the right of uncurbed self-expression. When we encourage the break-down of those basic rights we strike at the very root of our favored system.

As one who is not of Jewish extraction I point with pride, as an American, to the military contributions which have been made by American Jews. You may boast of a most remarkable and effective record in the defense of this Nation. Let that fact be emblazoned on the record of the Nation.

Today the patriotic cooperation of the Jews of America in the defense of the Nation is in keeping with their historic role. We must never permit the advocates of anti-Semitism to hang their hats on the peg of criticism in that respect. Furthermore, we will prepare ourselves to refute any other unfounded, untrue, un-American implications which libelously defame the Jewish people or any other minority in this country. We hope that more and more Nations will emulate our example and that the curse of persecutions of innocent minorities will eventually be eliminated throughout the world.

Foreign Policy

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

STATEMENT BY HON. HAROLD H. BURTON, OF OHIO, TO OHIO FEDERATION OF REPUBLICAN WOMEN'S ORGANIZATIONS

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me

for the Ohio Federation of Republican Women's Organizations on the subject Outline of a Sound Foreign Policy for the United States.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OUTLINE OF A SOUND FOREIGN POLICY FOR THE UNITED STATES

(Statement to the Ohio Federation of Republican Women's Organizations by Senator HAROLD H. BURTON, of Ohio, Columbus, Ohio, May 2, 1941)

In our foreign policy our great need is for orderly thinking, devotion to our Constitution, and faith in the American people.

We need leadership that will unite America in a policy that is unmistakably a policy for the defense of America, on whatever scale and whatever plan is demonstrated to be necessary to meet the needs of the day.

The outline of our foreign policy should include these basic propositions:

1. We must and we shall, at all costs, preserve America's freedom.

This calls for a program of defense invincible in modern warfare on land, on sea, and in the air. It must command the unquestionable respect of those who listen only to the strong. It should seek a strength so great that it will guarantee to ourselves and to the world either that we shall be let alone or that, if attacked ,we shall win. The Nation already supports and is committed to this policy. What we need for it, most of all, is time to make it effective.

2. In doing this, we must preserve America's own institutions and freedoms.

This means the wholehearted support and preservation of our constitutional structure and procedure, and of our Bill of Rights. It means full cooperation between the executive, legislative, and judicial branches of our Government. It means that if new governmental policies, such as the authorization of price fixing or the establishment of important executive branches of the Government, are to be adopted that this shall be done by law after consultation with the executive branch of the Government, and not by Executive order issued without consultation with the Congress. This means freedom of the press, of assembly, of worship, and, as far as possible, of individual opportunity. It means patient and cordial recognition of the right of freedom of speech by those loyally opposing as well as those loyally supporting the administration. It means freedom of speech for Gen. Hugh Johnson and Col. Charles Lindbergh as well as for Secretaries Knox, Stimson, and Ickes.

3. In doing this America must stay out of the war if and as long as this is possible consistently with the defense of America's freedom.

This means, just now, for example, no convoying by American naval vessels of war materials to belligerents. It does not mean any lack of diligence in policing or patrolling the high seas in the defense of American rights, people, and properties, including our insular possessions and the areas that come within our Monroe Doctrine and the Pan-American agreements that have grown from it. It means diligent defense but it does not mean aggression or incitement to aggression. It means limiting our aid to other nations to the lending or leasing of things, not of men. It means a bona fide and convincing recognition of the fact that the American people and the Congress, which is their constitutional representative on this issue, have not declared war, that they do not want to declare war, and that they do not want to enter upon an undeclared war. Our policy of national defense does not authorize war unless we are attacked or unmistakably threatened with attack. We are not now so threatened. Our national defense does not now authorize an attack by us on anyone. It does not authorize our provocation of attack upon us by anyone. It does not authorize our cargo carriers to enter combat areas. It does not authorize our naval vessels to convoy war materials to belligerent nations, although it does fully authorize the production and supplying of those materials as rapidly as possible and in as large and effective quantities as the President shall deem to be necessary for the defense of nations whose defense he now deems, under the law vesting him with that discretion, to be vital to the defense of America.

4. In doing this, America must be a united nation.

This means unity between the Government, the manufacturer, the farmer, the industrial worker, and the taxpayer. This means unity between capital and labor in the interest of uninterrupted production. It means a governmental guaranty of fairness and a governmental policy of firmness toward employer and worker alike. The employer and the industrial worker is at heart the same kind of a patriotic citizen out of uniform as is the general and the soldier in uniform. We all are in a common, essential patriotic service. Genuine, fair leadership can secure the same complete response to a call for patriotic service from men out of uniform as it can from those whom it places in uniform.

5. In doing this, all of us, officials and private citizens alike, must forget every personal, party, and other prejudice.

The President, in doing this should demonstrate a deep faith in the people and in their representatives. He should take the people and the Congress far into his confidence and in return he will receive their confidence. He should not attempt to force America further than he can carry a substantially united Nation with him. Divided, a free people is helpless. United, a free people is invincible. A free people will go to whatever limits are necessary to defend and preserve their freedom, but to have the dynamic strength inherent in freedom their action must be voluntary. It must be based upon deep conviction freely arrived at on the basis of facts clearly understood. America will follow a leader who points the way of truth but he must not hide or color the truth. He should lead in the exposition and analysis of the true facts and in the determination of policy based upon them. This calls for a knowledge of facts by the President and his staff and also for a frank sharing of those facts and his interpretation of their meaning with the Congress, the Governors, the mayors, the industrial, the agricultural, the labor, the civic, and the religious leaders of the Nation.

6. In doing this there must be on every hand deep faith in American principles and in the American people. There must also be an expression of that faith by the President and by the people.

There can be no doubt that with sound homes, teamwork in industry, and a united Nation that we can defend America. We must have faith in one another and faith in God. Courage is conviction translated into action. It is as great as the conviction is deep. We shall save America in proportion to our conviction of its soundness and our faith in it. The heart of our foreign policy, as well as of our domestic policy, must be our complete and immediate personal and official dedication of ourselves, our fortunes, and, if necessary, our lives to the service and defense of America.

National Defense Morale

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ARTICLE BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article I prepared for the Trade Union News, Philadelphia, Pa., published May 2, 1941, entitled "National Defense Morale."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Trade Union News, Philadelphia, Pa., of May 2, 1941]

NATIONAL-DEFENSE MORALE

(By Senator JAMES J. DAVIS)

The men behind our machines in the workshops and factories of the Nation are the surest hope of our defense. Soldiers, sailors, marines we must have and increasingly we are calling them to the colors but without the efficient building of manpower in our factories the military functions of defense will fail.

In the factory where the machines of defense are being fashioned there is need for more inspiration and understanding. The cause for which all of our efforts are now directed must be presented in a convincing way that will commend itself to the conscience of every true American. The fundamental principles of representative government, freedom of speech, press, assembly, and worship must always be held before the minds of those who toil for the Nation's defense.

The worker wants to have a feeling of accomplishment in his task. Men do not work for bread alone; they work for the protection of their homes, the schooling of their children, and the maintenance of their liberties. This is very real to them and the threat of loss of these blessings carries a genuine desire among them to give their utmost for the preservation of the American way of life.

With the adoption of the first 10 amendments to the Constitution there was erected one of the milestones of American liberty. Many attempts have been made to violate the rights of free individuals. These attempts have been made by Congress, Presidents, courts, and States. Attempts have been made to penalize men for free speech, to place a censorship over the press, to authorize unlawful search and seizure of private papers, to place men twice in jeopardy for the same offense, to take private property without compensation, to subject men to imprisonment at hard labor without indictment, to deny to an accused man the right to confront his accusers, to compel a man to testify against himself, and many other willful efforts to enslave men. In all these cases the Constitution and the Bill of Rights were invoked to protect the individual.

During wartimes the people willingly impose restrictions upon themselves, and the

Government may impose restrictions under the Constitution. But even during war individual rights secured by the Bill of Rights cannot be violated. Neither Congress, nor the President, nor the courts can suspend the Bill of Rights on account of war. The right of life, liberty, and property must be kept secure in the United States.

America stands for the Declaration of Independence and the Bill of Rights.

America is an ideal, a principle, a way of life in which there is equality of persons before the law.

America grants equal protection under the law to all religions, with favors to none. All men are here free to worship God or not to worship God, in harmony with the individual conscience. Here we have a total and complete separation of church and state.

America recognizes the individual rights of men to their own realm of faith and religion.

America stands for an equal opportunity for all to acquire property and to enjoy the fruits of one's labor and enterprise.

America maintains the right of citizens to criticize abuses in the government, to disagree with political policies, to differ in religious ideas and modes of worship, and to tolerate opposing opinions.

America stands for the right to work and the right of the worker to quit his work. Our high standards of living have come because we have been able to maintain our production. America grows strong as America keeps busy.

America stands against dictatorship and for our representative institutions of government.

American workmen believe in these principles. They should be held before their eyes in the factories and workshops of the Nation in their national defense days.

Involvement in Foreign Wars

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

STATEMENT OF HON. ALF M. LANDON

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a statement made at Kansas City last Friday night, May 2, by Alf M. Landon, of Kansas, dealing with the problem of foreign relations of the United States. Governor Landon made this statement in introducing Senator BENNETT CLARK, of Missouri, at a meeting sponsored by the America First Committee. I wish to state that I heartily approve the position taken by Senator CLARK and Governor Landon, both of whom are rendering a most valuable public service in the campaign they are making against the involvement of the United States in foreign wars.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The fight to save this great country from the lunacy of another world war is still being carried on. It is a fight that must go on. It is the fight to help the American people maintain the determination they have expressed repeatedly, to stay out of war.

Let's get the record straight. Long ago we made up our minds that this was not our war. Therefore, we are willing and anxious to help England with materials, but not men. Because of our determination not to send expeditionary forces we said, through the Congress, that England must come to American ports to get this material. The present national administration was reelected on a pledge to maintain that policy.

The American people have a distinct recollection of the many promises of the President to keep us at peace. They had the right to continue to feel safe and secure. But the people now are becoming distinctly disturbed by the administration's twilight steps to war. But they still accept the President's statements that what he is doing does not mean what it seems to mean.

As soon as the election was over the tune of some of the leaders on both sides changed. They became much more bellicose in their expressions and their policies. Almost, one would think that the administration had been elected on a war policy instead of a peace policy.

Campaign slogans were discarded, as easily as Hitler sloughs off his slogans. In every election there is a gross misuse of slogans. But that is something to be discouraged, not condoned. Certainly that is particularly true of life and death issues which our foreign policies involve in such times as these.

There is no new factor since the election except the Nazi temporary and pyrrhic success. All the factors affecting our decision have been fully and intelligently discussed for more than a year. All the possibilities of the present situations were canvassed long before they occurred.

If for any reason, new or old, the President desires to reverse this policy of peace, let him seek action by the Congress. Let the President make recommendations to the Congress—not at the last minute when there is nothing else for Congress to do but declare war. But let him, instead, seek immediately and forthwith, authority for the change from the policy the country decided on at the last election.

I warn my fellow Americans that after the war is over, if we become involved, any other course will precipitate a dangerous wave of pacifism and isolationism. A reaction greater than the reaction after 1918, when the American people thought they had been fooled and tricked by Woodrow Wilson's campaign slogan, "He kept us out of war."

In his last press conference the President is reported as laughing at the confusion of the correspondents, caused by his tangled statements.

He hasn't taken the people into his confidence enough for them to know why he is doing the things he apparently is planning without asking the Congress. Only by a candid presentation of the facts, and the free discussion of those facts, can he have the cheerful, wholehearted support of the people now. Of course, once war is declared we never have disunity. We close ranks behind our government.

In this deadly business we need a strong, active public opinion. That opinion can only be kept active by strong, candid statements and recommendations from the Chief Executive, and by free discussion.

There is now, and there always has been, a plain attempt by this administration to discourage discussion of its management of the country's affairs. Americans cannot even be as critical of British management as the British themselves, without being accused of being disloyal to our country. To accept that premise means that we are full allies of Great Britain now.

Only yesterday there was a wonderful exposition of what England is fighting for. The English people forced a Cabinet change. And what's more, they did it without an iota of accusation of disunity from the men in high places. Mistakes can only be corrected by an intelligent discussion of the facts.

For a year and a half the slogan has been drummed in our ears that to defend America we must defend England. If 150 years following our declaration of independence, we are still dependent on Great Britain for our survival, we are certainly in a bad way. What a comfort that slogan must be to the bloody, barbarian Nazis.

Such meetings as this afford the opportunity for enlightened discussion of these questions. The absolute necessity for such enlightening was never greater.

Let no one be deceived, either at home or abroad. Once the United States flag is deliberately fired on—whether it is by reason of patrols, or convoys, or any other reason—once the flag is fired on, our response becomes inevitable—war. Such a step means war to the finish, over the years. It means doughboys in new expeditionary forces. It means sending our men not only to Europe, as we did before, but to remote parts of the world. Wars are not won by half-way measures. Wars are not won by bluff. Wars are not won by clever moves by the heads of state. The greatest deception that has been practiced upon us is the implication that we can have war, and not suffer the consequences of war.

The American people do not do anything in a half-hearted way. Americans do not wage half-hearted wars. When the American Navy and Marines and air arms go in, the finest infantry in the world will be there too, because, war means doughboys.

This Republic can survive only if we preserve the freedom to carry on enlightened discussion of the administration's management of our affairs. In time of peace and in time of war, this freedom is a part of our elementary heritage. Those who exercise that freedom should not be subjected to smears and sneers, as they have been from this administration since its inception. Let no foreign dictator mistake free discussion for disunity in the United States, and let no one seek to destroy that free discussion at home.

I am happy to present a man who has fought on the field of battle and who has also fought on that equally heartbreaking field of free discussion in the face of bitter and unjust attack. I present one of the ablest and most courageous Members of the United States Senate, BENNETT CLARK, of Missouri.

Germany's Title to Possessions of Conquered Nations

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

LETTER FROM RALPH F. LOZIER, PUBLISHED IN THE WASHINGTON POST

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix a letter from Ralph F. Lozier of Washington, published in the Washington Post of April 16, 1941, deal-

ing with Germany's title to possessions of conquered nations.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 16, 1941]

CONCERNING GERMANY'S TITLE TO POSSESSIONS OF CONQUERED NATIONS

For many years I have read with interest and profit Mark Sullivan's comments on public affairs. But his article published in the Post of April 12 is shot through and through with error, unsound reasoning, and illogical conclusions. In discussing the title of Germany to unconquered possessions of conquered nations, he either asserts or leans to the conclusion that the title to these unconquered colonies would pass to the Nazis as the result of the conquest of the mother country. This is an unsound conclusion.

He says, "By conquest Germany got some kind of title to the American territories of those conquered nations." Title by conquest extends only to the territory actually conquered and seized by the triumphant nation, unless title to these unconquered possessions is subsequently acquired by treaty. A nation can be divested of its title to its territory only by cession or force. Where the divestiture is by treaty, the title passes without any immediate or outward change in the possession. But when one nation by force overruns and seizes the territory of another nation it acquires title only to the territory actually conquered and taken into its possession. Title by force or conquest applies only to seized territory.

Germany has conquered the Netherlands, Belgium, Denmark, and Norway, but has acquired no title to such possessions of these conquered nations as have not been actually seized or possessed by the Nazis. The situation is analogous to a bandit seizing and carrying away three-fourths of a citizen's property, which act would not divest such owner of the title to the remaining one-fourth not seized by the outlaw.

Mr. Sullivan says: "Germany has title, but does not have possession." I assert that Germany has absolutely no title to the territory of these defeated nations that has not been seized and held by Germany. Capturing a part of the navy of a conquered nation would not transfer the title of the uncaptured ships to the conqueror, and, by the same token, ruthlessly seizing a part of the territory of a nation does not divest the conquered nation of the remaining portion of her territory.

Mr. Sullivan further states: "Germany would by conquest of Britain get a conqueror's title to the British dependencies in the American hemisphere." Conquering Britain will not give Germany a "conqueror's title" or any other kind of title to the British dependencies in the American hemisphere, unless and until Germany seizes these colonial possessions or forces from England a cession of them. A "conqueror's title" rests solely on force, seizure, and ability to hold possession, and until that force is directly applied to these Western Hemisphere territories, and possession thereof taken, title to these dependencies remains in the mother countries until and unless renounced by treaty.

And, until Germany actually seizes and holds possession of these American hemisphere possessions, the United States or other nations may acquire title to such possessions either by treaty or conquest. In other words, these unconquered, unseized, and unceded possessions in the Western Hemisphere still belong to the mother countries and are still subject to either purchase or conquest by the United States or any other nation.

To illustrate: If Germany overruns and totally conquers Great Britain, while she would have a "conqueror's title" to the British Isles, she would, by virtue of such conquest, acquire no title whatsoever to Singapore, Gibraltar, and other British outposts, unless they were ceded by Britain, or unless Germany seized and held possession of them. And certainly, by conquering the British Isles, Germany by virtue of such conquest, would acquire no title to Canada, Australia, India, and other self-governing countries constituting the British Commonwealth of Nations.

RALPH F. LOZIER.

WASHINGTON, April 12.

When Peace Comes

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ARTICLE BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "When Peace Comes," prepared by the distinguished senior Senator from Pennsylvania [Mr. DAVIS] for the Moose magazine for May 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Moose magazine of May 1941]

WHEN PEACE COMES

(By United States Senator JAMES J. DAVIS, director general and pilgrim governor)

A wartime boom holds within itself the seeds of its own collapse. The greater the boom the more certain will be the coming of a depression which will make the last one seem like a pigmy. Wars always lead to severe depressions. The great need of the present hour is sufficient national intelligence to provide for a gradual and an orderly recovery of the normal activities of peaceful pursuits after the peak of defense production shall have passed. because defense activities are temporary.

We were in the World War for only 20 months, but the shock of that event so thoroughly penetrated to the lives and fortunes of our people that many years were required before normal activities were restored, and even today the far-reaching consequences of that grim struggle are evident all around us. Ethelbert Stewart, eminent Commissioner of Labor Statistics of the United States Department of Labor during the years I was Secretary, 1921–30, estimated that at the beginning of this period there were 5,700,000 off pay rolls and the unemployment then would match that of any time before or since if the same methods of tabulation were used in a uniform way. Strikes abounded in the key industries of the country in 1921–22, when more than a million men were out on strike at one time. These and kindred problems may once again confront us.

It is not too soon now to expect that various agencies of government and private institutions of study and research shall begin the task of finding ways of rounding out defense in terms of peacetime economic activities which shall be substantial enough to provide work for our entire population after we have met the military emergency which now confronts us. The National Resources Planning Board, the American Federation of Labor, the Social Science Research Council, the Brookings Institution, and other prominent organizations have already made a beginning in this field.

The great Gladstone once said: "The expenses of a war are the moral check which it has pleased the Almighty to impose upon the ambition and the lust of conquest that are inherent in so many nations. The necessity of meeting from year to year the expenditures which it entails is a salutary and wholesome check, making them feel what they are about and making them measure the cost of the benefit upon which they calculate." Today it seems that this check has operated tardily, for open warfare has been active in various parts of the world for the last 10 years. And daily the struggle increases.

There are three ways in which a government may finance a war or any other emergency—by taxes, by loans, or by the issue of paper money. It is now understood that the burden of war cannot be shifted to future generations by any means of financing. A national debt is estimated in terms of the necessity it imposes of paying interest. The principal of the debt may or may not be repaid at some future date; the interest must be paid. The necessity of levying taxes for interest payments may have an unfortunate effect on production by decreasing the volume of investment. Therefore it is now imperative that in time of war we shall steadfastly direct our thought to the time of peace.

We still suffer from the depression which came upon us in 1929. Large relief rolls continue throughout the land. Low interest rates show the volume of our idle capital. Low standards of living indicate the lack of adequate work for the unemployed. Too many dollars, too many machines, too many men are idle and apparently useless.

These problems have not been met in any fundamental way. Various experiments have been tried which promised quick and easy cures. The dollar was revalued; the made-work program was instituted; Government spending was increased, and numerous other ways have been sought to soften the blows of the depression. We know now that these attempts were only partially successful; they served to maintain the needy at a low level of existence but did not call into positive action the constructive forces of the Nation. Sound recovery methods have not been tried.

Another set of influences which bear heavily upon us comes out of the first World War. The fragments of world trade are in the utmost confusion. Europe is undergoing a revolution which must inevitably destroy established patterns of social and economic life, giving place to the development of new forms which are still little understood. Though it is not now possible to predict the final outcome of the war, it must be evident that the strength of the Axis Powers is a serious challenge to Britain. If Britain loses her trade position the struggle for pelf and power between competing totalitarian groups would doubtless prove a disturbing influence for many generations to come.

WEIGHTIER PROBLEMS

The coming of the second World War has released upon us even more serious problems. The course of the war to date has required us to launch an emergency defense program which is already straining the ordinary patterns of our economic life. Increasing concentration of our resources, men, money, and machines on production of the implements of war has provided work and at the same time diverted our production from the ordinary channels of civilian need. The more we devote our resources to military purposes, the greater will be the strain on our civil standards of living. When you have more guns you have less butter. This is true, whether applied to foreign countries or our

own. Let us be realistic enough to say that at the present time we face the needs of a military economy in the United States and Canada.

Particular danger lies in the fact that as men, money, and machines go back to work to forge the implements of war, with hunger goading on the urge to strife, our economy will take on the appearance of prosperity. It is the mirage which has a purple beauty even as it leads swiftly to the dark road of death. We shall be tempted to believe that at last we have overcome the paralyzing influences of the depression and finally caught up with the stream of progress. Armaments cannot be used to produce the goods or perform the services the people need. Armaments are a diversion of our resources from the instruments of production to the instruments of destruction. War piles up poverty and, although national defense is now imperative, we should realize what a severe strain it brings to the lives of our citizens.

FEWER UNEMPLOYED

It is anticipated that the national-defense program will have outstanding and comprehensive effects on the social-insurance programs under the Social Security Act, the Railroad Retirement Act, and the Railroad Unemployment Insurance Act. The combined effect of increased employment and higher wage rates will result in a rise in contributions paid under the various social-insurance programs. However, the shift from private to public employment under the defense program may handicap the insurance standing of those taking Federal jobs, for workers hired for the defense program will receive no protection under the civil-service retirement and disability programs. Defense activity is also expected to result in decreased benefit payments for unemployment insurance. Not only will there be fewer unemployed persons, but the duration of their unemployment is apt to be shorter. Moreover, men serving for a year under selective service will—unless action is taken to preserve their benefit rights—be ineligible for unemployment benefits during the interim between discharge from the Army and reemployment in private industry. The effect of defense measures on old-age and survivors' insurance benefits is less predictable. The demands for older, skilled workmen, combined with the inducement of increasing wage rates, may result in the continuous employment of persons after they reach age 65, and may also bring back into employment workers who had retired, but whose monthly benefits are less than they can earn in defense-stimulated employments. On the other hand, the general increase in national income, distributed in purchasing power to the families of the Nation, may enable elderly persons to retire who could not afford to do so under circumstances of low family incomes.

The problems of inflation may come upon us. While in Germany after the war, I witnessed the distressing conditions induced there by currency inflation. There is very little that a university or a hospital or an institution such as Mooseheart, which is endowed or dependent on the income of investments, can do to protect itself from the ravages of currency inflation and continue its present services. In Germany, after the inflation following the first World War, endowments were substantially reduced. In most cases there remained only the value of the physical property. The debts arising out of the national-defense program probably will add to the inflation forces we now have, depending on the methods used in financing. I understand proposals are now being made that $60,000,000,000 be spent by our Government in the next 3 years for defense purposes. The new debts will add new dangers.

The question often comes to me: Will it be safe to leave money in a bank during the coming years? The brief answer is, "Yes." The banks are, of course, safe—probably more liquid that ever before, and everyone should make every effort—sacrifice, if need be—to keep a margin of cash on deposit to care for the inevitable emergency. Considering the fact that accurate prediction of the future is impossible; that heavy taxes must be paid; and that incomes may be quickly and unexpectedly impaired, a bank balance—however modest—should be kept if at all possible. While this is always not practicable, still, when opportunity permits, it should be seized immediately.

IMPORTANCE OF HOUSING

As we look to the future, our attention is called to the economic outlook of the American people in terms of housing, for the stability of home life has always depended and will continue to depend on a house in which to dwell, where children may be born and life carried on in familiar and well-kept ways. No one knows what the economic situation will be after the war. We can, however, say this: Increasingly, if people have money, they will spend a liberal portion of it for new or improved houses. The interest of the Government in housing will continue so that buying a home on the monthly purchase plan will become as familiar as buying an automobile on the installment payment. It will be necessary for the Government to protect itself and the real-estate market so that Government-insured houses will not clog the ordinary economic channels in case of a prolonged depression. At the present time there is a tremendous shortage in low-priced houses, those which cost $4,000 or less and can be purchased by people who have incomes of $2,000 or less. Civic organizations and fraternal orders are carrying the message of this need. Sound city planning is now being adopted which will help to make this dream come true, where a hard-working man can have a house and home.

The President's Remarks Concerning Colonel Lindbergh

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

EDITORIAL FROM ST. JOSEPH (MO.) NEWS-PRESS

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial with reference to the President's observations about Col. Charles A. Lindbergh, written by one of the most distinguished editors in Missouri, Arthur D. Burrowes, of the St. Joseph (Mo.) News-Press, and published in that newspaper on Tuesday, April 29, 1941.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Joseph (Mo.) News-Press of April 29, 1941]

TIMELY OBSERVATIONS

Charles A. Lindbergh had a perfect right to say what he did last Wednesday night. His letter to the President yesterday was entirely within his rights. We are not at war. Even Presidents do not enhance their greatness by flippancy and facetiousness in press conferences. Some day somebody may gravely wrong the President by thinking he has delusions of grandeur. The President of the United States should never have called Colonel Lindberg a copperhead.

The President should read his history. But a man so busy he cannot distinguish that "Martin, Barton, and Fish" is not and never was alliteration, probably has not the time to mark out the fine distinction between Congressman Vallandigham, of Ohio, in the Civil War and Colonel Lindbergh today.

War had been declared when Vallandigham spoke his words denouncing the Civil War. We are not at war. And it was only last October the administration was saying we were not going to war. Remember? All aid, short of war. We can still hear the President's Harvardian pronunciation and accent. This attack on Lindbergh seems to us to be a violation of that spirit of fair play that says every American can speak his piece. Lindbergh has done just that. And that is all.

The trouble is we are in war hysteria. We saw that at that Lindbergh meeting in New York last week. There was more murder in the looks of both pro and antis on the street than, we bet, in the opposing armies of Europe. It might well have been another Paris Commune in the dying days of the Bourbon autocracy. We predicted this war hysteria and we all warned each other against it. Now we have reached the place where one of our charming pro-British friends out in the newsroom goes into mental and spiritual convulsions whenever the ticker ticks off a bad piece of news for the telegraph desk.

But to get back to Copperhead Vallandigham—and here is where Mr. Roosevelt should read history. For almost 3 months after the fall of Sumter, Lincoln did not dare call Congress into session. Why? He could not get a majority to back him. Even then for months it was debated whether the writ of habeas corpus could be suspended. That never was given congressional approval.

Now, remember, Vallandigham branded Lincoln a usurper. Vallandigham contended the South could never be conquered and that the war would bring political and economic ruin. Vallandigham was wrong. So is Lindbergh today. There is this difference. One man uttered treason in wartime. The other spoke his God-given right to warn and warn and warn until the very moment war actually is declared.

It might be well to follow the course of Mr. Vallandigham. He was beaten for reelection but only by skulduggery, a gerrymander to change his district for the purpose of beating him. He was arrested and sentenced by a military court for the duration of the war, but the popular resentment at the verdict was so great Lincoln banished him to behind Confederate lines. Later he went to Canada, where he did all he could to destroy the United States Government; yes, the Canada we now seek to aid. He was a candidate for Governor of Ohio during his period of banishment, and in 1864 returned unmolested to sit in the Democratic convention that nominated George McClellan to oppose Mr. Lincoln.

To compare the two men, Vallandigham and Lindbergh, was unworthy of a great President. It would be unworthy of a little President. Vallandigham encouraged desertions in wartime, tried to prevent raising of troops, and, in effect, did everything to cripple the power of the Government of the United States. Has Lindbergh done any of these things?

Let us repeat. We do not agree with Colonel Lindbergh at all. We think Hitler is a world menace. Lindbergh probably does not. We think, and so does much of Washington, that the future of this country is gravely imperiled unless Great Britain wins. Lindbergh does not think so. But neither does Herbert

Hoover. He was a great man once, that fellow Hoover. A lot of you high hats voted for him in 1928 because Al Smith had a whisky voice and went to the wrong church. Many others in high places agree with Lindbergh. Why castigate him?

We regret exceedingly his resignation from the Reserve force of the Army. Of course, he may have been forced out. But let the administration go slow. There was not the war fervor in Washington this month there was in April 1940. Does the President know that? Can the administration put us to war if we do not want to go to war? We wonder. To us out here in the Middle West it seems that Britain is making a grand fight, but there are still a few of us left who think that, so long as the administration insists we are not at war, it is the right of Charles Lindbergh or Hoover or William Castle or Senator Wheeler or Senator Clark or anybody else to try to urge us to stay out of war.

British Cities and Civil Defense

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ARTICLE FROM UNITED STATES MUNICIPAL NEWS

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the RECORD a statement entitled "A Message From Britain on Cities and Civil Defense," published by the United States Conference of Mayors in the United States Municipal News of May 15, 1941.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the United States Municipal News of May 15, 1941]

A MESSAGE FROM BRITAIN ON CITIES AND CIVIL DEFENSE

It will be recalled that on January 31 last, the United States Conference of Mayors submitted a report to the President outlining the organization and activities of a civil defense program for the United States. There was little of an original character in the report. It was based largely on the bitter experience of English cities in meeting their new responsibilities—because it was believed that available actual experience instead of theory and old philosophies should determine, in large part, the program for our country.

It was stated that any effective organization must recognize the fact that bombs, gases, artillery shells and microbes simply fail to recognize State political boundaries. Hence, in the event of an emergency we must set up direct relationships between the cities and other local units with the suggested Federal civil defense organization which would operate through a number of Federal regional offices to be established for each of the existing Army corps areas. Further, complete responsibility should be placed on the shoulders of the cities within each region and the Federal regional offices must be completely coordinated with the military branches of the Government.

Unfortunately, as yet, we have made little progress even in the field of preliminary planning for civil defense along these lines. A few so-called State defense councils have been created, some of them political in nature, even though, as stated above, they would be useless agencies so far as civil defense in an emergency is concerned. We still have a surplus of Federal coordinators, offices, divisions, agencies, bureaus, departments, et cetera, here in Washington with little or no unity. About the only favorable sign is the fact that a number of cities such as New York have developed integrated plans for the protection of the civilian population.

The present condition cannot be permitted to continue, and we are hopeful that in the next few days a plan based on the realities of the situation will be placed in effect.

This whole problem is so important that there is reproduced in this issue of the United States Municipal News one of the most authoritative statements on this subject which your editor has been privileged to hear. It was delivered in Ottawa on April 22 by the Right Honorable Malcolm MacDonald, High Commissioner to Canada from the United Kingdom, before the annual conference of the Canadian Federation of Mayors and Municipalities. Mr. MacDonald's statement, which ought to be studied by every official in the United States, follows:

"THE ROLE OF BRITISH CITIES IN THE DEFENSE OF BRITAIN

"(By the Right Honorable Malcolm MacDonald, High Commissioner to Canada from the United Kingdom)

"I am proud to be your guest this evening. But I feel somewhat overawed by the company. I was myself once an humble member of a municipal council in Britain, but never rose to the giddy heights of being a mayor. It is an honor to be here on the occasion when the Canadian Federation of Mayors and Municipalities are entertaining so many of their colleagues from the United States.

"This is a gathering of civic heads, of the chief citizens of the chief cities and towns throughout Canada and in parts of our good neighbor, the United States. You have supreme responsibility in municipal administration. You are the prime ministers of local government. There are some people who, because it is called local government, think that it is something of comparatively small importance. They are wrong. The very opposite is the case. The units of local government are the cells which build up together a vital part of the democratic body politic. I shall not presume to speak of local government in Canada and the United States. I am not sufficiently acquainted with your procedures here to estimate its exact importance. But I can speak of the place of local government in Britain, and I have a suspicion that what I say about it there will not be wholly inapplicable to its position in this continent. In Britain we are fighting now to maintain our democractic liberties. We think that they are so essential to our material and spiritual well-being that there is no sacrifice we would not make in their defense. Well, at the very heart of our democratic system lies self-government in local affairs. Without a healthy system of local government democracy would not exist.

"It performs a number of indispensable functions. For instance, municipal and other local councils are often the colleges, so to speak, from which our national leaders graduate. Some of our most famous prime ministers have begun their political careers as local councillors or aldermen, and some of them even rose to be mayors; and they owed much of their success in statecraft to the lessons in the difficult art of government which they learned. I suppose this may be the largest gathering of future Prime Ministers of Canada and Presidents of the United States that I shall ever have the honor to meet.

"Again, local government is a wide net that draws in many fish. It attracts into its manifold activities, its electoral organizations, its committees, and its councils a countless host of citizens, all of whom thus get some practice in government. So government ceases to be a monopoly of the few—the rich or the privileged. Some capacity in government is widespread; a large proportion of the citizens in the State are also to a greater or lesser degree rulers. This is itself a sure safeguard against dictatorship. When so many have tasted the interest and enjoyment of power they will not lightly yield it up to a tyrant.

"But, above all, a sound development of local government prevents the system of parliamentary democracy itself from declining into another form of dictatorship. If too much power is concentrated in the central government, it tends to reproduce some of the bad qualities of a dictator. It is necessarily aloof; it is not in close touch with the everyday life of the people in their various localities, and cannot adapt itself to differing local conditions which require some elasticity in government; its administration is rigid and bureaucratic. But if large powers of administration are widely delegated over many local councils, who are in close association with conditions in their respective areas, administration can be tempered to varying circumstances, and then government becomes intimate and sympathetic with the people. That is the great, essential function of local government. It prevents democracy from becoming bureaucracy.

"But you have not come here to listen to me philosophizing. You are met to consider local government in relation to war. You are anxious to know what is the part played by the municipalities and how they have acquitted themselves in the crisis in Britain. I can tell you quite simply. Local government in Great Britain never had such a glorious vindication as during these last 9 months when the Nazis have descended upon the island in their most savage fury and attempted to lam the life out of it. It is as though a murderer strikes viciously—smash, smash, smash, at his victim, endeavoring to break his bones, to spill his life's blood, to knock the breath out of his body. But the victim won't oblige. His bones do nothing more than crack, his blood continues to circulate, and he goes on breathing. And instead of succumbing he gradually gathers his own strength and strikes back at his assailant, using his fists until in the end he has the murderer by the throat and at his mercy. That is going to be the end of the story of this fight between Britain and Germany.

"Well, we owe the survival of Britain during those fateful months in large measure to the municipal authorities. We owe it, too, to the new regional organizations which have been interposed as a link between the central government and the local authorities. That is a new piece of machinery in our system of government which was invented to serve a wartime purpose and which has proved so valuable that I believe it will live on into the days of peace. But much of the brunt of the resistance of the air raids has been borne by the municipal authorities themselves. If I may say so, I can tell this magnificent story with special knowledge, because the Minister of Health—which was the rather unhealthy post which I held until I departed for Canada—with the Minister of Home Security now as a close colleague is the minister of the central government most concerned with watching and supervising the work of the local authorities.

"Our organization of civil defense is based on those authorities. They are the units of action. The air-raid wardens, the rescue squads, the fire brigades, the first-aid teams, and all the various companies which form the great army fighting this civilians' defensive war are organized in units based on

municipal areas and in commands under the municipal authorities. I think it is scarcely appreciated by the public in Britain and beyond how remarkably efficient the work of the local authorities has been. I don't say that it has been by any means faultless. One or two local authorities have been failures; we have had to replace them. And all of them, no doubt, made mistakes. The British people have not suddenly become a heavenly host of angels, possessed of all the virtues. They are very human—human in their frailties as well as in their sudden manifestation of qualities that are sublime. Even the municipal authorities have made mistakes. Nevertheless, our debt to them is huge, and its full measure is not generally known. For we could not advertise it sufficiently. We could not turn the brilliant searchlight of publicity on much of the details of their work. Otherwise it would have led to information reaching the enemy which he greatly desired to have. We did not wish to inform him each morning after the raids of the night before of the amount of destruction that he had succeeded in doing or that he had failed to do in any particular case. Nor, when he had done much damage, did we wish to tell him how quickly that damage was repaired. It was far better that he should think that the hurt which he had done to a town was lasting, so that he assumed he could scratch it off his visiting list for a while and not return to it immediately to give it another dose of his savagery.

"Therefore the gigantic scale of much of the work of local authorities went unrecorded in the newspapers, unnoted by the public. For instance, if after a single night's raid a town discovered at dawn that four-fifths of its water supply was destroyed owing to broken mains, we didn't tell our public; we didn't tell the enemy. And when by Herculean efforts the water department of that municipality repaired the mains so swiftly that half the water supply was restored at the end of 48 hours, three-quarters of it by the end of the third day, and the whole of it by the fourth, we didn't tell that, either. Yet these miracles of repair and recovery were being performed all the time.

"Town after town received the honor of the attentions of the enemy. Each in turn had its night of vicious assault. Some of them received the attack on 2 or 3 nights in succession. London took its punishment every night for 2 whole months. Many of them received repeated return visits at intervals. All of them replied to barbarism with heroism.

"The list of stricken towns is now a long one: London, Glasgow, Cardiff, Coventry, Birmingham, Liverpool, Newcastle, Portsmouth, Bristol, and a great host of others. There is one remarkable thing about the roll of honor. Every name upon it is classified as wounded. None of them is killed. None of them has died of wounds. Not one of them has ever withdrawn for a moment from the active fighting line. They have scarcely even done what the gallant Sir Andrew Barton is reported to have done in the rollicking ballad which records his hectic naval action. Struck by a cannon ball, grievously wounded, missing a limb or two, he sat down upon the deck of his frigate and cried cheerily to the sailors:

> " 'Fight on my merry men all,
> I am hurt, but I am not slain,
> I'll lay me down and bleed awhile
> And then I'll rise and fight again.'

"The battered boroughs of old Britain have not lain down to bleed awhile. They have dressed their wounds whilst they stood and fought. There is no more glorious page in the proud history of municipal government.

"The multitude and variety of their actions during and immediately following the phase of battle are extraordinary. In many of them they get invaluable help from voluntary organizations, and especially that superb women's organization, Women's Voluntary Service. I can only select a representative example of their activities. The local authority supervises the police and air-raid wardens who keep watch and ward in the streets; and the fire brigades who extinguish the conflagrations, and the first-aid posts where the walking casualties are tended; and the ambulance and hospital services which care for the more seriously wounded, and the discovery, identification and burial of the dead. They regulate the evacuation of women and children where it is necessary to get them out of harm's way, and they provide food, clothes and shelter for families who are themselves unscathed but whose homes have been blown to kingdom come. Their expert departments handle the work of restoring the damaged water, gas and electric supplies; they are responsible, too, for organizing the swift and steady repairs to many scores of thousands of damaged houses so that their occupants can live in them again as soon as possible after the raids.

"That is just a selection out of the modern list of duties of municipal councils in Britain! It is a sample of what is coming to you if after the Battle of Britain there is a Battle of Canada or a Battle of the United States of America.

"Let me take you even closer to the scene. Let me show you a glimpse of the municipal authorities in the actual front line at the moment of action, as you might see them any evening in Britain. It is 9 o'clock in the evening in Ottawa now; it is 2 o'clock in the morning in that little island. This is the scene that, whilst we sit here, is being enacted in many places there. It is pitch black in the streets; there is a drone of airplanes overhead, punctuated by the whistle and crash of bombs and the angry retorts of the anti-aircraft guns. The nerve center of civil defense action in every borough is what is called the control room. This is a cluster of underground apartments beneath some convenient building—usually the town hall. There are gathered the local civilian chiefs; they are on duty all night; they rarely get home; they take it in turns to snatch some sleep on the camp beds in the control room dormitory. There is the town clerk who has, so to speak, discarded his wig for a tin helmet. There is His Worship the Mayor. It would be an abuse even of the poet's and orator's license to say that he has discarded his chain of office for a suit of chain armor. But that chief civic dignitary who before the war spent his evenings dozing through after-dinner speeches now spends his nights very much awake helping to direct semi-military operations. These and the other control officers are surrounded in those subterranean rooms by the heads of the several civil-defense services, as generals in the moment of battle are surrounded by their staffs. And in a room next door are the messenger boys, ready at any moment, if there is a break-down in communications, to issue into the street above, jump on their bicycles and ride through the bombardment to deliver information to some sector of the front. Some of those boys have met a hero's death on those journeys. And in another room are the telephone girls; for, as I say, these control rooms are the very nerve center of all the action in the borough. Into them is telephoned by the police and wardens in the streets above news of every incident as it occurs; a high explosive bomb in this road, a stick of incendiary bombs on that block of buildings, an unexploded bomb somewhere else, and so on. And immediately the chiefs of staff telephone out from the control room directions to the appropriate civil defense services strategically distributed at their stations over the whole area above. To the stretcher bearer and ambulance parties waiting for a summons to help the wounded, to the rescue squads who will tunnel through the ruined buildings to release the living, to the firemen always ready to engage the flames of this modern hell, and to the rest.

"It has been a lovely revelation, this swift, cool, efficient adaptation of a multitude of ordinary citizens to the task of fighting a war on their own doorsteps. Untrained to warfare, they have acquitted themselves under fire like crack troops. And among those to whom I used to take off my tin hat in most profound admiration were your fellow mayors. Night after night I have had the honor of being with them and their colleagues in their control rooms, and of stepping with them into the streets on tours of inspection of their various services. There is a long tradition in British history that the chosen heads of each municipality are the guardians of the civic freedom and rights of every one of their fellow burgesses. In some periods of stress and strife in our national story, mayors, aldermen, and town clerks have even died on the battlefield or the scaffold defending those sacred rights against some contemporary tyrant. But never was that high tradition of the mayor's office upheld more nobly than it is today, when the civic dignitaries of municipalities all over the Kingdom are cool leaders in the forefront of the firm—and it is going to be the victorious—resistance to Hitler's attack on the whole stock of our democratic liberties."

Thus, the message from the former Minister of Health of Great Britain who played a leading part in English civil defense. It has often been said that somehow or other England always "muddles through." At present it is clear that we are "muddling through" and, unless we can utilize the experience abroad, we shall have failed to build up a structure and program based on the realities of modern warfare—instead of a structure and program based upon archaic and obsolete political boundaries. Civil or passive defense in the United States must be organized along the same lines as active or military defense, namely, on a national foundation, if we are to be prepared for an emergency that all of us trust will never occur. As one municipal official recently stated:

"Our present organization for handling civil defense may satisfactorily meet the needs of community singing, folk dancing, and basket weaving but it is ill-suited to the job ahead of us."

Holy Name Society Breakfast

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

ADDRESS BY HON. JAMES A. FARLEY

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the Honorable James A. Farley at the annual communion and breakfast of the Holy Name Society of the New York Post Office, at the Hotel Astor, New York City, on April 27, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. FARLEY. It was with real pleasure that I received the invitation of the Holy Name Society of the New York Post Office to join in your annual communion and breakfast, even though I am no longer associated in an official capacity with the Department.

There is something fine and traditional about the Postal Service that gets into your blood. It starts from the time when you are sworn in and it stays with you to your dying day. That is the attitude of everyone who has ever been connected with the Service; and, like others who have retired from active duty, I shall always feel during my entire lifetime that I am part and parcel of this great organization.

You are to be heartily congratulated upon the great showing which you made at the altar rail in St. Patrick's Cathedral this morning, and the thousands who have assembled here to break bread together on this delightful occasion.

Your spiritual director, Father Kiernan, must be indeed a happy man today. The officers of your society may well be proud of this impressive demonstration. At a critical moment in the history of all civilization, at a time like this, when the assertion is made that religion has died out, that God has taken a holiday, it is gratifying, it is reassuring, to see this vast body of men openly pledge their unwavering loyalty and devotion to the faith of their fathers and the honor of their country.

As I have stated, I shall always be interested in the welfare of the Postal Service. I am delighted with the reports of progress and the continued success that is being made under the administration of our mutual friend, Frank Walker, the Postmaster General. We are fortunate that we have such a man in charge of this great department of the Government. He is a splendid Christian gentleman, an able executive, and a man whose whole heart is in his work. I am sure that he is delighted, as we all are, in the loyal and efficient support that is being given to him and his assitants in full measure by the postmasters and postal employees throughout the Nation.

I am glad to learn that postal receipts continue onward and upward. In establishing so many camps around the country, the Army has undoubtedly done its share to increase the business of the Post Office Department. The clerks and carriers have probably observed the increase in what might be termed personal correspondence. I am sure all the boys in the camps are writing to their sweethearts, and the sweethearts are writing to the boys. Of course, the postmasters, the clerks, and the carriers are not privileged to read any of the letters, but perhaps they may take an occasional look at a postal card.

One of the first impressions to be gathered here this morning is the unity of purpose that has brought us together. "United we stand, divided we fall" has a special significance to each American today. We have all seen the result of the military strategy to divide and then destroy. Let us not be deceived. We listen to the radio from early morning until midnight, and we realize that what is happening abroad is bound to have an effect upon our own country. We are all thankful for what we have here, and the thing for us to do is to work together as American citizens and to give our united support to the President and to the administration.

We should be so united in the defense of our democracy that you could go out on the street and ask the first man you meet how he stands on the question, multiply his answer by 132,000,000, and obtain the public opinion and the private sentiment of the American people.

There are those who find fault with our system of government. There will be faults in any system of government that is directed by human beings. But with all its faults, who is there that would care to exchange it for a system of government that dictates what you shall think, what you shall say, and how you shall live; a system of government that would deprive us of our freedom of worship, the freedom of the press, and the right of free speech.

A line of the inscription on the pedestal of the Statue of Liberty in New York Harbor reads: "I lift my lamp beside the golden door." This country has always been and always will be the land of opportunity. We must not lose sight of the fact, however, that the brave men and women who came to settle on our shores in the early days for the most part sought the opportunity of religious freedom. We must keep that thought in mind, and it must be forever a part of the American heritage.

The characteristic of this Nation is essentially spiritual. The purchase of ammunition, tanks, airplanes, and the implements of war will be of no avail without the moral and spiritual support of the rank and file of our people. Let us stand together and let us face the world together as one solid, unified force for the maintenance of our American ideals and the preservation of our beloved country.

It has been a real pleasure to be with you this morning and to see each of you again. I hope to be invited to be with you in the future, and if I am, I assure you that the postman won't have to ring twice.

Auditor of Puerto Rico

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

EDITORIAL FROM PUERTO RICO WORLD JOURNAL AND STATEMENT BY THE ATTORNEY GENERAL OF PUERTO RICO

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial appearing in the World Journal of Puerto Rico, which refers to a recent appointment to an office in Puerto Rico, and also a statement by the Attorney General of Puerto Rico regarding the same matter.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Puerto Rico World Journal of April 28, 1941]

A NEW AUDITOR

Occasionally we hear about a man who has worked faithfully for his employer in a position of responsibility for many years, only to be overlooked when the time comes to move some one to a higher and more lucrative position. In most instances the promoted man is able to hold the higher post through the efficient and experienced efforts of the frustrated veteran.

Such a man is José-G. López, acting auditor of Puerto Rico, whose failure to receive the appointment to the post of auditor has made a lot of people very unhappy on this island. Not only are they unhappy; they are confused. They have known Mr. López for many years. They have associated the efficient operation of the auditorship in Puerto Rico with a man who, for 2 months each year of the 9 years in which he has been assistant auditor, has taken the full responsibility of that important government office. There are many who recall that Mr. López started in the auditor's office 27 years ago and has worked continuously since then, establishing a record for honesty and ability that has been beyond reproach. Prior to becoming assistant auditor he served the people of Puerto Rico for 11 years as general examiner of accounts. If Mr. López were called upon to fill out an application for the post of auditor of Puerto Rico, no man could honestly deny him the appointment to the position that his background and record so clearly show him to be the best and proper choice for the job.

To add to the confusion, President Roosevelt has named Patrick Fitzsimmons, of Los Angeles, to the auditorship of Puerto Rico. Doubtless Mr. Fitzsimmons is a capable man and we would not presume to intimate that he will make a poor auditor. But, so far as Puerto Rico is concerned, all that is known about Mr. Fitzsimmons here is that he comes from Los Angeles, out in California, United States of America. What we do know, however, is that Mr. López, who comes from Puerto Rico, is more than capable of carrying on the work in which he has devoted 27 years of his life.

Evidence of Mr. López' ability to fill the position was most forcefully borne out through the recent acceptance by the legislature, and by Gov. Guy J. Swope, of the 1941–42 budget, prepared by Mr. López, and accepted without amendments * * * for the first time in the history of Puerto Rico. And more significant, perhaps, is the fact that this budget was prepared while Mr. López was acting auditor, and under a legislature controlled by a new party whose legislation was not only voluminous but of a nature that entailed the most exacting changes from previous budgets to provide for new revenues and new expenditures. Last year's budget, also prepared under the supervision of Mr. López, was so scientifically and efficiently compiled that it was closed at the end of the year with a surplus of $1,500,000.

In view of the development in Washington to a real inter-American consciousness that has as its keynote the cementing of good will between Spanish- and English-speaking peoples of this hemisphere, we feel that Washington missed the bus by a wide margin when it failed to give a Puerto Rican a position he deserved and one that he has proved himself capable of filling. Often repeated but seldom heeded, the Federal Government's treatment of the people of Puerto Rico is closely watched by the South American republics who see in Puerto Rico the proving ground of Uncle Sam's attitude toward a people with a similar language and much the same culture as their own.

With solidarity of paramount importance, the appointment of a Puerto Rican to the post of Auditor would have been a gesture of more significance and of greater value than the position in question would indicate. This administration should awaken to a new sense of responsibilities in dealing with Spanish-speaking peoples, whether they are citizens under the American flag or members of any one of the 21 republics.

The transformation from ill will to good will is not only highly desirable, it is necessary. A Puerto Rican has proved himself deserving of a position in the service of his own people. He has the endorsement of all political parties on the island. His record is excellent. Why was Mr. Fitzsimmons, of Los Angeles,

given the appointment of Auditor of Puerto Rico? Perhaps it isn't too late to give practical expression to the good-neighbor policy by naming José G. López to the post he deserves.

ATTORNEY GENERAL OFFERS REMEDY IN LÓPEZ CASE—SUGGESTS RESIDENCE OF APPOINTEES BE REQUIRED BY LAW

Suggesting what is believed to be the first solution to the Presidential appointment of relative strangers to governmental positions in Puerto Rico, Attorney General George A. Malcolm said yesterday that an amendment to the organic act could be passed making it obligatory for a candidate to be a resident of the island for 1, 2, or 3 years to be qualified for such an appointment. Citing the Territory of Hawaii as an example, the Attorney General said that their organic laws require that, among other qualifications, in any similar appointee.

The Attorney General's suggestion was proposed, he said, in the matter of acting Auditor José A. López who was regarded locally as the logical appointee to the post of auditor until it was disclosed a week ago yesterday that President Roosevelt had appointed Patrick Fitzsimmons of Los Angeles to the position.

Issuing a sharp warning that he did not wish to be misunderstood, or accused of interfering in a political matter out of his jurisdiction, Malcolm said, however, that, like others in Puerto Rico, "I have the highest respect for López' ability."

In clearly defining his stand on the matter, the attorney general asked, "Why can't the matter be treated in a nonpolitical, noncontroversial way by simply amending our organic act? I have the highest regard for López. I should have liked to have seen him appointed to the post. But going on from there, however, I am also acquainted with the new auditor (Fitzsimmons). I spent some time with him when he passed through here last year on his way from Santo Domingo to Alaska. I knew him in China and the Philippines. I know him also as a high-class man—a good fellow—but that is not the point. We have good men right here in Puerto Rico."

"The remedy," Malcolm added, "is not to deal in personalities. Why not in these cases pick the man best qualified, but preferably one who knows the island through having resided here. That could be done by such an amendment to the organic act."

Attorney General Malcolm suggested that it was not too late yet to secure such an amendment in time to reconsider López as auditor.

Central Valley Project of California

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ARTICLE FROM THE SATURDAY EVENING POST BY MAGNER WHITE

Mr. GEARHART. Mr. Speaker, as one who has been active in the fight to secure congressional approval of California's Central Valley project ever since the coordination of the water resources within the interior basin of California was first suggested, I have found Mr. Magner White's article which recently appeared in the Saturday Evening Post under the caption of "We're moving the rain" of tremendous interest.

Because I believe that the facts and figures and descriptive matter which is contained in this tremendously able article will be helpful to my colleagues in the consideration of the Department of the Interior Appropriation Act, which now holds the attention of the Congress, I ask the unanimous consent of the membership that the article to which I have just referred be spread upon the pages of the CONGRESSIONAL RECORD.

There being no objection to the request of the gentleman from California, Magner White's article, We're Moving the Rain, follows:

[From the Saturday Evening Post of April 27, 1940]

WE'RE MOVING THE RAIN

(By Magner White)

You can ride through the Central Valley water-project area in California for 2 days without knowing you are in it, it is so big. You see only the 83 cities, towns, and hamlets; the rivers, the alpine mountains in the north, the dying orchards in the south, canals, barges, and power lines. It is more than 500 miles long. Virtually, the project tends to remake an area containing two-thirds of the agricultural lands of the State of California, that great mountain-hemmed basin which is the Central Valley; which, itself, is two valleys, the Sacramento in the north, the San Joaquin in the south.

There was never another project just like it. It doesn't add a single irrigated acre to the national total, yet, primarily, it is an irrigation project. Other projects have made desert and wastelands bicom; this one seeks to keep blooming about 2,000,000 acres of fabulously rich lands threatened with unique disasters. It extends from near the Tehachapi Divide, about 50 miles north of Los Angeles, almost to the Oregon State line. Two-thirds of agricultural California lies within its scope. Its mission, save for hydroelectric power, is not development, but rescue.

You ride in your car, travel afoot, float in river boats, glide in trains, and you see the symbolical elements of the economy it is designed to save. It is in shriveled asparagus plants, stunted by encroaching salt tidewaters on rich delta lands near San Francisco Bay, from which once came 99 percent of the Nation's canned asparagus, and where now $50,000,000 worth of factories, five municipalities, and 400,000 acres of land oftentimes gasp for fresh water. It is in the plight of a San Joaquin Valley farmer, trying vainly to get water from a well, now 250 feet deep and dry, which once—and that only 20 years ago— found "earth's sweet flowing breast" at from 10 to 20 feet. It is in that drought year of Indian legend when not a drop of water fell in all the great Central Valley. It is in the flood years—and you've read about those. What floods!

In 1862 boats rose up out of San Francisco Bay, proceeded up to Suisun Bay, then cut across country, over farmhouses and towns, 88 miles to Stockton, rescuing marooned citizens. That was the year newly inaugurated Gov. Leland Stanford led an inaugural reception party to the mansion at Sacramento and found the only way in was through a second-story window—by boat. In another flood several decades ago, steamboats went down to Tulare Lake, 200 miles inland, and were stranded. Yet drought strikes and river navigation is paralyzed. Need for the great new project is in all these extremes. It is in the 112.5 inches of rainfall recorded one year at Shasta Dam site and the less than 8 inches at Bakersfield at the other end of Central Valley the same year.

It is in the clamor of the people. Some saying, with Gov. Culbert L. Olson's New Deal administration, "Power! Power! Get ready for the Tennessee Valley Authority of the West and cheap, publicly owned power." Others in the San Joaquin Valley saying, "No; not power entirely. Give us water first, before our rich vineyards and orchards revert to desert—400,000 acres are threatened now." And still others, in the Sacramento Valley, saying, "Restore navigation on the Sacramento—boats and barges plying clear to Red Bluff, 200 miles inland; and give us flood control, for we are tired of being periodically washed away." And other groups, each with a separate prayer for deliverance.

The $170,000,000 Central Valley project seeks to answer all at once. Naturally, such a colossal order calls for a colossal project—and it is. "Its magnitude," says Walker R. Young, supervising engineer for the Bureau of Reclamation, in his office in Sacramento, "is astounding."

And that is astounding, for Mr. Young was the Government's construction engineer on the Colorado River's great Boulder Dam. Notwithstanding, "the Central Valley project is one of the most difficult and certainly one of the most important undertakings ever faced by the Bureau of Reclamation."

How big?

WHEN THE EARTH REBELLED

"From 1902 to 1937, the first 35 years of its existence, the Bureau completed reservoirs now irrigating 2,900,000 acres and sustaining a population of 860,000. This project alone will conserve water for 2,000,000 acres in a valley with more than 1,000,000 population—nearly 70 percent as much acreage as the Bureau reclaimed in 35 years, and more persons than live on all those other projects combined."

He said, "Astounding!"

For 90 years the project has been dawning. In that period it is estimated that about $3,000,000 has been spent by dozens of Federal, State, local, and private boards, commissions, committees, and agencies on studies, surveys, and investigations of the Central Valley and its meteorological, navigational, agricultural, and salinity-control problems. President Grant, who sent the Army's engineers to look into the situation, made a report to Congress on the valley's needs as early as 1873.

Civilized processes have finally forced action. The exploited earth has rebelled. Unprecedented floods come—a new one every few years. Fifteen feet recently was added to plans for the height of Friant Dam in the project because, after years of observation, a flood came along that justified changing the original design. The ocean creeps farther into the drained and clogged Sacramento River and into the heavily draughted San Joaquin, befouling wells, killing crops. San Joaquin Valley's water table falls and falls, and 40,000 acres are abandoned, and ten times that many are threatened. "By the normal processes of our farming, mining, and lumbering," said the National Resources Committee a few months ago, "we are creating a desert."

Here are the beginnings of one—in the second largest State in the Union. To the rescue. With two major dams, 350 miles of canals, scores of siphons, tunnels, bridges—27 in a 9-mile stretch of the Contra Costa Canal alone—and other auxiliary units. It is a national matter. It is a certainty that, sometime during the year, your table is enhanced with foodstuffs from Central Valley areas—grapes, raisins, figs, olives, walnuts, almonds, peaches, celery, spinach, asparagus, avocados, lemons, oranges, wines. Sixty percent of the 2,400,000 tons of grapes grown annually in this country comes from the San Joaquin Valley. Add vast cotton acreages and cattle ranches of the same area; fruit and nut groves and rice plantations of the Sacramento Valley, and you have a garden empire unexcelled in the world. But without controlled water, below par, or even

worthless. Desert. Silted and salted. Desiccated and drenched.

It is difficult to put into a nutshell sentence the project's fundamental engineering principle. The best description of it was by a Shasta Dam workman. Asked what all those men were doing there, digging and hauling, he looked up from his pneumatic drill and, with a dusty grin, said, "Mister, we're moving the rain."

And that's it. Central Valley's engineering problems all originate in misplaced rain. Too much in the wrong places or too little in the right places, and never in the right season. Two-thirds of the 37,400,000-acre basin's rainfall occurs in the upper, or Sacramento Valley, end. Only a third of the Central Valley's agricultural land is there. At the other end, in the San Joaquin Valley, the proportions are exactly reversed—two-thirds of the cropland, only a third of the water.

Therefore, move the rain.

And cure many other ills as you go along.

The Sacramento River flows southerly, the San Joaquin northerly. Rearrange some of that. Send the Sacramento farther south through a 100-mile canal called the San Joaquin pumping system, to relieve the San Joaquin. Because the San Joaquin's flow is going to be all but turned around on the map. The bulk of its waters, which normally flow north, are going to flow south through the 160-mile Friant-Kern Canal to those dying farms, vineyards, and orchards where the water table is dropping out from under the land. And, though far from its present northerly stream bed, it's also going to flow northerly through the 40-mile Madera Canal. After it's gone, send the Sacramento—at least some of its surplus waters, of which it often has plenty—to take over, and supply the 300,000 acres now drawing on the San Joaquin; the Sacramento to join the virtually departed San Joaquin's stream bed at Mendota through its 100-mile high-line canal. Switch the rivers around. Move the rain.

A STATE OF SUPERLATIVES

Each river will have its major dam. The Sacramento will have Shasta Dam, 12 miles north of Redding, named for the famous extinct volcano, Mount Shasta, which dominates that country. The San Joaquin will have Friant Dam, 20 miles north of Fresno, which will divert it into its two canals and send it, in new directions, on a new career.

One dam will be at the north end of the project, the other near the south end.

Together they are appropriately colossal, as befits their functions. There are already in California 618 dams with capacities aggregating 7,250,000 acre-feet. Shasta with 4,500,000 acre-feet and Friant with 520,000 will, together, store 70 percent as much water as all the other 618 combined. (Between us, a Californian gets a kick out of writing a story like this.) Everything about the project is super, like that. If the superlative is not attained directly in one way it is achieved obliquely in another.

But barge in anywhere along the 500 miles and you run into things that stand you still.

You go up around Redding, the Shasta Dam country. You hike through manzanita and chaparrel looking for game. Now and then you gaze on snow-peaked Mount Shasta, and you feel that exhilaration of the great, free, high spaces when suddenly: You hear, from somewhere down there in the bushes, a persistent, determined sound, like machinery. It can't be construction sounds from the dam—the dam is nearly 7 miles away. You mount a rise. You look down on—of all things—a winding, groaning device of the factory. A long, long belt conveyor out here in this wilderness.

It comes from nowhere, seems to be going nowhere; but wherever it is going, it seems to be going on forever, doggedly creeping on its rollers, up hill and down dale, through woods and across clearings; over a main State highway, twice across the Sacramento River, over four creeks—even over the Southern Pacific Railroad. Its wooden bents now 4 feet above the ground, now crossing highways and streams 90 feet up. Loaded with sand and gravel, what the engineers call "aggregate." Wait a minute—here comes a man. An inspector, apparently. It's good to meet someone way out here.

"Hey!" That stopped him. "What is this thing?"

He comes closer, puffing. "Well, sir," he says proudly, "this here is the longest belt-conveyor system in the world. That's some more of it over there on that hill, 2 miles away. She's 10½ miles long—'bout twice as long as any other'n ever built! She's takin' this stuff up to Shasta Dam. Ain't she a honey?"

She is. She starts near Redding, runs to Coram. She's lighted at nights with sodium-vapor lights, a spectacular sight for air travelers or others in the surrounding altitudes. She has 26 links, all interlocked, each motivated with a 200-horsepower motor, except for 4 down-grade units which generate power to help operate the other flights. Ten million tons of aggregate are going up to the dam on this system—enough to fill 200,000 gondola-type cars. Until Shasta Dam is completed, in 1944, this thing will never rest.

Shasta Dam is the key structure of the Central Valley Project. Grand Coulee Dam in Washington State, with a concrete mass of 11,250,000 cubic yards, is the largest thing ever made by man. Boulder Dam, 727 feet high, is the world's highest. But Shasta, with 6,000,000 cubic yards, will be bigger than Boulder, which masses only 4,360,000 cubic yards and, 560 feet high, will top Grand Coulee by 7 feet. This seems to put it in a class with the side-show midget advertised as "the smallest giant in the world"—but still, Shasta will be one of the greatest structures on this earth.

Notched into its 3,500-foot crest will be a 375-foot spillway. Some spillways are located at one side, or pass around the ends of a dam. This one goes over the top. Its waters will plunge 480 feet—nearly three times the drop of Niagara Falls—the world's greatest artificial waterfall. And Shasta, of course, will be "the highest overflow-type dam in the world." Done obliquely, and with a waterfall, but still—a superlative.

AN INDUSTRIAL MOBILIZATION

No one contracting firm in the United States would care to finance the cash-outlay requirements for the building of Shasta Dam. The bond requirements alone totaled $9,500,000—a bid-guaranty bond of $2,000,000, a performance bond of $5,000,000, and a labor-materials-payment bond of $2,500,000. So 12 nationally known contracting firms formed a special company, the Pacific Constructors, Inc. Some of the 12 were companies specially merged to join the big company. The combine won on a bid of $35,939,450.

In the company are: The Arundel Corporation, Baltimore; Foley Bros., Inc., New York; Hunkin-Conkey Co., Cleveland; A. Guthrie & Co., St. Paul; Gunther-Shirley Co. and W. E. Callahan Construction Co., Dallas; Shofner, Gordon & Hinman, Denver; Lawler & Maguire, Butte; and, all of Los Angeles, Griffith Co., Metropolitan Construction Co., American Concrete & Steel Pipe Co., D. W. Thurston Co., and L. E. Dixon Co.

Between Pacific Constructors, Inc., and the next bidder, the Shasta Construction Co.—also a combine, including members of the old Six Companies who built Boulder Dam—there was a difference in bid of only $262,907. Some of the difference seemed to lie in how to get the enormous quantities of aggregate and cement, and the resulting concrete, into the dam's structure. The Pacific Constructors, Inc.'s engineers solved the problem with an ingenious steel tower and cable system; a more common method is to use trestles and cars, at most supplemented with a cable or two. But this tower has seven cables—and that is unprecedented, so many tied to one tower; and it gave the company one of the most interesting problems ever developed in construction work, an unprecedented problem in harmonics.

The 4,000-ton steel tower in 460 feet high. Its four legs, spaced 184 feet apart, are set 100 feet into the ground. Operating machinery is located in three floors near the top. At the top, so far up against those vast backgrounds it looks like the traditional toothpick, is a 45-foot boom used in servicing the cable system. On the seven cableways—three of them more than a half mile long—glide carriages carrying concrete, up to 24 tons at a time. The problem was to keep the cables, all vibrating and singing back and forth to one another, from shaking the whole works to pieces. Supt. Frank T. Crowe, employed by the contractors, a veteran of Boulder Dam and other big jobs, was leery. No one knew what so many wild waves might do. If not properly set up, this "supermusical instrument" literally would "sing itself to death." Crowe called for advice, and the results showed his apprehensions were more than justified.

TUNING A TOWER

Adolph J. Ackerman, Pittsburgh engineer, was called in to contact harmonics experts of the Nation. He sat up nights; he traveled the continent; he consulted engineers of great electrical companies and physicists in colleges all over the country. The Bureau of Standards was called on to check formulas and theories. Consulting Engineer Henry D. Dewell, of San Francisco, also was put on the job. Conferences were held with Prof. Lydik S. Jacobsen, of Stanford University's vibration and earthquake testing laboratory.

Two cableways at Norris Dam, on T. V. A., had given a clue. An extensometer placed on these showed they were enduring stresses from 30 to 40 percent greater than conventional computations would indicate. Like bass strings on a great piano, with the loud pedal down, these cableways were generating sound waves, all below the human ear's range, and bouncing them back and forth, multiplying the effect each time until the total effect finally was like that of an impact of something weighing 75,000 pounds. This was with two cables. What about more?

It was determined that the cableways of more than 2,000 feet in length would emit waves which, though slow moving—only 500 to 600 feet per second—would be as irresistible as cannon balls. Not to mention a natural tension wave in each of the long swaying cables traveling 15,000 feet per second.

This was just the beginning.

"Considering five cableways," Ackerman reported, after a year's study and some differences of opinion, "with magnitudes of 30 to 40 tons per cableway"—bucket, load, carriage, and 3-inch cableway's weight included—"all transmitting into the headpiece of a central tower and into its supporting structure, we arrive at the enormous figure of 40,000,000 to 50,000,000 cycles!"

Obviously, none of the metals involved—I-bars, yokes, connecting pins; not even the 4,000 tons of steel in the tower—could have withstood any such vibrations. Imagine being hit forty to fifty million times by 30 to 40 tons. A proposed backstay arrangement on the tower was revised. Anchorage cables were placed where they would absorb, divert, or thwart the unwanted waves. Apparently these and other devices are placed at wild random; actually they are set with utmost scientific precision. Complicated.

"But," says Crowe, "she's hell for stout!"

When big dams go up, something—usually a town—is in the way and must be removed from the reservoir site. Here it's part of the

Southern Pacific's California-Oregon main line. It not only winds 37 miles through the site, it crosses the spot where the dam is being built. This complication is solved by an 1,820-foot tunnel under the west abutment. Trains temporarily rumble through and under, giving passengers a glimpse of the big machines mowing down hillsides, the hundreds of men removing brush for miles around, and the $4,500,000 plant the contractors had to put up before they ever poured a batch of concrete.

Later, when the trains move to a relocated line out of Redding, the bypass tunnel will be used to divert the river while the dam goes up higher. Then it will be plugged with a concrete plug 162 feet thick, and left to the ages—probably to puzzle future archeologists.

Relocation of the railroad is a $17,500,000 job. Thirty miles of new track and fifteen miles of highway are being built to take the railroad and a stretch of United States Highway 99 out of the reservoir area. Relocated railroad and highway come together 6 miles from the dam, after skirting a portion of the reservoir. This is the occasion for another big job to get them both across a tributary arm of the lake—the Pit River Bridge, which will be the highest double-decked and the highest railroad bridge in the world.

Highway traffic will travel four lanes on the upper deck, flanked by walkways; trains will travel below. The bridge will be 500 feet high, but, unfortunately, passengers will have no visual evidence of this, for, when the reservoir is full, the lower deck will be only 35 feet above the water. Paul Bunyan, the prodigious lumberjack of legend, might well have designed the concrete supporting piers. Visualize a No. 2 size Washington Monument, 95 by 90 feet at the base, 358 feet high—higher than the Tower of Babel. That's the largest pier. Two others are slightly smaller, seven others relatively insignificant, some only 100 feet tall.

CHANGING NATURE'S WAYS

But the three largest are so massive the bases must be cooled like a large dam, artificially, by circulation of river water through them in embedded metal tubes.

Shasta Reservoir from the air will look like a silver maple leaf set amid mountains. It will be a big leaf, for Shasta Dam will back the Sacramento and the tributary Pit and McCloud Rivers into their canyons 35 miles. The 29,500-acre lake will drain 6,665 square miles. The highest point in its watershed is Mount Shasta (elevation 14,161 feet). The 4,500,000 acre-feet of gross storage will be larger than the combined storages of the Tennessee Valley's Norris and Wilson Dams, but will be but a fraction of Boulder Dam's mighty 30,500,000 acre-feet.

However, again we come to one of those amazing Central Valley water project supers.

The Sacramento River is a mightier stream than the famed Colorado. The Colorado is 2,000 miles long. The Sacramento is only 400 miles long. But the Colorado's mean annual flow, averaged over 40 years by Engineer Young, who knows both streams intimately, is only 16,000,000 acre-feet as against the Sacramento's 21,000,000. At seasonal peaks this enormous volume tries to crowd into the Sacramento's limited stream bed, and this bunching of so much water in such a relatively small channel accounts for the Sacramento Valley's historic floods. Much of this water is on hand, contrarily, in the winter, when it isn't needed. In a period of 90 days enough water to float the United States Navy comes down and scoots into the ocean. A month later the river may have fallen so low boats have to be beached. Shasta Dam will change all this. Like Boulder Dam, Shasta Dam will harness a wild, overgrown winter and spring colt which, as yet, doesn't seem to know its own strength. In contrast, if you like, Grand Coulee Dam on the Columbia River will harness a lumbering elephant.

THE POWER QUESTION

Visitors to Shasta Dam, which is certain to become another prize western tourist attraction, will observe what seems to be a seven-story office building dwarfed in the perspectives at the base of the dam. This is the hydroelectric powerhouse. Here will be generated about 1,500,000,000 kilowatt-hours of power annually—and, before the power finally is distributed, possibly an equal number of political disputes and maneuvers.

This will add 20 to 25 percent to northern California's total power output. About 300,000,000 kilowatt-hours of this new power will be used to lift the Sacramento River's waters into the San Joaquin pumping system 200 miles down-State in the Delta. But subtracting this, enough will be left over to serve nearly 1,000,000 average five-room dwellings. Many farms will use the power for pumping. A portion will go for municipal and domestic uses. Naturally this power increase causes some concern to the Pacific Gas & Electric Co., which distributes most of northern California's power. Governor Olson's administration is insistent that the power shall be sold to publicly owned power districts. The P. G. & E. has offered to buy the power and distribute it through its own lines.

Thus the municipal-ownership issue is an important political byproduct of the Central Valley water project. Governor Olson's administration emphasizes the power aspect of the project; so much so that many Californians have the impression that power is the prime purpose. Congress, however, considers the project primarily a navigation matter. It's an item in the Rivers and Harbors Act of August 26, 1937. Technically the Bureau of Reclamation considers it in the same light, but some authorities will tell you its most important feature is irrigation. So the project is all things to all men. Few projects have merged so many objectives.

Whooping up the power issue early this year, Governor Olson had important "assists" from Secretary of the Interior Harold L. Ickes. Out of a clear sky, almost as if inspired, Secretary Ickes sent Governor Olson a letter while a power revenue-bond proposal was before the California Legislature. In this letter the Secretary announced California communities must "get ready" to receive Shasta Dam power by organizing power districts. Legislators were informed "the Federal Government wants us to prepare for publicly owned power"; but at this writing a proposal to "unfreeze" $50,000,000 of $170,000,000 originally voted for construction of the Central Valley project by the State itself seems doomed—it has been tabled in committee. The administration's plan was to divert this unused bond money to a State-owned power-distribution system and a supplemental stand-by steam plant.

The $170,000,000 was voted in 1933 by the legislature and upheld later on referendum. A proviso was that the amount of the bond issue was to be "reduced by such amounts as may be furnished by the Federal Government." This raised questions as to the bonds' legality when Congress authorized the project as a Federal reclamation undertaking in 1937. So California has on hand $170,000,000 of bonds—or authority to issue that amount. That is a lot of potential public money to be lying around unused. Public-ownership advocates, official and lay, have been busy trying to find some way to unfreeze at least some of the money for application to the vote-getting "cheap-public-power" movement. The California Water Project Authority, headed by Frank W. Clark, Olson's department of public works director, and an ardent municipal-ownership advocate, held hearings on the power question just before the legislature was convened in special session by Governor Olson. At these meetings, Clark reports in a letter, "the farmers turned out en masse from as far north as Shasta County to as far south as Kern County. For an entire day, speaker after speaker told the authority they wanted the power direct from the State." Nevertheless, two Republican members of the authority were unpersuaded; the authority split, 2 to 2, on recommending that Governor Olson put the $50,000,000 unfreezing up to the legislature. So Olson put it up anyway.

TURNING BACK THE TIDES

The P. G. & E. has not escaped the natural appellation in such a situation; Olsonites refer to it with affectionate sneers as the Power Trust. Some legislators were stubborn. They took the view that power was very much secondary to flood control and irrigation, and that, so long as Uncle Sam was building the project, why should the people of California put up millions for a power system? And there she lies—a sharp clash between public and private ownership. No matter who handles the power, it is expected, with irrigation revenues, to return to the Federal Government, in time, the entire cost of the Central Valley project.

Salinity control is another unique inner project in the Central Valley undertaking. At the common delta of the Sacramento-San Joaquin Rivers, waters of the Sacramento, controlled by Shasta Dam, will be used to "bump back" tidal waters coming up through San Francisco, San Pablo, and Suisun Bays. The salinity problem arises in almost the exact center of the Central Valley. Half a dozen municipalities, about 400,000 garden-truck acres, oil and sugar refineries, steel and paper mills, rubber and chemical plants, and usual mercantile and industrial establishments are affected.

A rich country, 20 miles wide by 50 long, is this delta country. It is called the Little Holland of California. In its 1,000 square miles are 550 miles of sloughs and channels. Much of it is at or below sea level. Its lands have been reclaimed and maintained at great expense by levees, drainage ditches, and pumping plants. To irrigate, the farmer simply taps one of the channels; he returns drainage water by pumping it up and over a levee. In some seasons of low river flow, such as the dry year of 1939, salt water from the bays invades the channels. As a result, some $30,000,000 annually in crops is threatened with the fate of Lot's wife.

This problem will be met with the Delta Cross Channel, 40 miles long, largely a widening of waterways between the Sacramento River at Hood and the San Joaquin at the southerly end of the delta. Through this channel, as well as by the Sacramento River itself, the delta channels will be flushed of salt water, and fresh water will be taken onto the dying lands.

PAYING FOR THE GOLD RUSH

More urban areas, including upland irrigated acres, will be served fresh Sacramento River water through the 46-mile Contra Costa Canal. Through concrete-lined banks this water will go to the industrial cities of Antioch, Concord, Martinez, Pittsburg, and Port Chicago—that gasoline-fumed, dark, busy area through which the traveler passes in entering San Francisco and Oakland from the east. This area has been desperate for fresh water. Water has been hauled in for filling automobile radiators. Bridge clubs have adjourned to Oakland so members might have fresh water for coffee. Manufacturing has waited on a water barge, overdue from a trip up the river to fresh-water areas. Pipe lines have been extended farther and farther inland after unbrackish water. Some communities have stored water from flood season to flood season, and run into precarious shortages before new floods brought new fresh waters. This accounts for the fact that since May 1936 the people have been organized into a canal-water district—waiting—and for the fact that the Contra Costa Canal, years before Shasta Dam's expected completion in 1944, is already half finished.

A controlled Sacramento River will end this salt menace.

The decreased river depths have been due not only to heavy irrigation draughts. Hydraulic mining, since the historic gold rush of '49 began in upper tributaries in 1856. This put debris and waste oil into the streams. Although unrestricted hydraulic mining was stopped by the courts in 1884, the debris has been coming down in diminishing quantities ever since. Agricultural California is still paying for the gold rush. In 64 years there have been 64 floods, and every one has moved its share of the earth farther downstream. Shoals have formed; channels are fouled; landings isolated by sand bars. Navigation, which started 100 years ago last August, and saw in 1 day in 1850, 24 vessels at the port of Marysville, has virtually halted at Sacramento, where once-busy boats now lie beached.

By stabilizing the flow the Central Valley project will rescue and revive the Sacramento's shipping. It needs rescuing. In 1926 river traffic was 1,222,993 tons of freight, of which 54,296 was fresh water in barges—the salinity problem was just beginning. A decade later, 1936, it was 770,127 tons, of which a fourth was fresh water. In the same period passenger traffic dropped from 76,288 to 32,323, and even that was high, due to short-haul trips, for in 1935 it had dropped to 17,145. The trend has continued downward, in contrast to the days when the Sacramento and Marysville water fronts were so clogged port officials had to tag vessels for overparking.

Navigation is a special concern of the United States Army Engineers. Under their direction the river channel probably will be improved between Sacramento and Red Bluff to supplement the stabilized flow under the project. Plans in preparation have not been made public. Boats on the rejuvenated river, coordinated with truck lines, will tap an enormous area—much of northern California; and livestock, fruit, and lumber-producing sections of southern Oregon and southwestern Idaho.

Hundreds of contracts are involved in the Central Valley project. None represents more diplomacy and cooperation than the agreement by which 2,314 water users in the northern San Joaquin Valley agree to take imported Sacramento River water in exchange for the San Joaquin water which will be diverted southerly and northerly, in a different area. This is in a territory where men have battled over water more than half a century, some dying with their boots on. The intensity of the scramble for water can hardly be overdramatized. The late Dr. Elwood Mead, Commissioner of Reclamation, once remarked: "Record books of every county in the State have been thrown open to entry of any sort of claim which need or greed might encourage. The aggregate of all water claims in California represents enough moisture to submerge the continent." The hottest spot in this scramble, in the past, has been right here where the San Joaquin flows, and where the Sacramento will flow and serve 300,000 acres when Mendota Canal is operating.

Peace, it's wonderful when 2,314 water users come to agreement in a deal so comprehensive. But they overlooked nothing. These northern San Joaquin irrigators want none of the fate that has befallen the be-salted delta. Even the quality of the water has been agreed upon, and the exact spot at which experts shall take the water regularly for study of its composition. Three eminent professors, studying the prospect, convinced the farmers that northern imported water would be all right.

So all is well—up to now—on the San Joaquin. But irrigators are wary of bicarbonates, sulfates, and chlorides in water. Let the cry, "The solids are comin" go out, and the resulting alarm would be like that preceding disaster. Without this diplomatic triumph, worked out by the Bureau of Reclamation and the 2,314 water users and approved by the State railroad commission, there could have been no Friant Dam to divert the San Joaquin and rescue the stricken south San Joaquin Valley.

Tragic evidence of the water problem down there is on every hand. Here's a peach orchard. Half of it is in bloom. Half of it is dead and shriveled. The well went dry. The grower, joining with a neighbor who still could get water, though only by pumping it from a depth of more than 100 feet, had to decide what trees he would allow to die. His decision is literally marked by the lines of life and death in the orchard. His neighbor's orchard is marked the same way. Common disaster has driven both to sacrifice so that each may have at least part of an orchard. Before the project is in full operation, more orchards and vineyards will die. But they can be revived; all they need is more water.

Meanwhile, the scramble for water is on. Big growers—Joe DiGiorgio, for instance, whose 11,000-acre vineyards are the world's greatest—share with smaller growers, and sometimes it's the other way around. Some of the larger operators have taken over neighboring acreages to work them, without profit, until the Friant-Kern Canal arrives. The owners couldn't meet the heavy pumping costs. The big growers are trying to hold the industry together; a dying orchard or vineyard next door might become a breeding ground for pests which would get out of hand and kill every vine and tree in the valley, big or little. Social and economic considerations seem to merge very aptly here.

The President's Water Flow Committee desribed the San Joaquin Valley water shortage as "the most acute found in any part of the United States." It is no wonder that when ground was broken for Friant Dam on November 5, 1939, 50,000 persons turned out to watch the ceremonial dynamite blast.

Friant will rate as the fourth largest dam of its type in the world. But few dams will be more important. It has the most dramatic rescue mission of any unit on the project. Without it, an agricultural empire would surely die in a few more years; a heavy blow would be dealt transcontinental railroads which haul these crops to you in 100-car fast trains; the Nation's tables would be impoverished, because these are mostly seasonal specialty crops which compete with no others in the United States—and, without Friant Dam, in a few more years you might be eating imported raisins and grapes.

Modernizing the Merchant Marine

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ADDRESS BY CAPT. EDWARD MACAULEY, UNITED STATES NAVY, RETIRED, A MEMBER OF THE UNITED STATES MARITIME COMMISSION

Mr. GEARHART. Mr. Speaker, it was my privilege yesterday to present Capt. Edward Macauley, United States Navy, retired, a recently appointed member of the United States Maritime Commission, to the members of the California Society, to whom he thereupon delivered a most timely, instructive, and tremendously interesting address.

In the light of the importance of that which Captain Macauley had to say, his informative outline of the activities of the highly important governmental agency of which he is a member, it is to be regretted that he could not have been heard by more than the 250 people who were in attendance at the Washington Hotel meeting.

Because I feel that his speech merited a much wider audience, and in the hope that the substance of that which he then said may be given greater circulation, I ask the unanimous consent of the membership of this legislative body that that which Captain Macauley said yesterday be spread upon the pages of the CONGRESSIONAL RECORD.

There being no objection to the request of the gentleman from California, it was ordered that the address of Capt. Edward Macauley, of the United States Maritime Commission, be spread upon the pages of the CONGRESSIONAL RECORD. The speech follows:

My fellow Californians, for many years we in the West have been trying to convert easterners to our more leisurely way of living. I think we were having some success. It was either our influence or the traffic lights which slowed down some of my New York friends from a gallop to a jog trot. I am afraid that we will have to suspend our campaign for the duration of this defense effort. We expatriates who are serving in Washington are close to the fast-whirling wheels of Government, and we can see the rapid tempo of political and economic developments. As a more recent arrival than most of you, I have been surprised at the speed with which our country is acting. The field of shipbuilding, with which I am most familiar, provides an excellent example. A year ago this Government was building merchant ships at the rate of 50 a year, according to a planned program of replacement for our aging cargo and cargo passenger vessels. In the last 4 months we have added 472 ships to that program, all to be built within 2 years, bringing the scope of our program from 50 ships a year to about 285 ships a year.

I shall not attempt to measure this increase in terms of dollars. With the billions which must be spent for the proper defense of this country and the support of British resistance, money figures are not as impressive as they used to be. Nor are money figures the important criterion that they used to be. As we all know, the primary object at the moment is defense and the cost of defense, whether we like it or not, must be a secondary consideration. There is another criterion of size, however, in the number of men needed for the building and operating of these ships. First, in the construction of these ships as well as the new naval vessels recently ordered, employment in the shipbuilding industry will more than double. Second, to operate these vessels we will need many thousands of officers and seamen. We believe that these 572 ships will require more than 20,000 seagoing personnel. Normally, our merchant marine employs about 55,000 on board deep-sea ships and this will be an expansion of more than a third. The new ships cannot be manned entirely by men with previous experience, because old ships which would normally be scrapped must be kept in commission during this emergency.

The Maritime Commission recently held a conference on the problem of the shortage

of maritime personnel. The precise steps to be taken are not yet determined but it is certain that some method will be found to man these ships with able, trained American seamen. The cooperation of the labor organizations of both unlicensed men and the licensed officers of all labor affiliations was offered the Commission in this conference, and their support in recruiting the additional seamen will be of tremendous help in solving the problem.

While this shortage of maritime personnel presents a great problem to the country, and while it is a regrettable development from the standpoint of putting an additional burden on the defense work of the maritime industry, it has a good side. It focuses attention on the tremendous importance of the men who go to sea. Too often do those of us not in the maritime industry think of ships as steel hulls, propelled automatically by machinery which never gets out of order and which automatically loads the cargo, warps the vessel out of the slip, navigates it across the ocean, makes a perfect landfall, and then automatically noses in to a slip in the foreign port before automatically discharging cargo. If the maritime industry could operate in this fashion it would be fine to concentrate all our thoughts on improvement of machinery and equipment. But it does not. Without proper and well-trained officers and men a ship is worse than useless. It is a danger to property and a hazard to navigation.

Great ships are not only huge machine shops, they are self-governing towns. The officers, engineers, and seamen of today must know what goes to make up the ship they are handling. The more the shoreside man, the man in the steamship offices, the operating man, is familiar with the problems of his brothers afloat, the better will both be able to pull together and bring success to themselves, their ships, and their companies.

In the old days, a good sea captain or officer needed a strong and far-reaching voice. Today a wave of the hand, the movement of a lever, or a quiet order serves the same purpose on board ship, and serves it better. A quiet ship is generally a well-disciplined ship.

Whether a ship is a smart ship or a slack one will be indicated by the conditions and performance of its brain and nerve centers, the bridge and the engine room and the officers who are in charge there. The organization and administration of a large vessel with a crew made up of many different elements and a large number of all kinds of passengers requires executive ability of the highest order and qualifications for leadership, firmness, tact, and consideration. Everything must be done for the health, comfort, and contentment of passengers and crew, and the vessel must be scrupulously clean and sanitary. Most passengers are landsmen, on an unfamiliar element and amid strange surroundings. They are deserving of sympathetic courtesy from the officers and men as representatives of the company which has received their passage money and is endeavoring to satisfy and please them. Formality and etiquette are very much in place on board ship, as they must be in any well-conducted organization, especially where authority and prompt and unquestioning obedience are of such importance. The dignity, self respect, and behavior of the officers will be reflected in the crew.

The Maritime Commission recognized this at an early stage and began a program for training able and skilled men to man its new and technologically superior ships. More than 12,000 men have already been reached by this training progam and as a result are doing their jobs better on the oceangoing vessels of this country.

The business leaders of the Pacific coast have in the past given considerable attention to the material side of the shipping industry. I am sure you were all pleased during the last 2 or 3 years to see new and efficient ships entering Pacific coast trade to carry your cargo and to bring in the imports which you need for your businesses. Being from the Pacific coast you appreciate possibly more than persons in any other part of the country the importance of shipping to a healthy business community. The attention which your businessmen have paid to the material side of shipping in supporting the establishment and operation of ship lines and in aiding in the establishment of new shipbuilding plants could well be supplemented by attention to the problem of getting and training good men to go to sea. This would not only be a service to the shipping industry but it would be a service to all business because it would be a protection to your property which travels over the water. This is not an academic suggestion on my part but a concrete one. They and you can encourage our young men to take up the sea as a calling. We may build ships—the best of ships—but we must have men—trained, experienced men—to run them.

All our attention should not be given to getting contracts to build ships and shipyards and steel plants. Some should be left for the problem of getting the best of our California and Pacific coast men to go to sea. In saying this I have a slight bit of regional pride. I think that the young men of the Pacific coast are unsurpassed for character and ability by the young men of any other part of the country. In 1919, while in command of an oceangoing vessel, the steamship *George Washington*, I had the honor of bringing to this country the Belgian King Albert and his Queen and the then crown prince, now the unhappy King Leopold, a virtual prisoner of the Nazis in his own country. King Albert told me then that he felt the typical American men were to be found in the far West—that there was the greatest development of the real American as distinguished from his European ancestral stock.

In urging men to go to sea and in facilitating their training for this service, you will not be asking them to undertake the privation and hardship they would have met 10 years ago. There was a time when living conditions on board ship were very nearly unbearable. Crowded, unclean forecastles, inadequate toilet and washing facilities, coupled with bad food, were frequently found on American ships. This has all changed, and for a very good reason. The efficiency of a ship and of her crew is enhanced by contentment with rooms and food. The new ships of the Maritime Commission program have clean, spacious quarters, adequate shower and toilet facilities, good ventilation and heating. In the crew's quarters the number of men per room is small, usually two, and there is a large locker for each. Hot and cold running water is installed in each room and over the basin is a shaving mirror with side lighting and with an outlet for an electric razor. The messroom is used as a recreation room between meals and has separate tables for four as well as long upholstered settees. A dresser, drinking fountain, and bookshelves are installed. A pantry serving both petty officers and crew is maintained for between-meal snacks. Officers' quarters have improved, too. The captain, chief engineer, and chief officer have individual rooms with individual toilet and shower. Officers' staterooms have settees, wardrobes, desks, drop-leaf tables, and medicine cabinets.

Nor has this program been restricted to the new ships. More than $1,500,000 has been spent in the past 3 years in improving crew's quarters, mess halls, and washrooms and in installing recreation rooms and new deck coverings on the older vessels of the merchant fleet. Expenditures per vessel have ranged from $15,000 on freighters to $100,000 on passenger liners. This is not to say there are no old ships with substandard crew's quarters, but they are rapidly being improved or replaced.

I have asked for your cooperation in getting men from the west coast to go to sea. I would like to show you how closely the west coast is tied to the development of the American merchant marine. Of the 764 merchant vessels building or under contract in the United States, 261 or about 35 percent are being built on the Pacific coast. This west-coast production will total 2,787,591 deadweight tons and will cost, according to contract provisions, approximately $540,000,000.

Of this Pacific coast program 177 ships are to be built in California yards—about 68 percent of the Pacific coast volume and a little more than 23 percent of the entire program for the Nation. Contracts amounting to nearly $355,000,000 have been awarded to California shipyards, representing about two-thirds of the total contracts placed on the west coast and nearly 25 percent of the total contract awards throughout the Nation.

What is undoubtedly of equal, if not greater, importance to Californians and the citizens of other Pacific Coast States is the activity by the Maritime Commission in building up, on a basis of permanent successful operation, the west coast shipping industry. Since the Maritime Commission came into being, it has been actively engaged in rehabilitating west coast shipping services to foreign countries. Several of these steamship lines have been reorganized with Maritime Commission cooperation. Notable among these are the American President Lines, formerly the Dollar Steamship Lines; the American Mail Line, and the Pacific Republics Line, which was formerly the Pacific Argentine Brazil Line. Allotments of new and fast ships from the Commission's construction program have been made to all of these lines and some of the vessels are already in service.

Under the present replacement plans the American President Lines will receive seven Commission-designed passenger-cargo vessels of 17,615 tons displacement and 18 to 19 knots speed, known as C–3's; four, the steamships *President Garfield, President Hayes, President Jackson,* and *President Monroe* already have been delivered and are in active service. The remaining three are expected to follow them within the next few months.

The American Mail Line has been allotted six C–2 cargo vessels of 13,893 tons displacement and 17 knots speed and 3 C–1 cargo vessels of 12,875 tons displacement and 15 knots speed, the first of which, the motorship *Cape Alava,* has been delivered and is now on its maiden voyage.

The Pacific Republics Line now has in active service two C–3 cargo ships, the steamship *Mormacsea* and the steamship *Mormacstar.* The third vessel of this type is scheduled for delivery to the Pacific Republics Line during the month of May.

While these plans, like all long-range peacetime programs, may have to be suspended and the ships assigned elsewhere during the emergency, you may be sure that with the dawn of the happy day when this crisis has been successfully weathered, they will once more be put into effect. Then again will sea-borne commerce resume its great historic function of spreading ever wider peaceful dealings between peoples, and with those dealings, as in the past, will come greater understanding and greater tolerance. In the world of the future it may be that the center of gravity will have shifted to the great Pacific area, bordered by so many races and colors and creeds, and then the groundwork that is being laid today will afford a firm foundation so that our Pacific coast may play its part in carrying on the constructive work of civilization.

Lakes-to-Gulf Highway

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

RESOLUTION OF THE HIGHWAY 45 ASSOCIATION

Mr. RANKIN of Mississippi. Mr. Speaker, if we are to adequately prepare this country for national defense, it is going to be absolutely necessary for us to construct a first-class system of transcontinental highways, and especially north-and-south highways, or highways to serve those areas most vulnerable to attack.

As I have pointed out before time and again, our most vulnerable area, so far as threat of invasion is concerned, is the Gulf coast.

Under permission granted me to extend my remarks, I am inserting a resolution of the Highway 45 Association, urging the construction of a four-lane highway to be known as the Lakes-to-Gulf Highway extending from Chicago, Ill., to Mobile, Ala.

We have just witnessed tragic examples of military disasters brought about largely by congested highways. We saw this happen in France, in Belgium, in Norway, in Holland, and more recently in Yugoslavia and in Greece.

Are we going to fail or refuse to take a lesson from those examples, and decline to prepare this Nation with adequate highway facilities?

By all means we should push the construction of these through thoroughfares and make them capable of carrying our military traffic in the event of an emergency.

And I submit that we could not find a better one to begin on than this Lakes-to-Gulf Highway providing us with a four-line highway along the shortest route from the Great Lakes to the Gulf of Mexico as set out in this resolution.

The matter referred to follows:

Resolution memorializing the committee appointed by President Roosevelt to plan the creation of a transcontinental highway system in the interest of national defense to include United States Highway No. 49, beginning at Chicago, Ill., thence to Kankakee, Ill., and thence down United States Highway No. 45 from Kankakee, Ill., to Mobile, Ala., known as the Lakes-to-the-Gulf Highway

Whereas the President of the United States has appointed the Honorable Thomas H. McDonald, Commissioner of Public Roads Administration, Washington, D. C., acting chairman; Hon. G. Donald Kennedy, Michigan highway commissioner, Lansing, Mich.; Hon. Bibb Graves, former Governor of Alabama, Montgomery, Ala.; Hon. C. H. Delano, Chairman, National Resources Board, Washington, D. C.; Hon. Harlan Barthelomew, city consulting engineer, St Louis, Mo.; Hon. Rex G. Tugwell, chairman, New York City Planning Commission, New York City, N. Y., as a committee to plan in detail the creation of a transcontinental highway system in the interest of national defense; and

Whereas United States Highway No. 49 from Chicago to Kankakee, Ill., and connecting with United States Highway No. 45 from Kankakee, Ill., to Mobile Ala., has been surveyed and proven to me the shortest possible route from the Great Lakes to the Gulf of Mexico; and

Whereas there is already a four-lane concrete highway from Chicago, Ill., to Kankakee, Ill., a distance of about 60 miles and a two-lane paved highway from Kankakee, Ill., directly south to Mobile, Ala.; and

Whereas it is not only the shortest route from the Great Lakes to the Gulf of Mexico, but it is the most level route, unobstructed by mountainous or broken terrain, not one foot of the proposed highway would ever be subject to floods at any time; and

Whereas the proposed route of the continental highway would only cross one major river, namely the Ohio, which is already adequately bridged and thereby eliminating the expensive cost of the construction of large bridges, fills, etc., along the entire route, and

Whereas if war should come and this country should be threatened with invasion we would be handicapped with our inadequate north and south transportation facilities, and

Whereas this highway would be in close proximity to the steel and coal mines of the South and in close proximity to the island territories off of the great Gulf of Mexico which might be used by foreign countries as air bases, and

Whereas it is only 885 miles from Chicago, Ill., to Mobile, Ala., along this route and the said route is free of heavily populated cities, which in case of war, would slow up troop movements and movement of mechanized Army units: Now, therefore, be it

Resolved, That this association of U. S. Highway 45, immediately urge the committee appointed by the President to plan the construction of a continental highway system in the interest of national defense to include the route from Chicago, Ill., over highway 49 to Kankakee, Ill., thence over highway 45 to Mobile, Ala., which has been designated as the shortest possible route from the Great Lakes to the Gulf of Mexico and referred to as the Lakes-to-the-Gulf Highway; be it further

Resolved, That a copy of this resolution be furnished each individual member of the President's committee.

Aid for Great Britain

REMARKS

OF

HON. E. HAROLD CLUETT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. CLUETT. Mr. Speaker, the Nation in this dark hour is waiting for leadership. Shall the President, the heads of our Military and Naval Establishments, or overwhelming public opinion decide the momentous question now facing the American people? Great Britain is in a critical state, and only our help can save her from disaster. Shall we deliver the aid we have promised, or wait until it is too late?

While we argue, Hitler is overrunning the European Continent with the most powerful and cruel forces of war ever known. Only two nations can defeat him. We must act together, or the fate of each one of the conquered nations of Europe may be ours. Our action will affect the destiny of America for generations to come. Woodrow Wilson said: "We are participants whether we would or not in the life of the world. What affects mankind is inevitably our affair." Our pledge to Britain means convoys and the assistance of the American Fleet.

Mr. Speaker, the Sons of the Revolution in the State of New York have adopted the following resolution on this subject:

Whereas the preamble to the constitution of the Sons of the Revolution in the State of New York recites as one of the objects of the society "to inculcate in the community in general respect for the principles for which the patriots of the Revolution contended"; and

Whereas the Axis Powers are by their philosphy and actions endeavoring to destroy individual liberty which was one of the primary principles of the patriots; and

Whereas it is demonstrated that the sentiment of the people of this Nation is overwhelmingly in favor of defeat for the Axis Powers; and

Whereas this sentiment has recently been implemented by the passage by the Congress of the so-called lend-lease law; and

Whereas the effectuating of the above-named law depends on the labor of the people of this Nation, either direct or in taxes; and

Whereas the sentiment, implemented by law, effectuated by taxes and the sweat of American labor will be impossible of accomplishment unless the matériel manufactured here, in the "arsenal of democracy" reach those for whom they are the tools to finish the job: Now, therefore, be it

Resolved by the board of managers of the Sons of the Revolution of the State of New York, That the Commander in Chief of the armed forces of the United States of America be empowered by the Congress to use any and every and the best means available, or to become available, to insure the prompt, continued, and uninterrupted delivery to the struggling peoples abroad of the matériel destined for them; and be it further

Resolved, That it is our considered judgment that, while this may not effectively keep America out of the war, it is the only method left by which the war may be kept out of America; and be it further

Resolved, That the widest possible publicity be given to this resolution; that copies be sent to the President of the United States, the Members of the Congress, the other State societies of the Sons of the Revolution, to representative patriotic societies in the city of New York, and to the membership of our own society.

The Democratic Party Understands "Appeasement"

REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. JOHNSON of Illinois. Mr. Speaker, we are not at war now. I do not

believe we are going to send any of our boys across the seas to fight in any European war, because, the President promised that to the American people before the election last October 30, in a speech at Boston, when speaking to the fathers and mothers of our country, when he said—

and I say it again, and again, and again, that I am not going to send our boys to engage in any European war.

Some good out-spoken Americans who not only want to make America strong in our defense but also want to stay out of the eternal European War must suffer name-calling abuses heaped upon them simply because they choose to be Americans and not hyphenated with any foreign power. Following is an interesting editorial from the Macomb Daily Journal of Macomb, Ill., under date of May 1, 1941, entitled "The Democratic Party Understands 'Appeasement'":

President Roosevelt is condemning people who urge that this nation stay out of a foreign war, calling them "appeasers" and "copperheads" and turning back to Civil War times to find such horrible examples as Vallandigham.

Now, the all-American appeasers of all times was Mr. Roosevelt's own Democratic Party. In August 1864, the darkest period of Rebellion days, Mr. Roosevelt's party met in Chicago in national convention, called the 4-year war a failure, and urged the immediate cessation of hostilities. On this platform the Democratic Party waged a national campaign in our Army's rear, while the southern forces, encouraged by this confession of defeat, strengthened their efforts to destroy the Union.

That there be no question of veracity the Journal publishes verbatim this peace plank of the Democratic "appeasement" platform of that most important campaign of 1864 won by Abraham Lincoln with a scant 5 percent majority of the popular vote.

The "appeasement" platform proclaimed:

"This convention does explicitly declare, as the sense of the American people, that after 4 years of failure to restore the Union by the experiment of war, during which, under the pretense of military necessity, or war power higher than the Constitution, the Constitution itself has been disregarded in every part, and public liberty and private right alike trodden down and the material prosperity of the country essentially impaired—justice, humanity, liberty, and the public welfare demand immediate efforts be made for a cessation of hostilities with a view to an ultimate convention of the States, or other peaceable means, to the end that at the earliest practicable moment peace may be restored on the basis of the Federal Union of the States."

W. P. A. in Connecticut

REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. DOWNS. Mr. Speaker, on April 21, the gentleman from Pennsylvania [Mr. RICH], on the basis of a newspaper article, criticized the officials of the W. P. A. in Connecticut, and stated that they were endeavoring to prevent men on W. P. A. from accepting employment in private industry. In order that the record may be straight in this matter, I have secured from the W. P. A. authorities in Connecticut, a list of the questions asked by a reporter on the New Haven Register, and the answers given by the Connecticut W. P. A. office, and submit them herewith.

Records show that from September 1940, to April 1941, the W. P. A. rolls in Connecticut have decreased from 16,482 to 9,413, as follows:

September	16,482
October	15,752
November	14,947
December	14,040
January	13,444
February	12,143
March	10,924
April	9,413

In my opinion, the answers submitted by W. P. A. officials and the record of decreased W. P. A. enrollment shows that no effort is being made in Connecticut to retain men on the rolls when positions in private industry are available. I heartily agree with the gentleman from Pennsylvania [Mr. RICH] that men should be taken from W. P. A. rolls and placed in private industry as rapidly as possible, and my investigation reveals that this policy is being carried out in the State of Connecticut.

The list of questions referred to above is as follows:

The following is a list of questions submitted on April 16, 1941, by Harold A. Stagg, of the New Haven Register together with the answers as dictated and typed in this office and returned to Mr. Stagg on April 17:

1. Question. What is W. P. A.'s attitude in connection with placing its workers or key workers in private industry?

Answer. W. P. A.'s attitude is precisely this: It is, as it always has been, diligent in its efforts to place all workers, administrative, supervisory, and project, in private industry. Despite all claims to the contrary, workers in all these classifications have been leaving W. P. A. at a rapid rate over the past 6 or 8 months. We encourage them in it. We shall continue to encourage them.

As for key workers specifically, we have lost from the administrative staff alone during the past few months a number of persons whom we could and should logically consider as key personnel. They have been engineers, accountants, and other men and women in the professional field. Naturally, we feel their loss and losing them usually means doubling up the work now carried on by those who remain. We do not, of course, hold out any inducements whatsoever to anyone, no matter how important he may seem to be to the welfare of the W. P. A. program, to remain with W. P. A. when private opportunities present themselves.

2. Question. Is W. P. A. actively attempting to place its workers in private industry?

Answer. Emphatically, yes. It should be generally known that W. P. A., months ago, instituted a job-training program, in cooperation with the State board of education and the Connecticut State employment service, a program deliberately designed to place W. P. A. workers into private employment. Under this plan workers are trained under skilled instructors for jobs in factories, machine shops, etc., particularly where defense contracts are held. We pay these trainees their regular W. P. A. wages during their training courses, at the conclusion of which hundreds have already found private jobs. This is continuing on an ever-broadening basis.

3. Question. Does W. P. A. have any tie-up with the State employment service or any other employment agencies? That is, could requests for help be met and supplied?

Answer. Yes; W. P. A. has a definite tie-up with C. S. E. S. All project and nonrelief personnel must register with C. S. E. S. before they can be employed by W. P. A. It should be borne in mind that C. S. E. S. considers a person working on W. P. A. as unemployed—as far as their records are concerned. If we are to assume that you mean to ask whether or not W. P. A. would or could act as an employment agency, supply help to a given town, city, factory, contractor, or individual, the answer is no. However, when such opportunities arise and the worker may be assured of making as much as or more than his W. P. A. pay, he takes the job forthwith.

Another factor which ties W. P. A. in with C. S. E. S. is this: After the mandatory layoff for 18 months' continuous employment on W. P. A. projects, each person must reregister with C. S. E. S. And, of course, you should refer back to the previous question, which definitely ties us in with C. S. E. S.

4. Question. If an employer asked W. P. A. for a specific number of semiskilled or even skilled laborers, would it provide them by taking them off an active project? For example, a project as important as the Municipal Airport expansion program.

Answer. This is partially answered above. However, such potential employers shou'd first contact the C. S. E. S., where the names of all W. P. A. workers are on file, and, as stated above, are still considered unemployed. As for taking them off a certified national-defense project, while it has been done in the past, we prefer, of course, to have them taken first from what is known as the waiting assignment file. This file contains the names of persons who formerly worked on W. P. A. and who cannot find other employment, or names of new persons similarly situated. They are most in need. They have no jobs of any kind and if the persons required can be found in this file, it would, obviously be doing a favor to all concerned.

If the certified national defense projects are as important to national defense as apparently the War Department believes them to be, then it stands to reason that the crews working thereon should be permitted to see their work through to as swift completion as possible, despite the fact that they are working on W. P. A. projects. Very naturally, then, we had rather have workers taken from other projects—projects which could be held in abeyance—than to have them taken from anything so vital today as airport construction in key defense areas.

5. Question. In general, what, if anything, is W. P. A. doing to use its relief workers to fill the need in industry in Connecticut?

Answer. The answer to this, in the main, is found in the answer to the second question. It has been our experience, during the past 6 or 8 months in particular, to find it increasingly difficult to man certain projects because of a shortage of skilled, semiskilled, and plain labor. Workers have been leaving W. P. A. by the thousands for jobs in private industry—leaving of their own accord. The fact of the matter is that we are deliberately discouraging practically all types of projects calling for skilled help (in the construction line in particular) because of the shortage of qualified personnel. We had such people—thousands of them—at one time. They haven't left Connecticut. They have found jobs—private jobs.

You should know, too, that we do not allow W. P. A. workers to refuse jobs in private industry when they are offered and when the jobs pay as well as their W. P. A. employment and when the jobs are such as they are qualified to fill. Refusal to take such

private employment will lead to dismissal from W. P. A.

Here are some figures to bear out all that has gone before: In September of last year we had more than 16,000 employed on W. P. A. projects. Today we have slightly more than 10,000—and the rolls are still going down. They are now at the lowest ebb in the history of W. P. A., and the low mark is yet to be reached. Our previous low was in 1937, when we had some 13,000. Our high mark was late in 1938, when we had some 30,000. These figures should mean something. They should indicate that most of our W. P. A. workers—all of the remarks to the contrary notwithstanding—do not regard W. P. A. employment as a "career."

Defense Savings Bonds and Stamps

REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. MONRONEY. Mr. Speaker, throughout the country in every town and hamlet, in small and large post offices, defense savings stamps and bonds are being sold to help carry the financial load of our program.

It is surprising to find that on Capitol Hill, where we have three good-sized post offices under the shadow of the dome of the Capitol, you cannot buy a defense stamp or bond. The reason is that the sales are not permitted in contract offices.

All of the Members of Congress are anxious to help carry this financial load—all want to see this program go over. The employees and those who work in the Capitol, too, are anxious to cooperate. If made available, many will be sold here.

No other place in the Nation draws as many visitors as the Capitol itself. I believe it would be wise—I believe it would greatly boost the defense-bond sales if the Treasury would authorize the House and Senate Post Offices—or the sergeant-at-arms office in the Capitol to put these bonds and stamps on sale.

I believe further that the bonds could be boosted by sale to the public under the dome of the Capitol, which this money is to help protect. Thousands would buy if given the merchandising touch by the Treasury to "start your defense-bond savings under the dome of your Capitol."

Under unanimous consent to extend my remarks, I include a letter to this effect to Secretary Morgenthau of the Treasury Department:

MAY 5, 1941.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury,
Washington, D. C.

MY DEAR SIR: It has come to my attention in our campaign to sell defense savings bonds and stamps that under present regulations the three post offices at the National Capitol are not permitted to sell these defense stamps.

A check further revealed that nowhere on Capitol Hill are they available for the hundreds who work in the very shadow of the Capitol. Every Member of Congress and their employees are anxious to help carry a part of this financial load and to cooperate in the sale and purchase of these defense bonds.

It seems to me that the establishment of a place to sell these stamps and bonds at the Capitol would be good business, not only to make them available more readily to the Members of Congress but also to the thousands of visitors who come to the Capitol daily.

These visitors could be encouraged to start their purchases of these stamps and bonds under the very dome of the Capitol of their country, and I am sure that an outlet here would help greatly to stimulate such sales. More than 5,000 a day visit their Capitol, most of whom would be ready prospects for the purchase of the stamps and bonds.

I will appreciate your giving this your attention. With all good wishes, I beg to remain,

Very truly yours,

MIKE MONRONEY.

Political Aspects of the Cooperation Between Mexico and the United States

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ADDRESS BY DR. ROBERTO CARDOVA, LEGAL COUNSELOR OF THE MEXICAN EMBASSY

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following thought-provoking address delivered today by Dr. Roberto Cordova, Legal Counselor of the Mexican Embassy, before the Section of International and Comparative Law:

Members of the American Bar Association: I am highly honored by the kind invitation which my dear friend Dr. Vance, the distinguished president of this bar, extended to me to come before this learned society to express my opinion with regard to the lawyer's role in hemispheric solidarity.

This broad subject cannot be covered in the small time I have at my disposal, and with the still smaller intellectual ability of which I can make use. Therefore I will content myself to present to you a few considerations on the political aspects of the cooperation between Mexico and the United States, which, lacking other possibilities, I will fill with the greatest sincerity.

I have had occasion to express—with pride and satisfaction—that in the field of inter-American cooperation, our two countries have achieved a great success. I reaffirm today this conviction, because I know that the bonds of friendship that now unite us, are here to stay, and will get closer and closer until the time when all of our natural difficulties will only be a matter of history. But there is of course, a long road ahead of us and the role of the lawyer in our two countries will be of paramount importance, to assure final and satisfactory results.

Of all professionals, the lawyer has been, in generations past, the one upon whom the task of framing the national policies has mainly fallen. To a great extent, the failure of cooperation or the success in the friendly unification of points of view and tendencies of governments are the responsibility of those charged in our countries with the legislative functions and the application of the principles of international law for the protection of public and private interests.

The respect for the courts and fair play which guide your daily routine work have crystallized in the national policies of the United States and have furnished a basic and reliable foundation for your actions in the field of international relations. The characteristic respect for judicial authority, for public welfare, before which the private interest must give way, has been transported and refined in the conviction that nations, as individuals, should abide by the provisions of the law and the dictates of the authority with jurisdiction to lay down the principles upon which the nations of the world must live in accordance with ethics and justice.

The United States, in recent times, has been a strong sponsor of the sanctity of these principles and of treaty obligations. For a good many years, your country has been insisting that nations, no matter how powerful or how weak, should all conform to the principles of equality before the law and the respect for the word pledged in an international contract. This attitude has won the respect, the admiration, and the friendship of all free and honorable nations, and I claim that the pride for all these, as of right, belongs to the lawyers and jurists of the United States.

We are living very critical moments. Unfortunately, history seems to repeat itself. The period which our forefathers traversed in the decade from 1820 to 1830 has come back to us with the same load of threats, of fear, and of hopes, which were the patrimony of our ancestors. In that decisive decade in the life of the Americas, we also find a strong combination of European countries which sought to conquer by force and without any regard for national feelings and institutions, the free and liberal countries of the Western Hemisphere. When, after the Congress of Vienna, the Holy Alliance was formed, it committed itself to regain the lost countries of America for the kingdom of Spain, thus crushing in its cradle the infant nations of the New World, which had just been born to the life of freedom, guided by your own Declaration of Independence and the French Declaration de Droit de l'Homme. We are today facing the same terrible danger. Powerful nations have erected themselves as the supreme judges of the destinies of mankind and its governments. As a hundred and twenty years ago, they also seek to force upon nations and individuals their own economic and political methods. For this purpose, they only advance one argument—sheer force; as a justification, they only offer a philosophical principle: "My right goes as far as my might." It is very comforting that now—as 120 years ago—this ruthless coalition against peace-loving nations once more finds America united in a single front against encroachments of lawless efforts to succeed in making force prevail against reason, against justice, and against law.

The Spanish-American nations of this hemisphere can never forget what we owe to the solidarity shown by the United States in 1823, when the generous and far-sighted Monroe Doctrine was framed. We fully realize what it meant for our independence, and are also grateful for the help which was extended at those trying moments in our history. Mexico, especially, has good reasons to be thankful for the generous attitude of your country, since in 1862 again we had occasion to prove the valuable friendship of the United States against European intervention in our territory. The great figures of Juarez and Lincoln will always live together in our memories, as they both lived together in the

fight against individual and national oppression. They both were lawyers, generous and strong; they both are the pride of our countries, who have them enshrined in the hearts of the people for whom they saved liberty and independence.

I should lack the sincerity I promised at the beginning if I did not point out to you here, as a friend to a friend, as a lawyer to a lawyer, some of the shortcomings that the cooperation between Latin America and the United States has had in the past.

Very soon after the Monroe Doctrine was proclaimed, your amazing economic growth, the realization of your own force, and the unfortunate exaltation of the feeling of self-sufficiency which swept this country, brought about the darkest moments in our common history: the well-known "manifest destiny" period provoked a complete misunderstanding of the real aims and generous spirit of President Monroe. Our countries at the turn of the nineteenth century, and for many long years, had good grounds to believe that the doctrine had as its basis only selfish motives of economic and territorial expansion. The European imperialism which we had successfully defeated together in 1824 again clouded the harmony of the Western Hemisphere.

The Spanish-American nations have never been willing to accept the aggressive and unilateral interpretation of the Monroe Doctrine; and they have fought persistently against its natural corollary, armed intervention. A strong movement of public opinion, as well as of political unrest, flooded the two American Continents from the Rio Grande to Patagonia, and Mexico was one of the leaders in the difficult fight against the distortion of the noble policy preconized by Monroe.

President Porfirio Diaz, well known for his friendship to the United States, in his message to the Mexican Congress of April 1, 1896, in order to avoid the evils of this misconstruction, suggested a new doctrine, which has come to be known as the collectivization of the Monroe Doctrine. His words are worthy of note. He said:

"The Government of Mexico shares the view of the doctrine which condemns as predatory any invasion directed by monarchical Europe against any of the American republics or against any of its free nations, all of which have today a popular form of government.

"Our history and the fight of our people to free themselves from an exotic empire, of European origin, form, and philosophy, and the bloodshed in that rude struggle, witness before the world our cult for independence and our hate for any kind of foreign intervention.

"We do not think that it will be sufficient, in order to achieve our aims, that the United States, in spite of its immense resources, should be entrusted with the task of defending alone the other republics of this hemisphere against the attacks of Europe, if they are still deemed possible; we believe that each one of them, by a declaration similar to that of President Monroe, should proclaim that any attack by any foreign power aimed against the territory, the independence, or the overthrow of the institutions of any American republic, would be considered, by the declarant nation, as an offense against herself, if the nation which would suffer the attack, or a threat of this kind, timely asks the help of the others.

"In this manner, the doctrine called today after Monroe, would become an American doctrine, in a broader sense, and although born in the United States, it will belong to the international law of all the American Continent."

This prophetic declaration has guided the government, as well as the statesmen and jurists of Mexico, ever since it was first formulated. In international conferences, taking every opportunity that we have had to express ourselves, consciously or unconsciously, we have worked toward the realization of this idea in America.

The struggle lasted for many years. I had the privilege of being present at the Sixth International Conference of American States, held at Habana in 1928, where the first open battle against armed intervention joined all Latin-American intellectual forces against the misinterpretation of the Monroe Doctrine and its disturbing effects. In the Seventh Inter-American Conference at Montevideo in December 1933 the enlightened administration that so ably still conducts today the destinies of your country, finally accepted the justice of our claims, and your distinguished Secretary of State Cordell Hull, in that momentous congress expressed the intelligent and generous understanding of the Government of the United States of the aims of all our peoples. He pledged the administration of President Roosevelt not to interfere in the affairs of any other country; he said that in view of the acceptance by his Government of the general principle of nonintervention, no government should fear any intervention from the United States under President Roosevelt's administration.

On December 28, 1933, President Roosevelt himself, speaking before the Woodrow Wilson Foundation, not only pledged his administration, as his Secretary of State had done a few days before, but, with a clear conception of the true significance of harmony in America and emulating President Monroe himself, introduced again in the cause of America all the spirit of your forefathers and of our ancestors. Very clearly he stated that not only his administration would be bound by the principle of nonintervention but that for the years to come the definite policy of the United States is contrary to armed intervention.

In December, 1936, during the Peace Conference, held at Buenos Aires, at the invitation of President Roosevelt, the able Mexican delegates, headed by our present Ambassador to the United States, Dr. Francisco Castillo Najera, introduced the already famous Additional Protocol of Nonintervention, which was signed and ratified by the 21 republics forming the Pan American Union. The signing of this treaty marks the turning point toward the paved road of true pan-Americanism and made it possible to sign, in 1938, at Lima, Peru, the Declaration of American Principles and the Declaration of the Principles of the Solidarity of America. The first one lays down the following points of international agreement:

"1. The intervention of any State in the internal or external affairs of another is inadmissible.

"3. The use of force as an instrument of national or international policy is proscribed.

"5. Respect for, and the faithful observance of, treaties constitute the indispensable rule for the development of peaceful relations between States."

The second, the so-called Lima Declaration, reads in part:

"That the peoples of America have achieved spiritual unity through the similarity of their Republican institutions and of the equal sovereignty of States.

"That on the basis of such principles and will, they seek and defend the peace of the continent and work together in the cause of universal concord. * * *

"That respect for the personality, sovereignty, and independence of each American State constitutes the essence of international order sustained by continental solidarity.

"That faithful to the above-mentioned principles and to their absolute sovereignty, they reaffirm their decision to maintain them and to defend them against all foreign intervention or activity that may threaten them.

"And that in case the peace, security, or territorial integrity of any American republic is thus threatened, by acts of any nature that may impair them, they proclaim their common concern and their determination to make effective their solidarity * * *."

All these instruments constitute the fulfillment of the most cherished aspirations of the Mexican nation since 1896, and, taken as a whole, they achieved the Americanization of the Monroe Doctrine.

In pursuance of its own policy, relying on the authority of two of the foremost statesmen you ever had, President Roosevelt and Secretary of State Hull, and in view of the faith of both countries pledged in these treaties, on April 1, 1941, Mexico signed with the United States an "Agreement for the reciprocal transit of military aircraft through the territories of both countries," without any restrictions as to the number of planes or flights. The agreement, nevertheless, provides that any country will be entitled to cancel the treaty at any time and the other country will have 24 hours within which the military planes of each country should leave the territory of the other.

This treaty would never have been possible without the international commitments to which I have referred, without the restitution to the Monroe Doctrine of its original meaning.

Real cooperation, reciprocal aid in all fields of human and governmental endeavors are now possible between our two nations. The community of economic, military, and political interests, is today a reality.

Very soon the United States will be the strongest military nation on earth Whatever the outcome of the European conflict might be, your country will emerge from the ordeal stronger than ever. May this strength be always used for the furtherance of peace and order—of justice in America and outside of America. I fear that the temptation to use this power for your own and particular interest will be very strong in certain sections of your public opinion and some of the agencies of your Government. I know the arguments that will be advanced by the imperialistic forces of the United States; they will only be a restatement of obsolete and worn-out allegations.

The example set forth in the present European conflict will not have a salutary effect upon the militaristic frame of mind in which this country might fall in the near future. In spite of these odds, Mexico is still confident that the enlightened opinion of the United States will sense the danger of indulging again in the use of force in America, which would certainly mean the destruction of the good will—of everything in pan-American relations which we have patiently built through all these years of common effort.

I hope that the Monroe Doctrine will always mean in the United States, and in America, collective security for all our countries—that it will always safeguard our independence against non-American states as well as against American states. With all my soul, I earnestly hope that the future generations of this hemisphere will never, never have to look back into history and reproach us, of the present generation, for having joined together as good neighbors—as brothers in a common cause—against European imperialism. The historic role of the American lawyer in hemispheric solidarity rests on the determination to fight any possibility of history repeating itself in America. Only in this way we will be able to maintain ourselves together and stand firmly on our ground in the forthcoming battle of the continents.

Advertising Is Essential to the Proper Growth of the Nation and Its People

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ADDRESS BY MR. RICHARD R. DEUPREE, PRESIDENT, PROCTER & GAMBLE CO.

Mr. WOODRUFF of Michigan. Mr. Speaker, James S. Milloy, Washington newspaperman associated with Look magazine and the Cowles' newspapers in Des Moines and Minneapolis, has furnished me with a copy of an address delivered to the bureau of advertising section of the recent annual American Newspaper Publishers Association convention in New York by Mr. Richard R. Deupree, of Cincinnati, president of the Procter & Gamble Co., and holder of an important position in the raw-materials division of O. P. M.

Mr. Deupree spoke on Advertising Is Essential to the Proper Growth of the Nation and Its People. Because of the speaker's preeminence in the field of business and advertising and the contribution his address makes to a subject of such widespread interest throughout the country today, I ask unanimous consent to insert it in the RECORD.

There being no objection, the address was ordered printed in the RECORD, as follows:

CORRECTING MISAPPREHENSIONS

I have been wanting to talk on this subject for a long time, and I appreciate this opportunity. I so thoroughly believe that advertising is essential to the proper growth of the Nation and its people that I want to give you my reasons as clearly as possible. You can fuss at my viewpoint, find fault with it if you will, but if you accept it, then I think you have an obligation to build on this essential concept, to improve it, to make it articulate for the people at large in order to correct some misapprehensions in their minds about advertising and to make a strong story stronger. It will be good for the advertiser, it will be good for the publisher, and for the public. It seems to me that we the advertisers, you the publishers, and the advertising agencies have a real obligation to do this, to do it wholeheartedly, and to do it now, once we see the problem clearly.

Right from the start I want to define my terms and make this distinction.

TWO TYPES OF INDUSTRIES

There are two types of industries. One which lends itself readily to advertising. The other which does not. Now it may be a coincidence, but my observations show me that as a group the nonadvertisers have a sad record from the standpoint of research, development, profit, labor conditions, and labor troubles.

Now, on the other hand, if there is an industry which lends itself readily to advertising and yet does not advertise, I think that is a crime.

But perhaps a worse criminal, in my estimation, is the man who advertises his business badly, wastefully. I would like to hold him up to scorn, for he is an out-and-out waster. He is wasting his own or his shareholders' money. He does not fit into the modern economic order. He does himself no good and, what is worse, he is a blight on legitimate advertising. His sins as an unintelligent, unprofitable advertiser are visited on the successful advertisers, the men who deserve a place in the Hall of Fame for deeds well done and true contributions to society.

There has been a lot of talk that if we did not advertise a given product we could immediately reduce the price to the extent of the advertising cost; that advertising in general is uneconomic; that advertising should be limited; that it creates monopolies. You've heard it; everyone has heard it.

I am not going to attempt to answer these charges individually, for if I am right on the fundamental concept that advertising is essential to the proper growth of a nation and its people—and I think I am—then all of these objections are answered. At best they are academic and could be argued pro and con without ever being able to arrive at any definite conclusion satisfactory to both sides or to the majority of the people.

Naturally most of these attacks, these academic bickerings, are centered on successful advertising. Apparently if a man fails in his advertising, that is all right, but if he is successful, that is all wrong. His successful advertising is called expensive and uneconomic when actually just the reverse is true.

Almost 40 years ago I heard Dr. Conwell in his famous lecture Acres of Diamonds, use words to this effect: "Given normal health and normal mind, it is a crime to be poor. It is a crime to fail." I think that statement is right, and that is where I start with advertising.

AS OLD AS MAN

Advertising is as old as man. Man has always talked about his achievements, and always will. The more he talks the more he assumes an obligation to make good on his statements; the more he talks the more he stimulates himself to improve his record so that he can talk some more; the more he talks and the better things he does the more he stimulates others to equal or better him. So competition begins, and the pressure to do better himself is terrific, and all because he began to advertise his achievements. This is a crude illustration, as crude as the cavemen themselves, but in this way progress is started and maintained. Without that talk about his achievements, that advertising if you want to call it of his achievements, inventions like the wheel or sail, or thousands of others, might never have been made.

To put into concrete form what I am saying, I would like to talk about the soap business. I am more familiar with that than with any other, though I could also cite the shortening business, or others to make my point. In fact, I feel sure that most successful advertising follows this same pattern—differing in degrees, of course.

Now, in regard to the soap business: In 1880–90 the housewife paid 5 cents for Ivory soap. In 1941 a shopping housewife still can own her Ivory soap for 5 cents. Now let's make some comparisons. What about those 50 or 60 years?

Since 1880–90 the raw materials which go into soap making have about doubled in price. Wages that were 8 cents to 10 cents per hour then are now 80 cents to $1 per hour. In other words, they are about tenfold what they were. I doubt if such a thing as a Federal tax existed in those days.

Today, we pay Federal taxes equivalent to the amount of factory wages. Add the tax to the wages and we pay today twenty times the wage which existed in 1880–90.

RESULTS OF ADVERTISING

It does not seem possible that expenses such as I have mentioned to you could be absorbed if we had not advertised Ivory soap almost continuously since 1882. The pressure to make good on our advertised claims built up our rigid manufacturing standards, stimulated research and development all along the line, and Ivory set the pace for the entire soap industry. I feel that the development was made possible only because an advertised brand was leading the way and because there was a legitimate profit for achievement. These two facts acted as a continual spur. Just as fast as one improvement was made, the industry would be on your heels, then it was your turn and you had to keep ahead of the procession if you wanted to live with an advertised brand that was profitable.

Don't forget that approximately one-half of the soap produced in this country is still sold as a nonadvertised brand, in the strict meaning of the phrase, but the leaders have always been advertised. There is no doubt in my mind that without a pace setter like Ivory soap, neither the inclination nor the money would have been available for the development of the soap industry and, as I said before, I could cite you many other industries like ours.

I want to amplify this thought. Progress in the soap industry up to 1880 was almost nil because no fundamental changes had been made since soap was first discovered, so far as the soap maker was concerned. True, he had learned to recover glycerine and a Frenchman was responsible for an improved soda, but the product was still slabs of soap—unwrapped slabs of soap—cut into oblong bars or else just plain chunks.

The next 10 years, 1880–90, belong to Ivory; there was not a great deal of other development. And that brings us almost up to the turn of the century and from then on, there was a tremendous development in the art of soap-making, culminating in the peak period of changes and improvements since 1920. This simply is not the same business that it was even in the early 1900's.

PROFITS AND DEVELOPMENT

These great developments, that I have referred to as fundamental, did not come about overnight. Profits plowed back into the business had gradually sprouted a crop of developments and improvements. But please remember: Without the advertising that created broad consumption for the popular brands, there would have been no profits to plow back into the business. And with no profits, there would have been no crop of developments and improvements.

If you want to prove that statement, look at the other side of the picture. Go to the industries that for some reason or other are unable to make money and see how uniformly and discouragingly backward they are in developments and improvements. And remember this—I make the statement categorically—any industry that is backward in development is costly to the public at large.

I would like to say this to you in another way. In the 1880's when a man was making 8 cents to 10 cents an hour and the price of soap was just about what it is, or higher than it is today, the average family consumed about $8 worth per year. In those days it took the head of the family approximately 90 hours work to earn enough to pay his yearly soap bill. Today the family consumes about $10 worth of soap per year, but it only takes the workmen approximately 11 hours' work to pay his soap bill. That extra 79 hours of work can now be used for other necessities and some of the luxuries which modern workmen enjoy. If this isn't a contribution to society, then everything I have said here means nothing.

CITES FALSE THEORY

There has been a saying going around that if you build a better mouse trap, all the world will beat a path to your door. In the first place, I don't believe it. In the second place, I don't believe Emerson said it. I

think someone claims it was a creation of Elbert Hubbard. Anyway, I flatly say that it won't work; the man that built a good mouse trap had to talk about it to make it worth while—to make other people understand why it was good. If he hadn't talked about it, he would still be in the woods and nobody would have heard of either the inventor or his mouse trap.

I am not going to cover the whole gamut of reasons to substantiate the fact that advertising is essential to the proper growth of a nation and its people. I think I could talk for hours on the value of education through low-cost reading material, which, as you know, is more or less attributable to the fact that advertising carries such a large share of the cost of newspapers, periodicals, and radio. I won't speak of the rising standard of living due to the educational effect of good advertising; of the stimulus to invention and discovery in all sorts of industries through that educational effect. There are many other illustrations that could be offered and ways in which the subject could be presented, but I leave that to you.

I do want to leave this thought in your mind. If you agree with me that advertising is essential to the proper growth of the Nation and its people, then if through false reasoning or any other cause, worth while, honest advertising is crippled and hampered, it will be a sorry day for this country, not just for you and me, but for the people who today get better products and live better because of advertising. It would be the death blow to real industrial development, and you and we must see to it that this does not happen.

Answering Objections on the Overton Formula

EXTENSION OF REMARKS

OF

HON. JOHN F. HUNTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. HUNTER. Mr. Speaker, a few days ago, the gentleman from Kansas [Mr. REES], offered some objections to H. R. 3490, which includes the Overton formula for determining the annual payment the Federal Government will make toward the expenses of the District of Columbia.

The gentleman's objections were based on what our investigations have shown to be an erroneous assumption; that residents of the District are not paying a fair and just proportion of taxes, as compared with the residents of comparable cities elsewhere in the United States.

To justify these statements he quoted real-estate tax rates in 22 cities. A few of these cities may rightfully have been called comparable cities, but it is difficult to picture Sioux City, Iowa; Phoenix, Ariz.; Cumberland, Md.; Topeka, Kans.; Fargo, N. D., and some of the other cities on that list as comparable cities.

The gentleman from Kansas also did not take into consideration a fact that is known to every real-estate operator in the country; namely, that a real-estate tax rate means very little unless methods of valuation are taken into consideration. In one area, real estate may be assessed for taxation purposes at 50 percent of actual selling price. In another, it may be assessed at 75 percent of market value. In the District, it happens to be assessed for taxation purposes at slightly more than 100 percent of actual sales or market value.

Your committee on the District of Columbia did not approve the Overton formula blindly. One of the steps was to secure a study of the tax situation by the Bureau of Census, which reported that residents of the city of Washington paid higher taxes than the average in the 10 cities nearest Washington's size in the United States.

I refer you to House Document 108, Seventy-sixth Congress, first session, District of Columbia tax study report made to Congress pursuant to Act of May 16, 1938, and submitted January 16, 1939. The report was prepared by the special staff under the direction of Mr. Colin F. Stam, chief of staff, Joint Committee on Internal Revenue Taxation, and Chester B. Pond, director of the District of Columbia tax study, commonly referred to as the Pond Report.

This report shows that taxes on property represents 67.83 percent of the total taxes levied in the District of Columbia as compared with 61.76 percent of 12 selected States and 64.77 percent of the 48 States of the Union.

The joint committee above mentioned found that on investigation of 9,795 sales of real estate in the District of Columbia, covering the period 1930–36, the total sales price was $131,901,719 as against an assessed value of $136,715,690, or an average ratio of 104 percent assessed value to sales value.

The Pond report recommends that the maximum rate on real estate and tangible personal property should be $1.75 per $100 assessed valuation.

An examination of the 1942 District of Columbia budget shows an estimated total revenue from all sources of general fund taxation of $33,940,000 and a real-estate tax yield of $22,300,000. Therefore, the real estate pays approximately two-thirds of the total general revenue taxes of the District.

The District of Columbia budget also shows that the real estate contributes 60 percent of the total general revenue account.

Mr. Dent, assessor of the District of Columbia, recently examined the recorded sales of property in the business district of Washington, embraced in the area east of Rock Creek and south of Florida Avenue, for the period 1938 through 1940.

There were a total of 88 recorded sales, aggregating $12,652,336, conveying property of which the total assessed valuation was $13,289,310. The total assessed valuation was, therefore, 105 percent of the total sales value.

Furthermore, during the same period the assessor's office found that there were 68 sales of large apartment buildings in the District of Columbia, ranging in units from 13 to a maximum of 140 and in sales price from a minimum of $25,000 to a maximum of $560,000.

A comparison of the sales price of these apartments with the assessed valuation thereof shows a ratio of 106 percent of assessed valuation as against sales price. The total assessed valuation was $7,822,241, and sales price was $7,367,375.

The same investigation discloses that during the same period, 1938 through 1940, the sales of 60 large residences in the old city area represented a total sales price of $1,912,640, as against an assessed valuation of $2,974,717, or an assessed valuation of 35 percent in excess of sales value.

Also, a comparison of sales prices of six large office buildings in the downtown section with the assessed valuation shows a sales price of $1,272,000, as against an assessed valuation of $1,488,229, or an assessed value of 17 percent in excess of sales value.

Industrial Problems

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

VIEWS OF ALBERT W. HAWKES

Mr. EATON. Mr. Speaker, at its annual convention held last week in this city, the United States Chamber of Commerce elected as its president for the ensuing term, Mr. Albert W. Hawkes, of New Jersey.

Mr. Hawkes has for many years been the active head of one of New Jersey's most important and successful industries. He is a man of vision, courage, and judgment, an honored and trusted leader among his own people. In both theory and practice he represents that important but seldom publicized segment of our national industrial life which solves its problems by the exercise of mutual understanding, good will, square dealing, and cooperation between employer and employee.

His views on industrial problems are set forth in a brief statement of policy which I insert at this point and which I recommend to the consideration of all who wish to see American industry rescued from the confusion and strife with which it is afflicted at the present time:

[From the Washington Evening Star of May 2, 1941]

HAWKES' LABOR-CAPITAL POLICY—NEW UNITED STATES CHAMBER PRESIDENT SUGGESTS SIX POINTS FOR EACH ECONOMIC UNIT

The new president of the Chamber of Commerce of the United States, Albert W. Hawkes, of Kearny, N. J., is an exponent of the idea that in these days, understanding between capital and labor is of the utmost importance to pushing forward the national-defense program.

To implement his proposal he has laid down six-point policies, respectively, for labor and for capital.

To labor he says:

1. Labor should remember that labor is its own most important customer. Therefore, labor must serve labor fairly.

2. Labor's progress in improving its position must be at a rate not in excess of the ability of our system to adjust and absorb it.

3. Labor must remember there never has been and never will be a substitute for a full day's work, at fair pay, under good working conditions. We must all remember that to have, we must produce, and to produce, we must work.

4. Labor should not lose its advances by making unreasonable demands which will not be approved by the public.

5. Labor, in its own interest, should remember that the sins of a few capitalists were visited upon all capital, and public opinion—the "court of last resort"—can cause this to happen to labor. All of labor must watch to see that part of labor does not stultify it.

6. Labor, in its demands, should remember that under our system labor of today is often capital tomorrow. If our system of free enterprise survives, this is more likely to be true from now on than ever before. Therefore labor should never make demands upon capital which, when it becomes capital, it would resist if made by labor.

Mr. Hawkes cites six points of policy for capital to remember:

1. Capital should be willing to pay a fair price, in the form of sound adjustments in employee compensation and relationship, as insurance for capital's security and free use.

2. Capital must remember that voluntary cooperation leads to efficient production, and can result only from fair compensation under fair conditions.

3. Capital should remember that our extended machine-producing industry requires many buyers—and these result from the payment to many people of more than the minimum required for subsistence.

4. Capital must recognize that regardless of what others may do, it should make its full contribution to the solution of today's problems because, as freemen, it can act today, whereas the events in other great nations prove that the rights of free people have been curtailed or destroyed in their "tomorrow."

5. All capital and management should investigate and consider the wage-dividend plans of some of our great institutions.

6. Capital should remember that we are all human and if we have an interest in the profits of the business, then we support what benefits the business and oppose all things that injure it, not only in the plant but at the polls.

The Tax Situation

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

LETTER FROM A CONSTITUENT

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from one of my constituents:

STURGEON BAY, WIS., *April 29, 1941.*

DEAR MR. JOHNS: The papers are full of stories about lowering the income tax base and that may be all right for a great many people who are careless with money anyway, but I hope thought will be taken for the poor devil on a modest salary who is paying for a home. You know the chap I mean. He buys a second-hand car and drives it for 5 years. When sonny falls on the playground and breaks his arm the local taxpayers are not called upon to pay the doctor bill. No; dad wears his fraying suit another year and mother buys a new flower or clip for last year's hat and a new belt or collar for her 2-year-old dress. They try to keep the family's teeth in condition so their sons will not be found by the draft board to have a foul mouth condition.

When their hand-to-mouth neighbors get a bushel of apples from the relief depot they may have a treat once in a while of four-pounds-for-a-quarter apples. Mother gets a four-dollar permanent once a year and the girl next door who takes care of children rather often pays $8 for a permanent but her younger brother gets a fine, new wool mackinaw from the relief department while sonny gets a thinner one and wears a sweatshirt under it for extra warmth.

They say we are the salt of the earth, but a lot of us are getting tired of being used as the seasoning for the improvident.

If things get too tough you may be hearing from me again with the plea, "Please, Mr. Congressman, is there any way I can be squeezed onto Uncle Sam's pay roll?"

I am enclosing a clipping from last week's Advocate. I hope the discussions wax warm in New York. Maybe I'll learn new ways to lick this fresh depression that looms over the head of the modest-salaried man.

This sputtering is not directed at you, Mr. JOHNS. Heaven forbid. I worked hard for your reelection and am in agreement with you on most things but the war question, and that is understandable since I am the first generation in my family to be born under the Stars and Stripes and not the Union Jack. No; the whole purpose of this letter is to bring to your attention the plight of the chap who is being ground between the upper and nether millstones.

Sincerely yours,

GAY HARRIS.

A Square Deal for Agriculture

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

LETTER FROM HON. V. A. BRADLEY, OF NASHVILLE, TENN.

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Hon. V. A. Bradley, of Nashville, Tenn.:

HOUSE OF REPRESENTATIVES,
STATE OF TENNESSEE,
Nashville, May 1, 1941.

Hon. ALBERT GORE,
Washington, D. C.

DEAR CONGRESSMAN GORE: I am not at present one of your constituents, but expect to be beginning with your next term, hence this letter.

Farmers here are interested in the legislation pending in Congress designed to bring about parity exchange of agricultural with industrial products, and are closely watching its progress in that body.

With the billions being poured into industry and the Government letting contracts on a cost-plus basis, thus guaranteeing huge profits to industry, and with the wages and hours law and the Labor Relations Board to protect labor, giving it short hours and high wages, common justice demands that legislation giving those engaged in our basic industry, and contributing more to the prosperity of the entire Nation than any other single group, at least a guaranty for a fair profit on the products they grow and the long hours of labor they put in producing essentials for both peace and war.

Agriculture is not now, and has not been getting a square deal. It is in much worse condition than when I was a young man. I offer as proof of this assertion these two illustrations out of my own experience:

1. When a young man I bought a mowing machine for $35. Two years ago I bought one the same size, same cut, substantially the same construction for which I paid $95.

2. As a young man I purchased a wheat binder. Cost, $120. Paid for it with wheat at 90 cents per bushel. Had I purchased one last wheat harvest it would have taken more than 400 bushels to pay for it. And it costs me more to raise a bushel of wheat now than it did then.

Agriculture cannot survive under present conditions, except in the form of peasantry.

Give us your best. We need it. We deserve it. Justice demands that we have it.

Sincerely yours,

V. A. BRADLEY.

Distinction Between Western and Eastern Hemispheres

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

RADIO ADDRESS BY HON. JOHN C. KUNKEL, OF PENNSYLVANIA

Mr. KUNKEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I delivered recently over the radio:

During my last broadcast, I talked a lot about the Western Hemisphere. Everyone else does, too, so much so, in fact, that there is a distinct tendency to forget that the distinction between the Western and Eastern Hemisphere is a purely artificial one.

The world is a unit—an indivisible whole. It is cut in two by no barriers of nature but only by an imaginary line drawn by man, so as to make it more easy to show on his maps and drawings. Our geographies may and can cut the world in half, but it never operates except as a unit. It's a good idea, every now and then, to look at one of those round globes which depict the earth's surface in full and which are available in many schools and libraries, just so as to remind ourselves that there really aren't two separate halves to the sphere we call the world. This will remind us of the vast distances between the continental United States and many sections of this Western Hemisphere in which it is

located. It will also call to mind that there are many places in the Eastern Hemisphere which are much closer and more accessible to the Continental United States than are many points in the Western Hemisphere. Gibraltar, for instance, is closer by sea to the entire South Atlantic Coast of South America than is the closest point in the United States (Miami). Dakar, Bathurst, and Freetown, on the coast of South Africa, are closer to South America than are our nearest bases in the Carribbean Sea. Attach a string to the globe representing the world at some point in the United States, say at Washington, and then swing the string around to various other points and notice the distances. Berlin you will find is closer to Washington than is either Buenos Aires or Rio de Janeiro.

LEND-LEASE BILL

The shifting fortunes of the present world struggle illustrate very vividly why some such measure as the lend-lease bill was necessary for the protection of this country. The turns of fate are so drastic and occur with such astounding rapidity, that it is impossible to foretell in advance where, if anywhere, the materials we are manufacturing for our defense can best be employed. Our continued control over these articles to the last possible minute is of the utmost advantage to us. The standardization of the British equipment with that of our own Nation which is being achieved under the Lend Lease Act, enables this great Nation of ours to use for its own particular purposes and needs those things which were originally earmarked for some other less fortunate nation. The Lend Lease Act has certainly not brought us any nearer to participation in the military and naval part of the war than we were before it was passed and put in operation. Claims that it was a war measure have not been justified. Certainly events have happened which have made the threat of war to us more imminent, but, in not a single case, has any one of these events been aided or abetted by the Lend Lease Act. As the theater of war operations grows and grows, the grim figure of war casts its shadow farther and farther. That is inevitable. The fact that this is so is the reason for that part of our defense program which is designed to limit the area of conflict and to keep it away from our own shores.

The furnishing of materials of war to Britain was started long before lend-lease was thought of. The opening of the Red Sea to American merchant shipping was by an executive proclamation by the President. The seizure of the German, Italian, and Danish ships was done under the provision of the act of 1917, which prohibits sabotage of vessels in our ports. The protectorate over Greenland, which in my judgment will be more likely to avoid war than to get us into it, was established by an agreement between the President and the Danish Minister.

The present discussion of convoys, as everyone knows, is not affected at all by the Lend-Lease Act. There are the major steps which have increased the present dangers which we have to face and consider. You may remember back in January, at the start of the present session, when the lend-lease bill was first up for discussion, that I called attention to the fact that those acts which would mean actual war could have been done long before, or could be done in the future without any legislation whatever; and I also pointed out that in all probability the question of our military and naval participation would hinge on the decision to be made on convoys, a question which at that time was well in the background and obscured by the intense public interest in the lend-lease debate. The more grim the storm clouds become, the more useful the act should be.

WORLD SITUATION TODAY IS VERY SERIOUS

The world situation today is very serious—so are our domestic affairs. We have made tremendous strides during the past year. Let us not overlook that. Whether what we have done to date has been enough we cannot say for sure. We cannot afford to assume that it has been. The time clock keeps running and the sand keeps trickling through the hourglass. The tasks which we must do loom larger and more imperative as the hours turn into days and the days into weeks. This should not be a cause for despondency or discouragement. Instead, this must be an incentive and an inspiration for greater effort on our part from now on. The most critical time for any nation is when it is halfway prepared. Aggressors see the sleeping giant slowly rousing. They fear his tremendous power when fully awake. They seek to strike before he is prepared to resist with his full capacities. So we must make haste. History down through the ages teaches us that national security must be attained in advance of the need for it. History today gives one example after another that more than ever before time is of the essence. Don't ever forget that the digestive processes are working on our side. Napoleon said, "All great empires die of indigestion." His empire, which at one time had almost the same boundaries as does Hitler's today, disintegrated from that cause. So did every other great empire of history. There is nothing to prove that imperial powers of digestion have improved at the same pace as have modern methods of mechanized warfare. Every success—past or future—places a further strain on the intestinal tract of the Nazi organism. Unfortunately, this process takes time and usually lots of it. The fact that it does means that a great many people in a great many places must have foresight, patience, and courage.

PUBLIC NOT GIVEN ALL THE FACTS

Not long ago I gave the President some very unstinted praise on the position he had taken with reference to the disclosure by the press of information about the transfer of certain air units in our armed forces to Alaska and the Far East. Military operations and movements require secrecy. In fact, I try to give the President support when possible and the benefit of the doubt when there is any real two-sided or three-sided question involved. My criticisms—as the present one—are for constructive purposes.

Recently a number of incidents have occurred which indicate clearly to me that the public is not being given all the material, nonmilitary, facts which the average citizen must have if he is to form an intelligent opinion on the issues he is called upon to decide.

The administration and the President are always calling on the Congress and the people to face facts. My contacts back home indicate that most people are ready to face facts as they are or as they may be, but they are having a lot of trouble finding out what the facts are. Too many of our leading spokesmen think that the way to win an argument is to call your opponent a warmonger, on the one hand, or an appeaser on the other. We are asked to accept glittering generalities on faith and not bother with the facts. Washington said, "In proportion as the structure of a government gives force to public opinion, it is essential that public opinion be enlightened." Governmental policy must receive united support if it is to be successful.

GREENLAND

At his press conference last Friday, the President said that Greenland already might be occupied in part by the Axis, but that he was not sure such was the case and that he could not say how the occupation was accomplished. I read this with amazement and consternation. Greenland is of immense importance strategically to the United States. The President has just concluded an agreement establishing a protectorate over it temporarily. That the President, who is also the Commander in Chief of the Army and Navy of the United States, should publicly state that he does not know whether or not Greenland was occupied right now by unfriendly powers seems incredible. If Mr. Roosevelt does not know what the situation in Greenland is, and he certainly should know, and there is no excuse for his not knowing it, then he had better make it his business to find out about it immediately, because there are very few citizens in this country who do not feel that this information is of immediate concern to us and who do not feel that who controls Greenland has a very decisive effect on our own safety and future well-being. Or is this a case where facts are not being given?

PUBLIC SHOULD KNOW FACTS

One question which is invariably asked me on my trips back home is how much of the American-produced goods which are being sent to England is being sunk. Another question invariably asked me is what is the actual rate of sinking of British vessels which are carrying goods across the seas to the British Isles. Various estimates on these questions appear in the different magazines and papers and they vary from time to time. Lately there have been rumors that the percentage was as high as 50 percent of the shipments of our goods. Some say not over 17,000 tons of British shipping per week is being sunk. I do not place any confidence in any of these statements; probably one of the guesses is true but there is no way to tell which one that may happen to be. It seems impossible for anyone to jar these facts from any department of Washington officialdom. Perhaps they do not know, but it seems incredible that they should not have at least reasonably accurate information. Secretary of the Navy Knox in a recent speech indicated he had detailed information on many of these subjects. In view of the decision which public opinion is asked to decide, whether in fact or at least theoretically being asked to decide, these figures certainly should be made known, if an enlightened public opinion is to be permitted and encouraged to make an intelligent decision, and if the growing demand for this information by our enlightened public opinion is to be satisfied. As accurate information as possible should be given at once.

Another evidence of this sort of thing was when the Secretary of the Treasury's recommendations for the new tax bill were sent to the House Ways and Means Committee, and that committee was then sworn to keep those proposals secret. If the amount of tax which people may be assessed is not a matter of interest and importance to everyone, then, of course, such secrecy would have no bad effect. But people are vitally interested in these proposals, even though those same people are ready to pay freely to provide the sinews of national defense. Certainly our domestic tax bill cannot be classed a military secret and certainly cannot be kept under cover for any considerable time. This latter fact makes the request for secrecy stupid and plain dumb, as well as dangerous and undemocratic. The recommendations were finally made public, but the idea of keeping such a matter of purely domestic public interest secret at all is rather alarming.

ETERNAL AND SPIRITUAL VALUES CONTINUE THROUGH ADVERSE TIMES

It has been very pleasant here at home this week end. There certainly isn't a more beautiful time of the year than early spring. Nor is there a more beautiful section of the world than this one right here in which we live. Watching the annual rebirth of Nature in all its glory and then contemplating the activities in which man is engaging through-

out most of the world today makes a strange and odd contrast. Dismal as the present circumstances are, God and Nature are again giving us a living proof that the eternal and spiritual values do continue through the most adverse times. Darker eras than the present one have been etched on the pages of history, yet, with all its recessions and backslidings, civilization has slowly struggled forward over the centuries. The structures that man is pulling down today in so many parts of the world with such vicious abandon are in themselves proof that man and his powers of destruction cannot utterly destroy any more than winter can permanently erase beauty and growth from the face of the earth.

Benefits of Defense Spending

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

EDITORIAL FROM THE ENID (OKLA.) MORNING NEWS

Mr. RIZLEY. Mr. Speaker, notwithstanding the huge amount being expended by war preparations, the fact still remains that while business and industry continue to take substantial profits from the defense-spending program, farm income is still below what it was in 1937. Under leave to extend my remarks, I include in my remarks an editorial from the Enid Morning News, Thursday, May 1, entitled "Who Is Receiving the Benefits?" as follows:

[From the Enid (Okla.) Morning News of May 1, 1941.]

Time and again the administration has assured the people that there would be no profiteering out of our war preparations. Time and again the farmers have been assured that the benefits of defense expenditures (estimated to total 40 billion) would reach them in higher prices for their products.

We started our defense spending in 1939. The Department of Commerce report shows the net income of corporations increased from $1,230,000,000 in 1938 to $3,847,000,000 in 1939, and in 1940 their net income increased to five billions.

How about the dividends to stockholders in these corporations?

In 1937, the dividend distribution reached $4,124,000,000. And in 1940 the dividends reached the staggering total of $4,800,000,000. This was an increase in corporate net income, after the payments of taxes, of 25 percent. The Wall Street Journal states: "Corporate profits are still rising and will be much greater in 1941 than in 1940, in spite of increased taxes, higher labor costs and larger reserves to amortize plant expansion for defense."

What about the farm income? While the corporate net income has increased 25 percent, the farm income is still below what it was in 1937. According to figures from the Bureau of Foreign and Domestic Commerce, the income of the 32,000,000 farmers in this country for 1939 the last year for which figures are available, was $5,635,000,000, or 8.1 percent of the total national income for that year. In other words, 25 percent of the population was receiving only about 8 percent of the national income. The same Government source reveals that national income in 1939 had recovered to 83.7 percent of the 1929 total. Farm income was only 77.6 percent of the 1929 total. This was in spite of the fact that in 1929 business and industry were in the midst of boom times, while the farmer, even then, was in a depression.

For the year 1939, the average per capita farm income for the entire United States was $266. For Oklahoma, it was $197, which is about the average for the cotton and wheat States. With cotton still at around 9 cents and wheat at 72–73 cents, the benefits of defense spending have not as yet materialized to the farmers of such States, and wheat and cotton, it must be conceded, are the two basic necessities in time of peace or war.

The farmers are not asking for inflated prices. They are demanding parity prices, that the purchasing power of farm products be equalized to the purchasing power of industrial products. Potatoes, for instance, on February 15, 1940, sold for 87 percent of parity. On February 15 of this year the price was only 62 percent of parity. The same is true of a great number of other farm-produced commodities. Eggs, on February 15, 1940, were selling at 112 percent of parity.

Last February 15 they brought only 68 percent of parity. Rye last year sold at 61 percent of parity. On February 15 of this year it sold at 45 percent of parity. The price of wheat on February 15, 1940, was 75 percent of parity. A year later it was 60 percent of parity. Similarly, the price of oats on February 15, 1940, was 74 percent of parity. By February 15, 1941, it had fallen to 64 percent of parity. The price of sugar beets in December 1939 was 70 percent of parity. In December 1940 this price was 67 percent of parity. The price of dry beans in December 1939 was 70 percent of parity. By December 1940 the price of dried beans was only 62 percent of parity.

The figures show that if the cost of food products has increased, the processors, not the farmers, have been getting the benefits.

At a time when corporate profits and industrial wages with administration approval are soaring high, should not the farmer be given at least the cost of production for his products? The green light from the President to his price fixer, Leon Henderson, would do the job and force a fair share of the benefits into the farm States where they belong.

Is Inflation Inevitable?

EXTENSION OF REMARKS
OF
HON. ROBERT L. RODGERS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ADDRESS BY DR. ALFRED P. HAAKE

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Dr. Alfred P. Haake, of Chicago, discussion leader on Wake Up America radio program and managing director, National Association of Furniture Manufacturers, before Pennsylvania State Chamber of Commerce dinner to Pennsylvania delegation of Congress and Senate, at Washington, D. C., April 30, 1941:

Inflation is not inevitable. It is the drifting refuge of those who lack foresight and courage and the will to prevent it. But, if you ask me, "Is inflation inevitable?" you must give me also the circumstances under which you ask the question. If you mean a continuing of the forces and policies now at work within the United States, the answer is "Yes; inflation is inevitable." In other words, inflation can largely be avoided or mitigated, if we will, but it appears doubtful that we shall.

Let's be sure we are thinking about the same thing when we talk about inflation. I do not mean a mere increase in the volume of medium of exchange, or money. There can be a very considerable expansion of credit and other money instruments without having inflation. And there can likewise be a contraction of the volume of money without having deflation. Inflation has to do with the relation of the quantity of money in use to the volume of business done. When the quantity of money and the volume of business rise and fall, but maintain the same general proportions to each other, we have neither inflation nor deflation; what we then have is elasticity, an essential characteristic of a satisfactory medium of exchange. It is when the quantity of money rises more rapidly than the volume of goods and services exchanged that we have inflation; when the quantity of money falls more rapidly than the volume of business done, or the volume of goods and services exchanged, we have deflation.

MOST DISASTROUS OF ECONOMIC DISEASES

Inflation is probably the most disastrous of economic diseases. It not only affects prices, wages, rents, profits, and interest, but worse, affects them unevenly, thereby bringing about a distortion in economic relationships without any concern for the just deserts of the various groups of people who are affected. It brings about arbitrary and harmful changes in distribution, giving unearned advantages to the debtor groups and penalizing undeserved and destructive disadvantages on the creditor groups, including millions of savings deposits and insurance policy holders. It brings about loss of efficiency in production and, even as it lowers the general standard of living it also increases the cost of war and the preparation for war. And then, just as inflation has punished the people on its way up, so deflation follows and makes even more horrible the punishment on the way down. It is bad.

Since inflation is a question of disproportionate relationship between the quantity of money and the volume of goods and services exchanged, or a rising price level, it is clear that the forces which bring it about must operate through one or other or both sides of the relationship. Some of these forces have been obscured in public thinking because so many of us have looked mainly or entirely at the issue of money as the cause of inflation, whereas the issue of money is only one of the causes and is itself the result of deeper causes.

CAUSES WHICH CAN BRING INFLATION

The forces now at work which can bring inflation are:

1. Competitive bidding by Government for defense materials and labor.
2. Speculative buying of commodities, in anticipation of price rises.
3. Increases in unit labor costs.
4. Governmental fiscal policies: (a) Financing defense program by borrowing instead of taxation; (b) monetary policies—gold dollar content, issue of fiduciary or fiat money; the gold prohibition law.
5. Too generous extension of bank credit (beyond the needs of production and distribution, leading to speculation and falsely high price levels).

REVIEW OF POSSIBLE CAUSES

As for the first, there is no real need for competitive bidding by the Government. It

was done in the previous war and contributed greatly to the inflationary period following. Rather than rely on competitive bidding, or the no less horrible plan of cost-plus, it would be wise to apply priorities. Fortunately, we have a generous supply of most raw materials needed and the capacity to produce huge additional quantities as they are needed, provided only we set up promptly necessary arrangements and tools. We do not need to have inflation from this source, and it begins to look as though we may avoid it here, provided particularly that the Government uses common sense in establishing wage rates on its projects. Parenthetically, it does not help the morale of our fighting forces to know that the boys back home are making plenty of "easy money," while those in the service train for $21 a month.

There has already been some speculative buying of commodities. Here, again, the existence of surpluses is helpful, for, in many cases, it really is not worth while to accumulate inventories until the surpluses melt and can no longer be replaced. Priorities also help here; and a campaign of education, including publicity activities can curb this danger almost to the vanishing point. So, while there undoubtedly will be some speculative buying, it does not constitute the danger it did 25 years ago. The thing to watch in order to prevent this danger is rising costs and diminishing productive efficiency.

Wage-rate increases constitute a real and vital danger. They were so during the last war and threaten to be more so this time. There is bound to be competition among employers for skilled labor and even unskilled labor. In addition, the unions are entrenched and enjoy official favor as never before. That throws a real responsibility on labor leaders, who are real powers in government now. Businessmen who might have protested vigorously 25 years ago now dare not stick out their necks, for fear of losing their heads.

The result is serious danger of harmfully high labor costs, rising prices, still higher costs and still higher prices—that vicious spiral of rising costs and prices that leads directly into inflation. I do not mean that anyone must be underpaid, or that earnings shall not increase. I do mean that any increased wage rates must be accompanied by increased efficiency, and that if efficiency remains the same higher earnings should result from more hours of work rather than higher wage rates. Unit costs must be held down and production vastly increased. Ironically enough, labor itself suffers from the lagging of wage increases behind price increases, and the further the process goes the more labor loses.

Governmental policy of financing the cost of defense and war by borrowing leads directly to inflation. If the Government discounts its notes at the Federal Reserve Bank, there is created immediately a vast addition to the quantity of money without corresponding increase in productive activity, and without setting in motion the commercial processes which would later withdraw the amount of money borrowed when, under ordinary commercial borrowing, the process which the discounted note had set in motion had been completed. Remember, please, that war activities destroy wealth, while commercial processes create wealth for human use.

Likewise, the selling of Government bonds, since most of these bonds must be bought with borrowed money, also leads no less surely to inflation, less directly, but no less surely.

SAVINGS MAY BE TEMPORARY BUFFER

There is a temporary buffer against this inflationary movement in the fact of existing accumulated savings in huge amount. To the extent to which these now idle funds and relatively idle funds can be drawn into Government bond investment, we can stall off inflation from this source, but at best it is only for a short time. And, to the extent that these funds are invested in Government bonds they are withheld from the more important job of financing production and distribution of goods commercially manufactured which, in turn, would provide the means of repaying the borrowed funds. The danger of inflation is very real and serious from this source.

Congress has already told us plainly that it intends to finance the defense and war program largely, if not entirely, by borrowing, in that the Federal debt limit has already been raised to $65,000,000,000, and is likely to be raised still higher. Government is notoriously fearful of taxing voters. There may be less hesitation in taxing a group with relatively few votes in order to win favor with a larger group having more votes, but that kind of taxation cannot pay the bill for national defense. It will be necessary to tax everybody, and I mean tax everybody.

There is tremendous danger of inflation in the existence and governmental possession of our huge gold supply, about 80 percent of all the monetary gold in the world. In 1933 the Government made a sleight-of-hand profit for itself by the simple expedient of pronouncing, by power given to the President, that the gold dollar should contain only 13.71 grains of gold instead of 23.22 grains. That automatically increased the amount of Federal reserve notes, and the gold certificates that could be issued against our Governmental gold hoard, by more than fifty percent, and we inflated to the extent of more than $2,000,000,000. At that time we had only about $4,000,000,000 worth of gold, but now we have more than $20,000,000,000 worth, at the new gold-dollar content level. By the simple expedient of further reducing the gold content of the dollar to one-fourth of what it now is, the Government could multiply the present gold certificate and Federal reserve note issue capacity, by its own act, by four times, simply creating out of hand that much more money.

In effect, this would be repudiation of three-fourths of the Government monetary obligations, or, if you prefer, it would be confiscation of three-fourths of such claims now held against the Government. Unfortunately, it would also affect the huge structure of private debt in the same way, even though the effect was not immediately discernible. The danger is made the more serious and likely in that we have on the books a law which prohibits the American citizen from owning and possessing any monetary gold. When that law was passed we had to turn in our gold and we would now be seriously punished if caught with any of it in our possession. That means that the Government can do about as it pleases in manipulating the gold dollar and its legal content, with enormous possibilities of impetuous and foolhardy action. The limit of possibility is entire repudiation of national debt and similar effect on private debts as well.

DANGER FROM EXTENSION OF BANK CREDIT

The fifth danger of inflation arises from extension of bank credit. On July 31, 1941, we had more than six billion and five hundred million dollars of excess reserves in our banks. The figure is higher now. That means that with the legally required percentages of reserves, we already had about $49,000,000,000 of deposits in our commercial banks and, on the basis of the excess reserves, we could add another $39,000,000,000, almost doubling the amount of bank deposit currency. That would be inflation indeed. Further devalue the dollar and each present dollar becomes a larger number of dollars and further multiplies the possible inflation. The picture is enough to frighten the very daylights out of the most optimistic banker.

Nor would it be enough to increase greatly the percentage of reserves required of the banks. The very existence of the huge gold hoard, held by the Government, is still the basic danger here. The present gold prohibition law has really accomplished nothing good and it does prevent the people of the United States from stopping any headlong, irresponsible and reckless program of finance for the Government; it helps prevent the realization that government, in any democracy, if democracy is to be preserved, must be no less reliable in debt payments than are private individuals. Democracy cannot live under insolvency.

THREE OUTSTANDING SOURCES OF DANGER

Evaluating the several sources of danger of inflation, I would name three as outstanding at this time:

1. High unit labor costs, or rising wage rates and overtime penalties without compensating increases in productive efficiency and output, and accompanied by consequent rising price levels.

2. Government borrowing to pay for defense and war.

3. Our huge gold hoard and the gold prohibition law.

Specifically how could we reduce the danger of inflation to prevent a recurrence of what happened after the last World War, culminating in the depression which began in 1929?

First, we should go to a 6-day week instead of a 5-day week, declaring a moratorium on overtime penalties for the duration of the war, thereby increasing earnings and production without increasing wage rates and unit costs. This is the first and indispensable step in preventing the vicious spiral of mounting prices and costs. Nor does it really penalize labor. For labor has far more to gain from helping maintain a reasonable stable-price structure and continued buying power after the war as well as during it, than labor has to gain from temporary sprees in buying, mounting costs of war, and suffering afterward with nothing preserved from the temporary spree of the inflationary period. In short, labor has far more to gain than to lose by holding prices down, and prices cannot be held down if wage rates go up and penalties are continued for overtime without compensation by corresponding increase in productive efficiency.

We must discourage speculative buying and hold prices down. Men should seek increased return through lowered net costs, through reduction of waste and better utilization of the means of production, but not at the expense of present wage rates.

PAY AS WE GO

Second: We must pay for defense and "pay as we go", using taxation instead of borrowing as our fiscal policy. I do not pretend that this can be inaugurated fully immediately, but we have the idle savings which can be used to absorb billions of Government bonds and give us a little time to get adjusted to and sold on the necessity of taxation. Instead of shocking the public with immediate full burden of taxation, we can ease that burden on ourselves as we take up the slack for the time being with Government bonds to absorb already accumulated savings.

In Canada they are already taking punishment like the men and women they are. They do not ask their government to delude them into thinking that their burden can really be cast on future generations and still keep Canada free. They are willing to meet financial cost even as they meet the real physical cost, which must be paid as they go in any case. Are we less manly than they? Are we utterly without courage to turn our politics into statesmanship? I refuse to believe it. I choose to believe that we can and even that we will.

REAL COST OF DEFENSE CONSISTS OF GOODS PRODUCED

It must not be forgotten for a moment that the real cost of defense consists of the goods which must be produced for that purpose. Appropriations of billions do not defend us any more than can pictures of airplanes and plans for tanks. We need airships that actually fly, cannon and guns that shoot, tanks that travel, and powder that actually propels projectiles. In short, we need goods, and the only way we can get them is to produce them. And the only way to produce them is to work.

It is encouraging to remind ourselves that our average annual income of $60,000,000,000 for the years 1933–37 was subjected to governmental taxes totaling about 22 percent. We paid thirteen billion and two hundred million for cost of government, and had left for maintaining our standard of living only forty-six billion and $800,000,000. Our income for 1941 will approximate eighty billion, and for the next 3 years can reasonably be expected to average all of $85,000,000,000 a year. Suppose we take 25 percent of that for government or about twenty-one billion and two hundred and twenty-five million dollars. We would still have an annual average of sixty-three billion and seven hundred million dollars for our standard of living, which is almost seventeen billion more than we enjoyed during the period of 1933–37.

With decrease in relief expenditures due to rapidly increasing employment, allowing an actual expenditure of seven billions for defense purposes, and approximately eight billions for State and local governments on top of the six billion which should then suffice Federal Government for other than defense purposes, and what we collect in the 25 percent of our national income will actually pay the bill as we go, and contribute mightily toward preventing inflation and subsequent depression. You may add to the costs of defense, or juggle the figures, but, with adjustments, it is still possible to pay as we go, or very nearly so.

Nor should this be a terrible hardship. They are doing it in Canada, and in England they are further increasing their tax burdens. The point is that both the Canadian and the Englishmen have come to prefer the taxing plan to kidding themselves with futile hopes that somebody else will pay for the war.

REPEAL GOLD PROHIBITION LAW

Third: The gold prohibition law should be repealed. In no other way can we be sure to avoid reckless tinkering with the gold dollar when the pressure grows too great for the courage of men who must make sound decisions. Nor will that be the danger sometimes depicted. During the height of our banking panic in 1933, only about 2 percent of our gold reserve was withdrawn by citizens of the United States and about another 8 percent by foreigners who can still withdraw.

WE DARE NOT BE COMPLACENT ABOUT INFLATION

Of one thing above all let me warn you. We cannot afford to be complacent about inflation any more than we can about strikes in defense production. Perhaps you can tell just where the danger line of inflation is and how we can go right up to it without danger of crossing. I frankly cannot and know of no one who can. The best illustration I know grows out of an experience I once had at Niagara Falls. The second time I was there I was able to study the scenery and the falls pretty thoroughly. I watched the enormous volume of water pouring over the falls, thousands upon thousands of tons of water going over, with no power on earth to hold them back once they came to the falls. And yet, I could look to my left, up the river, and see a point where a small rowboat might venture with some safety into the stream. I imagined a boat with some young folks entering the river up there. Knowing of the falls below, I would call to them, "Please, please go back to shore quickly. Somewhere in the river below you is a point beyond which you cannot go without going down to certain disaster and death. Pull for the shore while there still is time." And I imagined those young folks calling back to me, derisively, "Go to, you poor old mossback, you reactionary. If only you knew how pleasant and easy it is to go downstream, lots easier than pulling upstream, you would not give us such foolish advice." Well, I may be a mossback, I may even be a reactionary, but I am not interested in learning just how far we can go down the stream of inflation before we hit the falls. I am going to pull for shore just as quickly as the good Lord will let me get there.

America today is complacent. It is calling derisively to its would-be saviors, "You poor old mossbacks, why don't you try coasting along with inflation instead of breaking your back paying as you go." We have not yet awakened to the terrible seriousness of the task in hand. And I pray our merciful Father in Heaven that we may wake up before it is too late. France waited too long and was destroyed. England does not yet know whether or not she waited too long. We still have time. God grant we may use it effectively to produce goods, to pay the real price of sacrifice and work.

Dollar Devaluation

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

EDITORIAL FROM THE INDIANAPOLIS STAR

Mr. SPRINGER. Mr. Speaker, the President will urge that the authority be extended to him to further devalue the dollar for an additional period, and that the vast sum of $2,000,000,000, now in the hands of the Chief Executive, be continued and extended until June 30, 1943. The Federal Reserve bankers have urged that this power be not further extended to the President. A very enlightening editorial appeared in the Indianapolis Star, of Indianapolis, Ind., on this subject on the 1st day of May 1941, which I include in my remarks; I hope each Member will read this very brief editorial on this highly important subject.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the Appendix of the RECORD, and to include therein this very important editorial, appearing in the Indianapolis Star on the 1st day of May 1941, which editorial follows:

[From the Indianapolis Star of May 1, 1941]

LET DOLLAR DEVALUATION LAPSE

The President has asked that his authority further to devalue the dollar be extended until June 30, 1943. He also would have the $2,000,000,000 Stabilization Fund Act extended until June 30, 1943. Both powers expire at the end of next month, under the law as it now stands. The Federal Reserve bankers have urged that the President's right to cut the gold content in the dollar be not extended and, further, have urged that the authority he now has to issue $3,000,000,000 of printing-press money be rescinded.

The cancelation of the powers to devalue the dollar and to put out paper money was urged as one of the steps in a program to prevent inflation. The point was made that confidence in the stability of our dollar will be increased when the people know there is no likelihood of change in the gold content. The possibility of $3,000,000,000 of currency being added to the money in circulation is a disturbing factor, even if the money is not put into circulation.

The President is reported as preparing to take drastic steps to prevent inflation. Among the suggested measures is one to provide for price fixing. Along with the requests for more power, why not take the advice of the bankers and give up those that are charged with contribution to the chance of inflation? Congress will do well to take the advice of the financial experts and let the dollar-devaluation power of the President lapse, even though he is loath to let go of it as a bit of authority accumulated in dealing with the depression "emergency."

Strikes in National Defense Industries

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

LETTER FROM THE GROESBECK (TEX.) LIONS CLUB

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the Lions Club of Groesbeck, Tex., opposing strikes in national-defense industries. The letter is as follows:

GROESBECK, TEX., *April 23, 1941.*

We, the Groesbeck Lions Club believe the striking of any group of men employed in any industry engaged in the national-defense program is unjustifiable, a menace to national security, and disloyal, and we respectfully ask that necessary action to end all strikes in such industries be taken. We are mindful of the attitude of labor unions in France which hastened her doom.

Were our sons as they are called to the national defense to attempt to strike, we and the Nation would condemn such action as treason. Shall the men who produce the materials necessary to render effective the service of our young manhood by not only withholding their labor, though receiving many times the pay of our soldiers, but by preventing others from working who are willing and anxious to work? We say no, no, no.

We wholeheartedly endorse our national-defense program and of the same say in the words of the Declaration of Independence:

"And, for the support of this, with a firm reliance on the protection of Divine Providence, we mutually pledge to our Government and to each other our lives, our fortunes, and our sacred honor."

GROESBECK LIONS CLUB,
BUN A. CAYTON,
President.
H. FOUNTAIN KIRBY,
L. R. GEREN,
L. W. SHEPPERD,
Committee.

Farmers Should Be Provided With an Equal Opportunity Under the Law

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

LETTER FROM G. H. GRIFFIN, OF WALHALLA, S. C.

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a letter addressed to me on May 1, 1941, by Mr. G. H. Griffin, of Walhalla, S. C.

Mr. Griffin is an outstanding agriculturist, and I agree with him fully that the farmers of this country, who are responsible for feeding and clothing 130,000,000 Americans, are entitled to equal justice in line with that which Congress has given to many other groups, even by the passage of legislation for this purpose.

We hear much about the surplus of cotton and wheat. If the 30 percent of the people engaged in agriculture had an equal percentage of the national income of other groups, in other words, proper purchasing power, we would not have any surplus on hand at this time.

As previously stated, in that farmers are on a basis of about 65 to 75 percent of parity, it is very clear to me, and should be to all others who are concerned about the serious condition of agriculture, that it is impossible for a farmer to buy a dollar's worth of goods with 65 or 75 cents, and that is really the position of farmers today.

Farmers have been promised parity equality, and as chairman of the Agricultural Committee of the House, realizing my responsibility, and that of my committee, I want to state frankly that I will not be satisfied with any type of legislation which will not give to farmers that which they have been promised, and that to which they are clearly entitled—that is 100-percent parity.

The letter above referred to is as follows:

WALHALLA, S. C., *May 1, 1941.*

Hon. H. P. FULMER,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN FULMER: This is to acknowledge receipt of a copy of the April 23 issue of the CONGRESSIONAL RECORD, which contains the speech which you made to the South Atlantic Cotton Association in Greenville on April 18, together with copies of letters written by you to Mr. Armand May, president, American Associated Companies, Atlanta, Ga., and Prof. Gurth Whipple, director, New York State College of Forestry, Syracuse University, Syracuse, N. Y.

I appreciate exceedingly your furnishing me with the copy of your speech and copies of these letters, and I have read all of them with a great deal of pleasure and interest, and particularly I admire the manner in which you have made reply to the two gentlemen above cited, copies of letters which you sent me.

After giving fairly careful thought and study to your speech made in Greenville to the South Atlantic Cotton Association, in which you outlined a remedy for the relief of agriculture, I thoroughly agree with your conception of the agricultural problem and your plan which will provide considerable relief and give to the producer a fairer share of the consumers' dollar.

I wish to take this means of congratulating you upon your most excellent knowledge of the agricultural problem as exists today and for the relief remedy which you have so amicably advanced in your speech commenting upon your bill now being considered by the Congress. My hope and prayer is that you will succeed in getting this pending legislation favorably acted upon by the Congress.

The one and only thing that farm people or agriculture needs or is entitled to is equal economic opportunity comparable to that now provided and enjoyed by other groups. Your proposal, I believe, comes nearer to providing this than any that has come to my attention, and I am in thorough accord with your plan, and fail to see why any group or interest could by the use of sound reason object. Not until agriculture rises from its prostrate position and assumes a horizontal or parallel position with that of other industries and groups will prosperity return to this country of ours.

I realize there is little that I can do to help you in this undertaking, but I wish to assure you that I shall do, and stand ready to do, whatever I can to assist you and those who agree with your efforts to bring about all agriculture wants, needs, and is asking for equal economic opportunity comparable to that of other groups. We want no advantages and expect none, but it is only fair that all Americans be provided with equal opportunity under the law.

With kind regards and best wishes, I am

Very truly yours,

G. H. GRIFFIN.

Convoys

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

LETTER FROM A CONSTITUENT

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from one of my constituents:

MEAGHER & MEAGHER,
Binghamton, N. Y., May 1, 1941.

Hon. EDWIN ARTHUR HALL,
Congressman, Washington, D. C.

DEAR ED.: During the week of April 21 to April 25, the Binghamton Junior Chamber of Commerce straw-poll committee conducted a straw poll on the following question: Should the United States convoy goods to Britain? As chairman of that committee I am taking the liberty to forward the results to you, hoping that such results will be of assistance to you in reaching any decision upon the question of convoys when it arises in Congress.

This poll was conducted in the city of Binghamton by members of the junior chamber of commerce. One thousand one hundred and eighteen persons were questioned and results showed that 55 percent were against the use of convoys, 42 percent voted in favor of convoys, and 3 percent said they were doubtful about the use of convoys.

We hope to make this poll a regular service of the junior chamber of commerce. If there is any particular public question upon which you would like us to conduct a straw poll please let us know and we will give it serious consideration.

FREDERICK J. MEAGHER.

A Wisconsin "Red" Story—Best Joke of the Season

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

EDITORIALS FROM THE GREEN BAY PRESS GAZETTE

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Green Bay (Wis.) Press Gazette of April 30, 1941.]

A WISCONSIN "RED" STORY

Wisconsin has not lagged in "red" activities as much as some of its people may have thought.

There is Ann Christoffel, nee Ann Sabljak, alias Ann Stewart, wife of Harold Christoffel, president of the CIO Allis-Chalmers union.

The investigation concerning this lady has been sent to Washington upon the demand of a Member of Congress. It is typical of the routine directed by Moscow. The Wisconsin investigating committee says that it has proved beyond all doubt that the lady is a member of the Communist Party. And then it tells the story in detail.

First of all, quite naturally of course, she got on the Federal pay roll at $1,440 a year under her maiden name of Ann Sabljak. But the Wisconsin committee learned from a former "red" that in the party she was known as Ann Stewart and that she occupied an important position in the Young Communist League. The personnel director of the United States next appears in the evidence with his report that she denied she ever used the name of Ann Stewart. She admitted her marriage to Christoffel but vigorously denied her membership in the Communist Party. She concealed her marriage, she said, as a means of making more secure her job with the Government. But over and over she insisted she never had heard the name Ann Stewart. In fact, she was quite indignant about the charge of belonging to the "reds" or using a phoney name.

But investigators are persistent guys. They found that the lady had joined the First Methodist Church of Milwaukee under the alias of Ann Stewart. Then she admitted what she had so indignantly denied but a short time before, that she had not used the name of Ann Stewart.

Whether she joined the church at the time the manifesto went out from Moscow for all "reds" to "honey up" to all churches

with the expectation of choking them when a good chance appeared, we cannot say. But that this woman was an active, energetic party member worming her way around under false colors and false names the committee found supported by strong evidence.

Recently Harold Christoffel, the husband, denied he was a member of the "reds." Former members of the party, however, place him at its meetings leading the singing, particularly that great chant, Rise Ye Prisoners

But, according to rule No. 1 in the "red" catechism, it is a "red's" business to always deny that he is "red," it is his business to falsify in respect to everything where falsification may be advantageous.

It is noteworthy that these restless "reds" will at one and the same time bore into churches, into labor unions, and into Federal jobs, and expect to stay in all places by persisting in evasive conduct and answers.

[From the Green Bay (Wis.) Press Gazette of April 30, 1941]

BEST JOKE OF THE SEASON

Every time that Secretary of the Treasury Morgenthau appears before a congressional committee with a new tax bill he takes out of a pigeon hole in his desk that same little statement urging Congress to economy and pointing to the piles of skeletons that mark the course in history of every spendthrift nation.

And, true to form, Mr. Morgenthau talked again recently about lopping off a lot of money from nondefense items in the Government's budget.

We would like to wager a good bottle of beer that if the press hadn't been present before the committee the members would have laughed until they cried, would have rolled around and slapped their knees in an uncontrollable fit of mirth at the very idea of expecting anything in the nature of economy from the present rulers of America.

When a college funny magazine can match the Secretary of the Treasury in gaiety and wit it will have arrived some place.

Tax Guidance

EXTENSION OF REMARKS

OF

HON. FRANK CROWTHER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. CROWTHER. Mr. Speaker, in connection with the privilege of extending my remarks, I desire to present the following editorial published in the Washington Post of May 5, 1941.

The title "Tax Guidance," would be more expressive if it was followed by an interrogation point.

[From the Washington Post of May 5, 1941]

TAX GUIDANCE

The letter which President Roosevelt addressed to Chairman DOUGHTON, of the House Ways and Means Committee, in regard to tax legislation offers neither definite guidance nor moral support to legislators greatly in need of both. Although the President approves the Treasury's objective of raising $3,500,000,000 of new revenue, he does not urge adoption of its specific proposals to raise it. Indeed, there is a strong hint that he regards the Treasury's program as tentative. On the controversial issues of lowering income-tax exemptions and increasing excise taxes, Mr. Roosevelt is significantly silent. He takes refuge behind generalizations to the effect that every individual and every corporation should bear a fair share of the tax burden. He delivers familiar warnings against taxes that make the rich richer and the poor poorer. Since both rich and poor must be prepared to make heavy financial sacrifices for defense, this kind of appeal is singularly inopportune and unwarranted.

Incidentally, what does it mean in practical terms? It may indicate that the President is opposed to sales taxes or excise taxes on articles of mass consumption, as some commentators infer. However, that is pure assumption. And what is the President's purpose in decrying a tax basis so defined as "to exclude substantial and significant elements of income?" The incomes of the great majority of the American people are today (and would remain under the Treasury tax plan) exempt from income taxation. There is no hint that the President had these groups in mind when urging a broader tax basis. On the contrary, he was probably referring to the necessity of closing avenues of tax evasion in the corporate and upper individual income-tax brackets.

Nothing at all was said about the need for economy in nondefense outlays, although the President had a rare opportunity to back up Secretary Morgenthau's personal appeal for a billion-dollar cut in nondefense expenditures as a further means of reducing the 1942 Budget deficit. Furthermore, no reference was made to the importance of taxation as a means of curtailing civilian consumption and thus releasing labor and goods for defense use. In short, the letter to Mr. DOUGHTON is chiefly significant for its ambiguities and omissions rather than for its affirmations. It cannot fail to disappoint hopes that the President would offer all-out aid to those Members of Congress who are leading the fight for a comprehensive tax program and for substantial reductions in nondefense spending.

County Boards Should Be Appreciated

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. MURRAY. Mr. Speaker, the county boards of our States have always appeared to me as the foundation of our Republic. Here is a group of men elected by people who know them personally, and the election and endorsement of one's neighbors is a true measure of appreciation.

These men work many hours without remuneration in carrying on the work of their office and receive but small pay when compared to the other public officers of the country.

This group of county board members are required to cooperate with the agencies promoted by the State and the Federal Governments. For the best interests of society as a whole, I am sure if more Federal and State control were delegated back to the county boards there would be—

First. A more economical and efficient administration of public funds.

Second. A fairer and more equitable distribution of public funds.

If the county boards could be called upon to make the proper use of W. P. A. funds for example, a great amount of overhead could be eliminated and this money would reach the pockets of needy in much larger proportions than it has in the past.

I am pleased to note that one of the leading papers in my district, the Shawano County Journal under date of May 1, 1941, in the following editorial most ably pays tribute to the county board of Shawano County, Wis.

[From the Shawano County (Wis.) Journal of May 1, 1941]

OUR COUNTY BOARD

A year of important decisions, careful planning and significant changes awaits the Shawano County board of supervisors, that important governing body of this county which meets next Tuesday to organize for a new year.

Most of the members have served over a long period of years, some have only a few years to their credit, while three members face a new path of service. Certainly we know each man, realizing the confidence and faith that have been placed in him by the people of his community, will come with a determination to give the very best kind of service he can command.

The people of Shawano County are fortunate to have as their representatives men who are entirely capable, men who think for themselves, whose decisions are the dictates of their own hearts. They come as servants of the people, each to act according to the best interests of the people, not only of the community they represent, but of the entire county as well.

The average citizen in many cases fails to recognize the tremendous responsibility that rests with each member of the county board.

Shawano County is fortunate to have a county board composed of members who represent business and professional life as well as agriculture. Many of them are farmers, some businessmen, two are attorneys, and others are prominent in the dairy field. The Shawano County board always has been a cooperative body and their accomplishments have been exceedingly commendable.

It is with confidence that the people of this county look to the new administration, knowing full well that each man will do his part to make this county exemplary among the 71 counties of this State.

For Peace in Industry

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ARTICLE FROM THE NEW YORK TIMES MAGAZINE

Mr. LEAVY. Mr. Speaker, we are all deeply concerned in securing the maximum production in our national-defense

program. We all realize that to accomplish this purpose there must be the minimum amount of disagreement between labor and capital.

There has been a great amount of misunderstanding concerning the work of the Department of Labor in connection with its accomplishments in adjusting the differences that have arisen between these two mighty forces in the field of production.

Since 1937 Dr. John R. Steelman has been Director of the United States Conciliation Service in the Department of Labor. An impartial examination of the record of accomplishments under his fair and impartial direction would convince any person of the great work that he has been and is now doing. He possesses a sense of fairness and impartiality rarely found in men directly concerned in this great struggle. He has inspired and won the confidence of both organized labor and the industrialist. It is this unusual trait in the man that has made it possible for him to accomplish what to many of us would seem to be the impossible and to bring these warring groups together at the conference table and adjust their many differences.

I am sure that when the Members of Congress and the American people have a better knowledge of the established facts in connection with the work of Dr. Steelman and his service there will be a substantial reduction in labor-capital conflicts and an even greater reliance placed upon conciliation as a means of adjusting such differences as do arise.

A short time ago there appeared in the New York Times magazine of March 30, 1941, a very able and informative article under the title "For Peace in Industry—A Conciliator's Creed," by Cabell Phillips, concerning Dr. John R. Steelman and the exceptionally effective and splendid work that the Conciliation Service is doing under his direction, and I am glad to make it a part of the RECORD.

The article follows:

[From the New York Times magazine of March 30, 1941]

Industrial peace is domestic problem No. 1 in the United States today. News from the industrial battle fronts of America competes for front-page prominence with news from the military battle fronts overseas. Demands for antistrike and compulsory-labor laws are matched in volume and bitterness by demands for higher wages and crack-downs on uncooperative industrialists. The classic struggle between capital and labor is spilling over the rim of its academic confines.

Facing the challenge of this turmoil is the United States Conciliation Service. The one agency of the Government regularly empowered by law to participate in the settlement of labor disputes, it will have a growing role in the months to come. The recent Executive order creating the National Defense Mediation Board increases rather than diminishes this role. For the President's order takes cognizance of the Conciliation Service's record of achievement and the prestige and confidence which it has won from both management and labor. The new Board will function principally as a medium through which the most powerful pressure of public opinion will be exerted in disputes which the Conciliation Service finds itself unable to settle.

When you ask people in a position to know what they think of the Federal Conciliation Service there is almost unanimous agreement. They approve. "A fine job," "fair and impartial," "a splendid record of seeing objectively both sides of a dispute," they say. Within less than 60 days during the early winter the Service was endorsed, either by resolution or in public utterances of officials, by such diverse elements as the Congress of Industrial Organizations, the National Association of Manufacturers, the American Federation of Labor and the United States Chamber of Commerce. It is agreed that any bureau of the New Deal which attracts to itself praise from such mutually suspicious and antagonistic forces as these must possess a high potential of usefulness.

The Conciliation Service was set up in the Department of Labor in 1913. Its director since 1937 has been Dr. John R. Steelman, a genial 200-pound 6-footer with the guileless face of an Arkansas farm boy. Serving under him are 110 commissioners of conciliation distributed among the four administrative regions into which the country has been divided. The directors of these regions are in Washington. They are in daily consultation among themselves and with Dr. Steelman, and by telephone, telegraph, and mail with their representatives in the field. There is a constant stream of requests for their services.

A commissioner of conciliation is not an officer of the law. He has no authority or coercive powers. He cannot require that anything be done or not be done. He seldom enters a case until he has been asked. When he sits down to conference he can only reason, plead, and maybe bluff.

"The minute you make a cop of a conciliator you have destroyed his usefulness," Dr. Steelman says. "We do not want authority. We believe it to be the very antithesis of the spirit in which really effective conciliation is carried on."

A conciliator enters a controversy usually at the request of one or both of the contending parties: He hears both arguments, usually alone with the representatives first of one side and then of the other. He never takes sides and his first duty is to impress upon each his sincerity, his honesty, and his impartiality. They must recognize in him a friendly counselor whose point of view is not warped by the hatreds and prejudices which they themselves have acquired.

During the first conferences the conciliator is informed actually on only a few points upon which the controversy rests. From his own wide experience he can judge fairly accurately how just are the claims and charges involved. He is usually able to measure the relative components of reasonableness and stubbornness in charge and countercharge.

He maneuvers skillfully with first one side and then the other to find where compromises may be made. The union boss will admit over a friendly glass of beer that he could get his boys to accept a little less than the maximum wage increase they have asked if the management would play ball on vacations with pay. The president of the company will confide at luncheon that he might be persuaded to accept a preferential shop clause if it will not mean that he will have to fire his nonunion foundry crew.

Point by point common ground is arrived at. The factions have admitted to a trusted third party a willingness to make concessions which they would never have divulged to the opposition direct.

Thus armed the conciliator is ready at last to call the two sides together in conference. He knows the grounds upon which agreement can be reached. He knows that each side is eager for peace; as a skillful diplomat and psychologist he leads them to the objective they both seek. The action, then, is the result of mutual consent. Neither has lost anything. Neither has been made to do something it did not want. There is no aftermath of resentment to act as a fuze for a flare-up later on.

"Conciliation can be truly effective," Dr. Steelman believes, "only where the representative of the public commands the respect and confidence of both parties to the dispute. Respect and confidence can never be legislated. If I have a creed of labor relations, that is it."

John Roy Steelman gives therein a clue to his own success as a mediator. He is a husky, vigorous man in his early forties, with lively eyes and an enveloping warmth of personality. He is a Ph. D. and a former college professor. But you would be as likely to size him up as a dock hand who had hoisted himself up in the world by his bootstraps. His words tumble out with an almost juvenile eagerness when he talks, and his most academic discourses are punctuated by an effective choice of profanity which he never picked up in college.

He was born on a small farm in Arkansas in 1900. He finished high school in time to get into the Army for the last few months of the World War. By the time he was discharged he had made up his mind to get an education even if he had to fight another war in the process. Which, in a sense, he had to do. The family was poor, so he had to earn the cost of tuition himself. This he did by working in summers as a logger and sawmill hand in the cypress swamps of Arkansas. In time he had an A. B. degree from Henderson-Brown College.

But this was not enough. More summers in the logging camps; as a "blanket stiff" following the wheat harvests; peddling books and insurance. In winters he waited on table and corrected papers for professors at Peabody, Vanderbilt, Harvard, and North Carolina. By 1928 he had his full complement of degrees—five—and he settled down to a professorship in economics and sociology at Alabama College.

In 1934 Secretary Perkins made a speech there and met the young professor. Before the year was out she had pried him away from the cloisters and made him a commissioner of conciliation. Two years later, upon the death of Hugh L. Kerwin, who had held the post of Director of Conciliation since 1913, Dr. Steelman was named to succeed him.

The Director, like a good many of his associates, is frequently invited to outside jobs. Industrialists have offered him salaries tripling his present unspectacular earnings in the Government to take over their labor-relations departments. Powerful unions have tried to tempt him with high executive posts. He turns them all aside good-naturedly.

"Hell, this job is too much fun," he laughs.

One suspects there is also a strong sense of dedication in the make-up of this extroverted idealist. He spends from 10 to 15 hours a day in his office, and sees strings of callers late into Saturday afternoon and Sunday. His incredible energy and optimism are undoubtedly two of his principal assets as a mediator. He can usually "outsit" the other participants in a conference and hold them together in spite of weariness, frayed nerves, and seeming frustration. Early in March he kept a meeting going in his office between employers and employees for 29 consecutive hours. During the successful negotiations over a threatened strike at the Ryan Aeronautical Co. plant at San Diego last January, in which he participated by telephone from Washington, he did not leave his office for over 60 hours.

His office, incidentally, runs up one of the most staggering telephone bills in the Capital. It is not unusual for him to talk over long distance as many as a hundred times a day. Indeed, his penchant for the telephone has exacted the only physical penalty of his strenuous career. Constant use of the instrument is believed to have brought on the strange semiparalysis of the left wrist which

occurred several months ago. He has had to have a special device resembling a small radio installed on his desk into which he can speak and from which he can hear with no more exertion than the flipping of a switch.

Dr. Steelman adheres to no special technique in his approach to a conciliation problem. Beyond the routine of ascertaining the facts from both sides to the controversy and discovering the grounds upon which agreement can be reached, each situation has to be handled according to the peculiar exigencies involved.

In the Vultee Aircraft strike last fall he shuttled back and forth all night between the respective headquarters of the workers and the management with bait for small compromises. By noon the following day the cumulative total of those small compromises added up to the grand total of agreement, and the strike was settled forthwith.

Often he finds that moving the scene of negotiations away from the charged atmosphere of a struck plant to the relative calm of his office in Washington is effective. Not long ago one of his commissioners reported that he was unable to secure agreement between the workers and management of a small plant in New Jersey. Deliveries of certain defense materials were being held up. Steelman invited the negotiators to come to Washington. Feeling was so bitter that the union delegation refused to travel on the same train with the representatives of the operators. Once they were all in Washington around the conference table with Dr. Steelman and his staff, however, matters which weeks of negotiation back home had failed to settle were adjusted in the course of hours.

"You have done only a halfway job if in settling a dispute you have not made friends with both sides," Dr. Steelman tells his men.

In evidence of the fact that that warning has been heeded, he points to a bank of card index files in the office of his secretary. It contains the names and addresses of more than 15,000 people in every part of the country who are dependable friends of the Conciliation Service. Preachers, lawyers, union leaders, bankers, and ordinary workmen with influence among their fellows are included.

"Every one of them can be called on in a pinch," he boasts.

"For example, I got a telephone call one night as I was leaving the office a few months ago from the mayor of a small city in Oregon. He said that the restaurant and hotel workers' union there had voted to go out on strike at midnight. The whole town would be tied up, he said, and there probably would be an ugly public reaction.

"Well, I knew a little something about that situation. I knew the hotel and restaurant workers had something coming to them, but I also knew they didn't have a chance of winning their strike. It was a situation where a little heart-to-heart talking to was needed to adjust grievances on both sides.

"I didn't have one of my own men within 500 miles of that city, but in my file of 'unofficial conciliators' I found the name of a Catholic priest who had worked with us on another situation earlier. I telephoned.

"'Father,' I said, 'I've got a job outside your regular routine I want you to do for me. Get the union and hotel heads together and make them hold this situation up until I can get a man in there. Make the hotels and restaurants promise not to cut wages and the union promise not to strike for at least 2 days. I think we can settle this thing without anybody getting hurt.'

"He went right to work and got an agreement from both sides to observe the status quo. Two days later a conciliator got there and 2 days after that the controversy was settled. But if it hadn't been for that priest being on the spot when we needed him a really bad situation might easily have developed."

What happens when voluntary mediation fails? It doesn't fail often. In 1940 the Conciliation Service was called in on a total of 3,751 situations—strikes, threatened strikes, lockouts, controversies, arbitrations, consultations, etc.—of which more than 97 percent were successfully adjusted. In 746 of these situations strike votes had actually been taken. Seven hundred and nine were settled before the strikes began. Previous years have shown a similar record of achievement; in 1937, 95.9 percent of the situations were successfully adjusted; in 1938, 94.8 percent. The waste of millions of man-hours of wages and production was prevented.

When it becomes apparent that a voluntary agreement between the parties to a dispute cannot be obtained, the conciliator usually suggests arbitration with an agreement to both sides to abide by whatever final decision is reached. When the new Defense Mediation Board has begun to function, such difficult cases will be referred to it before arbitration is urged. For, regardless of how fair and impartial arbitrators may be, the service is convinced from its long experience that voluntary agreements arrived at by the disputants themselves are in almost every case preferable to decisions handed down by outsiders.

"I have seen at fairly close range, I think, as many strikes and lock-outs as any man in the United States," Dr. Steelman said in a recent address. "I have seen something, too, of what they cost labor, management, and the public. I have devoted a good part of my own working life to the task of fostering greater understanding between those who work and those who direct work in America's mills, factories, offices, and stores.

"I do not believe that such understanding—and the good will and efficiency which without it are well nigh impossible—can be furthered by compulsion. You cannot legislate peace. You cannot prescribe harmony. You cannot decree cooperation."

Strike-Bound Plants Show Huge Profits—Bad Labor Policies

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include an article from the pen of A. I. Harris. Mr. Harris is a columnist whose articles, among other papers, appear in the Toledo Union Leader. While we are abusing labor we might pause for a moment to glance at the other side of the picture.

Instead of being so anxious to pass more legislation to cure the strike situation, it might be profitable to insist that even great industrial establishments obey the laws that are already on the books. Surely we are not ready to admit that these few notoriously law-violating firms are bigger than the Government itself. The article makes interesting reading:

[From the Toledo Union Leader]

STRIKE-BOUND PLANTS SHOW HUGE PROFITS—BAD LABOR POLICIES

On March 31 the Labor Division of O. P. M. compiled a list of all strikes that had occurred in so-called defense industries. The list was compiled at the request of Chairman VINSON of the House Naval Affairs Committee, who wanted it to bolster his plea for passage of restrictive labor legislation.

If Chairman VINSON is really interested in the causes of strikes, a study of this list of employers will afford him an excellent opportunity. He would find, almost without exception, that strikes have occurred in those industrial establishments that, while enjoying exorbitant profits as the result of the national emergency, maintain, nevertheless, labor policies among the most backward in the entire country. He would find here a group of employers who have been flaunting the National Labor Relations Act, who have repeatedly been cited before the N. L. R. B. for vicious labor practices, and who have been found guilty in decisions handed down by the Board.

Representative VINSON might do well to consult Moody's Industrials and Standard Statistics to find out whether these firms can afford to pay their workers decent wages. In that connection he would find that Bethlehem Steel increased its net profits from $24,638,384 in 1939 to $48,677,524 in 1940; International Harvester from $3,876,810 to $22,926,110; Curtiss-Wright from $5,218,258 to $15,746,874; Allis-Chalmers from $3,719,546 to $5,051,440; Babcock & Wilcox from $1,168,796 to $3,588,199; Aluminum Co. of America from $36,633,389 to $44,146,297; Crucible Steel from $2,803,596 to $6,230,180; Jones & Laughlin from $3,188,944 to $10,277,029; Youngstown Steel from $5,004,484 to $10,815,468; Todd Shipyards from $896,642 to $1,408,671; Harvill Diecasting Corporation from $51,470 to $96,312 for the first 9 months of 1940; Kellogg Switchboard from $16,623 to $52,820; Universal Cyclops from $864,219 to $1,088,885; Vultee Aircraft from a deficit of $779,129 to a net profit of $374,457, while Motor Wheel Corporation reported net profits of $1,849,239 in 1939 with net profits for the first 6 months of 1940 totaling $1,182,506. Henry Ford does not report the profits of his concern.

The above, it must be remembered, does not include the fat salaries that these "profit patriots" pay themselves; also, it must be remembered, defense profits are just beginning to roll in, and 1941 profits will make some of the above shrink into insignificance; and yet spokesmen of the National Association of Manufacturers are talking of the patriotic service and sacrifice for national defense of its members during the present emergency.

Chairman VINSON would render the country a real service by telling reactionary employers that the establishment of enlightened labor policies and payment of decent wages would solve the strike problem completely and aid in reaching a maximum defense effort.

We suggest that Chairman VINSON make a further study along the above line to the point of ascertaining to what extent the worker is sharing in the current prosperity. He can obtain some rather enlightening figures compiled by the Social Security Board and the Bureau of Labor Statistics. These figures will tell him the following facts:

The Du Pont Co., in 1940, made a net profit of more than $2,200 from each of its 45,000 employees, this profit, after deduction of all taxes, totaling more than $90,000,000. Standard Oil net profits for 1940 of more than $110,000,000 represents a profit of about $2,000 from each of its 55,000 workers. The six largest corporations listed—General Motors, American Telegraph & Telephone, Standard Oil, Du Pont, United States Steel, and General Electric—derived a net profit of

$797 from each of their 885,000 employees; and, whether you believe it or not—Ripley, attention—the income of these same workers for that year averaged less than half of $797.

The Social Security Board has prepared an average budget for a family of man, wife, and three children of $2,200 a year for decent living standard. This budget provides 11 cents a day for food per person; $5 a year for education per child; $1.50 per week for medical care; and $34 a month for rent—certainly most modest. And yet 29 percent of American workers earn less than $1,200; one-third earn less than $400; and only 8 percent as high as $2,200. It is difficult to see how the blessings of American industry are extended to the workers.

This country is now engaged in a very noble effort—the defeat of Adolf Hitler and all that Hitlerism implies. In the opinion of most intelligent people, the defeat of Hitler transcends everything else in importance. It would be impossible to calculate the blood and tears humanity will shed and the decades of darkness that will follow in the wake of a Nazi victory.

Labor baiters are retarding rather than aiding the national effort by their insistence of antilabor legislation. Nobody wants to see that effort succeed, wants to see labor strikes or anything else that will interfere with the production program. But democracy cannot put forth its best effort with industry waxing fat and the workers ground down in poverty. Industry can be put in its proper place if the Government wants to put it in its proper place—and its proper place is an obedience of labor laws as well as other laws, maintenance of labor policies that reflect the democratic standards of the day, and payments of wages that will assure an American standard of living.

That is the best, and only way of assuring that we will reach a productive effort to meet the needs of the day. There is no danger that industry will go on strike if the Government insists on the above program. The Government possesses a very compelling and convincing weapon if it means business.

TAKING OVER PLANTS

Some of the New Dealers close to the administration have been plugging hard to convince the President to take over one or two of the strike-bound plants to show industry and the country that Government can operate plants during a period of emergency more efficiently than can private management. There is little doubt that the President was ready to take vigorous steps in that direction in the Allis-Chalmers case when the aggravated strike in that plant was settled.

Government operation of a defense industry, it was insisted, would solve the problem of work stoppages, since Uncle Sam would hardly violate his own labor laws. Also, there is not a little convincing evidence that private enterprise, so-called, is largely responsible for the plight that the democracies find themselves in today.

Alonzo Dillard Folger

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. REECE of Tennessee. Mr. Speaker, recently while browsing through an old memorial address made by my father-in-law, the late Senator Guy D. Goff, I came across a stanza from a poem by an unknown author—

We know when moons shall wane,
When summer birds from far shall cross the sea,
When autumn's hue shall tinge the golden grain,
But who shall teach us when to look for thee,
O messenger of Death!

When the news reached me last Thursday that our beloved colleague ALONZO DILLARD FOLGER had lost his life from an automobile accident, that stanza leaped into my mind with potent force.

How well indeed we know when the seasons will change, the tides ebb or flow. How well indeed we know all about a thousand and one other things so mundane yet so important in our daily round of existence.

But, oh, how little we know about that moment that is coming to all of us when the messenger of death will tap on our shoulder and bid us follow him to his Master. Regardless of what we may be doing at the moment—regardless of what we think is its vast importance to us or to others, we will have no alternative but to obey that summons.

Out of a clear blue sky, busy at his duties, our late colleague had no opportunity to plead for a little more time. It didn't matter that he had a lot of important work to be done—that his country needed him—that we needed him here—that there were unanswered letters on his desk and loved ones anxious for him.

No, indeed, those things didn't matter. What did matter was that nothing mattered anymore. Out of all the excuses that mankind so aptly knows, there was none that would defer for a single second, that messenger of death whom so many of us unfortunately see fit to visualize as black-robed and cadaverous.

There is utterly nothing I can say here that will soften the shock of our colleague's death or compensate us for his loss in our councils. We are grieved and saddened and a bit bewildered. We do not like to think about it but we know it might be our turn next and for a little while we frantically contemplate how dreadfully unprepared we are in every way. There are so many things we still want to do—so many people we still must talk with—so many scenes we still wish to enjoy.

Well, time has given us the answer to that. We have lines to contemplate over, especially that one that commands us:

In the midst of life prepare for death.

Then, all too well we know the admonition on the sundial—

It is later than you think.

I do not think the messenger of death caught our colleague unprepared in the great things. In every way possible, he had always obeyed the principles upon which all honorable lives are founded. He was zealous, diligent, honorable. He made it a rule to give of his best so that he in turn would also be entitled to equal consideration.

As a successful attorney he played a worthy part in the litigations of men. As a judge he was merciful and considerate. In his position as trustee of the University of North Carolina, he did much to better the educational advantages of eager youth. His party in which he was serving as national committeeman from his State ever found him loyal and unselfish. Here in the House we found his counsels invaluable and timely to a Nation in the throes of great and shapeless things to come.

Yes; this was no unprepared colleague who has just left our ranks, never again to return. He lived every day in the fullest and best manner he could and so it did not especially matter to him that he might not have been able to realize the approach of death's messenger as he did the seasons. What did matter to him and what always mattered the most, was tackling the immediate problem at hand.

Now he is gone—"dead at the post of duty" as someone has eloquently put it. He is gone and we are left behind to remember an honorable, helpful, useful man with whom we were proud to associate and work.

To his family and to his friends and to his colleagues from the great State of North Carolina, I extend more than a little sympathy. We have mutually lost much, but by the same token, we have been enriched by contact with a character who was infinitely better than common clay.

Overwhelming Majority Against Convoying

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

LETTERS FROM CONSTITUENTS

Mr. GEHRMANN. Mr. Speaker, during the last 3 weeks I mailed out to the people in my district 45,000 letters, asking them for an expression on this all-important question of using our Navy and air fleet to convoy shipments to England and other democratic nations, as provided for in the Lease-Lend Act. I explained to them that I had voted against all the bills that might eventually involve us in another foreign war, but in spite of my opposition, these several bills became law, and therefore I am going along with them. Certain groups made it appear that since the lease-lend bill passed, the people had changed their attitude and were now willing to risk our becoming involved by seeing to it that these shipments reached England. That is why I mailed out these letters, asking my constituents to advise me of their stand. Up to now I have received nearly 4,000 an-

swers, and out of that total less than 125 are in favor of convoying.

I am including a letter from Reverend Korbitz, which shows the sentiment of his people. I also am including a few short letters picked at random. These thousands of letters are not inspired or sponsored by any group or organization; they are the honest expression of the people of my district, and embrace all nationalities. I invite anyone, Members or newspapermen, to inspect them, if they think that perhaps subversive groups had anything to do with them. I expect to get many more thousands during the next week or two, because my last letters have just about arrived there now. The letters follow:

ST. PAUL'S EVANGELICAL
LUTHERAN CHURCH,
Medford, Wis., April 30, 1941.

Hon. BERNARD J. GEHRMANN,
House of Representatives,
Washington, D. C.

HONORABLE CONGRESSMAN: Though I have not become a registered voter of Wisconsin until recently and, for this reason, did not receive a letter request from you relative to your constituent's opinion of the question of convoying and active participation in Europe's war, yet a neighbor of mine and member of my congregation was kind enough to give me his letter to read, and so I am writing to you herewith and am also asking my members to write to you.

First of all, congratulations to you, Mr. GEHRMANN, for asking your constituents how they feel about the matter before you cast your vote in such an important matter as to give America's boys as cannon fodder. Would to God that the President would do the same. We have had enough of this "pulling the veil over the people's eyes" by saying we are not going to get into a foreign war. Roosevelt knows how the greatest majority of the American people feel about a foreign war—they are absolutely against involvement. He knows that and so do all the warmongers. So, instead of getting an actual vote on the matter, they are pushing us, inch by inch, and yard by yard, into this war. I was secretary of a pastors' convention committee that sent our pastors' disapproval to Congress in regard to lifting the embargo, stating our reasons for what would follow. We were promised not to fear. Then it was the lease-lend "strip tease" bill to denude the defense of America, and still we were promised not to fear a foreign war. Now the warmongers are crying, "What good will it do to have passed the lease-lend bill unless we get the goods to England?" Convoying or even policing the seven seas means war and nothing else.

Honorable Congressman, vote against convoying or even policing the seven seas. Vote against sending our fleet to Greenland or Iceland or the Red Sea. Vote especially against any and all attempts to propagate a "union now" with the British Empire. As Americans we want to retain our American form of government and our American ideals for which our forefathers bled and died.

Honorable Mr. GEHRMANN, vote for a good national defense of America first: Vote for thorough prosecution of all un-American isms in this country, including British Imperialism. We want nothing from Britain which many people of England are trying to cast aside. We do want to remain good Americans.

Mr. Conrad, editor of the Medford Star-News, is a good friend of mine. You may feel free to publish part of my reply in your letter to the papers. I know my entire congregation is against convoying or involvement in this war.

With kind greetings.

REV. F. W. KORBITZ.

SUPERIOR, WIS., *April 30, 1941.*

Hon. B. J. GEHRMANN,
Washington, D. C.

MY DEAR SIR: Have thought of writing you several times if only to encourage you to hold fast to the position you are taking in regard to our Navy being used to protect lend-lease shipments. As sure as this is done, I believe we are in the war without full preparation to meet exigent circumstances which are sure to follow. I know there are changes occurring in Congress rapidly these days, but I see no reason as yet, requiring to change your present position. There are three voters in my family that look upon your representation of our district most favorably, and others I have talked with.

No reply is necessary to this letter or expected.

Yours truly,

L. W. BEEBE, M. D.

ASHLAND, WIS., *April 28, 1941.*

DEAR MR. GEHRMANN: In answer to the inquiry, Shall our Navy be used to protect lend-lease shipments, our answer is emphatically, "No."

We appreciate your all-American attitude and hope we shall stay out of this war.

Mr. and Mrs. FRANK GRITTNER and family.

FREDERIC, WIS., *April 29, 1941.*

Hon. Mr. GEHRMANN.

DEAR SIR: Received the circular that you sent out from Washington. Thank you.

We are in accord with you, in that we do not want United States ships and men to convoy ships to England, or any step that will bring us into European war.

Mr. and Mrs. OSCAR HENDRICKS.

BALSAM LAKE, WIS., *April 28, 1941.*

The Honorable B. J. GEHRMANN,
Washington, D. C.

DEAR MR. GEHRMANN: I wish to assure you that I am not in favor of our convoying ships to Great Britain, or of doing anything that may embroil us in this war.

The President favored the Neutrality Act, because it was designed to keep American vessels out of danger zones presumably, and how can he expect the confidence of any of the thinking element of this country while he shows himself willing to undercut his own avowed principles. Convoying, or patrolling (whatever that means) both seem to me contrary to the spirit and purpose of the Neutrality Act.

One is moved to wonder at times if Roosevelt or Churchill is the President of these United States.

Sincerely,

J. H. SPENCER.

SUPERIOR, WIS., *April 21, 1941.*

Hon. BERNARD J. GEHRMANN,
Wisconsin Representative.

DEAR SIR: I admire your stand against mixing this country into any European war. It is the worst thing that could happen to this country. I have overheard conversation between well-educated and well-posted men saying the same, and am sure there is at least 90 percent in this locality that is strictly against convoying ships to England, or any other rash act that may lead us into war.

Yours very truly,

G. K. MONSON.

MEDFORD, WIS., *April 28, 1941.*

Representative B. J. GEHRMANN,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE: We are opposed to sending our ships to convoy materials to England. We believe that our equipment should be kept here to defend America.

During the campaign, President Roosevelt promised to keep this country out of war. We ask that you help him to keep his promise.

Respectfully,

GEORGE T. DUNKEL.

M. L. Benedum, Patriotic American, Speaks His Mind on Present-Day Problems

---

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ARTICLE FROM PITTSBURGH (PA.) POST-GAZETTE

Mr. RANDOLPH. Mr. Speaker, I include the following article from the Post-Gazette, of Pittsburgh. The interview is written by a well-known reporter, Ray Sprigle, and gives the fine patriotism and common-sense opinions of a great American, M. L. Benedum. In these trying days it is good to know the thoughts of this industrial leader:

[From the Pittsburgh (Pa.) Post-Gazette of May 3, 1941]

BENEDUM "WILDCATS" AGAIN AT 72 FOR OIL TO EXPEDITE DEFENSE—"LET'S START DRILLING," HE TELLS "HIS BOYS" AFTER 4 MONTHS IN FLORIDA, AND BITS START BORING IN NINE STATES

(By Ray Sprigle, Post-Gazette Staff Writer)

His seventy-second birthday just around the corner, his social security pretty well taken care of by possession of one of the 12 largest fortunes in America, Mike Benedum, the world's No. 1 wildcatter, is on the prowl again.

He came back to Pittsburgh the other day after 4 months in Florida, and his "boys," the officers of the great corporations that make up the far-flung Benedum-Trees oil empire, met him at the station.

Mike, who almost could get past a recruiting officer despite his more than threescore years and ten provided he kept his hat on, listened smilingly to the comments on his coat of Florida tan. But not for long.

"Well, boys, what are we doing now?" he wanted to know. Because to Michael Late Benedum any conversation that doesn't have to do with oil is wasted talk.

"LET'S START DRILLING"

There wasn't a great deal to report. The "boys" hadn't bothered Mr. Benedum much while he was on vacation and development of new production which has been Mike Benedum's guiding light for half a century has been rather at a standstill through the winter.

But Mike had the answer.

"Boys," he suggested, and it was while they were still on the way from station to office, "let's start drilling. Let's iron out any difficulties after the bits are on the way down. But right now, let's drill."

That was 3 weeks ago. Today all the way from Pennsylvania to Texas, across nine States, the drills are on their way down.

Trucks are rumbling along Pennsylvania highways and across Texas plains, laden with casing and tools. Hard-bitten tool dressers

and derrick men are back on the job once more. Geologists and siesmograph crews are exploring new territory. Not only in Pennsylvania and Texas, but in West Virginia, Kentucky, Illinois, Ohio, Kansas, Arkansas, and Louisiana, Mike has No. 1 wells on their way down. And most of them are in wildcat territory.

SEES VAST DEFENSE NEED

The flowing gold that Michael Benedum has hunted and sweated for and frozen for, over three continents for half a century, once more is going into bonaza if he can read the signs right.

Wars are fought on oil these days. And defense and armament programs are built first on steel and then on oil. The way Benedum sees it, these thousands of tanks that are going to roll off the assembly lines soon, and the thousands of airplanes that already are taking to the air, are going to demand millions of gallons of fuel. Tens of thousands of trucks are rolling night and day where only thousands rolled before. More than that, America's millions, back on the job again, are going to burn up not only the road but tankful after tankful of gas.

And if the Nazis ever cut Britain's supply lines to the Mosul fields in Iraq, then America will become the Empire's major oil reservoir. Within a year, Benedum is convinced, the oil industry of the United States will have to go in for all-out production. The nightmare of proration and throttled production is going to become just a memory.

BOOM DAYS FOR OIL SEEN

Boom days for oil are almost here again.

So Mike Benedum is "wildcatting" again.

Not that he's under any illusions as to what's going to happen to his profits, if any. What with an ever-expanding defense program requiring ever-increasing billions of dollars and the likelihood that the United States soon will be at war, Benedum regards it as a certainty that industry can expect a practical moratorium on profits for the next few years at least. And he's perfectly willing to take it.

The American way of life has done pretty well by Michael Late Benedum in the past 50 years, as he's perfectly willing to admit. More than that, he's willing to pay a pretty steep price in order that that way of life may continue. The last war took his only son, Claude, who died in the Army in the "flu" epidemic. It's all right with him, he says, if this war, if it comes, only takes his money.

FREEDOM MOST IMPORTANT

"No man likes to give up the money which he has accumulated through 50 years of hard work and sacrifice," he'll tell you. "But this is a fight for liberty. The country is requiring its youth to give up personal ambition and opportunity. The time may come soon when many of them will be called upon to give their lives. If the rest of us should have to give up every dollar we possess, that's not too high a price to pay to remain free.

"If this country loses the freedom which has made it great, material wealth will be worthless."

That doesn't mean that the man who, on a salary of $75 per month scraped together "between $700 and $800" as he remembers, to start his first oil well and built it into one of the world's great fortunes, is worried about the future—either the country's or his own.

"Too many people are always looking for a chance to sit down and welcome disaster," he says.

"I read history; I've read history all my life. I like it, and I learn from it. In every one of these periods like the present, with the world or a nation uncertain and despairing, men of vision and industry and courage have begun the building of a new and better world, right while the old one is toppling about their ears.

SEES DOOM TO DICTATORS

"That's been especially true of America. And even the world outlook, dark as it is, isn't anything to despair about. Read your history. One would think, to listen to many of our 'best minds,' that totalitarianism is something new. It's as old as the world. Dictators don't last. Alexander, Caesar, Napoleon—all of them had their day. And then they passed. With them passed all that they stood for, and the world went on toward freedom. And the little man in Germany will pass too."

Don't try to talk to Mike Benedum about a changing world that confronts the youth of today. Right away he'll go historical on you.

"Changing world?" he says. "Of course it's a changing world. When hasn't it been a changing world? Who'd want to live in it if it wasn't? Do you think change and progress have stopped or evil will stop? The one thing that hasn't changed is the fact that energy and ambition still pay dividends. With them you can figure out just what you want to do, just where you want to go, and then go out and get what you want and go wherever you want."

OPPORTUNITY FOR ALL

"All this talk about opportunity having come to an end in America, that we have reached maturity, and now are just going to coast along is sheer nonsense. That's old man's talk," he tells his interviewer, or anybody else for that matter, because, after oil, that's Benedum's favorite subject—opportunity for youth.

"Sixty years ago as a lad down in West Virginia I heard solid men in the community lament that the country was coming to the end of its rope. They'd prove it to you. They'd point out that all of the tillable land was already taken up and that there just wasn't any place for a youngster to start.

"But there were other men, not only in West Virginia but all over the United States who didn't have time to worry about the passing of opportunity. They were too busy beginning the development of oil and steel and transportation, getting ready to make America over."

STILL IN MAKING

Well, Benedum ought to know what he's talking about, because in his own field, oil, he's one of the men of the passing generation who helped make this country over. And the point he continually makes is that the country is still in the making, that there are just as many frontiers as there ever was.

And don't try to argue with Mike Benedum that he couldn't do it again, starting today with $800 and, of course, youth. Almost daily he tells his "boys" as they gather for the noonday "family" luncheon at the Duquesne Club that has become a Benedum tradition:

"If only I was young again, with just a job, any kind of a job, and the opportunities I see all around, then I'd show you how to make a real fortune."

Columnists Are Trying To Force the President Into a War That 98 Percent of the People Do Not Want

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. LUDLOW. Mr. Speaker, Col. John Thomas Taylor, the legislative director of the American Legion, has been out in Indianapolis, and while there he made the following statement:

> The question of "all aid short of war" is forgotten. It is now a question of when we will get in. Some who should know believe it will be within 30 days. But I have not talked to anyone who believes it will be more than 60 days.

All of us on Capitol Hill know Colonel Taylor, and we esteem him for his fine patriotic motives and his likable qualities, while making some reservation for the fact that his prophecies sometimes fail to click.

If Colonel Taylor had asserted that there is a concerted effort among columnists, interventionists, warmongers, and all of the influences, varied and sundry, that want war, to stampede the President of the United States into getting this country into war within 60 days, or sooner, he would have been hitting right at the truth.

It is perfectly obvious that many columnists, writing for the interventionist press and representing and speaking for interests that for one reason or another want to plunge America into Europe's black and bloody chasm, have turned loose a barrage on the President to force him to get into the conflict. The way these interests have turned against our President, and are now trying to stampede him into taking the last fatal step into war is one of the major scandals of our time.

Knowing the President as I do, his strength of character, his sense of honor, and the value he places on a promise, I cannot believe that he is going to be bulldozed in this manner. I have unshakable faith in the many assurances he gave the people during the campaign pledging his word that American boys will not be sent into foreign wars, climaxed by the following categorical statement which he made at Boston on October 30, 1940:

> And while I am talking to you—fathers and mothers—I give you one more assurance. I have said this before, but I shall say it again, and again, and again; your boys are not going to be sent into any foreign wars.

And so, while I would agree with Colonel Taylor that there are jittery war bugs and special interests, particularly active along the eastern seaboard, that would like to get us into the war within 60 days, or tomorrow if possible, I would not agree with him that war is quite so close at hand. Despite all the gloomy portents I am placing my dependence on the President's frank and freely expressed promises to the American people.

I do not know to what extent Colonel Taylor mingled with the Indiana folks while he was out there, but if he had taken time to talk with Tom, Dick, and Harry and their fathers and mothers and wives, the people who have to bear the burdens and griefs of war, he may have a message to bring to the authorities at Washington. If he took time to obtain the consensus of public sentiment he undoubtedly learned that while Hoosiers are unanimous and united in favor of building up our national defense to the highest point of perfection, and will spare no expense or gruelling burden laid upon them

for that purpose, the vast majority, I should say 98 percent, or more, of the people of Indiana oppose sending our boys into the war that is raging in Europe, Africa, and Asia, and they believe that we would not do so if we would follow Washington's sound advice, keep our heads, think of America first, and steer clear of foreign entanglements.

Britain Must Not Stand Alone

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

EDITORIAL FROM THE BALTIMORE SUN

Mr. RANDOLPH. Mr. Speaker, I do not necessarily agree with the following editorial, which appeared in the Sun newspapers, of Baltimore, Md., on May 2, but because of the thought-provoking material, I include the comment herewith:

[From the Baltimore Sun of May 2, 1941]

BRITAIN MUST NOT STAND ALONE

The hour of decision is here.

It is plain that the British are being forced back into their island. On the Continent their Allies have fallen in rapid succession before the Nazi's mechanized armies. The remaining independent states—Turkey, Spain, Portugal, Sweden, Switzerland—are subject to Nazi whim. In the Mediterranean Gibraltar on the west may be seized and Suez on the east. That sea may become a Nazi lake. Step by step the war machine moves in swift conquest wherever dry land provides a path for its soldiers, overwhelming in numbers, in modern equipment.

As the British are forced back into their island the Nazis intensify their assaults by air and sea. Their mechanized armies have been halted at the English Channel. But from the shoreline of the conquered Continent, their aerial armies seek to bomb into extinction the capacity and the will of the British to resist. They have made the vital port of Plymouth uninhabitable. At sea they unloose swarms of submarines and daily take devastating toll of the shipping upon which the beleaguered island depends for food and arms.

Britain stands alone, and Britain is being crushed and strangled.

This fact presents in ultimate form the question the people of the United States have been compelled to ask themselves again and again: How far shall we support the British people? Shall we go forward? Or shall we, at some stage, withdraw to our own shores and prepare to stand alone against the forces of conquest which are loose in the world?

The United States must answer this question in terms of its own preservation. Shall we more surely safeguard our territories and our institutions against future attack by aiding Britain in full proportion to her rising peril? Or shall we more surely safeguard ourselves by accepting her defeat as inevitable and concentrating our armaments for defense of our own shores? The question for us is not whether the British Empire, as such, shall be protected. That Empire has been, on the whole, an instrument of civilization. The world will be better if it shall endure. But when there has been failure of all measures proposed in calmer days for collective security, when international law is in ruins and anarchy rages, the first duty of this Nation is to guard its own household.

Properly, we believe, this rule has been kept in mind throughout the war. Knowing not only that the British Empire is an instrument of civilization, but also is a friendly nation, we amended our neutrality laws to permit her to purchase supplies in our markets. Yet we drew lines designed to keep war from our door. We sold her destroyers to be used in keeping open her sea lanes. Yet we demanded and received naval and aerial bases for the protection of our own shores. In time, as her resources became depleted, we enacted the lease-lend law to continue the flow of supplies. Yet we maintained lines drawn to guard us against war. These were not ignoble safeguards. It is not ignoble to guard the national household, by actions open and avowed, against the ravages of war.

But now the plight of Britain compels the United States to make final decision, under this very rule of self-preservation, whether we shall go further in aid of the nation who is our friend or whether we shall draw a final line. The time has come when candid men must realize that without greater aid actually delivered Britain will fall. This fact makes it imperative that the United States shall determine once and for all whether our own safety and security will be more surely preserved by protecting Britain or by standing alone on our own soil to face whatever issues the conquering totalitarians may present to us.

The Sunpapers, for their part, say to the administration and to the American people: Go forward in aid of Britain.

This means, in plain language, that we shall take whatever steps may be necessary to assure the delivery of our supplies to the British. Production in this country must be increased. It is not sufficient, despite roseate reports. Direction in Washington needs to be improved. An element of industry needs to be stirred. An element of labor needs to be sobered. But even the present laggard production for Britain will be largely wasted unless we take steps to make certain that our supplies of food and arms are delivered. The great but thinly spread-out British Navy is not adequate to assure delivery of our supplies. We must assume an increasing responsibility. That there are grave dangers in this policy no rational and honest man will deny. But this policy is the one alternative to the greater peril of faltering and standing alone.

It is not for the citizen to settle methods by which this country will assure the delivery of its supplies to Britain. The administration, advised by its diplomatic, military, and naval experts, must choose the methods by which we can most prudently and most effectually assure delivery. It must choose its methods with due regard to all factors in the Atlantic and in the Pacific. But whatever methods the administration shall find to be necessary—whether patrols or convoys or transfer of warships—the line of supplies to the British must be kept open and must be expanded, come what may. It is possible, by appropriate use of our resources, to put food into the stomachs of the British people, to put arms into their hands, to put new courage into their heroic hearts. It is possible to hold Hitler.

Those to whom the obvious dangers of this policy are gravely disturbing cannot shut their eyes to the peril for us in British defeat. They cannot shut their eyes to the political and diplomatic pressure to which the Axis would subject us in Europe, Africa, Asia, and gradually South America. Nor to the economic pressure. Nor, once the British Fleet is gone, to the military and naval pressure. They cannot shut their eyes to a fact which is quite simple and yet is so massive as to be almost inconceivable—the fact that our isolated security of many years is gone and that, if the British are defeated, this peace-loving Nation of 130,000,000 souls will be alone in a world where ruthless conquerors sit astride three continents and soon will be established in a fourth—South America.

There can be no joy in any course that is open to this Nation. Cut the tie with Britain and stand on our own soil or go further to rescue Britain—in either case toil and sweat will surely be our portion and truthful men will not disguise the danger of blood and tears. Behind us, perhaps for a very long time, are the days of aloof and comfortable debate on the good, the better, and the best in our domestic life. Fate looms before us in menace, whatever our course. But there is no escaping Fate by shrinking from it. Rather, it is for us to conduct ourselves in the manner of our fathers, who knew how to grapple with Fate, to master it, to bend it, to mold it in the strong hands of free men.

Britain must not stand alone.

The Middle-Age Worker

EXTENSION OF REMARKS

OF

HON. LUCIEN J. MACIORA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 2, 1941

Mr. MACIORA. Mr. Speaker, National Employment Week, May 4 to 10, will focus attention upon one of our gravest social and economic problems—that of barriers standing in the way of job opportunities for persons of middle age or older.

Federal Security Administrator Paul V. McNutt has analyzed the situation in a statement released May 3, which I commend to your attention. Under leave to revise and extend my remarks, I am including the full text of the Federal Security Agency's announcement.

A great reservoir of skilled labor stands untapped when business and industry fail to take advantage of the experience and competence of workers 40 years of age and older. Administrator McNutt significantly reminds that the average age of World War veterans is 48—an age at which employment opportunity under present conditions is virtually nonexistent.

Because I am convinced there is no necessary relationship between efficiency and age in most occupations today, and because I apprehend that the problem will be greatly exaggerated when the defense program lessens its intensity, I have introduced House Joint Resolution 178, empowering the Secretary of Labor to investigate discriminations against labor on the basis of age, and related subjects.

Your interest in this movement, and your suggestions will help solve this continuing problem which must be solved

before any real advance can be made in the attack upon unemployment in the United States.

The announcement setting out Administrator McNutt's views and objectives follows:

Federal Security Administrator Paul V. McNutt today called upon the 4,500 full- and part-time State employment offices which are coordinated under the United States Employment Service to unite with local war veteran and other civic organizations in finding jobs for workers over 40 during National Employment Week, beginning tomorrow. By Presidential proclamation, signed April 3, the week of May 4 to 10, inclusive, has been designated as National Employment Week.

"In view of the greatly increased demand for workers with certain skills," stated Mr. McNutt, "employers needing help to fill defense contracts should reexamine the qualifications of these older men and women so that valuable workers will not be barred from employment."

"Among workers past 40," Mr. McNutt said, "are many World War veterans; men who now average 48 years of age. As the President has stated, these men have a special appeal to our national sense of responsibility, particularly during this time of national preparedness."

Mr. McNutt stated that men experienced in the field of airplane manufacturing, shipbuilding, and tool and die making are particularly needed at this time. He pointed out that very few young people have had time to acquire the skills necessary to hold down important jobs in these industries. On the other hand, he said, men and women in middle life possess abilities and skills which fit them for employment in many lines of work.

According to Mr. McNutt, it takes about 7 years for a man to become a first-class machinist. During the depression many skilled men working in the metal trades were dropped by employers who no longer had sufficient orders to keep a full staff on the pay roll. But now there is a crying need for just such workers, and it is becoming increasingly difficult to find men with skill and experience in metal trades for jobs in defense industries.

The President has asked all churches, civic organizations, chambers of commerce, boards of trade, veterans' organizations, industry, labor, and the press and radio to cooperate in promoting the employment of workers over 40. Toward this end, Mr. McNutt urged all such workers who are out of jobs to register at the nearest local office of their State employment service if they have not already done so. He particularly urged workers who have skills needed in defense jobs, but who are not using those skills in their present work, to list qualifications with the nearest office of their State employment service. "There must be many skilled workers," Mr. McNutt said, "in the over-40 group—men and women who are now available for jobs in defense industries or who could be made ready after a short period of training."

Workers who have had experience in these crafts but whose skills have become "rusty," can be referred by local State employment offices to "refresher" courses for brushing up on their skills. These same offices will then list them for job openings.

In the aircraft industry, according to Mr. McNutt, the greatest need at present is for sheet-metal workers, woodworkers, and inspectors. Shipbuilding concerns need ship carpenters, loftsmen, boatbuilders, ship fitters, caulkers, and marine machinists. The machinery-manufacturing shops have many openings for tool makers, lathe operators, and boring-mill operators, tool and die designers, and general machinists.

American Transportation

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

ADDRESS BY J. GORMLEY, VICE PRESIDENT OF THE ASSOCIATION OF AMERICAN RAILROADS

Mr. KNUTSON. Mr. Speaker, one of the important angles to the national-defense program is transportation, more particularly as it applies to the railroads. A short time ago Mr. M. J. Gormley, vice president of the Association of American Railroads, delivered an address on railway problems before the Second Annual Western Transportation Conference at the University of Southern California, March 13, 1941. Mr. Gormley's address contains some very interesting and timely factual matter that will be welcomed by the House membership, hence my request to have it incorporated into the RECORD. The address follows:

RAILROAD PROBLEMS OF 1941

I consider it a very great honor to be asked to address the second annual Western Transportation Conference of the College of Commerce and Business Administration of the University of Southern California.

We find that concern has grown up in some quarters as to the preparedness of the railroads to meet the transportation needs of national defense. This is my excuse for repeating so often what I have said on this subject since 1939. It has gotten to be an old story to me, but I am told it is new to many people.

TRANSPORTATION SITUATION IN 1918

In connection with the subject of the preparedness of the railroads to handle the defense traffic load, the question is often asked, How is it possible to avoid control of the railroads by the Government the same as was done in the first World War? What was the real basic cause for the railroads being taken over by the Government during that war and what has taken place since that time that makes it unnecessary for Government control during the present war? The causes leading to Federal control, I believe, were best enumerated by the late Honorable William G. McAdoo, Director General of Railroads, in his annual report for 1918:

"In order to understand the operating problems presenting themselves with the inauguration of Federal control, it will be necessary to recount some of the potent causes producing the serious conditions of congestion which resulted in the railroads being taken over by the Federal Government, and I will enumerate the steps which were taken to overcome them.

"Accumulation of export freight at North Atlantic terminals, which was reflecting itself immediately in an inability to successfully handle domestic freight. There was no coordination of rail and overseas transportation. The accumulation was chiefly disturbing because it was stationary, and frequently comprehended unloading on the ground, to be afterwards loaded upon cars and moved to piers. The lack of coordination between rail lines and the overseas carriers was overcome by the creation of the exports control committee referred to herein, and export freight was brought forward from the interior only when ocean shipping was available.

* * * * * *

"Heavy building operations by different branches of the Government, the contractors for which ordered materials forwarded far in advance of their ability to receive and unload. There was at one time over 5,000 carloads of piling alone for the Hog Island shipyard in excess of its ability to accept.

"On account of the feverish demand for materials of all kinds, manufacturers purchased raw materials from unusual markets in excessive quantities, with the frequent result that arrivals were badly bunched and unloading was slow and difficult. This was particularly true in the heavy manufacturing districts north of the Potomac and east of Pittsburgh.

"The necessity for giving priority to shipments of Government freight and the lack of a central control, even in a single department, to decide upon the degrees of importance in priority. This had resulted in many instances through the insistence of some energetic officer handling a single class of material in a preference movement being given to freight of minor relative importance."

A natural question arises at this point as to what are the changes in the railroad situation, including organization of the railroads, the Army and Navy and shippers generally that will obviate the difficulties that caused Federal control of railroads in the last war.

RAIL IMPROVEMENTS SINCE WORLD WAR

Nine billion five hundred million dollars spent since 1923 for improvements—divided 45 percent for equipment; 55 percent for other facilities of all kinds.

Result of expenditures: 1,146 cars and 17,000 locomotives installed new since 1923; 1,800,000 cars and 40,000 locomotives retired. Seventeen percent increase in capacity of cars; 36 percent increase in capacity of locomotives.

Efficiency in operation: 60 percent increase in train speed; 100 percent increase in tons per train hour; 62,000 cars per week can be loaded now for each 100,000 cars owned, compared with a loading of 42,000 cars per week for each 100,000 serviceable cars owned in 1918; 8,000,000 more carloads loaded in 1929 than in 1918, with a considerable decrease in the ownership of cars and locomotives; $30,000,000 less demurrage collected in 1939 than was collected in 1918, a decrease of 83 percent, with a decrease of only 30 percent in the number of loaded cars; a further indication of more prompt unloading by receivers.

RAILROAD ORGANIZATION EFFECTIVE

The railroads are now thoroughly organized through the Association of American Railroads, which is composed of all the essential trunk lines and a number of the essential short lines. Its headquarters are in Washington. The president of the association is assisted by an executive committee of six railroad chief executives selected from different parts of the country. The bylaws provide that when necessary this executive committee would be in continuous session. It is my belief that the association now has all of the required authority to meet any predictable situation.

The car service division of the association has 13 district organizations with district managers and 13 shippers advisory boards, one in each district. There has been recently added to the car service division a manager in charge of port traffic, with headquarters

in New York, with port transportation committees cooperating with him, and a manager of military transportation located in the office of the Quartermaster General at Washington, to cooperate with the War and Navy Departments and others in the interest of providing transportation and avoiding delays to equipment in the carrying out of the Government construction material movements. The manager of military transportation is also in general charge of troop movements, cooperating with the War and Navy Departments and with the territorial passenger associations of the railroads.

No such organization existed prior to the first World War.

GOVERNMENT REALIZES IMPORTANCE OF AVOIDING DELAYS TO EQUIPMENT

The Army and Navy Departments, through are Army and Navy Munitions Board, are now thoroughly organized and they have adopted a most important regulation which provides that in the shipment of materials for the Government, cars must not be loaded until it is known that they can be unloaded promptly at destination.

The reason we had 5,000 cars of piling under load, delayed waiting unloading during the last war for the construction of the Hog Island Shipyard before the plans had even been completed, was due to lack of proper organization and planning by the Government and the railroads. At one time during the last war the railroads had over 200,000 cars under load for the Government and receivers in general which could not be moved because of inability to unload. The enormity of this mistake can best be understood by stating that this tie-up of equipment eliminated practically 25 percent of the railroad capacity. These defects have been remedied and it is the determination of the Army and Navy and the railroads that they shall not happen again.

SHIPPERS' ADVISORY BOARDS

The 13 advisory boards of shippers have provided a means of cooperation that did not exist during the last war. Let me quote from the report of the car-service division of the Association of American Railroads, dated November 1940 as an example of how this cooperative effort works:

"The annual grain movement always presents the heaviest single boxcar distribution problem. This year unusual aspects of the winter wheat harvest caused unexpected complications. Not for more than a score of years has a crop gotten off to so discouraging a start, due to an extensive and lengthy drought in the Middle West in the fall of 1939. From the first Government report in April until July, the estimated crop jumped 30 percent, and in the area of principal production—Kansas, Nebraska, Oklahoma, and Texas—production jumped 68 percent. More than half of this increase occurred after June 1. Late rains just before the harvest had a magical effect on production. New high records were established in the receipt of grain at terminal markets. At all terminal markets, through the cooperation of the grain trade, particularly the terminal grain committees sponsored by the shippers' advisory boards and the efficient work of the State grain inspection organizations, the crop was handled without difficulty."

This is another indication of the flexibility of the railroad machine and its ability to satisfactorily cope with emergencies.

PORT TRAFFIC CONTROL

It is well known that the congestion of traffic at the ports in advance of and during the last war was the start of the general congestion that occurred during that period. Having that in mind, it was determined in the fall of 1939 that an organization should be created to prevent such a congestion from recurring. To supervise this a joint committee was formed under the direction of the Maritime Association of New York, the Railroad General Managers' Association, the Association of American Railroads, the steamship operators, and others. The constantly increasing volume of traffic through the ports has been handled without any difficulty and without the necessity for issuance of an embargo to control the movement.

In this connection, let me call your attention to part of an article in the New York Times of March 2, 1941:

"WAR TRAFFIC FAILS TO CONGEST PORT—SURVEY SHOWS NO SUCH FREIGHT TIE-UPS AS OCCURRED IN LAST WORLD CONFLICT—COORDINATING UNITS BUSY—BRITISH SPOKESMAN DENIES THAT CARGOES ARE PILING UP HERE FOR LACK OF SHIPS

"Despite large-scale movements of war supplies to Britain and defense materials for United States military bases, freight traffic through the port of New York is being handled with virtually no congestion, a survey made here yesterday indicated.

"From representatives of the Association of American Railroads, the Port of New York Authority and shipping circles, it was learned that the obstructions that led to tie-ups along hundreds of miles of rail routes during the World War have not been in evidence at any time since the present conflict resulted in an expanded volume of trade here * * *."

TRANSPORTATION OF DEFENSE CONSTRUCTION MATERIALS

The manager of military transportation of the car-service division has been furnished with information as to all contracts made by the War and Navy Departments for construction projects. That information is relayed by him to the field forces of the car-service division. Through cooperation with contractors and others the principle of not loading cars until it is known that they can be unloaded promptly at destination is being carried out. Records show that with projects under way involving an estimated cost of over $1,000,000,000, cars arriving at points of construction have generally been unloaded on the average in less than the free time, or 48 hours.

ESTIMATED TRAFFIC, 1941–42

If there is to be a realistic approach to a problem, it first must be known what the problem really is. We know pretty accurately through the estimates made by the shippers' regional advisory boards what the traffic is expected to be 3 months in advance, but in an emergency of this kind it was thought desirable, if possible, to have a longer-range view of the traffic the railroads will be called upon to handle. Therefore, under the direction of Mr. Ralph Budd, transportation commissioner, the Advisory Commission to the Council of National Defense, the Bureau of Research and Statistics of the Advisory Defense Commission was asked to analyze the national-defense program and to make an estimate of the transportation requirements of the preparedness program and commercial traffic for the years 1941 and 1942. This estimate was made and was based in part on the estimated national income for those two years. These estimates of tonnage were then analyzed by the Bureau of Railway Economics of the Association of American Railroads and translated into carloads of revenue freight; this for the reason that carloading reports are the most current of railroad statistics and the best single measure for gaging equipment requirements.

FREIGHT-TRAFFIC INCREASE ESTIMATED

The production estimates by the Bureau of Research and Statistics of the Advisory Defense Commission, translated into carloadings by the Bureau of Railway Economics and supplemented by its own calculations for commodities not covered by those estimates, show the following results:

Total carloadings are estimated to be 39,780,237 cars for the year 1941, an increase over 1940 of 3,426,628 carloads, or 9.4 percent. Total carloadings in 1942 are estimated to be 42,493,982 cars, an increase of 2,713,745 cars over 1941, or 6.8 percent.

These estimated loadings mean that there will be about 76 percent as many carloads of freight handled in 1941 as were handled on the average for the years 1926 and 1929. The loading for 1942 is estimated at 81 percent of the loading in 1926 and 1929.

This is the first authoritative estimate coming from Government sources as to the traffic, both defense and commercial, to be expected for the years 1941 and 1942 and provides a reasonably accurate forecast of the future.

FREIGHT-CAR SUPPLY ADEQUATE

What is the car situation for dealing with this estimated transportation load for 1941 and 1942? In the first place, it should be remembered that the railroad plant is never used to its capacity. The nearest approach to capacity utilization occurs only in the peak months of September and October. The railroads, therefore, have no real problem in handling traffic until that season of the year.

It is estimated there will be in service September 1, 1941, not less than 167,000 cars that were not in service September 1, 1939, and of these, according to the figures of today, not less than 140,000 cars will be new since September 1, 1939. There was no difficulty in handling the traffic with a considerable number of surplus cars left over during the peak loading week in October 1939, when 856,000 cars were loaded. With the traffic load estimated by the Bureau of Research and Statistics of the Advisory Defense Commission, there will be a peak in October 1941 of approximately 870,000 cars and in 1942 of approximately 930,000 cars. This is based on the same seasonal fluctuations in the movement of defense materials as there is in the movement of ordinary commercial traffic, a situation which will probably not occur for the reason that defense materials will move without seasonal influence. The 167,000 cars that will be in service September 1, 1941, that were not in service September 1, 1939, will handle 104,398 carloads per week, or 5,428,696 carloads per year.

UNSERVICEABLE CARS LOWEST ON RECORD

We can disregard in these calculations the retirement of old equipment that will occur in the years 1941 and 1942. It is a well-known fact to railroad men that cars retired last year and to be retired in 1941 were of very little, if any, service in 1939 and, no doubt to a considerable extent, were in bad order at that time. We had on September 1, 1939, 224,603 cars in bad order, reduced to 107,182 cars at the present time, and now have the lowest number of bad-order cars on record.

Equipment is constantly wearing out, and new and better equipment is being purchased as the increase in traffic and net earnings justify. For example, 75,000 new cars were put in service in 1937 as a result of the increasing traffic of that year when there was no question of national-defense preparedness in prospect. Railroad plans do and must provide for handling all of the preparedness defense load, whether they get it or not. They do not ask to be relieved of anything by other means of transportation. In other words, they are the only indispensable means of land transportation at any time and under any and all circumstances.

RAILROAD FACILITIES UNLIMITED

I recommend today to writers, economists, and others that they consider transportation on the basis of existing conditions and facts instead of historical precedents. If they do so, they will find that in fact there is no limit to main line, yard, and terminal capacity. All that is required to increase the

capacity to any extent necessary is the addition of equipment and without the additions to other facilities. In other words, railroad capacity today is limited only by the ability of receivers promptly to unload cars and not use them for storage purposes.

The estimate of the Bureau of Research and Statistics of the Advisory Defense Commission, of the traffic load for the years 1941 and 1942 should eliminate the hysteria that is often in existence in times like this as to the traffic load to be moved.

SUBSTITUTION OF COMMON SENSE FOR HYSTERIA

It is extremely important that hysteria on the part of some people in connection with the demand that will be made on the transportation systems for defense preparedness and its possible effect on the movement of the commercial load should be dissipated. There is no real basis for concern as to the capacity of the railroads to handle without difficulty all the transportation created by the preparedness program and without any interference whatever with the movement of commercial traffic.

In this connection I will quote from an illuminating address made by Miss Harriet Elliott, Consumer Commissioner of the National Defense Advisory Commission, made at the National Farm Institute, Des Moines, Iowa, on February 21, 1941, reading as follows:

"Last December there were increases in the price of domestic fuel oil. Some merchants said that this was due to the defense program, others said that it was due to a shortage of tankers to transport the oil from the Gulf of Mexico to New England ports. Upon investigation we found that tanker and storage facilities were adequate to take care of existing demands and that operating costs had not risen. We made this information public and declared that there was no justification for an increase. Two weeks later the price of domestic fuel oil dropped.

"This brings me to another and extremely important phase of the work of the Consumer Division. That of combating misinformation, lack of facts and figures and what we call 'scare' advertising. Any emergency is likely to raise the public's blood pressure. A great many people do a great deal of talking and those who become hysterical get nowhere very fast."

Furthermore, in this same connection, I am quoting from the New York Times issue of March 1, 1941, under the heading "Steel capacity."

"The announcement yesterday by President Roosevelt that the steel-making capacity of the country has been surveyed and found ample to meet the requirements which will be made upon it is welcome news in more than one respect. It provides assurance that the program of national defense and of aid to Britain will not be hampered by deficiencies in this vital material, while at the same time all normal civilian demands can be met. In addition, the announcement should put an end to the demands which were being made by various economic planners for a large expansion of steel capacity."

I say the same thing for railroad capacity. There is on the railroads sufficient reserve capacity to meet expanding needs. They are the only industry in the country that is always in a state of preparedness.

Some concern has been expressed as to what would happen if the Government found it necessary to divert to other service all of the ships engaged in handling intercoastal traffic. We have figured this out and find that all the intercoastal traffic can be moved via the railroads in seven trains a day. In other words, one train per day for each of the railroads serving the Pacific coast eastbound. There would be a lesser number of trains west-bound but some empty cars would have to be moved west-bound by reason of the unbalanced traffic.

RESTRICTIONS ON TRAFFIC UNNECESSARY

As you all know, under the Railroad Administration during the last war, a great many arbitrary restrictions were made effective, such as increase in demurrage rates, arbitrary increase in carloading minimums, and various things of that kind, in the interest of adding to the car supply. We have said many times before, and now wish to reiterate that we believe, under present conditions and under any conditions we can possibly foresee, such restrictions or penalties are now totally unnecessary; and that, by proper cooperation and strict adherence to the principle of not loading cars until it is known that they can be unloaded promptly, there will be no necessity for such restrictions in the future.

I spoke of "proper cooperation." These are important words. As I understand it, cooperation rests upon a clear appreciation of the mutual responsibility of doing a job. Cooperation carries a distinct advantage to all parties. It is a democratic way of doing a job. In other words, it is a working together of human beings for a common end, and the ultimate capacity of human beings cannot be measured by statistics nor brought about by compulsion. Consequently, after many years of experience, it is my belief that embargoes to prevent congestion should be used only as a last resort, and only if and when cooperative control by shippers and receivers with the railroads and the Car Service Division of the Association of American Railroads has failed.

SHIPPERS' COOPERATION

As an example of cooperation by shippers I commend to you the following letter, dated February 28, 1941, from one of the largest shippers of food products in the country. By reason of the extreme modesty of the writer I refrain from disclosing his name or that of the corporation he represents:

"This company requires over 100,000 rail cars to handle its normal annual business.

"Our study indicated that much of our available sidetrack facilities were overburdened with cars carrying our inbound raw materials. This ofttimes delayed loading of our finished products, required by our customers. A detailed study of all inbound raw material cars at each plant indicated this disability could be halved by simply determining that the purchasing departments were following a time-worn custom of specifying, on our orders to suppliers, the phrase 'ship carload minimum weight.'

"We found that, actually, the purchasing departments in many cases had no actual knowledge of what the classification minimum weight was and, sometimes, cared less. When we asked them to change this clause to read 'ship maximum carload weight,' they immediately acquiesced.

"Under this plan we not only will require great many less cars for raw materials but we help ourselves substantially by gaining the added sidetrack facilities required for loading finished products.

"In one case, particularly, we actually had a requisition from one of our plant managers seeking permission to construct a second sidetrack. The above program made this entirely unnecessary.

"The point I want to emphasize here is that both our purchasing agents and plant managers immediately saw benefits to this company under this arrangement and undoubtedly others will find it equally beneficial if they proceed accordingly.

"The second part of our plan called for a review of classification minimums and average actual carloadings on our finished products.

"Here, again, we found many of our customers simply ordering a carload minimum, and the practice has been maintained over such a long period of years that our sales department could easily have taken the position that we just must not approach our customers to increase these requisitions; however, we found no hesitancy whatsoever in the sales department to start a vigorous campaign, through our entire sales organization, selling the idea to our customers that cars eventually would become scarcer, and the best way to insure an adequate supply of food products was to change from a minimum car to a capacity car. This undoubtedly will mean we will have fewer orders from these customers and less sales effort, and less detail for both customer and ourselves.

"The plan is being accepted in quite generous fashion. We have not made the capacity car mandatory as yet, but we have gained permission from the sales department to consolidate minimum cars into full cars and that will help considerably.

"I am glad indeed to assure you of our full cooperation to make this program as successful as possible and, thereby, help by helping ourselves."

Other shippers are doing the same thing but not having written me to that effect I am unable to give them credit as I have in this case. We commend the study of this statement by operating and purchasing officers of railroads.

ELIMINATION OF WASTE IN USE OF EQUIPMENT

In connection with efficient use of equipment, I quote from a recommendation to the railroads made by the vice president of our operations and maintenance department and approved by our board of directors:

"Pull empty cars from industrial sidings with same regularity as the loads are handled.

"Maintain checks on cars loaded with company material to see that they are loaded and unloaded promptly and that cars are loaded to maximum capacity where possible to do so.

"In purchasing standard material, such as spikes, ties, car decking, etc., buy in lots that will give maximum carload for each purchase instead of purchasing more often in units of 15 and 20 tons.

"I am quite sure that if these matters were handled uniformly by all railroads, it would have the effect of making available thousands of additional cars without any increase in cost, and that there would be substantial savings as a result of such action."

We ask shippers to remember that an increase in the lading of 1 ton per car, based on the 1940 traffic, is equivalent to adding 40,000 cars to the car supply. We ask the railroads to remember that a decrease in the turnaround time of cars of 1 day has the effect of adding 100,000 cars to the supply. In combination, therefore, an increase in 1 ton per car in the lading and a reduction of 1 day in the turn-around time is equivalent to adding 140,000 cars to the equipment supply. Certainly this is a challenge to all interested.

I close with the reminder again that there are no bottlenecks in transportation so far as railroads are concerned. They can only be created by a violation of the principle that cars must not be loaded beyond the ability of the receiver to unload promptly. The record up to date in this respect is entirely satisfactory.

Song for "I Am an American" Day

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1941

SHOUT! WHEREVER YOU MAY BE, "I AM AN AMERICAN"

Mr. CLARK of Idaho. Mr. President, it is my understanding that the date of

May 18 has been set aside by President Roosevelt as I Am An American Day. For such an occasion it would appear entirely proper that a song—I may say a very good song—should be given recognition. Probably the Members of the Senate have heard and have sung during the past few months the song to which I refer, it is Shout! Wherever You May Be, "I Am an American." I ask unanimous consent to have printed in the RECORD the words of this song.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SHOUT! WHEREVER YOU MAY BE "I AM AN AMERICAN"

On the street, in the home,
In a crowd, or alone,
Shout! Wherever you may be,
I am an American.
I am, from the heart of me.

Rich or poor, young and old,
Let this message be told,
Shout! Wherever you may be,
I am an American.
I'm proud of my liberty.

In the fact'ry, in the mill,
Thru each valley, from each hill,
Raise your voice and give America a thrill!
On the farms, in the schools,
Let's have one set of rules,
Shout! Wherever you may be,
I am an American.
I am, every part of me.

From Alaska's snowy peaks,
To the Southland's muddy creeks,
Listen in, because America now speaks!
On the farms, in the schools,
Let's have one set of rules,
Shout! Wherever you may be,
I am an American.
I am, ev'ry part of me.

Broadcasting Regulations of Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, May 5), 1941

EDITORIAL FROM WASHINGTON EVENING STAR AND AN ARTICLE BY DAVID LAWRENCE

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in last night's Evening Star on the subject of regulating radio and also an article by David Lawrence, on the same subject, appearing in the same issue.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 5, 1941]

REGULATING RADIO

Serious legal issues, as well as questions affecting sound business practice, are raised by the new radio regulations which have been approved by the Federal Communications Commission.

In promulgating the new rules, five members of the Commission, with two dissenting, assert what is in effect an almost unlimited authority to regulate the radio industry. But the Federal Communications Act, from which the Commission derives its powers, contains no specific authority for doing any of the things which the Commission seeks to accomplish through the issuance of the regulations. Some color of justification may be found in the so-called public interest clause of the act, but if, under the vague authorization, the Commission, by bringing its licensing powers into play, can impose its will on the radio industry to the extent envisioned by the new rules, then it would seem that it is subject to no real restraint under the statute.

If the Commission, for example, can forbid the making of radio contracts for more than 1 year on the assumption that this is in the public interest, and can enforce this decree by refusing to issue licenses to noncomplying stations, where does its power end? Taking an extreme hypothetical situation for purposes of illustration, what is there to prevent a majority of the Commission from concluding that it is in the public interest to ban political speeches from the air and enforcing a regulation to that end by the threat to withhold licenses?

From the standpoint of sound business practice, the new rules also seem to be of dubious validity, although this is a matter concerning which hasty judgments are apt to be worthless. But, having due regard for this consideration, there seems to be no doubt that the Commission's action is designed to replace a system of national broadcasting which has given good service with a vaguely defined new set-up which may or may not prove more desirable. The Commission obviously is motivated by the belief that greater competition in the radio industry is to be desired, but it may be wondered whether it has given adequate consideration to the possibly destructive effects of the kind of competitive activities which would be fostered by the new regulations.

If the present system is broken down, what assurance is there that the good programs will not gravitate to the better stations to the obvious disadvantage of their smaller competitors? If a broadened field of competition is its objective, how does the Commission propose to insure that the less desirable stations, from an advertising standpoint, will get enough business to keep going? And, having the public interest in mind, what is to happen to the excellent sustaining programs which have been built up under the existing system?

These, with other questions raised by the new regulations, go to the very heart of the discussion which has revolved around the proper function of administrative agencies. Decisions of the present majority of the Supreme Court on the whole have tended to widen the field and broaden the powers of these agencies, and if it is shown that the resultant extension of their activities is more harmful than beneficial, it seems obvious that the remedy lies with the Congress, which created them.

[From the Washington Evening Star of May 5, 1941]

F. C. C. RULE HELD BLOW AT LIBERTY—BROADCAST ORDER SEEN PRELUDE TO UNITED STATES OWNERSHIP

(By David Lawrence)

One by one the precious liberties of the American people are being taken from them by a Fascist-minded bureaucracy in Washington. Last week the Supreme Court, ignoring the plain words of the law, took away from employers the right to hire whom they please. Now this week the Federal Communications Commission has issued an order which virtually destroys the freedom of radio.

The latest decree, which has no sanction in law and runs counter to the plain words of a decision of the Supreme Court, in effect, orders the destruction of the American system of broadcasting as the people of the United States have known it for the last 12 years.

Without public hearing the F. C. C. has given more than 400 broadcasting stations only 90 days completely to reconstruct their entire system of programs and business relationships to the national networks. Virtually all broadcasting stations, and particularly those which have licenses up for early renewal, now have a pistol at their foreheads—either they comply or their licenses will be revoked.

The decision, which was 5 to 2, reveals the minority as saying that the new decree will mean anarchy and chaos in the whole broadcasting business.

If there is constitutional authority for a governmental commission to destroy freedom of the air in broadcasting overnight, there will easily be found authority to destroy freedom of the press, too. Already the F. C. C. has arrogated to itself the right to say who shall run broadcasting stations, setting up a discrimination between citizens which has not the semblance of authority in either the law or the Constitution.

GOVERNMENT OWNERSHIP SEEN

The ostensible object of the new decree is to get rid of alleged monopoly, but that is merely an excuse. The real purpose is to impoverish and demoralize the radio business so that the Government may take it over. Strong advocates of Government ownership constitute the Commission's majority personnel.

Congress alone can save the liberties of the people by prompt action. When the members of a Government agency become arbitrary and completely defy the courts and the law, Congress can, if it desires, pass a joint resolution staying the hand of the Commission at least until a thorough congressional investigation is made of the whole affair. Such a resolution, incidentally, could amend the radio law so as to require that members of the F. C. C. hereafter shall not hold office longer than 1 year. If, as the commission now orders, the relationships between stations and networks cannot be made for longer than a year, then the vast power over the broadcasting business which the F. C. C. usurps can best be controlled by the people in their own interest by making it necessary for all commissioners to come up for renomination and confirmation by the Senate once a year.

COURT'S RULING

The Supreme Court in very explicit language has said that the radio act does not give the Communications Commission power to regulate the business of broadcasting, but only to issue or revoke licenses and allocate wave lengths so as to avoid mechanical conflicts. If there is monopoly or unfair competition or unfair trade practices, the Congress has provided antitrust laws and has created the Federal Trade Commission with which to tackle such problems. Nothing in the statute gives the F. C. C. power to set itself up as a miniature Department of Justice or Federal Trade Commission. If this were so then any governmental agency could usurp such powers and carry on inquisitions and persecutions.

But the era of administrative absolution is here. While the American people have their eyes focused on the headlines of Europe, a game of sabotage is going on here which has even deceived the slumbering Members of Congress. The New Dealers, have from the first considered the State as the only instrument which can determine

what is good for the citizen. The theory of private initiative and free enterprise has been dealt blow after blow by bureaucrats who are almost as much sold on Government ownership and national socialism as if they lived in Berlin.

ENCROACHMENTS OF GOVERNMENT

The American people have enjoyed radio. Programs giving the finest opera music and the best plays together with educational and religious broadcasts have made American radio superior to anything else in the world. Now all this is to be stricken down because the system of revenues to pay the expenses of such entertainment is to be broken up by capricious-minded officialdom.

Both the National Broadcasting Co. and the Columbia Broadcasting System have made vigorous protest and doubtless the owners and managers of the hundreds of individual radio stations affected will make themselves heard, too, in opposition to the Commission's demoralizing order.

This destructive action, however, is just one of a series of steps by which governmental commissions are encroaching on the rights of the people, and not on just one business. It is one of the means whereby totalitarianism is imposed under the guise of law and regulatory order. Usurpation of power without check or hindrance leads to more and more abuse. With freedom of the radio gone, the next step will be limitations on freedom of the press and then freedom of speech. At a time when national unity is so important, it is incredible that the bureaucrats would be so bold, but with an acquiescent or indifferent Congress, the people can lose their liberties rapidly. It will be interesting to see whether Congress rises to the challenge laid at its doorstep by the five bureaucrats in the Federal Communications Commission.

Draft Incongruities

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, May 5), 1941

ARTICLE BY JAY G. HAYDEN

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article written by Mr. Jay G. Hayden, published in the Providence Journal of May 5, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Providence (R. I.) Journal of May 5, 1941]

DRAFT INCONGRUITIES GIVE FEDERAL OFFICIALS JITTERS—ADMINISTRATION SQUIRMS BUT IS IN TERROR OF INQUIRY SURE TO FOLLOW REQUEST FOR CHANCES; ARMY COMMAND WOULD DROP AGE LIMIT TO 18

(By Jay G. Hayden)

WASHINGTON, May 4.—Almost every day there is some new indication that the administration is squirming under the incongruities of its selective service army recruiting system, but that it is in mortal terror of the congressional investigation which a request for corrective legislation certainly would entail.

A little more than a month ago Brig. Gen. Louis B. Hershey, acting director of selective service, appeared before the Senate Military Committee to oppose a bill, offered by Senator JAMES E. MURRAY, Democrat, of Montana, to exempt medical students from the draft until they have completed their college courses. Within the week General Hershey argued against blanket deferment of physicians and medical students on the ground that once the business of releasing army eligibles in groups was begun there would be no end to the business.

But on Saturday General Hershey issued an order instructing all local draft boards to grant deferment to practicing physicians and to medical students and interns "who give reasonable promise of becoming acceptable medical doctors."

MORE DRASTIC RULING EXPECTED

It is authoritatively reported that a far more drastic exemption is in the works—that General Hershey within a few days will tell the draft boards to take only unmarried men under 26 years old, thus deferring at one stroke the whole 26 to 36 age group.

What the Army high command would like to have done is to drop the age of compulsory trainees to 18 and release everybody over 23. Speaker SAM RAYBURN announced last week that the latter plan was under serious consideration and that it might include permission for each draftee to pick his own 12 months for Army training, any time within the 18 to 23 age span.

The difficulty is a change that would take in persons outside the present statutory 21 to 35 age limits would necessitate bearding the congressional terror. Hence, the search for some makeshift that can be done by Executive order. The fear is that if Congress once gets its hands on the situation it may upset the whole Selective Service apple cart.

The crux of the dilemma from which the administration is attempting to escape is that the draft law vastly overemphasized the need for a mass Army, and this at the expense of personnel requirements of the national-defense program, which now are looming as much more acute. Something like 10 times the money and organizational energy, for example, is being expended in the quest of an Army which can neither be equipped nor housed as things stand than is going into the recruiting and training of the much more vitally needed skilled workers for airplane plants and shipyards.

SIXTEEN MILLION ON ANXIOUS SEAT

Added to this is the circumstance that for something less than 250,000 men so far supplied to the Army by the conscription method, 16,000,000 eligibles have been placed on the anxious seat. It is impossible to measure the slump in productive efficiency draft worry has occasioned, but O. P. M. officials believe this is a considerable adverse factor.

The selective-service bureaucracy, including 6,200 local boards each with a complement of clerks, medical examiners, etc., is costing more than $20,000,000 a year to maintain. Assuming the maximum annual quota of 800,000, each of these boards would be called on for an average of less than three draftees a week; actually, the average per board so far has been nearer to one draftee a week. The reasons for this slack business, of course, are: First, the great number of voluntary enlistments and, second, the shortage of housing and equipment.

Certainly it is true that if the same great recruiting organization, devoted to providing an Army, had been set up at the same time last summer to recruit and train skilled airplane makers and shipbuilders, the crucial industrial preparedness program would be much further advanced than it is today.

THE YOUNGER, THE LESS WASTE

Col. Harry C. Kramer, executive officer of the World War draft and author of the present draft law, was the first to point out its unfitness for the purpose of creating an Army Reserve reservoir, for which it now is being used. Colonel Kramer's fundamental contention is that the older the trainees the more rapidly they evaporate because of marriage, physical deterioration, and other causes. Six percent of the men are married at 19, and less than 20 percent at 21, but 50 percent are married at 25 and 80 percent at 35.

Hence Kramer argues that the younger the men are trained the less waste. The present draft law, he says, would be ideal if the need was for a huge land army to man trenches as quickly as possible, but it is ridiculous from the standpoint of training men for use in a highly indefinite future.

The situation recalls a speech made by the late Senator Knute Nelson, of Minnesota, himself a Civil War veteran, at the time the World War draft law was under consideration. Arguing for 18 as the minimum age, Nelson declared that "over half of the Army we had during the Civil War consisted of boys of 18." Specifically, Nelson said, "There were 104,987 who were 15 years old; there were 231,051 who were 16 years old; there were 844,981 who were 17 years old; there were 1,158,438 who were 18 years old. Of those 22 years of age, there were only 618,555; aged 25, there were only 46,626; aged 44, there were only 16,071.

"The oldest man we had in the company in which I served was an Englishman who was 35 years old—only 35—and yet he was so much older than the rest of us that we called him Old Dad."

The Triumph of Mind Over Matter

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, May 5), 1941

ARTICLE BY STUART CHASE

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Stuart Chase, appearing in the May 3 issue of The Progressive, entitled "The Triumph of Mind Over Matter."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Progressive of May 3, 1941]

THE TRIUMPH OF MIND OVER MATTER

(By Stuart Chase)

A recent letter to the New York Times carried this stirring sentiment: "The person who permits the thought, or voices the opinion, that we are too late, or that Britain will fall, is double a deserter in this battle for freedom."

As I write, the aid we dispatched to Yugoslavia is about 6 weeks too late, and Britian is falling out of Libya and Greece at an alarming rate. According to the Times' cor-

respondent this is error, to be driven from the mind, lest the thinker desert freedom. I am going to work on it, for I have a high regard for certain kinds of freedom, but I cannot guarantee success. Work as I may, I have a leaky mind into which facts occasionally penetrate. Then I have the devil's own time chasing them out again.

SOME FIRM CONVICTIONS

As a nation we certainly cannot be accused of not trying to become fact proof. Neither can many of our radio commentators and military experts. We have scored practically a 100 percent performance in holding the right thought right down the line since the war began. Most of us can point proudly to the following firm convictions:

That the Poles are hardy fighters. General Mud, furthermore, is coming to their aid. They may not have the equipment but they have the spirit, and it is the spirit which wins.

That the Germans missed the bus in their attempted invasion of Norway. Hitler has made a ghastly miscalculation. God help the Nazis as the British Fleet drives into the Skagerrak!

That the fortifications on the Belgian frontier are many times stronger than in 1914. No army can take them except at a prohibitive cost.

That the Dutch will open the dikes and drown the gray-green hordes.

That the Maginot line is impregnable.

That German soldiers have a slave psychology and cannot stand up against free men.

That Weygand is coming from Syria! He is flying over the front in Flanders! He sees the narrow corridor the panzer divisions have driven through to the Channel ports. He will attack and seal the corridor, and that will be the end of Hitler's rash adventure.

That the retreat from Dunkirk turned defeat into deathless victory.

That the French Army is the finest in the world.

That Allied money and resources will crush Germany. Her children will starve. Her people will revolt.

That Hitler did not invade Britain after the fall of France—and so another deathless victory.

That sea power will beat land power every time. Admiral Mahan said so in 1890. Walter Lippmann says so now, and it must be true.

That General Wavell has liquidated the Italians in Africa.

That the Greeks will drive the Italians into the Ionian Sea.

That Turkey will fight if Hitler invades Bulgaria. Ah, what hardy fighters those tough Turks are!

That Hitler has made a ghastly miscalculation in the Balkans. He must now fight a dreaded two-front war. A blitzkrieg is impossible in the mountains. Ah, what hardy fighters those Yugoslavs are!

That the British have new secret weapons; they have solved the problem of defense against night bombing.

That Russia will back up Turkey. Russia will back up Rumania. Russia will back up China. Russia will back up anybody.

That Japan is hopelessly bogged down in China. The guerrillas are making her task impossible. Japan grows weaker every day.

That $7,000,000,000 in paper money for loans and leases have Hitler stopped in his tracks.

That if Hitler cannot win this year, he can never win. He cannot win this year, so he can never win.

OUR GRIP IS STILL FIRM

These right thoughts we have conscientiously held, one after another, for almost 2 years, and on some of them we still have a good firm grip. The fact that most of them have turned out to be completely mistaken has not discouraged us in the least. Tomorrow, over the air, our favorite commentator will have a bright and lovely new thought for us to hold.

I, too, held thoughts like these, tenderly and against all evidence to the contrary, until France capitulated. That was a fact so gigantic that I could not gallop my mind around it. It plainly marked the end of the balance of power formula by which Britain had dominated Europe for 300 years.

Since then I have seen one earnest popular conviction after another blow up in our faces. I am beginning to wonder if these exercises in metaphysics are, after all, the best method for serving the cause of freedom.

MOONBEAM CHASING VERSUS BRUTE FACT

By the cause of freedom I mean the national interest of the United States. I realize that this is dangerously definite, but, after all, I really care about the United States, and I am not quite sure what freedom in general refers to.

Is the freedom of America to defend its territories and preserve its way of life really helped by devoutly believing things which are not so? How well can a nation of moonbeam chasers stand up against a combination of the most hard-boiled dealers in brute fact the world has ever seen?

I refer to the German and Japanese strategists. They win their victories by the most painstaking regard for military, political, and economic facts. When German diplomacy broke down in Yugoslavia the panzer divisions were right there to march into the breach. Panzer divisions are not invincible. They can be licked. But to lick them, is it not essential to face realities 24 hours a day, with no excursions into never-never land? Ask General Wavell.

A PLAN SHOULD BE READY

We want to see Hitler beaten so badly that almost any half-truth, any rumor, is mentally converted into full-fledged proof of his approaching downfall. Nothing could be more dangerous as a national policy. It is like going into the ring convinced that one can readily handle Joe Louis because he belongs to an "inferior" race. The next thing one knows the interne is shaking his thermometer in the ambulance.

It is said on all sides that sooner or later a show-down must come between the United States and the Axis. In one form or another, either military or economic, or both, I believe that statement to be true. The most probable real battleground will be South America. What kind of a battle shall we put up if we rely on right thoughts to direct our strategy?

If we refuse to believe that Britain can fall, and all our plans are geared to that end, will there be enough trees in the country up which we can climb if Britain does fall? Britain may hold out, and I hope she does, but I should like to have a plan ready in case the worst happens. A man, or a nation, is a fool not to prepare for the worst in the reeling world of 1941.

IF THIS BE TREASON

One of the right thoughts we have been told to hold is that Britain is our first line of defense. We are told little about our second and third lines. After Britain, the blue ocean—and then what? Citizens are entitled to know.

Suppose we send England not only aid—which she certainly rates—but the works? Suppose we give her the best of the Navy, the air force, all the antiaircraft guns in the place? We send them because we know in our secret hearts she cannot fail, so why not? Then something slips. Perhaps God nods. This gives the Axis a nice kitty with which to commence operations further to the west.

A dozen battleships, 200 destroyers, a thousand flying fortresses—a very nice kitty indeed. The Navy will not permit such a thing. Of course, no naval officer in his senses would dream of it. But this is exactly the kind of footless action which a policy of holding the right thought leads to.

I for one am getting pretty tired of banking all our spiritual capital in Europe, and permitting no thought that our treasure is anything but safe. One calm look at the military and economic situation makes it all too clear that it is not safe. It is in the most devastating danger. We need most of it right here in this hemisphere, ready for whatever storms may come.

If this be treason, make the most of it.

Resolution of Sons of the Revolution in the State of New York

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the preamble to the constitution of the Sons of the Revolution in the State of New York recites as one of the objects of the society "to inculcate in the community in general respect for the principles for which the patriots of the Revolution contended";

Whereas the Axis Powers are by their philosophy and actions endeavoring to destroy individual liberty which was one of the primary principles of the patriots;

Whereas it is demonstrated that the sentiment of the people of this Nation is overwhelmingly in favor of defeat for the Axis Powers;

Whereas this sentiment has recently been implemented by the passage by the Congress of the so-called lend-lease law;

Whereas the effectuating of the above-named law depends on the labor of the people of this Nation—either direct or in taxes; and

Whereas the sentiment, implemented by law, effectuated by taxes and the sweat of American labor will be impossible of accomplishment unless the matériel manufactured here, in the "Arsenal of Democracy" reach those for whom they are the tools to finish the job"; Be it

Resolved by the board of managers of the Sons of the Revolution in the State of New York, That the Commander in Chief of the armed forces of the United States of America be empowered by the Congress to use any and every and the best means available, or to become available, to insure the prompt, continued, and uninterrupted delivery to the struggling people abroad of the matériel destined for them; and be it further

Resolved, That it is our considered judgment that while this may not effectively keep America out of the war, it is the only method left by which the war may be kept out of America; and be it further

Resolved, That the widest possible publicity be given to this resolution, that copies be sent to the President of the United States, the Members of the Congress, the other State Societies of the Sons of the Revolution, to representative patriotic societies in the city of New York, and to the membership of our own society.

Production and Patriotism

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6 (legislative day of Monday, May 5), 1941

ADDRESS BY WHEELER McMILLEN BEFORE SEVENTH ANNUAL CHEMURGIC CONFERENCE

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Wheeler McMillen, president of the National Farm Chemurgic Council and editor in chief of the Farm Journal and Farmer's Wife, before the Seventh Annual Chemurgic Conference at the Hotel Stevens, Chicago, Ill., March 26, 1941, and entitled "Production and Patriotism."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRODUCTION AND PATRIOTISM

WE WANT TO KEEP OUR AMERICA

(By Wheeler McMillen, president, National Farm Chemurgic Council, and editor in chief, Farm Journal and Farmer's Wife)

The United States—our Constitution, our riches of freedom, our wealth of natural and created resources, the farms and enterprises and institutions that flourish under our flag, the soil from which we have grown, and the ways of life that are ours—these we cherish. Today we affirm our patriotism with an understanding more clear-minded than ever before in our time.

We want to keep our America. Living and dynamic, it is still in process of creation. Not only do we want to keep it, but we want to keep on creating it.

We know the way. The way is to produce. Production built the Nation great, and only production can either preserve or advance our country.

At this present interval the task of defense demands vastly increased domestic production in order that every military and civilian need may be safely and continuously supplied.

Should the needless tragedy of war engulf our people, the ultimate effort in production will be desperately required throughout the conflict.

The after-era following defense or war, whatever the eventual shape of the world, will present conditions from which the only rescue will be production balanced to create jobs as well as goods.

Were there no need for defense, were there no impending catastrophe of war, the already monumental burden of national debt would admit but one possible solution, and that is the production of enough income to make its payment possible.

Leave out war, defense, debt, and future depression—even then the needs and desires of the economically less fortunate in our population would imperiously demand that there be more and more production. Their chance to earn comes only when production makes jobs for them.

Today we open the Seventh Annual Conference of Agriculture, Industry, and Science. The theme of our meeting is "Chemurgy in Defense—and Beyond."

Chemurgy is a doctrine of production. Chemurgy's philosophy seeks that every American may produce, earn, and consume more. The spiral of prosperity is production, jobs, earning power, consumption, more jobs, more earning, more buying. The spiral starts wherever new earning power can be initiated.

So the effort of our economy should be directed toward enabling our own people to earn more buying power. You can't import jobs.

Our 132,000,000 people can absorb fabulous quantities of goods. Few, indeed, are those who have reached the ceiling of consumption—who have bought everything they want.

Neither have Americans approached the ceiling of production. We may not even be in the basement.

A dramatic illustration of how science will expand America's power to produce can be taken from within the membership of this organization.

At the California Institute of Technology, a member of our board of governors, Dr. Robert A. Millikan, is installing a new 200-inch telescope. This instrument will penetrate space for a distance of 1,000,000,000 light-years—twice the present maximum. The scope of space which it will permit to be examined will be multiplied by eight; eight times as much of the universe will be seen as is now within the reach of human knowledge. So great will be the power of this instrument that if the Stevens Hotel were located on the moon instead of here on Michigan Avenue, it could still be seen.

On this program Friday morning, another member of our board of governors, Mr. Howard R. Huston, has promised to describe the first commercial electron microscope, now in use in the laboratories of his company. A mild glimpse toward the vast new universes of knowledge this instrument will open may be had by a comparison. The most powerful of present optical microscopes might enlarge the appearance of a human hair to the thickness of your wrist. The electron microscope would give it a diameter of 40 feet, or greater than the width of most city streets. The behavior of bacteria, the character of cellular and molecular structure, will become known far more intimately.

The historian who writes in 2041 may very likely put down that the great events of the 1940's were not international wars, but the first use of these two instruments for the multiplication of man's seeing power. From these new realms of knowledge will come wholly new forms of goods for human use. Lower cost methods and greater durability will permit more people to enjoy more things. Wastes from ignorance and disease will be lessened. Surely no one can doubt the power of the United States, if freedom of initiative is preserved, to continue its history of heightening human well-being.

The immediate prospect is darkened by the hideous shadow of war. Wars are made by politicians and plunderers. The fruits of war are misery and poverty and taxation, eaten in the bitter sauces of hatred and moral disintegration. The earth is growing poorer with each day of destruction. International thinkers and international politicians now want to intensify the destruction. They would force Americans to exchange what could well be our impregnable security for a share in the world's blood, hate, misery, and debt. They may succeed. Some of us are marking down their names, one by one, in our books of memory.

Wars may consume the accumulated tokens of wealth, they may destroy incredible tonnages of material, they may blow out the brains and shed the lifeblood of our ablest youth. We have to deplore the setbacks from war at a time when science and industry and agriculture have prepared new advances in well-being.

But after war comes reconstruction—building up after the destruction. Unless the savagery goes on endlessly, there will still be some soil. There will be sun and rain and atmosphere. We may hope to preserve the skills and sciences. With these and with earnest labor we can rebuild the American dream—provided only that politicians do not entangle us too deeply in the snarls of internationalism, and provided that the one galvanic generator of productivity remains—individual human freedom. Free Americans can outproduce totalitarian slaves.

A foremost danger is that internationalist thinking will tend to center attention on fifth-rate markets in other continents to the neglect of the world's one first-rate market here in North America.

The Government, industrialists, bankers, and traders have spent, lent, and given enormous sums to make sales in the Orient, the Antipodes, and in the faded markets of decadent Europe. Even while they are being tempted by the orchids of the Tropics, the home orchards are full of golden fruit. One American making $4 a day is a better and easier prospect than any 10 coolies or peons each earning 40 cents a day.

On the farms alone of the United States there awaits a hungry reservoir of needs. Once amply energized with buying power, the already voracious rural market will perform incredible feats of consumption.

The United States census counts more than 6,000,000 farms. Half of these earn nearly nine-tenths (89 percent) of the whole national farm income. These 3,000,000 produce by far the most, and therefore earn the most. Chemurgy's assignment is to enlarge the opportunity for all the 6,000,000 farms to produce profitably. The way to accomplish that is to enable farmers to produce every possible one of the agricultural items Americans consume, and beyond that to discover opportunities for farmers to produce new things, and further to find markets for the agricultural wastes.

Almost everyone agrees that $9,000,000,000 is not a fair income for agriculture. For years groups of farmers have been demanding that the Government guarantee parity. Parity, as defined, is a movable figure, a complex sort of mathematical will-o'-the-wisp, compounded on the relationship between what farmers bought and sold 30 years ago when it is assumed they got an even trade in the exchange of goods. If parity had been reached last year, the national farm income would have been around eleven and one-fourth billions.

The goal of parity is insufficient and inadequate. The services of farmers are certainly no less valuable and vital than a cross-section of other services.

The 1940 national income was $70,000,000,000. The 32,000,000 farmers were 25 percent of the people. A fair goal, it seems to me, would have been 25 percent of the national income, or seventeen and one-half billion dollars.

I might easily draw an enticing picture of the jobs that would make and of the flood of industrial goods that would move from factory to farm were the agricultural income raised by any substantial figure. More pertinent is how the income can be increased.

Most observers have long recognized the basic trouble in agriculture. Too much has to be sold in a buyer's rather than in a seller's market. Whenever supply and demand relations result in a seller's market the situation expresses itself in good farm prices.

Chemurgy's constant search is for new markets, new buyers. That's the urge in chemurgy. The percentage need not be large to swing a situation over to the seller's advantage. We have seen the expansion of soybean uses exert that effect. Several million acres grow soybeans which are in larger demand than the corn and oats that otherwise would have occupied the same acres. A lower-priced product is replaced with a higher-priced one. A domestic product moves into uses formerly filled by imported materials. More than 15 percent of the soybeans

are turned to nonfood uses, enough to help make the markets. The growers have more money than if the new crop had not appeared. That is chemurgy in action.

No crop situation is more difficult than that of cotton. No crop is so definitely faced with a buyer's market. Has chemurgy anything to contribute?

Ordinarily, some 12,000,000 bales are grown. From eight to ten million bales can be consumed domestically. The problem is either to find buyers for the 4,000,000 bales or to find something more profitable for the growers to raise. The export market is about gone; in the long run a blessing may be seen in the disappearance of a market that forever restricted the price to what a coolie in Peking or Penang could pay for his shirt. The process of finding new uses may add a little to the much-too-small dent it has so far made in cotton supplies.

But are southern farmers able to grow nothing else than cotton? If they grew all the vegetable oils now imported, a greater acreage would be required than is occupied by the excess portion of cotton. They cannot immediately grow all of the 2,000,000,000-pound oil imports, but we know they can grow some. For their cottonseed and peanut oils, chemistry finds added uses. They can grow castor beans for drying oils, and chemurgy hopes soon to see that crop on a sound domestic basis. We know that perilla grows wild in the South and therefore wonder why it can't be grown tame.

Sweetpotatoes grown there can be made into starch to replace the three to four hundred million pounds of imports. Woodpulp and paper manufactured there will add further opportunities. The utilization of southern wood products, as well as northern, is steadily opening into a variety of new markets. More sugar would immediately be grown, both in the South and in the beet areas, if restrictions against earning by farmers were removed. And on this program tomorrow we shall hear that cotton itself can be grown to industrial specifications so as to bring a premium in a seller's market instead of a loss in a buyer's market. Has chemurgy anything to offer toward the cotton problem? All it asks is a chance.

The export crops are the headaches of agriculture because they constantly struggle for outlets in buyer's markets. What then could be plainer common sense than to make the utmost effort to bring new crops to enough acreage that the competition will be among buyers for the product instead of among sellers for the market?

That is a basic part of chemurgy's program. New crops for existing or new markets, new uses and markets for the old crops, and profitable uses for those portions of production—stalks and straw, culls and byproducts—that now bring little or nothing.

Now, when defense is an uppermost thought, is a favorable time to push new crop research and trial. The national defense will be imperfect and incomplete until every single item of either military or civilian need can be produced at some price and in some place within our borders or very nearby. You can't defend the United States with imports.

This phase of defense is being neglected almost wholly by our Government. Already shortages in drying oils, in certain essential oils and herb products, are apparent. Your Council is doing all it can in these situations. One small result has been contracts between users and farmers for some hundreds of acres of formerly imported products. Industrial laboratories, working with the spirit of chemurgy, are heping to meet the drying-oil and other situations.

The great defense task of the years ahead is economic. Against the combined assaults of world-wide depression, poverty-stricken producers abroad, and tax collectors at home, we shall have to defend American jobs, American farmers, American business, and the American standard of living. The time to begin on that task is now. The one possible insurance against the foreseeable disasters of that era is to take every possible step toward increasing the profits of farmers. When the slump comes we dare not depend on foreign markets. There won't be any that are permanent.

Industry's one real hope then will be the American farm market. If the one-fourth of America that farms is then prosperous, the other one-fourth which depends directly on farm earnings will also be prosperous. Thus half of America will be in shape to consume the products and services that sustain the other half.

I see no other feasible insurance against the depression everyone anticipates. If anyone can offer something more practicable, he should be heard.

Only one school of thought objects to chemurgy's program. This is the school of internationalism. This badly educated school has never learned the fundamental principle that production has another function than the mere supply of goods. A highly necessary purpose of production is to supply consuming power to the producer.

The internationalists contend that goods should be imported from wherever they can be obtained most cheaply. They fail to take into account that buying power must be produced in the United States.

What would be the consequence if, when the wars are over and the munitions machines turn to other tasks, the United States were to follow that policy to its ultimate absurdity? Conceivably somewhere in Europe automobiles, plastics, and steel and farm implements may then be made more cheaply than here, so we buy them from Europe. Industrial Asia may be sending radios, ceramics, textiles, electrical items, and a multitude of products of the two-dime-a-day labor of the Orient. The whole earth will have bargains then to pour into America's market. Would not the logical result approach extinction of the purchasing power of our people?

If carried to the extreme such a policy would leave Americans unable to buy either from each other or from other countries. As long as we have unemployed acres and unemployed men, our policy should be to give our own people preference at every opportunity for production. The exporters, importers, shipping interests, and bankers would be wise indeed, if they would look at the records which show that the years when their business is most active are the years when domestic prosperity is highest. The internationalist trade doctrine of giving away American earning power is evil nonsense, of about the same compound as the curious internationalist political doctrine that foreign trade is an instrument for the promotion of peace. Full productivity and prosperity at home provide the soundest base for rational expansion of our trade with other nations.

Chemurgy is forthrightly nationalistic. Ideas, however, respect no international boundaries. Chemurgy is not only good for the United States, but it is good for any other nation which follows its philosophy of full development for all productive agricultural resources. On this occasion I would like particularly to extend a hand of fellowship to our friends the chemurgists of Canada, our best neighbors, who have organized their own council and to whom all our material is available. The literature of the Council goes to members in a dozen countries of the world.

The concepts of chemurgy are not political. They are economic and scientific. The National Farm Chemurgic Council is not political in its intent; never has been; and shall, I trust, never become so. I emphasize these facts, in order that what I wish to say next shall not be misunderstood.

The most fundamental division of opinion in the United States today is the cleavage between nationalism and internationalism. A large number of Americans believe firmly that the destiny of their country can best be achieved by undertaking to maintain freedom of speech and of worship, and freedom from fear and from hunger, within the borders of this Nation. They are nationalists.

They favor full development of the natural, human, and spiritual resources that are within the United States.

They definitely do not believe that the growth of the national economy has been completed. They are certain that wherever the energies and skills of Americans are not restrained the frontiers of production will be expanded.

Nationalists believe that the productive powers of the United States are such that, unaided and unentangled, every border and shore of our States can be defended against any possible combination of aggressors.

Nationalists hold deeply the conviction that the most precious rights of man can best be preserved, and that his highest economic and cultural destiny can most certainly be realized, by concentration toward building higher the great plateau of well-being upon which the United States now towers above a less fortunate world. Nationalists favor the peaceful cultivation of this plateau in preference to plunging down into the bloody swamp of international poverty.

The internationalists hold other views. Their doctrines of confusion and catastrophe are widely disseminated. Indeed, by determination of a majority of Congress and of the Executive, they are now national policy.

No matter how far we may disagree, in times of genuine crisis and emergency we all, as loyal Americans, subscribe to the sentiment of Stephen Decatur in support of our country.

There is no disloyalty, however, in pointing out that the great issue of internationalism versus nationalism has never been decided by the suffrage of the American people. The internationalists were successful at the 1940 conventions of both parties. The issue was not debated in last year's campaign.

No one of us these days can see far into the future. There is every indication that we shall see worse times before we shall see better. At some date the forces of destruction will have run their course. Then will come the task of paying for the damage, and of endeavoring to resume a forward course. Farseeing leadership will not await the bottom before beginning to chart the course upward. The policies of internationalism will then have to justify themselves in the light of events.

The thoughtful citizen of that time may reflect upon history. He may observe that during a century and a quarter of essentially nationalistic policy his country prospered and the well-being of its people steadily increased; and he may reflect that from the time his leaders turned to internationalism the advance of his country has been irregular and halting.

If this guess at the future is at all correct, the doctrine of nationalism will be thought about and discussed. Its values will emerge more clearly in the public mind. The issue is not yet closed. The post-defense and post-war procedures are still to be determined. It will not be surprising if major political parties will be forced to draw their lines on this division. One party may fly the banner of internationalism, and another the ensign of nationalism. A conservative prediction is that as destruction and annihilation proceed, the virtues of domestic production will become more clearly understood.

I have drawn this theme to your attention for a definite reason. It has seemed to be appropriate that the political connotations of these two forces be brought out into the

light. With the future implications in full view, perhaps we can see more clearly than otherwise that chemurgy, as a program of production, can and should proceed regardless of political events.

Internationalism for a time may set us back faster than we can go forward, but it cannot prevent us from facing to the front, making whatever countergains are possible.

In the final analysis, though we speak here of goods and things, these are not what really concern us. Our real concern is people—the human beings who find their lives most happily expressed in productive activity and their families best protected by the fruits of production. The great objectives of holding the economic machine in high gear are not mere goods nor mere dollars, the great consideration is that when the machine is not in high gear, the weakest, the least able are the first to be unemployed. If America can continue straight ahead to produce, there will be work and opportunity. With less than that industrial statesmanship cannot afford to be content.

Whatever the course of our country, now or later, there is patriotism in production. It is not isolationism that we preach, as may be said by those who use words in place of reason. If we are going to have effective defense against any imaginary or real aggression, self-sufficiency is plain common sense. When we can foresee the relentless approach of post-defense or post-war slump, it is plain common sense to prepare by starting to produce more earning power, and to earn more buying power, for those who will need it most.

I am one who firmly believes that we in the United States of America have an inspired mission on earth. Our farmers, working with our scientists and industrialists, have banished famine for the first time in human history. Our scientists and industrialists have dissolved distance, overcome gravity, conquered pestilence, and have made tremendous inroads on poverty. Ignorance is retreating. Humanity has been elevated to new heights in America, by Americans, here in our invigorating atmosphere of freedom, under representative government.

First among present obligations is to maintain liberty here—liberty for men to think, speak, worship and work. Under the blessing of liberty we can show all the world the supreme example of human well-being in a nation where freedom, production, and patriotism go hand in hand. We cannot hope to force our ways upon the peoples of the earth. But if we let the people of the earth see that we ourselves have devotedly adhered to freedom of speech and worship, that by our way of life freedom from fear and hunger can be enjoyed, we shall most effectively fulfill our inspired mission to aid humanity.

Larry Gilbert's Twenty-fifth Year in Baseball

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. HÉBERT. Mr. Speaker, more than a century ago the State of Tennessee sent one of its most gallant and valiant sons to the city of New Orleans to defend its gates against an invading army.

The name of Andrew Jackson will always be synonymous with the city of New Orleans because of that brave soldier's magnificent victory on the field of Chalmette. New Orleans will always owe a debt of gratitude to the State of Tennessee because of Andrew Jackson. He was a great American. He was a typical American. He was a forceful, fighting, two-fisted American. America today would be a better nation if we had more Americans like Andrew Jackson.

Today in the city of Nashville homage is being paid a New Orleanian, and I like to believe that this much-deserved honor and homage which is being paid this Louisianian is in part compensation for the debt of gratitude which New Orleans owes to Tennessee.

The Louisianian who today is being honored by Nashville, like the Tennessean who has long been honored by New Orleans, is a fighter, a man who has won his spurs not on the field of battle, like Andrew Jackson, but on the field of competitive sports. The man who is being honored today in Nashville, like Andrew Jackson, is a man who has never been known to turn his back on a friend or retreat from a foe. This man represents everything that is clean and honorable in the field of sports, and I want to say to the State of Tennessee that, as proud as Tennessee is of Andrew Jackson and as grateful as Louisiana is of the part which Andrew Jackson played in the Battle of New Orleans, we of Louisiana and of New Orleans are equally as proud of Larry Gilbert, who today is being honored in Nashville on the occasion of the beginning of his twenty-fifth consecutive year in the Southern League, as player and manager and developer of some of the brightest stars that have ever shown in the baseball firmament.

America today, Mr. Speaker, needs more men like Larry Gilbert.

America today, Mr. Speaker, would be a greater Nation if there were a greater number of men the type and caliber of Larry Gilbert.

In these days of peril and danger to our democratic way of thinking and living we need men who have known success in the American way; we need men who have lived by the American way; we need men who believe in the American way of doing things whether those men come from the athletic fields of competition, from the machines of industry, from the carpeted offices of big business, or from the plows of the farmers in the field. No matter from what walk of life these men come—they must all be fired with the knowledge and the thought that the American way is the right way of life. They must exemplify in their every action, their every word, and their every deed that they believe in the American way, that they live in the American way and are willing, yes, Mr. Speaker, to die if need be for the American way.

Larry Gilbert is one of those Americans.

In honoring Larry Gilbert today, Mr. Speaker, Nashville and the State of Tennessee pays homage not only to Larry Gilbert the man and the individual, but honor and homage to every man in baseball who, like Larry Gilbert, has brought honor and fame on himself by doing a good job.

It has been my privilege to have known Larry Gilbert during his entire baseball career.

It is my honor at this time to represent the congressional district in Louisiana in which Larry Gilbert makes his home.

As a small boy I watched the progress of Larry Gilbert in baseball. As a sports writer I came to know Larry Gilbert well, and I came to appreciate the full value of his friendship and his full value to the Nation as a teacher and developer of young men.

Larry Gilbert started like most American youngsters as a player on the sandlots of his native New Orleans. He was a left-handed pitcher. Because of his prowess at bat and his agility afield he soon became an outfielder, and in 1914 he was a member of now famous Boston Braves, "the miracle team" of the National League, which found itself in last place on July 4 and at the top of the National League in September with the championship bunting tacked to its mast.

It was this team which subsequently defeated Connie Mack's famous Philadelphia Athletics in four straight games, a feat not to be duplicated in a world's series contest until the invincible Yankees strolled onto the scene and into the baseball arena.

Because of a leg injury Larry Gilbert eventually was sent to the Kansas City Blues, from which club he was purchased by the late A. J. Heinemann, of New Orleans, for the sum of $3,000, which was raised by "Heinie" on his own personal insurance policy.

On the afternoon of May 6, 1917, Larry Gilbert walked on the field in the uniform of his native New Orleans. He was not to take off that uniform until he had brought much honor to it and to the city he represented.

In the baseball park where he had chased balls and acted as scoreboard keeper he was to find his greatest successes.

As a player he led his league at times in hitting and number of bases stolen. He was called "The Tris Speaker of the Minors." When his playing days were ended by a pitched ball he became the manager of the New Orleans team, succeeding the late Johnny Dobbs.

Winning pennants became monotonous to New Orleans under Larry Gilbert. A Gilbert piloted team never finished out of the first division.

Repeatedly offers came to him to manage major league baseball clubs, but Larry, devoted to his home city and attached to his life-long friend and benefactor, Heinemann, refused to leave New Orleans and passed up national fame and glory because of loyalty.

Heinemann died and Charlie Sommers, of Cleveland, succeeded as president of the New Orleans team. Sommers died and new people, a local syndicate, gained control of the baseball club, but still Larry Gilbert remained in his home-town uniform.

Came the day when the late Fay Murray, of Nashville, tired of seeing Nashville drawing up the rear guard in baseball, made Larry Gilbert a proposition which would give him half interest in the Nash-

ville club and complete charge of its operation.

It was such a tempting proposition that Larry Gilbert could not turn a deaf ear to it, but before accepting the offer he went to his New Orleans employees and asked them if they thought he would be disloyal. He was told that such loyalty as exhibited by him had seldom been found in any man and was advised to accept the proposition.

There was no laughing or rejoicing in New Orleans that day because Larry Gilbert had been lost to the people of New Orleans.

But there wasn't a man, woman, or child who had known Larry Gilbert who did not wish him success and godspeed in his new venture.

Mr. Speaker, I may have appeared rather expansive and somewhat superlative when I mentioned Andrew Jackson in connection with Larry Gilbert, but where in America today is the real baseball fan who does not think it is just as important for his team to win a baseball game as it is for an army to win a battle?

There is not a baseball fan in New Orleans who does not feel that Louisiana's debt to Tennessee has been repaid by Larry Gilbert. There is not a baseball fan in New Orleans who does not feel, in all sincerity, that as Andrew Jackson, the Tennessean, saved the city of New Orleans from a military blitzkrieg, Larry Gilbert, the Louisianian, saved Nashville from a baseball black-out.

When Larry Gilbert went to Nashville he took a team from the bottom of the ladder and placed it on the top rung. Today Nashville's baseball team carries the championship flag over its park because Larry Gilbert, alone, was able to plant it there.

Larry Gilbert is and has always been a credit to the game of baseball.

I always liked the thought that the battle of Waterloo was won on the fields of Eton and I have always liked to believe that the World War was won on the athletic fields of America.

There is something about American sports which breeds good citizenship, which develops character, which makes good Americans of those who participate. Larry Gilbert, during his 25 years in the Southern League, has helped develop young men who became famous on the baseball diamonds of America. He has developed character in men, young and old, whether they became baseball successes or not.

Right here in the city of Washington is a player who was sent here by Larry Gilbert and who has endeared himself to the baseball fans of Washington. Buddy Myer came to the Senators from the Pelicans after being grounded in the game of baseball by Larry Gilbert.

It was Larry Gilbert who first recognized the possibilities of Mel Ott, the "little giant" of the Giants and probably one of baseball's immortals of the future.

The roll call of those sent to the major leagues by Larry Gilbert is a long and an impressive one. It includes names perhaps forgotten by the modern baseball fan but recorded in baseball's history for all times. It includes such names as "Gink" Hendricks, the great Dazzy Vance, and "Hank" DeBerry of Brooklyn, Walter Barbare, Carl Lind, Eddie Morgan, Joe Sewell, Freddie Spurgeon, Odell "Bad News" Hale, Denny Galehouse, Johnny Humphries, and others of the Cleveland Indians; "Pinkey" Whitney, of the Phillies, and scores of others too numerous to mention at this time. A complete list of players sent to the major league by Larry Gilbert during his 25 years in the Southern League would be a roll call of the great and near greats of the American and National Leagues.

Last year the roster of the incredible Brooklyn Dodgers included the name of Charlie Gilbert, the second son of Larry Gilbert.

Larry Gilbert, Mr. Speaker, is a credit, not only to his profession but to any profession. Never once has the name of Larry Gilbert been linked with anything that was not honorable. Larry Gilbert has always been a gentleman, on and off the baseball field. Larry Gilbert is an institution in baseball, and Nashville does well today to honor him on the twenty-fifth anniversary of his debut in the Southern Association of Baseball Clubs.

Larry Gilbert is as popular in opposing cities as he is in New Orleans and Nashville. Greater tribute can be paid to no man in any field of endeavor.

Larry Gilbert is a typical American father. He has raised three splendid sons. His devoted wife is his constant companion off the baseball field and his most enthusiastic rooter from the grandstands.

New Orleans, Mr. Speaker, is proud of Larry Gilbert. Louisiana is proud of Larry Gilbert, and I have requested this opportunity to bring to the attention of the Members of the National Congress the observance of the launching of the 25 years of consecutive service of this splendid character in American life.

Mr. Speaker, baseball is a great game. The President of the United States annually honors the game of baseball with his presence at the opening game in Washington. Baseball is recognized as the national pastime. Baseball is as much a part of the American way as the democracy under which we live. When a man has served honorably and faithfully in the game of baseball he deserves full recognition.

There may have been greater managers than Larry Gilbert in baseball but certainly not in the minor leagues.

I unhesitatingly admit that there have been greater players than Larry Gilbert but, Mr. Speaker, nowhere in the American life has there been a more loyal and devoted character to his chosen profession than Larry Gilbert.

Give us more men of the sterling qualities of Larry Gilbert and we will have a stronger and better nation in which to live. Treachery, disloyalty, "fifth columns," and un-American "isms" would never creep into our daily lives if more men were sparked with the patriotism and loyalty of this man who has gone to the top of his profession in the American way—the only way we should know.

I join with the city of Nashville in today saluting Larry Gilbert, and I am proud of my years of personal friendship with him and the fact that I number him among my constituents in the district which I represent in this Congress from the State of Louisiana.

Larry Gilbert, I pay you the just tribute of your long and honorable career; may you live to observe your fiftieth anniversary in the game to which you have given the best there is in you.

Mr. Speaker, under leave to extend my remarks on this occasion, I desire to now insert in the RECORD a copy of an editorial which appears today in the Nashville Banner by Fred Russell, sports editor, also saluting Larry Gilbert on his twenty-fifth anniversary in the Southern League:

[From the Nashville (Tenn.) Banner of May 6, 1941]

A graying gentleman with flashing brown eyes will walk into the Nashville ball park Tuesday night, May 6, 1941, swap his store clothes for a white, red-trimmed, knee-panted uniform and from the third-base coaching line manage a club through another game.

Just another game? No; it's the start of Larry Gilbert's twenty-fifth consecutive year in the Southern Association; the launching of the twenty-fifth year of one of the longest and most magnificent individual careers the game of baseball has known.

First as a player, then as a manager, a leader of men, Larry Gilbert has come to be known as Mr. Southern League, as one of the most thoroughly popular and most highly respected figures in any sport in the entire Nation.

Nashville is proud of Larry Gilbert. He is a baseball landmark, a credit to the game, a credit to athletics, a fine influence, an asset to this city. If we had the choice of the entire world, we still would take Larry Gilbert as Nashville's baseball representative.

Newspaper Publishers on National Defense

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

RESOLUTION OF AMERICAN NEWSPAPER PUBLISHERS ASSOCIATION

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the 1941 convention of the American Newspaper Publishers Association:

Whereas the directors of the American Newspaper Publishers Association, having considered the greater opportunity for public service afforded to all American newspapers in this time of grave national emergency, and having recognized that other associations of newspapers and newspapermen in the United States were likewise aware of such opportunity, called a conference of the representatives of national and regional newspaper organizations; and

Whereas the accredited representatives of the American Newspaper Publishers Association, the American Society of Newspaper Editors, the National Editorial Association, the Southern Newspaper Publishers Association,

the Inland Daily Press Association, the New England Daily Newspaper Association, the Pacific Northwest Newspaper Association, the New Jersey Press Association, the New York State Publishers Association, the Ohio Newspaper Association, and the Pennsylvania Newspaper Publishers Association, meeting in the city of New York, Tuesday, February 4, 1941, after full consideration authorized the issuance of the following statement of their unanimous purpose and intent:

1. That the newspapers recognize their primary obligation to further national defense in every possible manner.

2. That the newspapers also recognize their essential duty to furnish complete and accurate information compatible with military necessities.

3. That the newspapers in the performance of these obligations bespeak the cordial consideration and cooperation of Federal and State authorities concerned with national defense: Therefore be it

Resolved by the membership of the American Newspaper Publishers Association in annual meeting assembled, That this association hereby unreservedly ratifies and affirms the declaration of intent as approved in such conference, and declares its purpose to make such declaration fully effective through its officers, directors, and their committees for such purposes to be appointed.

Lincoln and the Constitution

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

ESSAY BY LOUISE BRIGGS, OF MANSFIELD, OHIO

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I place in the RECORD an essay on Lincoln and the Constitution, by Louise Briggs, of Mansfield, Ohio, one of the winners of the essay contest sponsored by the American Legion of the State of Ohio. I am happy to say that the young lady lives in my congressional district.

The essay follows:

Abraham Lincoln was outstanding among those who made our Constitution the bulwark of American civilization. In those tumultuous times, when the chief topic of interest was that of slavery, Abraham Lincoln took over the reigns of our Government. Disagreeing factions were led to open violence because of the heated discussions of this topic. President Lincoln, the sturdy, humble champion of the underdog, could not stand idly by and see all of his ideals and convictions being trampled under the feet of tyrants. Such conditions could not be tolerated.

"All men are created free and equal"—on the foundation of this theory our Constitution and Government were built. Lincoln had no desire for personal wealth and popularity. His chief concern was for legislation that would benefit his friends, the common people.

There were strict constructionists who defied anything that was not specifically stated as being ethical by the Constitution. There was at that time nothing in the order of constitutional law favoring the Negro. Neither was there anything stating that he was not free and equal with a white person. Had he not been purchased by his masters? Was he not their property? Did not the Constitution say that the Union would protect a citizen's property? These were questions asked again and again. All this led to serious controversy and a threatened break between States.

The result, as we all know, was that South Carolina seceded from the Union. Six States within as many weeks followed her leadership. The act was termed unconstitutional by the northerners, while the southerners contended that it was their right and privilege. This brought to light the greatest defect of the Constitution, the inadequate definition of States' rights.

The great Civil War settled many questions; slavery was abolished; personal rights were defined; and the Federal Government was given precedence over State government, thus establishing governmental prestige between States and maintaining world prestige. The first steps to the realization of Abraham Lincoln's convictions had been attained.

But this was only the first step. He must yet do something to have these people made secure in their new-found freedom. In the face of a dissenting cabinet, he presented his proposed constitutional amendments to Congress. These were accepted and the former slaves were made lawful citizens with the right to vote. Had Mr. Lincoln's ideals been fully realized? We will never know, for he died shortly after from the wounds of an assassin's bullet.

A worthy man had been foresighted enough to see what would happen if immediate steps were not taken to knit the country more closely together. He set aside his own welfare and gave his life that we, the reapers of the fruits of the seed he sowed, might have something of which we could be duly proud; something that we could revere and hold sacred. He and the people who gave their lives gave us a heritage that has made ours the most beautiful and agreeable land in the entire world.

The Constitution for which Lincoln fought so desperately is now the stronghold of our Nation. Without it we could not stand in these dark, foreboding days of war, hatred, and destruction.

Truly we owe to our ancestors all the support that we can give to the protection of this document that was their ideal and guiding light in the establishment of a Nation unsurpassed in all the world in liberty, justice, and equality.

Keeping America Out of War

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, men are constantly rising on this floor and intimating that the President of the United States is trying to get us into war. The gentleman from Illinois [Mr. JOHNSON] a moment ago read the President's statement wherein he said:

And I say it again, and again, and again, that I am not going to send our boys to engage in any European war.

The President has not violated that promise.

There are men on the outside, many of them violent political enemies of the President, who are doing everything they can to prod him into violating that promise and plunging this country into the European war.

They hate the President, they want to destroy him. They want to wipe out all the progress his administration has made. They think that if they can prod him into this fatal plunge it will cause him to go out of office discredited. That is exactly what they want. They want to choose his successor.

This is their old trick. This same element licked the boots of Woodrow Wilson, then turned and drove the dagger into his back, and then proceeded to destroy the reforms his administration had brought about.

They are becoming impatient, they seem to be afraid that President Roosevelt might make a movement for peace, bring this terrible war to a close, restore the peace of the world, and make himself the most popular leader on earth. That would spoil their plans.

They would not mind the return of peace to the world so much if they could first destroy Roosevelt, and at the same time get their pound of flesh. If they could accomplish his downfall, then they would probably demand peace and brand him as a warmonger. Then they think they could elect an administration that would do their bidding.

They are turning heaven and earth to get us to convoy vessels into the war zone, knowing that, as the President has been quoted as expressing it, "convoys mean shooting and shooting means war."

In my opinion such a movement would cripple instead of increase our aid to England. In the first place it is not necessary for us to convoy these vessels. It was understood when the lend-lease bill was passed that we were to lend or lease these vessels to Great Britain and that she would operate them under her own flag.

If necessary we could lend or lease vessels to Great Britain for convoy purposes. She has plenty of sailors, well trained to operate such convoys. Then if one of them were sunk it would not involve us in the war, since it would be under British registry and flying the British flag.

On the other hand, if we were to convoy these vessels under our own flag and one of them were attacked it would more than likely draw us into the war, paralyze our commerce throughout the world, probably bring Japan into the conflict, and impair our ability to furnish the supplies Great Britain so sorely needs.

Some men are clamoring for a declaration of war. But they seem to be in a hopeless minority just now. I wonder where they think we could land an army in Europe if we got into this war. But as I said, they seem to be in a hopeless minority, and their attempts to stampede the President and the Congress into war seem to be "backfiring" on them.

President Roosevelt is standing by his promise to the American people to keep this country out of war and not to send our boys to fight on foreign soil; and while Congress is rendering every possible aid to Great Britain short of war, I do not believe there are a dozen Members in this House who would vote to plunge this country into war today.

Protection of Shipments Under Lease Lend Act

REMARKS
OF
HON. FOSTER STEARNS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. STEARNS of New Hampshire. Mr. Speaker, reference was made on the floor of the House yesterday to a resolution recently adopted by the National Executive Committee of the American Legion, urging the protection of shipments under the Lease Lend Act. In order that the Members may have the exact text of this resolution before them, I take pleasure in placing it in the RECORD in full, under leave to extend my remarks, together with another resolution of the same committee, calling on the President to inform the country more fully as to the gravity of the situation that confronts us:

TWO RESOLUTIONS ADOPTED BY THE NATIONAL EXECUTIVE COMMITTEE OF THE AMERICAN LEGION, MAY 2, 1941

Whereas the American Legion in convention assembled at Boston, Mass., September 23–26, 1940, adopted a resolution whereby it urged the Government of the United States to exercise all lawful means to prevent the shipment of raw materials to aggressor nations and that it continue to extend to all peoples who are resisting aggression the fullest cooperation consistent with our obligations, our security, and our peace; and

Whereas thereafter the Congress of the United States, after full debate and proper deliberation, passed House bill 1776, known as the lend-lease bill, whereby the President of the United States is authorized to extend aid to Great Britain and her Allies in their efforts to preserve to the world the priceless right of freedom; and

Whereas we believe that practical and necessary aid to Great Britain and her Allies requires that war matériel, food, and medical supplies be delivered to them; and

Whereas there is grave danger that vessels carrying such matériel and supplies will be attacked by belligerent nations in violation of international law and in violation of compacts heretofore entered into by such belligerent nations: Now, therefore, be it

Resolved by the national executive committee of the American Legion, That we earnestly urge the President of the United States as Commander in Chief of the armed forces of the Nation to employ such units of the United States Navy and auxiliary forces in such manner as in his judgment may be required to insure the safety of American vessels and their crews by guarding them against attack from any source; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States.

Whereas the President of the United States and the Secretaries of State, War, and Navy Departments have publicly stated that totalitarian aggression constitutes an immediate and grave threat to the safety of the United States; and

Whereas under such circumstances action by the people of the United States appropriate to the full extent of this emergency is vital; and

Whereas the people of the United States, not being fully informed of the true facts, do not understand nor appreciate the dangers of which the President and his officers speak, nor do they fully comprehend the full extent of this emergency which threatens the safety of the United States and its people and, therefore, have in consequence lapsed into a peacetime complacency: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion that we urgently request the President and his officers to immediately make available to the Congress and to the people of this country a full and complete statement of the facts which constitute immediate danger to this Nation as they see it, in order that speedy and effective action may be taken for the complete protection of the country and to insure that singleness and unity of purpose among our people which is so necessary to national safety; and be it further

Resolved, That the American Legion pledge its utmost support to whatever plan of action shall be deemed by the President and the Congress to be necessary for the safety of this Nation.

Bryan County Patriotic Mass Meeting

EXTENSION OF REMARKS
OF
HON. WILBURN CARTWRIGHT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1941

ARTICLE FROM THE DURANT (OKLA.) DAILY DEMOCRAT

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a report published in the Durant Daily Democrat, in my congressional district, describing a patriotic meeting held in Durant, Okla., on April 23, 1941.

I hope that the Members of Congress and people throughout the Nation will read about these patriotic people whom I have the honor to represent in Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Durant (Okla.) Daily Democrat]

BRYAN COUNTY CALLS ON NATION TO DEVOTE ALL ITS ENERGIES TO DEFENSE

Warning that America, because of its own weakness, is in danger of being next on the program of aggressors' conquest, nearly 2,000 Bryan County citizens Wednesday night called upon President Roosevelt, the Congress, and the American people to subordinate all private industry to the program of national defense and protection of the American way of life.

Starting what they hope may be a national landslide of public sentiment against compromise with capital and labor in their disputes delaying defense production, the hundreds of Bryan County "grass roots" patriots stamped themselves as interventionists even to the point of feeding the beaten nations of Europe and Asia, then going to their defense with arms and ships.

The meeting unanimously adopted a resolution directed to the President, the Congress, and the American people demanding curtailment of all nonessential production to release labor, materials, and plant facilities for maximum speed in producing all adequate defense needs and calling upon capital and labor to immediately subordinate personal gain, "as a million draftees have done," to concentrate on every effort toward proper national defense.

Speakers warned of the critical situation facing America and its form of government and emphasized all American people must make sacrifices in money, time, and temporary loss even of their liberties to defend their way of life.

Businessmen, professional men, ministers, farmers, and laborers came from every nook and corner of Bryan County to pay their respects to dictators and other enemies of democracy, even to the naming of Charles A. Lindbergh, and offered their services to their Government in its time of danger and at another crisis in its history of battling aggression.

Visitors were here from many neighboring counties to see what it was all about and to carry home a resolve to organize their own counties along the same line.

John D. Steakley, Durant automobile dealer, declaring that automobile manufacture is in competition with the defense program, demanded a halt in the making of automobiles for private industry until the defense program is completed.

Mr. Steakley, one of the sponsors and chairman of the meeting, said America produced 4,000,000 automobiles last year, while building 1,500 airplanes for the United States and Great Britain.

Mr. Steakley revealed the idea for such a meeting as this was fostered by a group of Durant men 14 months ago. "Maybe it should have been held then," he said. "We hope it is not too late now. At least we can't delay any longer."

"France fell because it had lost its ideal," G. T. Stubbs, superintendent of the city schools, declared, "and our greatest danger is from within—within our own souls. If democracy will not work it is because we fail to make it work. If we fail it will be a defeatist attitude that makes us fail."

Mr. Stubbs, a World War veteran, also one of the sponsors of the meeting, declared that American stock living in 19 Southwestern States will win this battle of defense.

"We are the orbit around which unity of 130,000,000 American people can be attained."

"May we be spared the horrors of war, but as Christ died to make men holy, let us be willing to die to make men free," said W. E. Utterback, Spanish-American and World War veteran.

"Difficulties between labor and capital are the biggest problems we face in preparing to defend ourselves," he continued. "Yet America has never yet permitted anyone to hinder its progress in war or peace, and by its will of majority it again will surmount these difficulties."

"France fell spiritually before it fell militarily," C. C. Hatchett, Durant attorney said, warning Americans they must sacrifice their own pleasures, their own means and their own time and service to see that America does not fall.

"We must arouse ourselves from the nonessentials of life. It will take fortitude, and it will require the unity of every man and woman in America to overthrow the most brutal aggressors of all time. We must have spiritual guidance, and we must have a stiffening of our moral and spiritual life to accomplish the task before us."

County Judge Jake Loy, of Sherman, heading a delegation, including two newspapermen from Grayson County, Tex., lauded the spirit of Bryan County citizens for their action, saying, "I am going to ask Grayson County to do what you have done, and I commend this program to every county in every State in America."

"We're not prepared to defend ourselves, but if people of America act as you have acted, we will be prepared and very soon," he continued.

W. E. Schooler, publisher of the Hugo Daily News, said, "Can we do less than our boys have done who are in the Army, Navy, and Marine Corps? We owe it to them as much as we owe it to those who have fought before and those who are coming after us to preserve this great land of ours."

A letter from Capt. Ralph Ownby, of Ninetieth Brigade headquarters company at Camp Barkeley, one of five Durant national guard companies in the national service, was read to the assemblage.

Captain Ownby said:

"All members of my unit, and I think that I express the attitude of members of the other units from Durant, were most pleased when we saw in the Durant Daily Democrat where everyone was being called to a patriotic mass meeting.

"We who are working day and night appreciate knowing that the folks back home are backing us up, and it gives us courage as we trudge along during the wee hours of the morning, moving from one battle formation to another, to think that those we respect and admire are joining hands with us in our efforts to carry out the plans which our Commander in Chief, President Franklin D. Roosevelt, has so carefully laid out for us.

"Express to each and every one of them, our joy in their participation in this great cause and assure them that we will give all that we have in the cause."

The event here attracted newspapermen from five outside cities, and other newspapers and all the press associations are carrying accounts of the meeting.

Outside newspapermen here to chronicle the first meeting of this character ever held, at least in the Southwest, were Edwin Hunter of the Daily Oklahoman and Times, Oklahoma City; C. L. Richhart, Fort Worth Star-Telegram; Newell Johnson, Sherman Democrat; Paul O. Tooley, Denison Herald; and W. E. Schooler, Hugo Daily News.

The resolution, adopted with a thunderous "aye" vote and signed by more than half those present, is:

"Be it known to all that we, the God-fearing, freedom-loving citizens of the United States of America living in Durant and Bryan County, Okla., do hereby assemble ourselves, by the grace of God and under the rights, privileges, and responsibilities guaranteed by our Constitution, for the purpose of considering the serious problems that affect and threaten the continuance of our democratic way of life and the perpetuity of our Nation.

"Because we love peace and want to share its blessings with all mankind, we declare the following principles and purposes, and recommend the same to our national leader, President Franklin D. Roosevelt; to our Congress; and to our fellow citizens throughout the Nation:

First. Curtail or eliminate nonessential production to release labor, materials, and plant facilities for maximum speed in producing all adequate defense needs; and

Second. That capital and labor immediately be forced to subordinate personal gains, as a million draftees have done, to concentrate on every effort toward proper national defense.

Third. That we and all other liberty-loving Americans be called upon to pledge sacrifices for defense and liberty.

Adopted on this the 23d day of April, 1941, at Durant, Okla.

The unusual and impressive ceremony was opened with advancing of the colors by Sons of the American Legion. The Durant High School band, directed by Theo Nix, entertained with a half dozen numbers or more while the crowd was gathering.

Rev. Cecil A. Denney, pastor of the First Christian Church, opened the service with invocation, and Rev. Fred Mesch, pastor of the First Methodist Church, gave the benediction.

DURANT, OKLA., *April 25, 1941.*

His Excellency, FRANKLIN D. ROOSEVELT,
President of the United States of America,
Washington, D. C.

DEAR MR. PRESIDENT: We have the honor to transmit to you a message from the citizens of Durant and Bryan County, Okla., as expressed in an assembled mass meeting.

The citizens have felt for several months that they should assemble themselves and convey to you their convictions as affecting the national-defense program. Such a meeting was held Wednesday evening, April 23, with some eighteen hundred loyal citizens from all walks of life of this county present.

The conclusions of our citizens are frankly stated in the resolutions herewith attached that were unanimously adopted and signed. In the press of the crowd some names were not secured, but there were no objectors.

It is our hope that similar meetings may be held throughout the Nation in order to unify thinking and to strengthen our people to support our national program as you develop it. We stand ready and willing to be used in this program on your command.

Respectfully submitted.

J. D. STEAKLEY,
L. F. LEE,
M. W. FITZGERALD,
HOLLIS HAMPTON,
GLENN M. MCDONALD,
G. T. STUBBS,
Committee.

Be it known to all that the God-fearing, freedom-loving citizens of the United States of America, living in Durant, and Bryan County, Okla., do hereby assemble themselves, by the grace of God and under the rights, privileges, and responsibilities guaranteed by their Constitution, for the purpose of considering the serious problems that affect and threaten continuance of our democratic way of life and the perpetuity of our Nation.

Because we love peace and want to share its blessings with all mankind, we declare the following principles and purposes, and recommend the same to our national leader, President Franklin D. Roosevelt, to our Congress, and to our fellow citizens throughout the Nation:

Curtail or eliminate nonessential production to release labor, materials, and plant facilities for maximum speed in producing all adequate defense needs;

That capital and labor immediately be forced to subordinate personal gains, as a million draftees have done, to concentrate on every effort toward proper national defense; and

That we and all other liberty-loving Americans be called upon to pledge sacrifices for defense and liberty.

Four United States Objectives

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

EDITORIAL FROM THE SIOUX CITY (IOWA) TRIBUNE

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sioux City (Iowa) Tribune of April 10, 1941:

[From the Sioux City (Iowa) Tribune of April 10, 1941]

FOUR UNITED STATES OBJECTIVES

Nowhere have we seen a better summing up of the American attitude toward the war than was made by Representative KARL E. MUNDT, of South Dakota during the course of a recent congressional debate. He reduced American objectives to four; and here they are:

1. That America stay out of the war.
2. That we extend all aid short of war to Britain and her associates.
3. That we build and protect our own Military Establishments so as to make this country impregnable.
4. That we preserve in this country our American system of representative government in which the executive, the legislative, and the judicial branches share coordinate power.

Can you state the American viewpoint and purpose more succinctly than Mr. MUNDT has done?

No doubt our country seemed to wobble a bit and to squabble a lot in trying to adhere to such a four-point policy as the versatile South Dakotan has outlined, but on the whole it has, up to now, stuck fairly close to objectives.

We may have left an opening here and there through which some subversive doctrine might creep in, or which might be taken for authority for subversive action. Is so, the fault escaped detection in weeks of debate and a great many people have misjudged the purposes and principles of American officials.

Wake Up, Fiorello

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

It is getting to be a daily occurrence to find editorials in our leading newspapers similar to this one, complaining, on behalf of our citizens, against the inefficiency and neglect of the present administration of the city of New York, headed by Mayor LaGuardia. I regret that New York City has such an administration, but we must face the facts and admit that the people of New York are not getting the character of service which they deserve and for which they are paying exorbitant taxes.

The editorial follows:

[From the New York Herald Tribune of May 6, 1941]

The police apparently have solved, quickly and efficiently, the murder of Harry V. Maxwell, the advertising man who was shot and killed early Sunday while sitting in a parked automobile with a woman companion in East Eighty-first Street. This is good work and deserving of the gratitude of the community. And yet the situation disclosed by this tragic case is exceedingly serious. There have been many reports recently of thugs who made a systematic practice of robbing parked automobiles, and in some instances the occupants have been forcibly abducted and driven away. In one case reported to the police the robbers forced their way into an automobile which had only paused to wait for a traffic light to change. If the confession of the prisoner in the Maxwell killing is to be relied upon (and it sounds perfectly plausible), he and an accomplice had made a living by preying on persons sitting in parked automobiles, and it is probable that other combinations of crooks have been doing the same thing.

All this, notwithstanding the arrest in the Maxwell episode, reflects a condition in this city which is downright disgraceful. Robberies and beatings of persons in automobiles have been serious enough, deserving of grave concern, but it has taken a murder to focus public attention upon this menace to public safety—a menace which, admittedly, is not so easy to fight. Some drivers, often after having had a threatening experience or two, have made it a habit to lock all the doors of their automobiles from the inside, not only while parked but while driving about the city. This, no doubt, is a highly sensible precaution, and perhaps all drivers should be as careful, but at the same time the fact that such devices are necessary is by no means a pleasant thought. Surely there should be better protection. New York boasts of the ablest police force anywhere, and its detective arm regularly demonstrates its alertness and ingenuity in solving serious crimes. What we need now, clearly, is effective measures before, rather than after, the event. We decline to believe that it is necessary for motorists, no matter what the time of night, to be at the mercy of hoodlums and potential killers.

The St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

LETTER FROM THE W. H. PUGH COAL CO., RACINE, WIS.

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from the W. H. Pugh Coal Co., of Racine, Wis., a company which has been connected with Great Lakes transportation for nearly a century, on the St. Lawrence waterway, as follows:

W. H. PUGH COAL CO.,
Racine, Wis., April 23, 1941.

Congressman STEPHEN BOLLES,
House of Representatives
Washington, D. C.

DEAR CONGRESSMAN BOLLES: The St. Lawrence waterway proposal is up for consideration, and we thought probably you would like to have our viewpoint on that question. Let me state that our company has been connected with Great Lakes transportation for nearly a century, and we can see no advantage to your district if this project is completed. As a matter of fact, the taxpayers will be carrying a terrific burden in the years to come because of this defense program, and anything nonessential should not be considered at this time.

The principal traffic on the Great Lakes is coal, grain, iron ore, and stone. These constitute well over 90 percent of the total tonnage and would not in any way be benefited by the proposed waterway. As a matter of fact, they would probably be harmed, as you would have foreign boats with cheap crews carrying merchandise which is now being carried by American ships paying a high wage scale.

During the past few years there has been some movement of wood pulp into northern Wisconsin from Sweden and Finland and a few cargoes of potter's clay for use at the Kohler plant at Sheboygan. However, the vessels carrying this material are of a size that the present waterway is suitable for their use, and there would be a very slight saving in having larger cargo ships in this trade.

Under normal conditions wheat can be carried from the head of the Lakes to England for about 10 cents a bushel on the combination rail-and-vessel rate. Of course, in times of war, the vessel rates are vastly increased, but any ships using the proposed waterway would, of course, be subject to a similar increase in wartimes. In this connection it might be well to note that United States is going to have a very difficult time exporting grain in the future, as this trade has been dwindling for many years, and when hostilities cease there is very little prospect for this country to export grain in competition with depreciated currencies and cheap labor in foreign grain-raising countries. Another thing to be considered is that, if through the construction of the St. Lawrence waterway, larger cargo boats could come direct to Lake Michigan ports, they would bring cheap foreign goods into this territory in somewhat larger volume than in the past and will be placing American industry and labor under competition with cheap products, which surely would not be to their advantage.

As a power project, the competition is entirely without merit, as the original cost is entirely too high. Even at the present time they are producing power cheaper in Wisconsin, with coal, than it is being produced at Niagara Falls with water power, and the Niagara Falls plant has an investment that would be only a fraction of the St. Lawrence project.

It is to be hoped that consideration be given to the fact that the lake cargo boats, as a rule, will not be adapted for ocean travel, as the construction is entirely different, and it would not be possible to interchange them successfully.

It seems that the above facts are sufficient reason for not considering the waterway project at all feasible, and it is our hope that you will use your best efforts against it.

Very truly yours,

W. H. PUGH COAL CO.,
W. H. PUGH, *President.*

Petition Against Involvement of United States in Foreign Wars

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

PETITION OF ELECTIVE OFFICIALS OF ORANGE COUNTY, IND.

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition signed by elective officials of Orange County, Ind.:

PAOLI, IND., *April 26, 1941.*

We, the undersigned, duly elected officials of Orange County, Ind., believing we represent the views of a large majority of the citizens of this county, realizing the impossibility of their each signing such petition, do, upon their behalf and in accordance with our own personal views, hereby petition you, the Honorable EARL WILSON, Congressman from the Ninth Congressional District of Indiana, requesting that you do all in your power, both by your vote and your most valuable influence, to defeat any measure which in your opinion may in any way have a tendency to involve this Nation in the European war, and that you wholeheartedly support all measures destined to prohibit such involvement.

A. R. Gassaway, auditor of Orange County, Ind.; W. O. Ritter, clerk of Orange Circuit Court, Ind. Bruce McFall, treasurer of Orange County, Ind.; Noble Ellis, sheriff of Orange County, Ind.; Garrett Ferguson, recorder of Orange County, Ind.; Ira Quakenbush, assessor of Orange County, Ind.; Charles R. McClain, surveyor of Orange County, Ind.; Orville E. Cornwell, superintendent of public schools of Orange County, Ind.

The Chivalry of Ireland

EXTENSION OF REMARKS

OF

HON. JOSEPH A. GAVAGAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. GAVAGAN. Mr. Speaker, and my colleagues of the House, I was thrilled yesterday learning that the government of Eire rushed aid and assistance to bombed and shattered Belfast, Ireland. Once again Irishmen extended the hand of brotherhood to stricken humanity. Once again southern Ireland exemplified to all the world her attributes of Christian chivalry and brotherly love. She has always done so in spite of what one may call the perversion of history. I have always believed that were I a teacher of history I would best serve by teaching the direct opposite to present understanding of certain events. One such

event would be the historical background of the artificial barrier known as North and South Ireland. Few really understand that this historical anachronism was conceived in the mind of Cromwell, described by the English historian, Clarendon:

A brave, bad man, with all the wickedness for which hell fire is prepared.

The common understanding of Ireland—even by some claiming intelligence—is a people and nation irrevocably divided by basic religious and racial barriers. This is the common belief even of so-called intellectuals who never "drank deep the cup." The historical truth, however, is that in all the tragic and heroic struggle for Irish liberty and human justice, the Protestant sons of Ireland gave their blood and lives in the sacred cause of Ireland's freedom. Need I recall the names of Wolff Tone, Robert Emmett, Charles S. Parnell, Sir Roger Casement, and a host of others, forming a galaxy of men whose minds, souls, and lives were consecrated and dedicated to the holy cause of Irish freedom.

Yea, I rejoice that Eire today has her Eamon de Valera who the love of humanity and justice prompted to rush to stricken Belfast the aid and assistance of the instrumentalities of the Government of Eire. The Prime Minister acted even in spite of a prior German warning of like destruction to Eire, in the event of aid and assistance to Northern Ireland. Real Irishmen heed not the braggart's boast and scorn his threats.

The New York Times of today contains an editorial that I believe timely and worthy of your thought and attention, and which I include in part in these remarks, as follows:

[From the New York Times]

BARRIERS BURNED AWAY

To save Belfast, capital of the black north, where so many bitter battles have been fought between Irishmen, southern Ireland rushed to her neighbor her own fire-fighting brigades and ambulance corps during Sunday night's terrific air raid. Eire forgot her neutrality in speeding instant aid to the victims of the Nazi holocaust, which did less damage to Britain's biggest shipyards than to office buildings, churches, and thousands of workers' homes. She defied the threat received after a previous raid, when German planes dropped warnings that Dublin might be given fires of her own to put out if she persisted in helping her northern neighbors. And Irishmen on both sides of the dividing line forgot their ancient feud as they worked together in the smoking ruins of an Irish city.

A mingled wave of sympathy and gratitude has drawn Belfast and Dublin closer than they have been in a generation. Against the forces of destruction battering down their common world, they have discovered that they are more united by the ties of humanity and civilization than they are divided by political antagonisms and religious differences. Chalk up this achievement to the credit of Mr. Hitler. He did not boast of it in his Reichstag speech, but here is something to high light the latest self-portrait of the frustrated peacemaker. His bombers have done more to burn away the barriers between the two Irelands than any Irish or English statesman has been able to do.

Civil Service Registers

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. HEFFERNAN. Mr. Speaker, I have just introduced a bill (H. R. 4639) which provides that the Civil Service Commission shall establish for persons between the ages of 40 and 55, separate registers for any position in the classified civil service for which such persons are otherwise eligible. No person not on such register shall be certified to any position in the classified civil service for which such a register is established until all persons on such register shall have been so certified.

My purpose in introducing this measure is simply that I would like to see middle-aged persons get a break; I would like to assure them their places in our vast scheme of living despite their ages, as long as they are still physically capable of performing their duties satisfactorily.

The letter which follows illustrates very well the problem facing middle-aged persons who must work for a living. It was written by a woman who knows from experience that some provision must be made for those whose age alone bars them from so many opportunities.

BROOKLYN, N. Y., *April 18, 1941.*

Hon. JAMES J. HEFFERNAN,
House of Representatives,
Washington, D. C.

DEAR MR. HEFFERNAN: Among your constituents in this district I know of five women—and there may be many more, no doubt—who are middle-aged, and unemployed for that reason and no other. The women I know are intelligent, capable office workers in good health. They have been bookkeepers, typists, stenographers, etc. Some lost a position because the boss retired and the younger man who succeeded him wanted younger help; some for other reasons. I lost my position because I worked for the Cunard White Star, Ltd., and when passenger service to Europe ceased because of the war there was no need to operate the baggage department. Although my immediate superiors tried to get me work with the British Ministry of Shipping, they were unsuccessful because I am of German descent. On that score I will say, I am American-born; my parents came to America when they were still rather young and they were married here.

My purpose in writing you is to ask: Cannot place be made somewhere under the Government defense program for the middle-aged persons who have done office work all their working lives, and who are unemployed, though still capable of working efficiently?

There seems to be organization everywhere but among the single, unemployed, middle-aged women.

In another generation such women lived out their lives in the home of a married brother or sister and were just "old-maid aunts" who faded out of the picture sooner or later.

Nowadays, however, since we have been independent and self-supporting so long, we don't like dependence nor the title of old-maid aunt.

Besides, most of the brothers and brothers-in-law earn almost too little for their own family needs without having to provide for a sister.

Science has done everything to make normal life longer for us; therefore, someone should be thinking up a way to make the mediocre women useful and self-supporting.

Somewhere in the program there must be something we can do. I, for instance, need to work for 16 years longer before the social-security benefits become payable.

The navy yard is nearby; perhaps we could be employed there. My shorthand speed is 95–100 words a minute, and my typing, 50 words a minute. I recently took a civil-service examination for stenographer, but, though I'm sure I passed the 120-word test in dictation and transcription, those papers were not marked because I did not pass the straight-copy test. That did not surprise me much, for somehow I could not do well to start with that day. I shall make application to take another examination, but the examination probably won't take place until next year or very late this year. In the meantime, I shall have to find some remunerative employment.

Congress is not idle, I know. But we seem to have been forgotten. Something should be done for us, or with us. We should count too. Has anyone given us a thought now that the country's resources are being assembled? Why are not our abilities resources too?

In answer to those who may say that during the long period of remunerative years we should have provided for the lean years, let me say that every girl who starts working as a stenographer cannot get to the top. There are those who start quite young, who draw the routine work, and who never marry, but stay on until they must make place for younger women. Saving is not always possible. In my own case I can show where I helped this and that one of my relatives until I had no savings left.

Can't you think of something we can do under the defense program or under any other Government project? I can gather together from this district a number of women between 40 and 55 years of age who are experienced in office routine, and who need remunerative work. The work need not be the office variety provided it does not require walking around or doing things older people can't do. Many of us can still keep records, compile statistics without being expert statisticians, take shorthand notes, and transcribe them. Also we could be correspondence supervisors or section heads.

The idea in writing to you is to remind you of the forgotten women, potential national human resources. Could not you (or Congress) find, immediately, work suitable for older women to do? They might qualify by examination or test, if necessary, but the young women should be excluded from the same tests. Please do not suggest that we take civil-service examinations and await our chance of being called unless the examinations are especially for persons between the ages of 40 and 55. Perhaps the work could be found first and the women fitted in later.

The situation for the middle-aged, single, unemployed woman is grave, I think. We pay taxes, and we vote. Won't you please try to unearth something for us to do?

Sincerely yours,

Miss A. S. P.

[H. R. 4639, 77th Cong., 1st sess.]

A bill granting civil-service preference to persons between the ages of 40 and 55, inclusive

Be it enacted, etc., That the Civil Service Commission shall establish for persons be-

tween the ages of 40 and 55, inclusive, separate registers for any position in the classified civil service for which such persons are otherwise eligible. No person not on such register shall be certified to any position in the classified civil service for which such a register is established until all persons on such register shall have been so certified.

Women's Club of Kremlin, Mont., Opposed to Involvement of America in War

EXTENSION OF REMARKS

OF

HON. JEANNETTE RANKIN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

PETITION SIGNED BY CLUB MEMBERS

Miss RANKIN of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

KREMLIN, MONT., *April 22, 1941.*
Congresswoman JEANNETTE RANKIN,
Washington, D. C.:

We, the undersigned members of the Kremlin Women's Club, do earnestly ask that you continue to make every possible effort to keep this country from becoming involved in any war.

We favor giving material aid to friendly countries who are fighting for their freedom, but are absolutely opposed to becoming so involved that it will be necessary for our men to fight in any foreign war.

Kremlin Women's Club, Kremlin, Mont.: Mrs. Isabelle Petrie, Mrs. Inez Koble, Mrs. Hazel Hansen, Mrs. Fred Swartout, Mrs. S. G. Vosen, Doris Pasma, Mrs. Jay Pasma, Mrs. Joe Hollenhorst, Mrs. John Donovere, Mrs. H. W. Cody, Mrs. Leonard Kenfield, Mrs. Wendell Winter, Mrs. Chris Vosen, Mrs. E. Purdy, Mrs. B. J. Robeck, Mrs. F. D. Duffy.

The Hard Way Is the Only Safe Way

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

THE HARD WAY

Mr. HOFFMAN. Mr. Speaker, the hard way, in the long run, is the safe way. Saint Matthew was right when he wrote:

For wide is the gate and broad is the way that leadeth to destruction, and many there be which go in thereat: Because strait is the gate and narrow is the way which leadeth unto life.

The President spoke true when he said that taxes are paid in the sweat of the man who works; that the nation which continued to waste or to spend more than its income was as surely on the way to bankruptcy as the individual who followed a like course.

We have been wasting and spending. Now comes the day of reckoning, and, if we as a Nation are to continue to exist, the strait gate and narrow way is our only road to safety.

Democratic leaders in Congress have long realized this, and within the week have put on a drive to force the administration to cut down nondefense appropriations by at least a billion dollars. May success attend their effort.

For several years industrial workers in mass-production industries, or employed by large corporations (not clerks, teachers, professional men, farmers, or businessmen), have been receiving periodic increases in wages, shortened hours of employment. Those not so fortunate do not begrudge them these increases, with the shorter hours, but are beginning to wonder when they are to receive their increases. All would like to prosper together.

THE FIRST THING

Is preparation for defense. The O. P. M. has come to realize that a 30-hour week will not enable us to meet Hitler's 60-hour week. Hence, last week, the President, at its suggestion, called for a 24-hour, 7-day week—this to produce the munitions of war, the ships, to aid Great Britain.

It is time we quit riding the joy wagon and all begin to push it out of the deep mud, the sand, and up the hill. That is just what the farmer, the workingman, the clerk, and the professional man, the small businessman in the country have been doing the last 8 years—and, in addition—paying taxes on the cost of everyone's joy ride.

Now, says the President, we must all go to work—and really work. Well, many of us are used to it and we shall be glad to see the other fellow bending his back and taking on part of the load; and we only hope that the President does not mean that a favored few are to receive pay and a half and double pay for all the work they do to save themselves, as well as the Nation, after they have put in 30 hours a week. If he does, nothing will have been gained. As he said recently, let us all sacrifice. As I have written before, if this is our war, let us all take a piece of it—whether that piece be good or bad.

THE BURDEN

Of something more than three and one-half billion dollars is soon to be imposed upon your backs by way of additional taxes. If the danger is to our Republic and—from within or without—no doubt it is, we are all willing to sacrifice. But none wants anything wasted or foolishly given away. The bottom of the barrel is not so far away and for national defense we may possibly need not only all that is in it, but something besides. Let us see if we can get that something.

DOES THE PRESIDENT MEAN IT?

Too often the President gives lip service but does not follow through with action. So now again some are wondering whether he really means economy; honest, hard work; a businesslike administration; or whether he is "just foolin'."

A hint of the latter comes with his demand at this time for $20,000,000 to aid in building a highway from our Mexican border down through Mexico, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama, to Panama City. The ultimate goal is a 12,000-mile highway from the United States to the Argentine.

Before we do that, and especially at this time, how about a few roads in your community? We would like to see the folks down in Argentina, but if we must build a highway to them, we may not have money enough to buy the gas to drive down.

The Rivers and Harbors Committee, at the suggestion of the administration, has renewed the drive for the Florida Canal. There are other schemes for spending money, including the one for $6,000,000,000 for public-works projects.

To top it off, an administration Interior Department appropriation bill contained a little item of $40,000 for a super-super-comfort station down on the banks of the Potomac, where they have the symphony concerts. That was a little too much for even this spending Congress. So out the item went.

CONCLUSION

Do the folks at home really want convoys, war, the sending of an expeditionary force, new and additional taxes, the giving of most of our defense materials to nations across the sea? I doubt it.

I think we rather follow the hard and narrow way, the way to self-discipline, the way of economy, even though it means temporarily more work and less of everything for us, but will give us the certainty of national existence and a better life for our children. Perhaps I am mistaken. Only time can tell.

California Tide and Submerged Lands

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

RESOLUTION OF STATE LANDS COMMISSION OF CALIFORNIA

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas more than 90 years ago the State of California as one of the United States, by virtue of its sovereignty and the act of its admission to the Union, became the owner, in perpetual trust for its people, of all lands within its boundaries submerged by the waters along its shore, of all lands covered by the ebb and flow of its tides, and of all the lands beneath its navigable streams and lakes; and

Whereas, for over 90 years the sovereign State of California has maintained uninterrupted jurisdiction over said lands; and

during said years has expended vast sums of moneys of its citizens in building structures thereon, and in dredging and improving its ports and harbors, and in building bulkheads and breakwaters therein and thereon, and in doing all and every of the things that a free people find essential to be done to make its sovereign lands available for the beneficial uses of its citizens in commerce, education, and recreation; and in aid of the United States in the exercise of its functions in fishing and navigation, as specified in the Constitution; and

Whereas minerals have been found beneath certain of said lands, and the State of California, in the interest of conservation thereof and for the benefit of its people, has caused said minerals to be produced, thereby obtaining for the State and its people an income exceeding $900,000 per annum, thus lightening the enormous tax burden now resting upon the citizens of California; and

Whereas the title of the sovereign State of California to these lands and privileges over which it has for so long maintained unquestioned jurisdiction and expended so much of the treasure of its citizens, has been sustained by numerous decisions of the Supreme Court of the State of California and by the Supreme Court of the United States, in cases in which the principles involved were clearly at issue; and

Whereas certain officials of the Government of the United States, and also persons for personal gain, have for 2 years or more endeavored, and are now endeavoring to obtain the sanction of the President of the United States for the filing of court proceedings on behalf of the United States against the State of California and those holding under and subservient to the State of California, with the object of wresting from the State of California, and those holdings under said State, said sovereign rights so long maintained and exercised; and

Whereas the State lands commission, under the provisions of the act passed in 1938, is prohibited from issuing prospecting permits to prosect for oil and gas in tide and submerged lands, and is also prohibited from issuing leases or contracts for the extraction of oil and gas from tide and submerged lands unless such laids are subject to drainage by wells located or drilled on adjacent private lands, thereby conserving oil and other minerals which may be contained in such tide and submerged lands; and

Whereas the State lands commission, consisting of the director of finance, as chairman, the Lieutenant Governor of the State of California, and the State controller of the State of California, was established in 1938 and has jurisdiction over the State-owned tide and submerged lands; and

Whereas this commission is by statute vested with the power and authority to administer the lands owned by the State of California: Now, therefore, be it

Resolved, That this commission protest the said proposal and any proposal to attack the title of the sovereign State of California in and to said lands, and asserts as the duly delegated body charged with the duty of administering said lands that it condemns said attempt and any attempt and will oppose the same by all lawful means; be it further

Resolved, That the secretary of this commission shall certify the passage of this resolution and shall forward a certified copy thereof to the President of the United States, to the Vice President of the United States, to the Governor of the State of California, to the Attorney General of the United States, to the Solicitor General of the United States, and to each of the Members of the United States Senate and the House of Representatives representing the State of California, or any district thereof, in the Congress of the United States.

I, Webb Shadle, executive officer of the State Lands Commission of the State of California, do hereby certify the foregoing to be a full, true, and correct copy of a resolution of the said commission, duly adopted by a majority of the members of said commission, and entered upon the minutes of said commission at a meeting on March 13, 1941, at State capitol, Sacramento, regularly called, and at which a quorum was present; that I have compared the same with the original, and that it is a correct transcript therefrom and of the whole of the said resolution.

Witness my hand this 13th day of March 1941.

[SEAL] WEBB SHADLE.

Three Choices Seen for Us

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

LETTER IN THE NEW YORK TIMES ON MONDAY, MAY 5, 1941, FROM BROTHER BENIGNUS

Mr. MARTIN J. KENNEDY. Mr. Speaker, as a student of public opinion, I have read many letters and articles appearing in the daily papers and magazines discussing the position of our Government in the present world crisis. Reading my congressional mail and talking to my constituents, I have discovered that even members of the same family are often in honest but violent disagreement as to the best course for us, here in the United States to pursue.

Among the confusing and contradictory views printed each day, it is refreshing to read the opinion of a fellow New Yorker, Brother Benignus, professor of philosophy, Manhattan College, published in the New York Times of Monday, May 5.

The arguments presented by Brother Benignus are logical, reasonable, and constructive. The professor's feet are right on the ground. This letter is like an oasis in a desert to the American reader who loves our great democracy.

Let us consider this consistent train of thought and profit by the philosophical presentation.

The letter follows:

[From the New York Times of May 5, 1941]

LETTERS TO THE TIMES—THREE CHOICES SEEN FOR US—WE MIGHT RISK ALL TO STOP HITLER, KEEP ALOOF, OR ARM TO BRING JUST PEACE

TO THE EDITOR OF THE NEW YORK TIMES:

Many of our statesment, private citizens, and journalists writing or speaking on America's position in regard to the war, present two alternatives: (1) Risking all to conquer Hitler now; (2) abandoning the world to Hitler. Uncritical acceptance of these alternatives is the basis of the pleas to assure delivery of our war goods to Britain, even if it means our physical involvement in the war.

Belief that these are our only alternatives following prior beliefs:

1. That a prepared and alert America can be successfully invaded.

2. That America cannot survive, remain herself, and follow her own way of life if nazi-ism rules Europe.

3. That it is useless and futile to seek any just negotiated peace now.

4. That there is nothing that America can do to save democracy and civilization except to throw herself into the task of defeating Hitler.

Military men do not admit the first of these propositions. Furthermore, the probability that Hitler will ever attempt to invade America is not lightly to be assumed.

CERTAINTY VERSUS PROBABILITY

As to the second proposition, certain clarifications are in order. Collapse of many private American interests that are tied in with the world market, and consequent hardship to many Americans, are fairly predictable outcomes of a Hitler victory. But economic strangulation and the end of our way of life are not. A more probable result would be a forced effort on America's part to bring herself to a degree of self-sufficiency somewhat approaching the degree possible for her. Further, why do we ignore the certain impoverishment that our war effort would cause, while worrying about the probable effect of a Hitler victory?

The third and fourth propositions embody the real defeatism abroad in our land today. Our power for peace and justice lies unused because we have given up hope and desire of using it. We prefer to prolong the war and to run the risk of getting into it ourselves, to end up, probably, lying exhausted alongside a prostrate Europe. If anyone says that a peace arrived at now would almost certainly be better than one arrived at after 4 or 5 more years of hate and killing and destruction, we call him an appeaser.

Our belief that America can do nothing for herself or for the world except to throw all her resources into the task of defeating Hitler is apparently leading us into a course of action which is not only nationally unwise but which will have, in all probability, the most dire consequences for the whole human race. It entails, actually, at this moment, the neglect of America's own defense. It entails a very real risk, and one which few of us seem to have seen in all its true horribleness. If the thought of Hitler's complete victory in Europe is enough to make us tremble, what about a Hitler victory in which America goes down with the rest? Then, indeed, all is lost, all hope is gone.

DOUBT OF EUROPE'S FUTURE

And suppose we beat Hitler, what then? Wars should be fought only for the peace that comes out of them. Most of us would concede that the awful sacrifice of American resources and lives that our fighting would entail would be repaid if its result were to be a just and orderly Europe in which a repetition of the present horror would be impossible; but who will say that the mere crushing of the present evil, nazi-ism, is a sufficient payment for our sacrifices, if Europe remains the same old place with the same old ferments, to simmer for another 20 years, and then boil up into a new "ism" when America's present crop of babies will have attained selective-service age?

America today has no peace aims worthy of the name. President Roosevelt's "four freedoms" constitute an admirable ideal, but neither the President nor anyone else has so much as hinted at a way to bring this ideal to actuality. The first necessary element in any post-war reconstruction is some power in the world that has not been involved in the destruction. The chances that America will be involved in the destruction if she enters the war are very high, regardless of whether final victory is hers or not. We had a year and a half of war the last time; does anyone think that it would be only a year and a half this time? And if America is physically and morally impoverished along with the other belligerents, there remains "red" Russia.

THREE CHOICES OPEN

If America becomes strong and remains true to herself, there is hope that she can

work out some effective machinery to adjudicate future international disputes peaceably. Of course, the facile answer to this is that it will be impossible to work out and operate any such thing if we have to deal with Hitler. But we do not know how long Hitler and Hitlerism can last, even assuming nazi-ism's complete victory in this war.

America's true alternatives are quite different from those usually put forward. America can make one of three choices: (1) She can risk all in an effort to stop Hitler now, (2) she can build up her own strength and keep aloof from Europe, (3) she can build up her own strength, physical and moral, to lead the world to a just international order.

The first of these choices means very probable disaster for America and for all the world. The fact that America is unprepared for war is a relevant fact, even if our statesmen and editorialists refuse to treat it as such. To take this course would be to gamble on national safety and to toss away our only chance of bringing any good out of present evils. America's brains, good will, and strength will be needed in the post-war world. To dissipate them in a war whose result cannot be foreseen would be an act of treachery to herself and to mankind.

The second choice would be both un-Christian and risky. Un-Christian, because it would amount to telling Europe to go ahead and destroy itself in its own favorite way. Risky, because it would offer to American politicians and editorialists the same recurring temptation to get into Europe's fights.

Only the third alternative makes American and Christian sense. America must stay clear of the European conflagration and build up her own physical and moral defenses, with the aim of doing what she can when she knows what she wants to do and when she is capable of doing something. She must reverse her misguided policy of being isolationist in peacetimes when she might accomplish some good, and interventionist in wartimes when she can only make "confusion worse confounded."

BROTHER BENIGNUS,
Professor of Philosophy, Manhattan College.
NEW YORK, *May 1, 1941.*

World Affairs

EXTENSION OF REMARKS
OF
HON. JARED Y. SANDERS, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

RESOLUTION OF KIWANIS CLUB OF BATON ROUGE, LA.

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to put in the RECORD a resolution passed by the Kiwanis Club of Baton Rouge, La. This resolution was passed without a single dissenting vote, and I believe that it expresses very clearly just about how the people in my section feel about the present very dangerous world situation that confronts us.

From my own observation, I am convinced that the people themselves are ahead of the Congress in their appreciation of the danger and in their determination to take such positive steps as may be necessary to insure our national safety.

The resolution is as follows:

The Baton Rouge Kiwanis Club believes with deep conviction:

First. That the present European war was unprovoked by any acts or intent of the neighbor nations of the Axis Powers;

Second. That this war stands therefore before the world as a war of greed and aggression, pure and simple;

Third. That it is an unholy and unrighteous violation of unoffending peoples, revolting to every principle of humanity and the comity of nations;

Fourth. That it seems now clear that nothing less than world domination will satisfy the lust and greed for power of these violators of human rights: Therefore be it

Resolved by the Baton Rouge Kiwanis Club—

First. That we brand Germany, Japan, and Italy as outlaw nations who have breached the settled principles of international law so carefully built up around the council tables during the last several hundred years of western civilization;

Second. That it is our firm conviction that the acts and purposes of the Axis Powers are such that no nation or people anywhere on the globe can hope to remain neutral, except on terms and conditions specified by them and to end in becoming their tool and vassal;

Third. That the vital interests and perhaps the very continuance of our American democracy are at stake in this World War;

Fourth. That we deplore the blindness of any leaders in America who fail to see our peril and who hamper our will or hinder our effort to put America's manpower in readiness to protect our country and to do our share to preserve world order;

Fifth. That we call upon the Congress and all in authority to confect and to put into execution with energy and dispatch the measures and policies worthy of our great country in this solemn hour;

Sixth. That we favor a bold and realistic attitude in the face of the present dangers and suggest as an early measure that we make our Navy and shipping available to insure war material and supplies to the defenders of democracy;

Seventh. That a copy of these convictions and resolutions be sent to the Members of the Senate and House from Louisiana, to the Secretaries of State, War, and Navy, and to the President of the United States.

I hereby certify that the above resolution was adopted at a luncheon meeting of the Baton Rouge Kiwanis Club on Thursday, May 1, 1941.

RICHARD C. CADWALLADER,
Secretary.

Political Dishonesty

EXTENSION OF REMARKS
OF
HON. THOMAS A. FLAHERTY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

EDITORIAL FROM THE BOSTON POST

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of May 6, 1941:

[From the Boston Post of May 6, 1941]

POLITICAL DISHONESTY

Congressman Casey, of Clinton, made a spirited and able attack upon the proposed redistricting moves in Massachusetts.

In the opinion of many of us he did not go far enough in his castigation of the motives of the bosses.

Politicians in either party have a queer code of honor in such matters.

They clamor for honesty and public service, yet they call such things as campaign contributions, appointment of inept officials and, finally, gerrymandering, honorable dealing.

They admit, as former Mayor Mansfield once said, that a man can be honest in some things yet politically dishonest all the days of his public life.

Maybe they can quiet their own scruples by such terms as "legitimate graft" (campaign funds), and "political dishonesty" (the gerrymander).

But the public makes no such fine distinction. From the earliest school days, our citizens are taught that this is a glorious land, filled with good works and democratic principles, and that we have the right to select our own public leaders.

Such pages in our history books are dismissed as so much hypocritical pap as soon as we are old enough to know our public men.

We discover that men with large fortunes at their command can spend as much in a single campaign as most of us can earn in a lifetime, despite the fact that the law declares, in effect, that this is illegal.

We find that they can batter and bribe themselves into public office. They can swamp strategic sections of their opponents' strongholds with fat wads of money. They may never take a dishonest dollar while in office, but the fact remains that they arrive there by dishonest means.

The gerrymander, the art of carving up a district to keep out political opponents, regardless of the proper representation of the people, is so dishonest that it is revolting, yet sanctimonious politicians agree that it is permissible, because they have gotten away with it for a long time.

In Massachusetts we have the same old story today. We have a maneuver afoot to gerrymander the Fifth and Eighth Districts so that Congressman ARTHUR D. HEALEY will be jolted out of office and the present senate president, Angier L. Goodwin, will slide in.

Thus the Republican machine will reward one of its faithful handy men and the district will get some exquisite misrepresentation.

As president of the senate, Mr. Goodwin can direct this strategy to take care of himself.

Labor Policies of Industries Participating in Defense Contracts

EXTENSION OF REMARKS
OF
HON. JEANNETTE RANKIN
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

RESOLUTIONS OF LOCAL UNION NO. 65, INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, AND OTHERS

Miss RANKIN of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

BUTTE, MONT.

Whereas the most vicious propaganda campaign ever initiated is now being waged against the wage earner and organized labor; and

Whereas those responsible for this campaign fail to mention that the profits on the labor of each employee of the major corporations of the United States of America in 1940 was double the amount of wages paid; and

Whereas it is an insult to the intelligence and patriotism of the American worker to charge that their efforts to better their working conditions is an attempt to slow down defense production; and

Whereas press reports of strikes in defense industries fail to state that many of these workers receive as little as $12 a week, while many more receive less than $20 a week, and

Whereas industry made no attempt to get into production until they had compelled the Government to remove all profit restrictions, and give guaranties for amortization of plant expansion: Now, therefore, be it

Resolved, That before the self-appointed saviors of our democratic institutions destroy the very things we are so proud to protect, by enacting legislation that would make slaves of free men and women, the United States Senate, the United States Department of Justice, and the United States Department of Labor, be, and they are hereby requested to make a complete investigation of the labor policies of the industries participating in defense contracts, with a view to protecting the wage earner's right to a just share of the profits made on these defense contracts, and be it further

Resolved, That these same Federal agencies make an investigation of the amount of money being spent by the National Association of Manufacturers on antilabor propaganda and their influence on the attitude of the newspapers of these United States; and be it further

Resolved, That the findings of these investigations be made public and furnished to all national and international unions.

Respectfully submitted.

LOCAL UNION NO. 65, INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS,
DAN SHEEHAN, *Secretary*.

Identical resolutions received from—

D. S. Lyons, secretary, United Association of Journeymen Plumbers, Gas and Steam Fitters, Local Union No. 673, Anaconda, Mont.

Dean Tardeville, secretary, International Association of Bridge, Structural, and Ornamental Iron Workers, Local Union No. 81, Anaconda, Mont.

Elmer Rude, secretary, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers, Local Union No. 666, Helena, Mont.

Perry S. Melton, secretary, Central Trades and Labor Council, Kalispell, Mont.

Tax Plan Would Halt Inflation

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

ARTICLE FROM PM

Mr. WICKERSHAM. Mr. Speaker, I think it might be wise for the Members of the House of Representatives to weigh the matters hereinafter mentioned:

[From PM of May 2, 1941]

TAX PLAN WOULD HALT INFLATION

(By Nathan Robertson)

WASHINGTON, May 2.—The House Ways and Means Committee got a badly needed lesson in economics yesterday from two economists who know how to use the tax system to prevent inflation without placing the burden on the poor.

The economists were Dr. Albert G. Hart, Iowa State College professor, and S. E. Harris, Harvard University professor. Among all the witnesses the committee has heard on the new tax program they were unique for two reasons:

They were proposing a system that would hit themselves and others in the upper-income brackets harder than the Treasury plan, and would be easier on the poor.

They understood the effect of taxes on purchasing power and inflation.

SIMPLE TERMS

Dr. Harris explained the inflation problem to the committee in simple terms. He said that out of a $90,000,000,000 national income next year, $20,000,000,000 might go for national defense. That would leave $70,000,000,000 worth of things the people could buy. But with $90,000,000,000, to buy with, and only $70,000,000,000 worth of things to buy, prices would be bound to go up.

Dr. Hart presented a plan sponsored by 130 economists, including some of the Nation's best known, to meet this situation. It was to raise all the new revenue through income taxes and to provide for quick rate increases whenever the cost of living began to rise sharply, so as to absorb the excess purchasing power.

In order to work, Dr. Hart said, this system must not only be flexible but prompt. He said it would require an entirely new system because income taxes now are collected a year and 2 years after they are levied. The Treasury is just collecting now the taxes levied last year.

To get this promptness of action needed in draining off excess purchasing power, the economists proposed to collect income taxes at the source, just as social-security taxes are now collected. Employers would deduct from wages and dividends varying amounts depending upon whether the recipients were single, married without dependents, or married with dependents. Farmers and self-employed would continue to pay their income taxes annually as they do now, but would be encouraged by discounts to pay currently instead of the next year.

RELIANCE ON INCOME TAXES

An equally striking feature of the economists' plan was complete reliance on income taxes. To get away from the additional excise taxes proposed by the Treasury they would lower income-tax exemptions. They said only 18 percent of the national income is now reached by income taxes and recommended that it be extended to reach 50 percent. Then a half of 1 percent rise in the cost of living could be counteracted by an increase of 1 percent on the income tax.

Dr. Harris presented figures showing how the sales tax hits the poor man, the income tax the rich man. Here is how much people in various income brackets would pay under a sales tax, with food and housing exempt, and how much they would pay under the income tax the economists propose:

Income:	*Percent taken by sales tax*	*Percent by income tax*
Under $500	6.4	0
$3,000 to $5,000	5.1	5.8
$20,000 and up	2.7	9.2

American Trade Unity

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a copy of a bill introduced by me on April 29, 1941, being H. R. 4575, as follows:

A bill to promote the economic welfare of the countries of North and South America

Be it enacted, etc., That for the purpose of promoting the economic welfare of the countries of the North and South American Continents by removing the economic barriers of custom and tariff duties, and thereby permitting the free and unrestricted trade and intercourse between the people of these countries, it is hereby declared to be the policy of the United States to initiate a customs union in the North and South American Continents within the confines of which there shall be free trade and articles of growth, produce, or manufacture, produced within these countries, shall be permitted to pass from all parts of this area free and unrestricted by customs and tariff duties. The provisions of this act shall extend to all countries in the North and South American Continents who shall remove all customs or tariff duties on goods imported from the United States. When such countries have certified to the President of the United States that imports from the United States are to be admitted duty free, all import duties and tariffs on goods from that country shall be automatically suspended: *Provided*, That the President may establish quotas of certain products to be imported when unrestricted importation would disrupt or nullify the domestic policies of the United States, such quotas to become operative unless Congress shall by concurrent resolution within 60 days set aside such quota.

The Gerrymander

EXTENSION OF REMARKS
OF
HON. THOMAS A. FLAHERTY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

RADIO ADDRESS BY HON. JOSEPH R. CASEY, OF MASSACHUSETTS

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered over the radio last Saturday night by my colleague from Massachusetts [Mr. CASEY]:

The title of my speech tonight is The Gerrymander. It is an abuse of power by a State legislature whereby the congressional

districts are so arranged as to throw into each district a majority of voters of the majority party, thus giving it practically all of the representatives from the State.

The word "gerrymander" goes back to the year 1812, when Elbridge Gerry was Governor of Massachusetts. At that time the Massachusetts Legislature contrived a redistricting scheme which gave one of the districts the shape of a lizard. Gilbert Stuart, the well-known artist, entering the room of an editor who had a map of the new district hanging on a wall over his desk observed, "Why, this district looks like a salamander." and put in e claws and eyes of the creature with his pencil. The editor replied, "Say, rather, a Gerrymander" and the name stuck.

This scheme was used most flagrantly in Missouri in order to deprive the Negroes of the right to vote. Some Republican leaders in Massachusetts now intend to revive it for the purpose of depriving the Democrats of Massachusetts of representation in national affairs The chairman of the committee empowered to report back to the legislature on redistricting is Angier Goodwin, president of the State senate. Under his direction, the Republican members of the committee have drawn up a plan which has for its main purpose the carving out of a congressional district that will insure Angier Goodwin a seat in Congress.

This pet district of Mr. Goodwin's would give him a district composed entirely of Republican towns and cities. He can't take any chances of having even one Democratic town in his district. On his merits, Senator Goodwin can't make the grade. He hopes to ride into Congress on the back of the gerrymander.

In order to carve out the district, Angier Goodwin and his cohorts felt that it was necessary to place three sitting, progressive Democratic Congressmen in one district—namely, HEALEY, FLAHERTY, and CONNERY. Congressman FLAHERTY's district is right in Boston and is overwhelmingly Democratic. So Mr. Goodwin and his handymen want to extend Congressman FLAHERTY's district so that it takes in that part of Somerville where Congressman HEALEY lives, and then goes out to Lynn and takes in that part of Lynn where Congressman CONNERY resides. Of course, only one of them could possibly win, and that would mean the elimination of the other two. Under this proposed scheme the great cities of Lynn, Lawrence, and Somerville are split and divided and thus robbed of their strength and unity. The combining of three Democratic Congressmen in one district is the most atrocious feature of the proposal. It deprives these Congressmen of the opportunity to fight for their seats in Congress.

In the case of my district, they propose to drop such Democratic strongholds as Southbridge, Dudley, Webster, Spencer, and Leicester, and to go all the way down toward Boston and add such Republican strongholds as Lincoln, Weston, Wellesley, Needham, and Dover, thereby insuring my defeat. But at least I can fight for my seat in Congress as I have fought for it on previous occasions. My district was originally a shoestring district as the result of a previous gerrymander. Nevertheless, I succeeded in carrying it each time I ran by increased majorities. The present gerrymander would give me tremendous obstacles to overcome, but that is nothing new in my political life—and I am not asking for any quarter for myself. I am speaking in behalf of those sitting Democratic Congressmen who have been deprived of even the opportunity to run for their seats by this dishonest, corrupt, and venal scheme to redistrict Massachusetts for the benefit of the president of the State senate, Angier Goodwin.

Mr. Goodwin undoubtedly thinks that placing three Democratic Congressmen in one district is a brilliant stroke of strategy. It is brilliant all right—so brilliant that it can be best described by a quotation from Congressman John Randolph, made in the House of Representatives on March 5, 1806, about something less reprehensible. He said, and I quote, "So brilliant, yet so corrupt, that, like a dead mackerel in the moonlight, it both shines and stinks."

All previous plans for gerrymandering pale into insignificance before this bold usurpation of the rights of the voters. The other plans were petty larcency. This one is grand larceny.

At the moment, the G. O. P. has the big majority of important jobs: Governor, majority of the legislature, and 9 out of the present 15 Congressmen. As a result of the last census, Massachusetts loses 1 Congressman. Republican bosses are not content with the majority of the big jobs. They want more. Therefore, Angier Goodwin and his handymen have designed a congressional redistricting bill which they think will give the Republicans 12 Members of the next national House of Representatives and the Democrats but 2. That is a ration of 6 to 1, and no man can claim that this represents the proportion of Republicans to Democrats in Massachusetts.

You all know that the Governor, in the last election, was elected by a very small majority. The fight was close, very close—so close that its outcome was in doubt for a long time and a recount made necessary. Indeed, in the past 16 years, the Democratic candidates for President have all carried Massachusetts.

Massachusetts is a democratic State. No man can honestly claim that it is any worse than 50–50. This plan makes it 84 to 16, which is utterly false and absurd.

If a Democratic Governor and a Democratic legislature ever proposed to put through a plan such as this, can you imagine the howl that would go up from the Republican press of this commonwealth. The Boston Herald did carry an editorial in which it mildly rejected the plan and stated that the redistricting, while a difficult job, ought to be done as fairly and equitably as possible. But I have yet to read where any other Republican paper in the State has condemned it. It comes with particularly bad grace at this time when the democratic form of government all over the world is threatened. It proves that Mr. Goodwin and his cohorts not only do not favor democratic representative government but are incapable of even understanding it. They are, in effect, attempting to gag the Democratic voters of Massachusetts from having a voice in national affairs. They have the power, they have the votes, but they haven't got the right. Decent Republicans throughout the State will combine with Democrats and independent voters in resenting it.

There may have been a time in the past when political trickery and political fakery were countenanced as being a necessary part of public life. That day has passed. Today more than ever, the voters of America demand that men in public life consider public office a public trust. The rights of the citizens must be respected.

In the face of the fact that during the past 16 years, each Democratic presidential candidate has carried Massachusetts by a decisive majority and during that same period, the people of Massachusetts have accorded majorities to the Democratic candidates for Governor at five State elections and to the Republican candidates at only two, this attempt to legislate out of existence the Democratic Congressmen of Massachusetts, violates all laws and rules of fair play, decency, and justice. Just as boldly and ruthlessly as any Hitler, they propose to ride roughshod over the principles of democratic government. If the plan succeeds, the Massachusetts delegation will be unrepresentative.

Let me make it clear that I do not charge the Republican State administration with responsibility for this proposal. All I know is that it was submitted by the Republican majority on the redistricting committee as a tentative plan. I am here tonight to unmask it in all its naked ugliness. I am here tonight to call it to the attention of the leaders of the Republican Party in Massachusetts. Now that it has been called to their attention, they cannot—and I believe will not—stand idly by and disclaim responsibility. If they do, I confidently predict that the voters will handle them without gloves in 1942.

During the last campaign I recall seeing the pictures of Governor Saltonstall and Lieutenant Governor Cahill on billboards throughout this Commonwealth, and underneath them the words, "They stand for honesty and integrity in government." Tonight I ask them to live up to that simple campaign promise. I warn them that as leaders of the Republican Party, if they remain silent, the voters will construe their silence as cooperation. I believe that they and decent Republicans everywhere will repudiate this nefarious enterprise that Angie Goodwin and his cohorts are now considering.

I understand that the Democratic members of this redistricting committee have a plan whereby the State of Massachusetts is divided into compact contiguous districts. This alternative plan does not split or divide a single city. Under this plan there would be established 8 Republican districts, 4 Democratic districts, and 2 doubtful districts. I do not approve of this plan. It is too much of a capitulation. I agree with the position taken by Labor's Nonpartisan League, which wrote to Governor Saltonstall under date of April 29, and stated, "Since the State of Massachusetts is about evenly divided between Democrats and Republican voters, any plan which would appreciably change the present representation in Congress would be manifestly unfair." Therefore we ought to have seven Democratic Districts and seven Republican districts. However, the Democratic minority on this committee state that they can't hope to get this—that the Republicans have the power and the votes and that they (the Democratic members) have submitted the alternative plan in order to salvage what they can. It will be very interesting to see whether the Republican leadership in Massachusetts will accept this alternative plan which gives the Republicans eight districts and the Democrats three in a State that is evenly divided. If they do, they can still save their faces, because, while the plan is one introduced by Democrats, nevertheless it was introduced because of the fear that the Republican proposal, which I have just discussed, would be forced upon them.

If the Republican leaders fail to accept this alternative plan they will stand convicted before the bar of public opinion as being b' :sed and sanctimonious frauds, interested in nothing except political power and pelf.

The choice is theirs. They cannot evade it. Either accept the alternative plan or commit political suicide in a most ignominious fashion in 1942.

Today, As Always, America Comes First With the American Legion

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

RESOLUTION OF THE NATIONAL EXECUTIVE COMMITTEE, THE AMERICAN LEGION

Mr. HOFFMAN. Mr. Speaker, this morning, from the National Legislative

Committee of the American Legion, the following letter and two resolutions were received:

THE AMERICAN LEGION,
NATIONAL LEGISLATIVE COMMITTEE,
Washington, D. C., May 5, 1941.

Hon. CLARE E. HOFFMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HOFFMAN: Enclosed please find two resolutions adopted by the national executive committee meeting of the American Legion on May 2, at Indianapolis, Ind.: One calling for the resignation of the Secretary of Labor, and the other forbidding strikes and lock-outs in industries.

I shall appreciate very much if you will have these two read into the CONGRESSIONAL RECORD for the information of the Members of Congress.

Sincerely yours,
JOHN THOMAS TAYLOR,
Director, National Legislative Committee.

Resolution 43–B

Whereas it is essential at this time of grave emergency that there should be no lack of complete confidence in any officer of the Government if we are to attain full unity of purpose in this Nation; and

Whereas it is becoming increasingly obvious that there is a growing lack of confidence on the part of the American people in the abilities of the present Secretary of Labor to fully exercise the high responsibilities of that office; and

Whereas it appears that as long as the present Secretary of Labor is in office there will continue to be trouble in defense industries: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion, That it is the opinion of this organization that the cause of national unity in national defense will be best served by the tender and acceptance of the resignation of the present Secretary of Labor.

Resolution No. 43–C

Whereas for 19 years the American Legion, representative of the veterans of the war of 1917–18, have advocated universal service if war should ever again be our Nation's lot; and

Whereas if this Nation is to be spared and our way of life is to continue, our sacrifices must be universal. There are no private rights which transcend public safety. There are no material profits which cannot be recaptured and there is no wage situation incapable of adjustment after the work is done: Now, therefore, be it

Resolved by the national executive committee of the American Legion, That we demand of the national administration and the Congress legislation forbidding strikes and lock-outs in national-defense industry during the period of this national emergency.

Who Feeds the Fascist War Machine With American Oil, Munitions, and Dollars?

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

EDITORIAL AND ARTICLES FROM PM

Mr. WICKERSHAM. Mr. Speaker, I believe it will be worth while for each Member of the House to carefully weigh the matters hereinafter mentioned:

[From the New York PM of May 2, 1941]

WHO FEEDS THE FASCIST WAR MACHINE WITH AMERICAN OIL, MUNITIONS, AND DOLLARS?

Here—on the following pages—are the facts we've been able to find out. More important than the facts are the questions they raise—questions that only a congressional investigation can really answer.

Who's doing this to democracy's fight for life?

What are we going to do about it?

Meanwhile, George Reedy and Kenneth Crawford, in PM's Washington office, complain that we have undervalued their exposé of the part played by William R. Davis in selling oil to Germany. Here is their pertinent wire—and our reply:

FROM KENNETH CRAWFORD AND GEORGE REEDY TO THE EDITOR OF PM

What are you going to do about it?

After several months of investigation and several days of composition, we in the Washington office have prepared a series of articles on William Rhodes Davis, the big oil and peace man.

You have buried our reports on Mr. Davis in what would be the want ads if PM carried want ads. You haven't bothered to call attention to them on page 1.

We are concerned about such cavalier treatment of such important and significant news.

You seem to have been so preoccupied with the menace of distant Nazis that you can't see the menace of Nazi allies who are right under your noses. You have been fighting Nazis in Europe, in the north Atlantic, in Omaha, Nebr.—anywhere except in Manhattan. As distant fields look greener, so distant fights are more challenging.

It is simple enough to get worked up about fascism's unlovely works abroad. It is not so simple to get aroused and arouse others about the handsome Texan, the successful American businessman and adventurer, who looks out from the pages of PM (with monotonous regularity, if we may say so. Can't you find any other art in the morgue?). (For a full-page picture of Mr. Davis, see p. 21.)

Yet this engaging gentleman sold the Germans a good part of the oil reserves that drive the Luftwaffe bombers that kill our Allies in Great Britain night after night; the oil reserves that drove the tanks that mowed down our Allies in Greece; the oil reserves that soon will be driving machines against Gibraltar and Suez. Is it too much for your imagination to bridge the gap between fancy offices in Rockefeller Plaza and the rubble-strewn streets of London?

Mr. Davis built an oil refinery for the benefit of the Nazis—long before the war broke out, to be sure. He fed this refinery with crude oil from Mexico—up to and even after the Nazis were murdering Poles. He got access to the Mexican oil by worming himself into the confidence of labor leaders in Mexico and the United States of America. He tried to peddle a shabby peace plan to President Roosevelt after Poland had been conquered.

He has associated with and cooperated with agents sent to this country and Mexico by the Nazis to get war materials from us—war materials that one day will be used to kill American soldiers and sailors. He has contributed liberally to the organizations built up here to confuse us and make us easy prey for the Nazis.

We in the Washington office think William Rhodes Davis, his associates and the others like him ought to be investigated by a congressional committee with power of subpena. We haven't been able to find out all that should be known about him and them. We could only get what information people were willing to give us voluntarily.

We have raised some questions that should be answered. For example: Did General Goering seriously consider trying to overthrow Hitler after the conquest of Poland or were our officials told that to trick them into approval of the conquest? Was it just coincidence that John L. Lewis' anti-Roosevelt campaign broadcast cost just about what Mr. Davis contributed to various Republican organizations? How much military material have Mr. Davis and others shipped the Nazis by way of Japan and Russia? Who was the mysterious woman in the black veil who followed Joachim Hertslet, chief Nazi agent for the Western Hemisphere, around Washington the last time he was here with one of Mr. Davis' men?

We in the Washington office are going to keep on digging up facts about the William Rhodes Davises in the hope of persuading Congress that it should find out what they are up to and, if their activities are detrimental to the safety of the United States of America, as we believe they are, that these activities be stopped.

What are you up in the New York editorial rooms going to do about it?

GEORGE E. REEDY.
KENNETH G. CRAWFORD.

FROM THE EDITOR OF PM TO KENNETH CRAWFORD AND GEORGE REEDY

You are right—and you are wrong.

We know how you feel, having worked months on an important story only to find it missing from the front page. But you are wrong in concluding that this office is uninterested in exposing Fascist plotters at home. We think Fascist plotters at home are more important and more dangerous than Fascist plotters abroad. That is why we were so enthusiastic about your idea of tracking down William Rhodes Davis, when you first brought it up months ago.

But you are right that the fall of Greece, the President's new patrol policy, and the loss of the Mediterranean conspired to get our eye off the ball. We should have smashed your story harder, and you have our apologies. If the readers of PM had missed your story because it was printed on inside pages, they would get our apology, too. But we do not think they did miss it—one of the reasons we haven't got any ads in PM is just so we can never bury any story. We banged away with Davis as a daily must, even though in this news crisis we were dropping other series and features.

Why we agree that we should have played it on the front page is not that we do not think people read it. We know, from the mail and telephone calls, that they did. It should have been on the front page because the facts you have revealed deserve the most dramatic treatment we know how to give them.

There has been a lot of talk in the papers about Charles A. Lindbergh, spokesman for the "fifth column" in these United States. Personally—I do not know either, but on the record—I like Charles Augustus Lindbergh a lot better than William Rhodes Davis. As far as I know, all Charles A. Lindbergh has done about fascism is argue for a national policy favorable to it. All he has done is talk.

Aside from giving some stupid British statesmen misleading and inaccurate technical information about the competence of the Hurricane and the Spitfire to fight the Messerschmitt, he has never done anything but public-mouthpiece work for the Fascists. But your man, William Rhodes Davis, is something else again.

Your man William Rhodes Davis has made money out of this nasty business. Your man William Rhodes Davis has mixed innocent blood and guilty oil.

With you, I want to know a lot more about him. And others.

I want to know who was it in with him. I want to know who else has cashed in on selling the power to hoist the land mines over London, so they might be dropped on sleeping women and children. I also want to know who cashed in on driving shell splinters

of United States scrap iron into the bodies of Chinese peasants.

I want to shake these facts in the face of the American public and say, "Look at them. This is what fascism means. This is the fascism that is here already waiting for a Hitler victory, waiting for a chance to do to you what Hitler has done to the working people of Europe.

This is the Pandora's box that a Hitler victory over Great Britain would open here in our midst. Hitler has friends here whom he will want to reward in his victories, as he rewarded Quisling when he took Norway. Quisling is a comparatively nice fellow, stacked up alongside of Americans who sell munitions to the enemies of democracy.

Go to it. Keep telling us what you can find out, and we will keep hammering the question here: Who are these people, and what are we going to do about them?

R. I.

[From the New York PM of May 2, 1941]

W. R. DAVIS STARTED TO DELIVER MEXICO'S OIL TO NAZIS—THE BRITISH BLOCKADE STOPPED HIS TANKERS—BUT HE WAS STILL GETTING MONEY FROM THE NAZIS IN 1940—FOR WHAT?

(By George E. Reedy and Kenneth G. Crawford)

WASHINGTON, May 2.—William Rhodes Davis and his associates insist that they have done nothing to help the Nazis since the outbreak of war in the fall of 1939—that the more than $400,000 they collected from the Germans in 1940 was in payment for oil delivered before the invasion of Poland (September 1939) or immediately after.

The fact seems to be that the British blockade did stop the flow of oil from Mexico to Germany almost immediately. Mr. Davis lost two cargoes learning that the blockade was effective. He continued to ship to Italy, presumably for transshipment to Germany, until the British bottled up the Mediterranean, too. Discontinuation of the traffic was not a matter of choice; it was a matter of necessity.

But Mr. Davis, who says with Charles A. Lindbergh that he wants neither side to win the European war, has continued to collaborate with the Germans in other ways. He has peddled their goods in Mexico. He has sent agents into other country below the Rio Grande scouting for the strategic war materials the Axis powers need. He has brought German agents into the United States of America and Mexico to do Hitler's chores.

IT'S ALL LEGAL

He has continued to do these things as the Nazis have overrun Europe, and United States officials well know it. Up to now they could not or would not do anything about it. They probably could not because, as one of Mr. Davis' assistants pointed out to us, it still is not illegal for an American businessman to do business with the Germans. The United States of America is technically neutral and anyone is at liberty to sell Mexican oil or minerals to Germany if he can figure out a way of making delivery. This assistant did not admit anything. He merely stated a hypothetical case.

Mr. Davis went so far as to admit that he still, on occasion, exchanged messages with German authorities. But all his messages, he said, were open to inspection by United States authorities and none was in code. He added that he had always acquainted the State Department with the details of "every transaction I ever made."

This statement, we are in a position to say, is an exaggeration. Not all of the exchanges have been code free, although they might seem so to the casual reader.

BRINGS NAZIS TO MEXICO

Just before the German invasion of Poland, when Mr. Davis was doing a big business buying expropriated Mexican oil, shipping it to his Hamburg refinery, and paying for it part in cash and part in German barter goods, big bees were buzzing in his sombrero.

He proposed a plan which, in effect, would have made Germany the economic overlord of the United States of America's closest southern neighbor. His scheme involved construction of a railroad, a pipe line across Mexico from the Pacific to the Atlantic, purchase of ships for removal of guano from southern California and various other projects whose total cost would have run into tens of millions.

In August 1939 he brought to Mexico Joachim Hertslet, high official of the Nazi economic ministry and gauleiter of the Western Hemisphere, to look over the prospectus. With Herr Hertslet came Eugene Brieschke and another expert.

The idea was that Germany would extend credits for the development of Mexico's rich natural resources and pay itself back out of profits from the exploitation and barter. Mexico was to become Germany's Western Hemisphere trading post. Herr Hertslet, after conferring with Mexican officials in the presence of Mr. Davis, turned thumbs down.

FOOTHOLD IN MEXICO CITY

But Mr. Davis was not completely discouraged. After returning from Germany in October with his peace plan—a plan which would have made Washington the underwriter of a Polish Munich—Mr. Davis expressed confidence that the war would be of short duration and that his Mexican preserve would be waiting. Accordingly he kept open his Mexico City office, which, when we visited it last month, was doing business under the direction of E. S. Walnes. The name on the door was Damex Engineering Co. This firm is the successor of Davecome, the company that sold millions of dollars worth of oil to Germany in 1938 and 1939.

Asked about reports that Mr. Davis was buying up mercury and other strategic metals for shipment to Germany via Japan and Russia, Mr. Walnes said he had investigated the mercury market with the idea of keeping himself busy and making a little money for the firm. He said nothing came of it, though, because he discovered that the mercury market was so tricky he might lose more than he made. This seems strange because the Japanese bought tons of it last year and bid the price up to three times its 1938 level. Fulminate of mercury is used to make bomb detonators.

As late as last summer, after the war had been on for almost a year, Mr. Davis sent his associate, W. F. Flanley, to Brazil to investigate the possibility of trading oil for manganese ore, iron ore, and other essentials of war. Davis' agents had previously gone to Uruguay on a similar mission. Last fall Alberto Cuevas and Fredrico Franco Arch, who represented themselves as Davis' spokesmen, scouted Mexico for mica, sulfur, and mercury. They talked to Elmer R. Jones, of the Wells Fargo Co., about a plan for export of sulfur in quantity.

Last January Herr Hertslet, who had a Davis representative in tow when he visited Washington in the summer of 1940, was reliably reported back in Mexico helping a Japanese trade mission barter rayon at bargain prices for mica, tungsten, oil, mercury, and antimony. At one time in 1939 Japanese steamers were loading 8 to 10 cargoes of Davis oil every month.

AND OIL IN THE UNITED STATES

Mr. Davis once paid the expenses of H. H. Hagenmann, of the Junkers Co., for a trip to Mexico. And early last year he organized Avimex, apparently with the object of establishing himself or his German friends in the flying business.

While all this activity has been going on in Mexico, Mr. Davis also has been busy developing his Rincon oil field in Starr County, Tex., which is connected by pipe line with a tank field at Brownsville, the American port closest to Mexico. Officials of the Brownsville Chamber of Commerce told us last month about Mr. Davis' plan for building a $1,000,000 refinery in their town. He already owns a lion's share of the port facilities. Before we got there he had brought a party of bankers and other potential investors to the scene of the refinery project.

Just how valuable the Rincon pool is, how much oil is being shipped from it and where, is Mr. Davis' secret. We were told a lot of stories in Houston. Some competent oil men told us Rincon was a bonanza. A Mexican official, acquainted with oil in the Southwest, told us Mr. Davis was "getting some very nice kerosene out of it." Mr. Davis also has oil properties in Mexico but apparently is concentrating his attention on Rincon at the moment.

Mexican officials claim they are still selling some expropriated oil to the Continental Refining Co., which has a contract with Mr. Davis for exploitation of Rincon. Mexico's other customer now is the Eastern States Oil Co. of Galveston, which associates of Mr. Davis organized.

There is no doubt in the minds of informed American officials, whose names we are not at liberty to give, that Mr. Davis is, or has been until very recently, selling war materials to the Axis Powers and continuing to cooperate with Herr Hertslet. This traffic may now be stopped by Russia's refusal to permit transit of war materials over her territory as the British blockade stopped direct shipments to Germany. Even then, there will be the Japanese market.

[From the New York PM of May 2, 1941]

THE TIME HAS COME TO ANSWER: WHICH AMERICAN FIRMS ARE SENDING OIL TO JAPAN?—HERE'S A CHANCE TO SET THE RECORD STRAIGHT

In the belief that the American people are entitled to know which American companies are shipping oil to the Axis, PM sent the telegram on this page to the presidents of 16 of the leading oil companies in the United States of America.

Which companies are shipping oil has never been made public. We don't know. It's a "trade secret." A month ago we published a photograph of an export order of the Standard-Vacuum Oil Co. showing that as late as March 7, 1941, a shipment of 256,000 gallons of oil was made to Japan. This photograph is reproduced on the preceding page. That's one company, at least, that we know about. But what about others?

We will keep track of the answers we receive and pass on the information.

In addition to the Standard Oil Co. of New Jersey, here are the other companies to whom telegrams were sent:

Socony-Vacuum Oil Co., Inc., J. A. Brown, president; Standard Oil Co. of Indiana, E. G. Seubert, president; The Texas Corporation, W. S. S. Rodgers, president; Standard Oil Co. of California, W. H. Berg, president, Standard Oil Building; Gulf Oil Corporation, J. F. Drake, president; Shell Union Oil Corporation, R. F. A. van der Woude, president; Consolidated Oil Corporation, H. R. Gallagher, president; Phillips Petroleum Co., K. S. Adams, president; Tide Water Associated Oil Co., W. F. Humphrey, president; The Atlantic Refining Co., R. H. Colley, president; The Pure Oil Co., H. M. Dawes, president; Union Oil Co. of California, R. H. Taylor, president; Sun Oil Co., J. Howard Pew, president; The Ohio Oil Co., O. D. Donnell, president; Continental Oil Co., Dan Moran, president.

[Telegram]

MAY 1, 1941.

W. S. FARISH,
President, Standard Oil Co. of New Jersey, 30 Rockefeller Plaza, New York City:

An official British statement announced yesterday that up to the end of March nearly 29,000 innocent men, women, and children have been killed and 40,000 injured in Nazi air raids on Britain. Every American who can still be moved to indignation at these wanton

killings must ask himself: "How much American oil helped to refuel the bombers that brought this horror to the British people?"

PM is now printing a series of articles showing that William Rhodes Davis and his associates sold the Germans a good part of the oil reserves that fuel the Nazi luftwaffe. We know that oil is at this very time still going to Japan to help kill Chinese defending the independence of their country, and that some of this oil is available for Japan's Axis partner, Germany.

By every moral code it is revolting to the American spirit that Americans should take part in such a heinous business, particularly at this moment, when the American people have expressed their determination to beat fascism. Behind the cloak of "trade secrets" is hidden the identity of American companies who still participate in this traffic. We believe this is intolerable: that the American people have the right to know the names of those who are helping to arm our enemies against us.

We know that you are not doing this; but the only way for the public to know is to eliminate the innocent one by one. In line with this process, would you be good enough to let us know whether your company is shipping oil to the Axis Powers?

THE NEWSPAPER PM.

HERE'S THE FIRST ANSWER WE'VE RECEIVED

LOS ANGELES, CALIF.,
May 1, 1941.

NEWSPAPER PM,
Brooklyn:

Retel, May 1. Our company has consistently refused to fuel German or Italian vessels for some time as result of requests from the British Admiralty. We are selling some oil to Japan, securing a license from the United States Federal Government for each shipment and have not felt it to be in the best interests of all concerned for our company to attempt the determination of policies affecting foreign relations. Up to the present time the British Admiralty has made no suggestions to us with reference to sales of petroleum to Japan. May we suggest that you investigate oil sales by British and American controlled companies of oil from the Dutch East Indies, which are currently being made to Japan.

REESE H. TAYLOR,
President, Union Oil Co., of California.

The Pan-American Highway

EXTENSION OF REMARKS
OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

ADDRESS BY HON. ROBERT R. REYNOLDS OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at Cincinnati on Thursday night, April 3, 1941, entitled "The Pan-American Highway in Relation to Hemispheric Defense." This address was delivered under the auspices of the Cincinnati Automobile Club, which is one of the member clubs of the American Automobile Association, was broadcast over the Crosley Broadcasting Stations, and was rebroadcast over the shortwave station WLWO, of the Crosley Stations, in Spanish, to the Latin American countries of Central and South America, and in Portuguese to Brazil.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Mr. Henry, president of the American Automobile Association, Mr. Gardner, president of the Cincinnati Automobile Club, Mr. Switalski, general manager of the Cincinnati Automobile Club, members of the Cincinnati Automobile Club, distinguished guests, ladies, and gentlemen, initially I wish to assure the officers and trustees of the Cincinnati Automobile Club of my deep appreciation of their invitation to address you on this, your fortieth anniversary, and to congratulate you upon the acquisition of one of the finest automobile club buildings in all the world. It is certainly one of the most modern automobile club headquarters in the country, and it must be of pleasing satisfaction that you actually own it.

I am happy, indeed, to find myself with you in this palatial hall of mirrors of the Netherland Plaza Hotel in your thriving, teeming, prosperous city of Cincinnati, the gateway to the South; Cincinnati, with its welcoming arms outstretched to the north, east, south, and west, with its doors opened to the Atlantic, to the Pacific, to the Great Lakes, and to our sister republics of the south, welcoming at all times the 250,000,000 inhabitants of the Western Hemisphere. It is truly a city of hospitality.

Secondly, may I thank the Crosley Radio Corporation, through the medium of its two broadcasting stations, for the opportunity to reach at this time the ears of the more than 1,000,000 motorists throughout the length and breadth of this vast continent who are members of the American Automobile Association and the more than 275,000 boys constituting the membership roll of the school safety patrols in the more than 3,500 communities in the United States.

For more than 10 years I have had the honor of serving as one of the vice presidents of the American Automobile Association; and, having traveled extensively by automobile in virtually every country of the world where the modern arteries of civilization are to be found in the form of highways, I particularly can appreciate the tremendous aid and service which has been and is being provided by your organization to the motorists of the world, particularly in the United States and Europe.

It will doubtless be interesting to you to learn that the American Automobile Association was organized in 1902 when there were only 23,000 motor vehicles and less than 150 miles of improved highways in the whole of the United States. And I may say with just pride that its leadership in the field of motoring has unquestionably been a potent factor in the phenomenal growth of motorcar use, by Americans at least. Today passenger-car registrations alone total more than 30,000,000, and today there are more than 1,000,000 miles of improved highways, in comparison with 150 miles of improved highways only 39 years ago.

However, it will perhaps prove more interesting to some of you to learn that the Cincinnati Automobile Club is exactly 1 year older than the American Automobile Association itself. This club, one of the many A. A. A. clubs, was one of the pioneers in the development of the famous Dixie Highway, the Atlantic-Pacific Highway, the Appalachian Highway, and has been active in all good-roads work for exactly 40 years. This club alone now has more than 6,000 school-patrol members in its territory, which includes southern Ohio, northern Kentucky, and southeastern Indiana.

This club's most recent activity has been in the promotion of the Cincinnati-Charleston Highway, which has now been broadened to a military highway. On the Great Lakes to the north of us, and to the south, in the industrial district, and in the eastern seaboard at Charleston, S. C., it will be a supermilitary highway connecting industrial and defense cities with the seaboard; a military highway transporting raw materials to manufacturers, rather than having transportation depending entirely upon railroads, where one act of sabotage might destroy transportation for days or weeks. Such a project is truly an aid to our national-defense program, and I congratulate your club upon its activities in an endeavor to lay this ribbon of concrete which will lead from the southern seaboard at Charleston to Cincinnati and northward to the Great Lakes.

It is concerning national defense and hemispheric defense in connection with highways about which I shall address you tonight.

Several years ago I visited by automobile, boat, and plane the islands of the Pacific—from the Galapagos group off the coast of Ecuador—northward over the Pacific, through the Bering Sea and the Arctic Ocean to Point Barrow, the northernmost point in the Western Hemisphere; then across Canada to Labrador and Newfoundland and southward over the North Atlantic; then through the Caribbean to British Guiana, just north of Brazil. This trip I made with a view to making recommendations as to the welding of a band of steel which would provide us with a perfect defense by the establishment of outposts in the Pacific, the Arctic, the Atlantic, and along both coasts of the northernmost sections of South America. We have in mind the acquisition of islands off the coast of Ecuador. We have fortified our Pacific possessions. We are developing our defenses in Alaska, the Aleutian Islands group, and the Arctic. We have acquired rights to make establishment of bases—outposts—in Newfoundland, the Caribbean, and in British Guiana. We are fortifying against attack upon the Panama Canal from both its Pacific and Atlantic entrances. I am in high hope and believe that the band of steel which for many years I have favored soon will have been welded.

And now, in order to perfect to a large extent national and hemispheric defense, we are actually developing a combination military, commercial, and tourist highway which eventually will lead from Fairbanks in Alaska, where we have but recently established an Army air base, southward across the United States, Mexico, and Central America, traversing the Panama Canal Zone, with a terminus southward at Buenos Aires—the metropolis—and eventually northward to Rio—the most gorgeous city setting upon the earth.

Such a ribbon of concrete—such a course of modern arteries—will clasp the two continents of the Western Hemisphere, thus providing solidarity and hemispheric defense which we all seek during these perilous hours—hours filled with threats and fears of attack, penetration, and aggression.

It is a sad fact that throughout its history, the United States has felt itself infinitely more closely related to the culture, history, and commerce of various European nations than to the republics to the South. Unfortunately, the average North American child can reel off the date of the Norman conquest in England, the salient causes and effects of the French Revolution, but the average North American adult is strangely ignorant, for example, of the causes and effects of the Mexican Revolution, or of the great names of Bolivar, Sam Martin, Sucree, O'Higgins, and other heroes of Central and South America.

Likewise, the people of Latin America have never considered their destinies tied to the strange, rude people of the north, but rather to the decayed grandeur of an ancient em-

pire across the sea, to what the liberator Bolivar was pleased to call "The decadent philosophies" of the Old World.

Well do I remember with much appreciation my beloved but departed colleague, United States Senator Hamilton Lewis, who so ably represented his great Commonwealth of Illinois, and particularly well, when frequently he advised the people of our country to turn their eyes southward, southward where in the Latin American countries there reside a people in numbers approximating the population of the United States. Many times have I visited all the countries of Central and South America and on those many occasions have I observed the opportunities that await the industrialists, the businessmen and the youngsters of our Nation, all of whom may find enviable opportunities for employment, development, and trade in that section of the world.

If I were commissioned to issue a command to my countrymen in this critical hour of world history, it would be "eyes south." Too long now have we in the United States looked too exclusively to countries across the Atlantic. Likewise, if I might venture to issue a command to our sister republics south of the Rio Grande, I should say "Eyes north." Some of them, like our country, have looked too exclusively to European nations. The manifest destiny, welfare, protection, and safety of this hemisphere lies in friendly continental solidarity. The barrier of language, the lack of communication and transportation, have all militated against the understanding and cooperation essential to preserve and advance the political and economic independence of the pan-American nations.

Present disturbing world conditions demand the cementing of American strength to preserve American freedom. One of the most important developments of these conditions in this part of the world is the unanimous acceptance of all countries beyond the Western Hemisphere of the fact that an injury to one is the concern of all, and in speaking of these two continents of our section of the world, I recall to memory that Simon Bolivar, the liberator, was to South America what George Washington was to North America. Unfortunately, Washington is better known in Venezuela today than Bolivar is in the United States. Washington was resting in Mount Vernon before Bolivar's work was done, but the South American had been strengthened by the example of his North American comrade in devotion to independence.

In 1826, George Curtis, the adopted son of Washington, sent Bolivar a gold medallion containing a lock of Washington's hair and bearing a miniature portrait by Stuart. On it in Latin were engraved the words "This portrait of the author of liberty in North America was donated by his adopted son to him who achieved equal glory in South America." A letter from Lafayette accompanying the gift added: "Of all men living, and even of all men in history, Bolivar is the one to whom Washington would have preferred to send this present. What else can I say to the great citizen whom South America has honored with the title of liberator, a title which has been confirmed by two hemispheres, a man endowed with a prestige equal to his disinterest, who carries in his heart only the love of freedom and of the Republic?"

This was the man who blazed new trails 114 years ago, whose vision extended beyond the horizon of immediate independence for his native Venezuela, or even of independence for all Spanish Americans. In 1826 he summoned delegates to meet at Panama for the formation of a Congress made up of all the American Republics, the fulfillment of a glorious dream that had never grown dim through years of struggle and eventual victory. He believed that the future of this continent was wrapped up in the slogan which he proclaimed, "Unity, unity, unity."

Distance was greater in his day than in ours. There were lacking, even more markedly then than now, transportation and communications, and the unity and cooperation he sought to bring about failed of realization during his lifetime. However, transportation facilities by land and water have improved and those by air have been inaugurated, and we of all the Americas, both North and South, would do well to make utilization of Bolivar's slogan: "Unity, unity, unity."

The mutual interdependence of the American Republics and the logical continent-wide desire to establish a second type of union, understanding, and solidarity have been emphasized at pan-American conferences from the one called by Bolivar in 1826 up to that one recently held in Habana, Cuba, in July of 1940.

On April 2, 1889, there opened a conference called by the United States and attended by representatives of all the other American nations. Among the proposals of this congress was one authorizing the construction of a transcontinental railroad which would connect all the nations of the continent. However, the overwhelming development of automobile transportation and the perfecting of new methods of road construction soon made the building of a highway more feasible than a railway. As a result, the sentiments and mutual assurances conveyed in the various pacts and agreements between the American nations are now being practically applied to end the isolation which has made pan-Americanism a purely lyrical idea.

The pan-American highway, as originally planned, begins at Ottawa, in the Dominion of Canada, and finally ends in southern South America, and now the beginning of the latest pan-American highway idea will extend from Fairbanks, in Alaska, southward to Laredo, Tex., where the Ottawa branch will join.

The history of the pan-American highway is one of the engrossing chapters of hemispheric enterprise, and it might be said that after all these years this modern conception was the inspiration of a group of Latin American engineers which met in Washington, D. C., in 1924, and since then it has been the goal of two continents; however, the real history of the pan-American or all-American highway properly begins back in the sixteenth century. At that time all of what is now Central America was known as Guatemala, and the Spaniards, with their capital city in the northern part of the province, decided to construct a highway southward in order to cement their rule over their wild and inaccessible possessions, and with slave labor they built a massive bridge. Today this bridge is still standing and is in good condition. It actually will be traversed by the pan-American highway when it is completed, and cars bearing licenses from Iowa, North Carolina, Ohio, or Maine may shortly be utilizing this bridge built nearly 200 years ago.

Plans for hemispheric defense have given new impetus to this, one of the greatest road projects ever dreamed of by man, which would stretch from the snows of Alaska through the tropical swamps of Central America, over and along the Andes of South America, to the bustling, modern city of Buenos Aires in the Argentine. So with a world aflame, Uncle Sam, looking to his defenses, finds that two of his most valuable outposts—Alaska and the Panama Canal—are on the mainland, but today can be reached only by air or water. Railroading started in this country early in the nineteenth century, while automobiles began their great march toward popularity early in the twenties, but to date neither steel nor macadam reaches to these possessions. Although our own frontiers within the United States have seemed boundless, time and increased population are closing them to the American of pioneering instinct. Yet, to the northwest of us lies one of the most potentially rich, undeveloped territories in the Western Hemisphere—Alaska—still open to our people. Alaska alone covers 590,000 square miles, with all the variations of climate from that of the Temperate Zone to that of Arctic conditions. In many portions the climate equals that of the eastern seaboard of the United States, while, as a matter of fact, Juneau, the capital of Alaska, has milder winters than the Capital of our country, Washington, D. C. So vast is this expanse of Alaskan territory which we purchased for approximately $7,000,000 that it actually covers many more square miles than all of the States east of the Mississippi River. It is in Alaska that this pan-American highway will begin, and will run southward from Fairbanks across British Columbia, over the United States through Mexico, Guatemala, Salvador, Spanish Honduras, Nicaragua, Costa Rica, Panama, the Canal Zone, Colombia, Ecuador, and at Vitor, Peru, where the road branches, one spur proceeding southward to Santiago, the capital of Chile, and across the towering Andes to Buenos Aires, the capital city and the metropolis of the Argentine. The other spur proceeds over the high level to La Paz, Bolivia, and from there to the Bolivian-Argentine border and through the Argentine pampas to Buenos Aires. From there a ferry connects with Montevideo, Uruguay. It is planned to extend the highway northward from Buenos Aires through Paraguay and perhaps in the immediate proximity of Iguassu Falls near the borders of Paraguay and Brazil, and then northeastward to Sao Paulo, the coffee center of the world, and terminating at the beautiful capital city of Rio de Janeiro, which nestles serenely beneath the towering peaks that overlook one of the most gorgeous bays in all the world.

A large portion of this vast stretch of cement, macadam, and sand-clay ways has been completed. There are stretches in Alaska, Mexico, Honduras, Nicaragua, Costa Rica, Panama, and Colombia which remain to be completed, but work today is going forward at an almost satisfactory rate upon most of these stretches with the aid of these respective governments in cooperation with the United States—and, I daresay that ere long one may in comfort by automobile make the trip from the near Arctic Zone across the three Americas to the very tip of the Argentine, and then northward to the road's proposed ultimate terminus at the capital of Brazil.

Last fall while in South America some of you will probably be surprised to learn that one of the longest automobile races ever to take place was run over a part of the Pan American Highway from Buenos Aires across the Andes to Lima, the capital of Peru, a distance of 3,000 miles and return to Buenos Aires, making a total of 6,000 miles. This race was participated in by more than 100 cars, all exclusively of stock type, and it was my privilege to have witnessed from the air a leg of this race when I was flying from La Paz to Salta in the Argentine en route southward.

I have driven over a goodly portion of the Pan American Highway and have flown over all of the rest of the highway. In talking last fall with people in all of the countries of Central and South America traversed by the Pan American Highway I was delighted to find them enthusiastic about its completion. They recognize that the completion of such a mammoth project will bring closer together the 259,000,000 of people of the Western Hemisphere; that it will be productive not only of a tremendous influx of tourists into our sister republic of Mexico, but southward over the lands once ruled by the Aztecs, the Mayans and the Incas. No more colorful country in all the world can be found than is to be seen along this route. No other section in the world possesses a history more interesting than the history of the western world. No other people upon the face of the

earth are more friendly, affable, congenial, than our brothers to the south, our neighbors of Latin America. Even today one may pilot one's car from Caracas, the capital of Venezuela, over a well-done highway to Bogota, the capital of Colombia, and southward to Santiago in Chile, or Buenos Aires in the Argentine, with the exception of a brief strip in Ecuador.

So, finally, soon we may go abroad without the use of a steamer. Soon we may motor to every republic of Central and South America and feast our eyes upon the towering pyramids, the tombs of the ancient Aztecs, the temples as spacious as those of India, the snow-capped peaks as towering as those of the Alps, and there and elsewhere the cathedrals as mammoth and as gorgeous as those of Europe. Then, southward, the towering peaks of the Andes; Lake Titicaca, 12,500 feet above sea level; the colorful Indians of all of these countries; the ancient ruins of western civilization, which some declare to be older than the civilizaion of Egypt; the palatial hotels and the mammoth public edifices of Buenos Aires, with its public underground garage accommodating 1,800 automobiles. And in tropical and mountainous Brazil, a country almost one-third larger than continental United States, where the Portuguese language is spoken by its 50,000,000 inhabitants, from where one may return by car to their respective homes in the United States or to our frontier in Alaska. If these 16,500 miles over which we have traveled almost from the North Pole to the South Pole have wearied us, then we may embark by palatial steamer from Rio with our car northward over the Atlantic through the Caribbean, touching perhaps British, Dutch, and French Guiana, within sight of Devils Island; and, homeward, perhaps for a day's docking at Trinidad, Martinique, the Barbados; and who knows but what we might find it possible to disembark at Santo Domingo and motor across that old Spanish dominion to lovely Haiti; then on the homeward stretch maybe we shall motor from Santiago, Cuba, across the island to Habana, where last year a very important meeting of the Pan American Conference was held; and then to our respective homes in the good old United States of America.

Longevity Bill

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address on the so-called longevity bill delivered by me in connection with the program of the United National Association of Post Office Clerks on Friday, May 2, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

First of all, I wish to pay my compliments to the United National Association of Post Office Clerks, under whose friendly auspices this program is conducted.

I join in this, their radio program, with great happiness and enthusiasm because it touches a subject in which I am deeply and genuinely interested.

To those of you who may be listening this evening and to postal employees wherever you are tonight, I wish to make this as simple and as clear and as unequivocally direct as I know how: I favor, first, last, and always the enactment by Congress of a longevity pay bill for postal employees.

I speak quickly and bluntly about this legislation because it is becoming a subject of increasing public interest. Occasionally, a well-meaning citizen questions rather critically my sponsorship of this legislation. He tells me that the postal clerk or carrier or other employee is in a favored status, both as to salary and security, and that a so-called bonus for him for long and faithful service cannot be justified under the economic conditions of today. Sometimes he may go even further and denounce the proposal as wholly and permanently without justification under any circumstances.

The history of this legislation makes it easy to believe that there are likewise Members of the House and Senate who would subscribe to this philosophy.

Therefore, I am unusually happy tonight to grasp this opportunity to make the case as I see it. It is a stand from which I have no intention of retreating. I believe in the justice of this measure, and I believe in it with all of the sincerity and earnestness of which I am capable.

We are now, I hope, approaching the successful conclusion of a long and often discouraging campaign. I first introduced a longevity pay bill in 1928. That was 13 long years ago. The fight still goes on.

Currently, hearings are being conducted by the House Post Office Committee on the legislation and, later on in this Congress, I intend to request hearings in the Senate. Each is a productive step toward the achievement of an honorable goal.

To get the record straight, the bill proposes that, after 10 years of service, all postal employees shall receive $100 per annum increase, and for every 5-year period thereafter, an additional $100 per annum until 30 years' continual service has been completed. At the present time, post-office clerks and carriers, for example, enter the service at $1,700 per annum and receive annual salary promotions of $100 until the maximum grade of $2,100 is reached. Once they have achieved the $2,100 per year grade, the prospect of further salary promotion is extremely limited

It boils down to the unpleasant truth that, in the vast majority of cases, the average postal employee is in a salary stalemate after he reaches the regular salary grade. Thus, an employee of this Government, in the Postal Service, may be no further advanced, so far as pay is concerned, at the conclusion of 30 years that he was at the conclusion of perhaps 5 or 10 years of service.

Should such a situation obtain, under force of law, in private enterprise, it would precipitate an issue that would rock the country. Of course, there is the very important element of job security involved, and rightly so. But even such security cannot compensate for a wage stagnation, under law, which affords virtually no hope of progress, nor allows any recognition of increased efficiency obtained from years of experience.

The longevity bill would provide a just reward for long, faithful, and efficient service with the Post Office Department. It would recognize that conscientious application to duty merits some material consideration. It would mark the man who has performed long and loyal service with a badge of tangible appreciation—an appreciation counted modestly yet effectively in dollars and cents. It would provide an immeasurable stimulus to morale within the Service. It would generate hope, inspire confidence, and promote good will throughout the ranks of the biggest business on earth. Furthermore, it would cite to other private and public enterprises the crystal-clear truth that the United States Government recognizes and rewards its faithful senior employees.

To be completely practical about the matter, a postal employee's competence increases commensurately with his years of service. It is equally true in almost any other trade or profession which you might name. But in the Postal Service, no matter how highly skilled an employee may become, his grade and his salary are stationary except in a few rare instances when he may, through unusual and fortuitous circumstances, fall heir to a higher assignment.

Supervisory and executive positions are relatively few and the prospects of the average village or city clerk or carrier or other employee to attain such posts are as relatively likely as that of the average employee in a plant becoming one day the president or executive head of the company for which he works. It does happen, of course, but the rank and file, including the highly competent and skilled, remain perforce in the grade which they attained a few short years after they entered the Service.

There has not been a general salary reclassification act since 1925. Sixteen years is a long, long time to wait for adjustments. Who can declare that the postal employees, by and large, have not been tolerant and patient? In my opinion, as a group, they have demonstrated a degree of restraint that has been both rare and commendable. The hour is soon to come, however, when they shall insist on the equity which they deserve.

The Post Office Department, in rendering its opinion on the legislation this month, stated that 147,153 employees would be affected, and pointed to the increased cost that would necessarily be involved.

I have discussed this subject with the Department officials in the past, both publicly and privately, on a friendly basis. I appreciate the anxiety of the Postmaster General, for whom I have the highest regard, to keep to a minimum the expenditures of his Department. In my judgment, it is the most efficiently and economically operated branch of the Federal Government, and I would do nothing to detract from or hamper that superlative record.

I am compelled to question, however, the value or extent of an economy which is effected by a tax on the morale and initiative of a large group of employees. I seriously question whether it actually is money in the pocket of the Department to regiment into a permanent salary rut the great bulk of its employees. A longevity pay act which would provide a modest reward for long and faithful service would, in my opinion, yield infinite dividends both to the personnel and to the Department. Perhaps you may think I deal in sentimentalities while the Department deals with realistic budgetary figures. It may be true to a certain extent, but my years of experience with legislative matters affecting postal employees convinces me that it is both blind and futile to eliminate the human equation in considering the justice and merit of personnel legislation.

Tonight I plead the cause of the longevity bill. My heart is in it. I know that where once the field of support for the measure was scattered and forlorn, today it is strong and united. With the strength that springs from accord and from the knowledge that the cause is sound, we will keep up the good fight.

Fiscal Policy

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

ARTICLE BY FRANK R. KENT

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very fine statement in the Baltimore Sun by Mr. Frank R. Kent on the subject of reducing nondefense spending and establishing a sound fiscal policy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun]

WASHINGTON, May 6.—When a member of the President's Cabinet or any other high Government official makes a public recommendation or proposes a basic change of policy, it is naturally regarded as news. The assumption is that he speaks for the administration. Particularly is this true when he happens to be recognized as on intimate terms with the President or when he speaks just after conferring with him.

Certainly it would seem that the newspapers are justified in construing—and the public in accepting—such statements as significant. But that is so distinctly not the case with Mr. Roosevelt and his administrative aides that the utterances of the latter, while they still make the headlines, are diminishing in importance among those whose job it is to observe and interpret national affairs.

The reason, of course, is that the President does not back them up, and any Government official's recommendation not backed up by the President just falls to the ground. He might better not have made it. Mr. Roosevelt not only does not back up such recommendations after seeming to approve, but on more than one occasion actually has gone in the other direction. This is a strange way to act, but that is how he has acted more than once, as men like Mr. John Hanes and Mr. Lewis Douglas can attest. A striking example has just been presented in the request, which the CONGRESSIONAL RECORD reveals, Mr. Roosevelt has just made of Congress to extend for 2 years his power further to devalue the dollar and to operate a stabilization fund.

It may be recalled that some 5 months ago Mr. Marriner Eccles, head of the Federal Reserve Board, a strong New Dealer and warm friend of the President, publicly urged that these Presidential powers be ended, as a means of lessening the threat of inflation. Mr. Eccles' recommendation was made after he had talked both with the President and Mr. Morgenthau; and it was unanimously endorsed by all the other members of the Reserve Board, by the presidents of the 12 Federal Reserve banks, and all the Board's Advisory Council. Coupling the curtailment of power with insistence upon a reduction in normal governmental expenditures, these officials made an unprecedented request of Congress that seemed to have administration approval.

It was not for some weeks that any sign of disapproval was given, and then it seemed more a lack of enthusiasm than disapproval. Meanwhile, various administration spokesmen represented Mr. Roosevelt as glad to relinquish the power to devalue, and Mr. Eccles was highly praised for his sound suggestions. Now, most unostentatiously, Mr. Roosevelt throws the Federal Reserve Board advice "out the window" and asks Congress to extend his emergency powers over the currency until 1943, in face of the almost unanimous view of the Federal fiscal officials that to give them up would aid greatly the effort to avoid inflation.

No one offers much of an explanation of the President's action. Like many of his others, there is no adequate or easy explanation. In making his request Mr. Roosevelt does not meet the Federal Reserve Board's argument at all. He just ignores it. Such is his control of Congress that probably he will get what he asks, though there is certain to be some protest. That, however, is apt to be overshadowed by the tragic events of a great war, and thus, with slight public notice, the Government will refuse to take a step, urged by its own financial authorities, to guard against a great danger.

This by no means is an isolated instance of the President's refusal to back up his own trusted aides. A short time ago Mr. Morgenthau told the House committee that nearly a billion dollars might—and should—be saved by reducing normal expenses. This was in line with what the President himself had said in January. However, when he wrote his letter to Chairman DOUGHTON of the Ways and Means Committee, urging the new taxes, he neglected not only to back up Mr. Morgenthau but never mentioned the subject of retrenchment. A day or so later the committee indicated its desire for the Morgenthau economy, though the President had not referred to it.

It is a bad state of affairs. Here is the great Federal Reserve Board, appointed by the President, asking him to adopt one course and the President adopting exactly the reverse course. Here, too, are the Secretary of the Treasury and the Ways and Means Committee insisting upon a great cut in normal governmental expenditures, while the President fails to follow through and has, in fact, lent his influence to increasing at least one appropriation 100 percent. With such a complete lack of coordination and coherence, there is danger of the whole fiscal program drifting into chaos. It would be almost in the nature of a miracle if Congress, without Presidential leadership, should do the things essential to stability. But that seems the only hope.

Resolutions of Executive Committee of American Legion

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two resolutions adopted by the National Executive Committee of the American Legion on May 2 last.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Whereas the American Legion in convention assembled at Boston, Mass., September 23–26, 1940, adopted a resolution whereby it urged the Government of the United States to exercise all lawful means to prevent the shipment of raw materials to aggressor nations, and that it continue to extend to all peoples who are resisting aggression the fullest cooperation consistent with our obligations, our security, and our peace; and

Whereas thereafter the Congress of the United States, after full debate and proper deliberation, passed House bill 1776, known as the lend-lease bill, whereby the President of the United States is authorized to extend aid to Great Britain and her Allies in their efforts to preserve to the world the priceless right of freedom; and

Whereas we believe that practical and necessary aid to Great Britain and her Allies requires that war matériel, food, and medical supplies be delivered to them; and

Whereas there is grave danger that vessels carrying such matériel and supplies will be attacked by belligerent nations in violation of international law and in violation of compacts heretofore entered into by such belligerent nations: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion, That we earnestly urge the President of the United States as Commander in Chief of the armed forces of the Nation to employ such units of the United States Navy and auxiliary forces in such manner as in his judgment may be required to insure the safety of American vessels and their crews by guarding them against attack from any source; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States.

Whereas the President of the United States and the Secretaries of State, War, and Navy Departments have publicly stated that totalitarian aggression constitutes an immediate and grave threat to the safety of the United States; and

Whereas under such circumstances action by the people of the United States appropriate to the full extent of this emergency is vital; and

Whereas the people of the United States, not being fully informed of the true facts, do not understand or appreciate the dangers of which the President and his officers speak, nor do they fully comprehend the full extent of this emergency which threatens the safety of the United States and its people, and therefore have in consequence lapsed into a peacetime complacency: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion, That we urgently request the President and his officers to immediately make available to the Congress and to the people of this country a full and complete statement of the facts which constitute immediate danger to this Nation, as they see it, in order that speedy and effective action may be taken for the complete protection of the country and to insure that singleness and unity of purpose among our people which is so necessary to national safety; and be it further

Resolved, That the American Legion pledge its utmost support to whatever plan of action shall be deemed by the President and the Congress to be necessary for the safety of this Nation.

The Place of Mediation

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

ADDRESS BY DR. JOHN R. STEELMAN

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Dr. John R. Steelman, Director of Conciliation, United States Conciliation Service, Department of Labor, before the conference meeting on labor relations of the Chamber of Commerce of the United States on April 30, 1941. The subject of the address is, The Place of Mediation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The mind and heart of American business is advancing steadily toward the realization of progressive labor policies which make for peace in industry. Yankee ingenuity and that strong American characteristic of perseverance have been able to achieve in this country industrial and technological advances not to be found anywhere else in the world. The United States Chamber of Commerce is to be commended for the forward-looking business principles which it has accepted, and the increased steps which are taken day by day toward the realization of such ideals.

It is encouraging to see the leaders of American industry giving an ever larger place to the subject of healthy human relations in the conferences which they conduct and the meetings held under their auspices. It would make me happy to contribute even a little to your meeting on that broad subject today.

Mediation and conciliation are used interchangeably in our country. Some have sought to make definite distinctions between the two words. As far as I know, there is no basis of fact for such a distinction. Conciliation or mediation (whichever you prefer to use) is the process of bringing those who differ to the council table in a series of conferences, either separately or together, so that finally they may iron out their differences and agree to an accepted solution.

Conciliation is the age-long way of bringing harmony in the midst of conflict. It is the simple task of bringing those who differ around the council table. History is filled with the accomplishments of those who have followed this peaceful method of solving problems. Church councils have ironed out disputes in doctrine. King's councils have worked over the major problems of government. Trade associations and labor unions have met to agree among themselves upon those principles for which they are organized and those working procedures by which they carry on. Indeed, without consultation and common agreement there would be no government, no industrial organization, no labor unions, and no orderly way of life. Conciliation is just another word for organized peace.

A meeting of minds is a general basis of on-going civilization. It is necessary in international relationships as within the boundaries of our domestic difficulties. Diplomacy is a channel for the settlement of both international and national problems. In fact, there is no limitation whatsoever which may set on the good work of conciliation. Getting together is necessary in the home, the school, the church, the market place, the labor union, and the chamber of commerce. All of these have a common need—the bringing of people to the task of working and living together without resort to force or coercion.

The purpose of conciliation is to prevent unnecessary conflict and to bring understanding among those who differ. It is not always possible to get people to agree to harmonious action. Frequently it is necessary to urge people to give the time necessary to intelligent discussion of their differences. If more understanding can be established in this way, leading to greater productivity and assured good will, time spent in discussion is time well spent. But if there is no will to peace, no desire for open expression of opinion, and no genuine desire to improve working conditions and work efficiency, discussion in itself will not avail. Argument will never be a substitute for good will.

The arbitrary exercise of governmental power to enforce the transient desires of either labor or management can bring no permanent good. Legislation to outlaw strikes would be as fundamentally unsound as straight jacket legislation for the control of management. Unless the voluntary way of life which has brought such blessings to our country in the past can be continued, we shall have but little better to offer to the world than totalitarian bigotry. On our way to the maintenance of our American liberties we cannot afford to enthrone totalitarian concepts of government in our midst.

A recent article appearing in the Nation's Business carries this important statement:

"Despite the present need for speed, there are two good reasons for not rushing into a regimented economy: First, it is not the best way to win this struggle; compulsion is a weaker force than the enthusiastic efforts of a free people. Second, freedom too easily surrendered may be lost. The force we are combatting is totalitarianism; let us not surrender to it in advance."

Compulsory arbitration has been tried in various places, in foreign lands as well as in some of our own States. The Australian compulsory-arbitration law and the Kansas industrial-court law did not prevent strikes. A law to outlaw strikes can make them illegal; it cannot abolish them. The United States Chamber of Commerce has gone on record against the use of coercive measures for the settlement of strikes. Management and labor unite in favor of voluntary ways of solving these problems in our free land.

Practical necessities bring special problems in connection with mediation work. Every case is different. It is not possible to generalize about all of them or to present a formula which will meet all problems. The time, place, and individual circumstances of each trouble spot in the industrial fabric demands separate and personal consideration. Conciliators must go to their work with open minds. No prejudgment of a situation is possible. The need for care and adaptability is never more evident than in relation to industrial problems.

The conciliator must know human nature. He is called on to deal with it in the rough. A formal call upon the United States Conciliation Service for assistance does not always insure a warm welcome on the part of labor leaders or industrial managers when the conciliator arrives at the scene of the dispute. In only 2 or 3 instances, however, has the service of one of our commissioners been refused during the last 12,000 cases handled. It takes time to establish confidence with leaders on both sides. It requires more than an ordinary amount of tact and patience to bring them to understand the need for an honest facing of the facts relating to their differences. While technical equipment and economic data are necessary for the conciliator they will in no way compensate for practical common sense. The conciliator on the job has to be there with all the skill at his command or he should not be there at all.

The publicity attendant on strikes is always a problem in itself. When the conciliator comes to the seat of industrial trouble, he seeks to work quietly. The detailed work of conciliation which he accomplishes is seldom printed in the newspapers. For the conciliator is as much bound by professional ethics as a doctor, a lawyer, a clergyman, or any other public man could be. The newspapers may carry accounts of the visible manifestations of strikes and lock-outs. The inside story is usually known to a very few people.

Strikes are unusual trouble problems in industry. We have over 184,200 manufacturering establishments, each of which produces over $5,000 in goods each year. Last year less than 2 percent of these firms were involved in any form of work stoppages due to labor trouble. A work stoppage or a strike is news. Unfortunately we do not hear enough of our industries and business establishments which go on year after year with no strikes and no threatened strikes. The great majority of workers and business managers realize the importance of continued production, especially in these days of emergency need. A strike situation is not the ordinary course of business routine in the United States.

However, it will not do to minimize the seriousness of those stoppages which do occur. No one could be more aware than we of the Conciliation Service of the many problems arising from week to week. Not infrequently our work continues from 9 in the morning until almost dawn of the next day. During 1940, the Conciliation Service disposed of 4,665 situations involving over 1,700,000 workers.

In order most effectively to implement the work of the Conciliation Service, the National Defense Mediation Board was created by the Executive order of the President on March 19. This important body of distinguished leaders has at its command the combined conciliation sources of the Nation. It has proceeded to its work promptly and fearlessly and has well justified the faith which the President has placed in it. Emergency needs call for emergency aids and the National Defense Mediation Board is a substantial agency assembled for these emergency days.

The Conciliation Service has worked in close cooperation with the National Defense Mediation Board ever since the Board was created. This has been especially facilitated by the work of a liaison officer with the Board whose uninterrupted experience as a commissioner of conciliation goes back to before the World War. Another close link has come through the work of the conciliators on cases certified to the Board. As soon as the case is certified, the National Defense Mediation Board contacts the commissioner of conciliation on the scene asking him to continue to help the parties seek a settlement until the Board is ready to handle the case. A number of cases certified to the Board have been settled by the conciliator on the job before the National Defense Mediation Board called the company and union officials to meet together. When the case is taken to the Board, the conciliator usually comes to Washington to assist by sharing with the Board the information he has already obtained.

As for certification of cases to the Board, we have carefully instructed the entire staff of the Conciliation Service to give utmost attention to any potential Board case and to earmark, at the earliest possible moment, every situation which may at any time become deserving of such special treatment in the interests of the defense program. So far, 22 cases have been certified to the Board. Of this number, 12 have been settled. In 3 others, stoppages have been terminated and

further investigations are in progress. Six cases are pending.

The National Defense Mediation Board is authorized to seek adjustment and settlement by mediation and voluntary arbitration. The Board like the Conciliation Service has no power of enforcement. It is authorized to investigate issues, conduct hearings, take testimony, make findings of fact, and formulate recommendations for settlement. It can also make public such findings and recommendations whenever in the judgment of the Board the interests of industrial peace so require. The Board in no way implies any form of compulsory arbitration. The basic labor-relations policy of our Government is that agreement be freely arrived at by management and labor. We are still following the voluntary method long established for settling our disputes.

Conciliation and voluntary arbitration as methods used by the United States Conciliation Service go back to 1913 when the Service was established under the Department of Labor. Since that time the Service has been active in approximately 30,000 labor-management situations involving more than 23,000,000 persons.

When the National Defense Advisory Commission was established, the Secretary of Labor designated seven of our most experienced Commissioners of Conciliation to devote full time and energy to employer-employee relations in seven key industries: Steel, shipbuilding, oil, rubber, and chemicals, aviation manufacturing, machine tools, and building construction. Since then additional special commissioners have been designated for these and other vital industries. These men have brought peace to many situations by the wholehearted support of management and labor.

These industries are, of course, only a few of those upon which our defense program depends. All our 110 Commissioners have been instructed to give preference to all defense cases. We have a man on the case in a few hours and he keeps in daily contact with our Washington office. Full information, of course, is promptly relayed to all Government departments and agencies affected.

Throughout our work of the past few years we have observed a growing trend to the use of mediation in the early stages of management-labor differences. Naturally we have done our best to encourage this trend. During 1940, for example, out of more than 1,600 threatened strikes and controversies which were originally brought to our attention, over 90 percent were settled without stoppages of work.

More and more unions have adopted a policy of withholding strike action until the Conciliation Service has been notified of the difficulty and has had a chance to help work out a settlement satisfactory to all concerned. And more and more management representatives are calling on us in the earlier stages of any difficulties which are encountered.

As a further step in avoiding stoppages of operation, management, and labor in drawing up their agreements are increasingly providing that if they themselves are at any time unable to adjust a dispute over interpretation of any part of the contract, the matter shall be submitted to arbitration. As for the choice of an arbitrator, where no individual is specified, it is frequently provided that the Conciliation Service, upon request, shall designate some neutral person. A survey last year of over 1,200 agreements in our files disclosed that 62 percent contained provisions for arbitration.

So much for the inclusion in agreements of provisions for arbitration of any disputed interpretation or application of those agreements. There is another type of arbitration about which considerable misunderstanding exists. This is the arbitration not of the application or meaning of an existing agreement but of what some agreement, as yet unconcluded, shall be.

Mediation is not always effective. Sometimes all the efforts of the best conciliator fall short of developing a satisfactory solution of some aspects of a controversy. In these comparatively rare cases the conciliator will usually encourage the parties to submit to arbitration the point or points on which they cannot come to agreement. He encourages them, in short, to agree to arbitrate.

Arbitration of this type is often quite valuable and deserves the careful consideration of all parties whenever a dispute cannot be settled by other means. There are, however, limitations to its usefulness which cannot be ignored in our efforts for positive, constructive peace in the industrial field.

It has been my own experience and that of the Conciliation Service over many years that a solution reached by the parties themselves is to be preferred to any decision handed down by any outside party, no matter how well-informed and conscientious and impartial that outside party may be.

Many union leaders, without solicitation, have pledged their cooperation and are helping their members sensibly and patriotically to avail themselves of all the facilities of conciliation and arbitration. With this policy, I need hardly add, progressive American managements are cooperating most heartily. I commend to you at this time, that, in your own plants, mills, stores, and offices, you utilize all the facilities of conference and negotiation. In the event that a problem is not resolved by this procedure, we, of course, are at the service of your company and your employees. I suggest only that you call us in during the earlier stages so that, so far as in our power lies, we may help work out a voluntary solution before and not after a stoppage of operations.

Strikes and work stoppages are not alone responsible for delay in production. Defense activities have met with problems all along the line. Lags in production and bottlenecks of distribution have been found in many places. Common sense shows clearly that responsibility for these conditions cannot be measured in terms of any one factor. As we move forward in our national-defense program our achievement will be explained through the cooperation and efficiency of many men and institutions.

There is no end to the problems which we must solve and no way to fix responsibility for success or failure except as every citizen in the land shall accept his full responsibility. All of us should strive earnestly to promote peace in industry. We are challenged to accept the teachings of the world's greatest conciliator who, 2,000 years ago, in the Sermon on the Mount said, "Blessed are the peacemakers." The peacemakers are first of all the management leaders and labor representatives on the ground. Then come the interested citizens of the community and the mediators. It will take us all to do the job that lies ahead.

Defend Our Country

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

EDITORIAL BY T. R. CUTHBERT IN THE LABOR WORLD OF CHATTANOOGA, TENN.

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Labor World of Chattanooga, Tenn., which was printed on May 2, 1941. The editorial was written by T. R. Cuthbert, editor of the Labor World, who states that it is the personal view of the editor and that the expressions contained in same may or may not coincide with labor officially, although he believes it does generally.

This editorial is worthy of the very serious consideration of labor and of those representatives who are especially interested in the advancement of the condition of the workingman. Mr. Cuthbert is a student of international affairs who is willing to face the situation bravely. His suggestions and conclusions contain much logic.

The editorial follows:

[From the Labor World, Chattanooga, Tenn.]

DEFEND OUR COUNTRY

(This editorial is the personal view of the editor, and the expressions herein may or may not concide with labor officially, although we believe that it does, generally.)

For weeks we have been squirming and fidgeting in our editorial chair, so to speak, and as war events are rapidly unfolding, more and more have we felt an "editorial" coming on.

Winston Churchill's speech Sunday finally set it off. His talk should do more than show the United States that England is doing her part to fight the world's battle for free government. It should bring clearer home to us here that we are yet asleep, that Hitler will surely win, despite England's bulldog traits, unless we wake up and get into the fight.

Four years ago we sincerely believed that we were prepared to refuse to go to war under any circumstances. That was before Hitler's amazing success in his vicious war aims, his threat toward all free countries, his overriding of the helpless democracies, and his terrible body blows to the greatest democracy of them all, outside of our Nation.

Today we say to labor and to the world that we must get into this war, regardless of cost or sacrifice. Let England take a licking, and as sure as tomorrow's sun, our time will come to face Hitler alone, in a world of defeated and helpless nations already under his heel. Hitler will not need to fight us militarily then—all he will need to do will be to draw economic strings tight around us—cheap wage Japanese labor, slave French and English, Belgian, Italian, and Scandinavian workers will be forced to produce the world's needs at prices that will close down our own factories, we will be strangled to such a point that we will be eager to die fighting rather than of slow starvation.

If we need to convoy ships right up the Thames River to London, let's do that. If Hitler does not like it, let our guns roar while we can shoot them.

If, possibly better, it takes an outright entrance into the war, let Congress tell Hitler, which includes Japan and Italy, that we are coming over to see them.

All this will cost plenty, the least of which will be increased taxes. Rather pay all our money in taxes, we say, for self-defense than pay half of our earnings to a ruthless dictator.

This is no time for mincing words.

We need airplanes, tanks, armaments, and ships. Many manufacturers are taking advantage of the needs of national defense to force their never-ending battle against organized labor. Labor will never give up its right to organize, and if necessary, strike in defense of the right of free trades-unions.

While we will bitterly oppose the attempts of these bosses to legislate our right to strike out of existence under guise of national need, we say to our people that ourselves, for the duration of the national need, will make every sacrifice to avoid all strikes that in any way touch defense industries.

Sometimes this might mean the temporary ruination of a labor union. It might temporarily allow such bosses the chance to achieve their aims. However, the day of reckoning will come when we have finally licked Hitler, and when we can once again turn our thoughts to our enemies within our home boundaries. We can settle all scores then.

Like it or not, costly as it may be, it will be labor that will lick Hitler. Divide our thoughts now between Hitler in Germany and the little Hitlers at home, and we shall surely see the day when Hitler himself will eliminate both labor and our little American Hitler imitators. He did it in Germany; he has done it everywhere his heel has trod.

Let the labor movement take the lead in practicing patriotism in the hope and confidence that capital and management will follow this lead for a united nation.

This is our spring edition. In springtime thoughts usually turn lightly to love. Today our thoughts turn heavily and grimly toward war in self-defense. Instead of sweetly chirping sprightly love notes, we feel the urge to shout:

"Wake up, America; get out those guns, tanks, planes, and ships. Steel yourselves to pay the price. Do it now or do it never."

Reapportionment in Maryland

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1941

Mr. COLE of Maryland. Mr. Speaker, under leave to extend my remarks, I include two articles recently published in the Baltimore Sun, one by Gerald Griffin. I wish to comment briefly on the situation in Maryland, then insert the articles referred to.

My home State of Maryland, according to the 1940 census, has a total population of 1,821,244, an increase of 189,718 since 1930. The Second Congressional District of Maryland, which I have the honor to represents, accounts for 534,568 of this total, or more than 29 percent of the population of the State. At this time there are more than twice as many people in my district as there are in the First District of Maryland.

During the hearings held by the House Committee on the Census on March 5, 1940, I appeared before the committee and advocated the passage of legislation which would compel the States to meet such a problem as we have in Maryland—and which exists in other States also—properly and equitably, thus wiping out this inequality of population in districts, according to a constitutional procedure. I recognize, of course, the question involved as to the constitutional right of the Government to pass such legislation, but, after a careful study, I am convinced we do have the right in the exercise of our clear and exclusive power to decide who shall be seated as a Member of this House.

For the benefit of those interested possibly I should insert at this point a brief portion of a statement I made March 5, 1940, before the Committee on the Census of the House, which is found on page 73 of said hearings:

Mr. COLE. No; we do not have any Congressman at large from the State of Maryland. The situation, as in many other States, presents a problem in that the legislatures of the States are unwilling to tackle this problem for fear the new set-up will not be as agreeable to them as the one they have.

I represent three counties as well as about one-third of Baltimore City.

I am not advocating that any particular section be taken away from my district or anything be added to it. That is the job of the members of the Maryland Legislature in whom I have real confidence. I am satisfied with what I have or with whatever the legislature wants to do with my district; but I think the Congress should compel the States to meet a problem such as we have in Maryland and in other States properly and equitably, wiping out this inequality of population in districts according to a constitutional procedure.

As well as I know the personnel of this committee, which is composed of gentlemen of real ability, I am satisfied that you will be able to work out something remedial for existing conditions. The difficulty from a legal standpoint of writing into law a solution of the present difficulties, is recognized by all.

In the last Congress one of the bills introduced in connection with apportionment of Representatives in Congress provided that—

"If the population of the largest congressional district in any State entitled to more than one Representative shall be found, under the latest census returns, to exceed the population of the smallest district in the same State by more than 50 percent, then such districting shall be invalid and thereupon all Members of Congress in that State shall be elected at large until new districts conforming to the above requirement shall be established."

After studying the problem to some extent, and reading the law on it, but perhaps not so carefully as you gentlemen of the committee have, I believe the provision I have just read will find support in the courts. I may say in passing that I read considerable of the Madison debates in connection with this matter. I believe it is within the meaning of the Constitution, in connection with our rights in this matter, to provide something such as I have read; and I hope that such language or something similar to it will be incorporated in such measure as you gentlemen see fit to report.

Mr. GOSSETT. Would it be, in your opinion, constitutional for the Congress to mandatorily require of the States that they redistrict?

Mr. COLE. I think so; but we could not enforce it through court action. The House of Representatives, in the exercise of its clear and exclusive rights in deciding who shall be seated as a Member, could enforce such provisions. I believe that you could legally place such a provision in the law, that it would be constitutional, but, as I have said, I do not believe you could enforce it through judicial decree. I cannot think of any way by which you could compel the States to comply, other than to recognize that ultimately the House, and the House alone, would determine the right of one to a seat as a Member.

Mr. GOSSETT. Do you think it advisable for the Congress to attempt to lay down a formula for the States in the matter of redistricting?

Mr. COLE. Yes; in accordance with the suggestion I have made here.

While the question of the constitutionality of such a provision as I've quoted is not wholly free from doubt, I believe it would be warranted by the Constitution. The Constitution, in article I, section 4, provides:

"SEC. 4. The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators."

The Supreme Court, in *Smiley* v. *Holm* ((1932) 285 U. S. 355), discusses the breadth of the power given the States in this matter—"these words embrace authority to provide a complete code for congressional elections" (p. 366). The Court goes on to say:

"This view is confirmed by the second clause of article I, section 4, which provides that 'the Congress may at any time by law make or alter such regulations,' with the single exception stated. The phrase 'such regulation' plainly refers to regulations of the same general character that the legislature of the State is authorized to prescribe with respect to congressional elections. In exercising this power, the Congress may supplement these State regulations or may substitute its own. It may impose additional penalties for the violation of the State laws or provide independent sanctions. It 'has a general supervisory power over the whole subject.' (*Ex parte Siebold*, 100 U. S. 371, 387; *Ex parte Yarbrough*, 110 U. S. 651, 661; *Ex parte Clarke*, 100 U. S. 399; *United States* v. *Mosley*, 238 U. S. 383, 386; *Newberry* v. *United States*, 256 U. S. 232, 255). But this broad authority is conferred by the constitutional provision now under consideration and is exercised by the Congress in making 'such regulations,' that is, regulations of the sort which, if there be no overruling action by the Congress, may be provided by the legislature of the State upon the same subject (pp. 366, 367)."

Certainly the statements quoted would seem to indicate that reasonable requirements imposed by Congress would be supported.

There are legislative precedents for reasonable regulations by Congress, which so far as I know have never been questioned. Thus in every reapportionment act since 1872, except the 1929 act, there have been one or more of the following requirements:

1. If the State failed to redistrict when there is a reduction in number, all Members shall be elected at large.

2. The districts shall be composed of contiguous and compact territory.

3. The districts shall contain "as nearly as practicable an euqal number of inhabitants."

The provision I advocate is no more than a specific statement of a rule similar to the general requirement of containing an equal number of inhabitants. Whether an excess of 50 percent is reasonable or not is a question of judgment. On that question I think everyone would agree that the figure is not unreasonable. Certainly any court will not lightly overturn Congress' judgment as to reasonableness.

Then there comes the question as to how such a statutory provision would be enforced. I don't think there is available any judicial machinery to enforce it. That is, no penal or civil sanction is imposed on the State if it violates. But I do think that the House of Representatives has the power to enforce the provision under the power granted it in article I, section 5, of the Constitution, which provides: "Each House shall be the judge of the elections, returns, and qualifications of its own Members." Such enforcement would then be by the refusal of the House to seat a Member or Members from the State violating the provision. That refusal, I do not believe, would be attacked in the courts, for the power of the House is, I believe, in this regard, absolute. The recent Child Labor Amendment case has indicated the refusal of the Supreme Court to decide so-called political questions and its willingness to decide that a question is a political one. It seems to me that the analogy is apt here, for

the election, returns, and qualifications of Members is a political question of the highest order.

Accordingly, I conclude that Congress has the power to provide this kind of reasonable regulation in connection with the election of Members of the House, and the method of enforcement available is one which is beyond judicial scrutiny.

The public ordinarily shows little concern over the reapportionment in our States and brings little influence to bear in advocating such legislation. Yet it is admittedly a process involving the very foundation of our form of government and is one to which not only Congress should give consideration at an early date but the legislatures of many States, certainly Maryland should do likewise.

I am glad the Baltimore Sun has renewed its interest in this subject. If the same interest is manifested while the legislature is in session and the people of the State are acquainted with the real situation, I am of the opinion that Members of our legislature would be willing to undertake a realinement of the districts of Maryland. For the purpose of preserving this interesting contribution to the subject and giving the Members of the House an opportunity to read them, I insert herewith the two articles of the Baltimore Sun to which I have referred:

[From the Baltimore Sun of March 30, 1941]

KEEPING CONGRESS SMALL DESPITE THE CONSTITUTION

(By Gerald Griffin)

The average Congressman's weakness for creating new Government jobs—and then tucking deserving constituents into them—is an axiom of Washington. Around the Capitol, for example, there are scores of patronage employees: Guards, doorkeepers, clerks, elevator operators, and the like. In the light of this frank interest in jobs, the occasional examples of congressional self-denial stand out like beacons.

One such example, curiously enough, involves the total number of Members of the House of Representatives. For if Congress took the Constitution at its word, it could provide a maximum of 1 Representative to every 30,000 of the Nation's population. On that basis there would be approximately 4,340 Representatives, with several thousand more clerks, doorkeepers, and guards. Instead, there are only 435 Members of the House. This total has been kept since the census of 1910, and has just been reaffirmed for another decade.

But despite this display of abnegation the legislators have had to wrestle with temptation when it has come to deciding how the 435 seats in the House shall be apportioned among the States. This year, moreover, temptation won out in the House, in a struggle between a Democratic seat from Arkansas and a probable Republican seat from Michigan. But it was balked in the Senate when the long debate on the lease-lend bill prevented an apportionment bill from reaching the Senate floor.

By reason of a law enacted in 1929, reapportionment of House seats among the States after a decennial census goes automatically into effect by a stipulated method, after a 60-day period, unless Congress passes a bill providing for some other method or for some new total. That period elapsed early in March, which meant that the so-called automatic reapportionment method will be followed.

The automatic method, however, merely determines how many Representatives shall go to each of the 48 States. It is up to each of the States to determine how its Representatives shall be allocated among the various counties. In States where the congressional representation is changed as a result of population shifts, this problem invariably brings out politics in full flower and provides new examples of ingenious gerrymandering.

Maryland's congressional districts show that problems of this nature can arise even when the number of districts does not change. Maryland has had six Representatives in the House since the apportionment after the 1870 census, its population growth having kept pace with that of the Nation. But its congressional districts have not been changed since 1902, when an equitable allocation was made, so that each Congressman represented almost the same number of constituents. Since then the Second District has grown tremendously, with the result that Representative WILLIAM P. COLE, Jr., now represents more than twice as many Marylanders as does, for example, Representative DAVID J. WARD, of the First (Eastern Shore) District.

ELECTIONS AT LARGE

States which have gained new House Members have sometimes had trouble in deciding how the new district should be laid out. If the State legislature can't make up its mind, for one reason or another, and fails to redistrict the State in such instances, the additional Representative may simply be elected at large. After the 1930 census, Connecticut, Florida, New York, Ohio, Oklahoma, and Texas all gained Representatives and elected them at large in 1932.

Under the method of apportionment which has now become effective for the 1940 census figures, 10 seats in the House will be shifted in the 1942 elections. California gains 3 Members (because of its rapid population gain since 1930), and 1 each is gained by Arizona, Florida, Michigan, New Mexico, North Carolina, Oregon, and Tennessee. These seats will be taken away from Arkansas, Illinois, Indiana, Iowa, Kansas, Massachusetts, Nebraska, Ohio, Oklahoma, and Pennsylvania, which will lose 1 each.

This computation is made by the major-fractions method, which was followed after the 1930 census. Another widely favored method of apportionment is called equal proportions.

It so happened that on the basis of the 1940 figures, use of either the major-fractions or equal-proportions method would have given the same results except for one House seat, affecting two States. Under the equal-proportions method, Arkansas would not have lost a seat, and Michigan would not have gained one.

Since Arkansas is safely Democratic, Michigan is inclined toward the Republican side, and the present majority in the House is Democratic, it was not strange that legislation was introduced providing for use of the equal-proportions method in apportioning House seats this year. And despite earnest arguments from the Republican ranks about the superiority of the major-fractions method (and taunts about changing the rules after the game had started), such legislation was passed by the House. It died in the Senate during the 3-week debate of the lease-lend bill.

It was largely because of this heroic struggle which apportionment induces among legislators that Congress passed the automatic apportionment law. In fact, so painful was the apportionment process after the 1920 census that Congress had simply ducked the issue.

In 1929, when providing for the 1930 census, Congress set up the automatic-apportionment plan. It provided that after the census had been completed the President should transmit to Congress a statement of the apportionment population of each State, together with an apportionment of Representatives to each State according to the existing total membership of the House. The apportionment was to be made according to each of three methods: (1) Method used in the last preceding apportionment; (2) major fractions; and (3) equal proportions. If within 3 months Congress took no action, apportionment became effective by the method used in the last preceding census (in this case, major fractions). The law was amended last year to allow for the change made in Congress' opening dates by the "lame duck" amendment, and the time allowed for congressional deliberation on the subject was reduced to 60 days.

Although the public ordinarily shows little concern over the apportionment battles which have raged in the National Congress and in State legislatures, actually it is a process involving the very foundations of our representative form of government.

[From the Baltimore Sun of April 13, 1941]

MARYLAND INEQUALITY INCREASING

Following a course not so much different from the familiar case of the man who keeps putting off a trip to the dentist, the State of Maryland has been putting off, from year to year, the rather troublesome task of bringing its congressional districts into line with population changes. It has been 41 years since the present districts were laid out, and Maryland is near the foot of the class, among the 48 States, in this respect.

New Hampshire has retained its present district lines for the longest time of all the States—since 1881. But New Hampshire has only two congressional districts, and their population growth has been so uniform that the 1881 apportionment is still fair. This is not the case with the three States which last changed the boundaries of their districts after the 1900 census. They are Arkansas, Illinois, and Maryland. Arkansas now must redistrict, because it is losing a Congressman, but Illinois needs only to drop one of its Representatives elected at large, and Maryland, which keeps its present total of six Congressmen, is under no compulsion to do anything at all about reapportionment.

MARYLAND OUT OF BALANCE

Many Marylanders are hopeful, however, that the State will do something about it; that the Governor and the general assembly will not keep putting the matter off indefinitely. For Maryland, unlike the fortunate New Hampshire, has not grown in such a way that the 1902 apportionment remains equitable. Actually, it is sadly out of line.

The 1940 census figures, giving the total population for each of the six Maryland districts, tell the story concisely. They show that the population difference among the districts, which was marked in 1930, has become even more pronounced:

	1940	1930
Total State population	1,821,244	1,631,526
First district	195,427	193,658
Second district	534,568	461,419
Third district	206,526	203,929
Fourth district	276,856	259,467
Fifth district	288,851	244,519
Sixth district	319,016	268,534

To take the most extreme instances, these figures mean that Congressman DAVID J. WARD, of the First District (the Eastern Shore), now represents 195,427 Marylanders in the House, while Congressman WILLIAM P. COLE, Jr., of the Second District, represents 534,568.

WHERE GAIN WAS GREATEST

More than 29 percent of the State's population thus is located in the Second District, which embraces Howard, Carroll, and Baltimore Counties and part of Baltimore City. During the decade from 1930 to 1940 the Second District accounted for 38 percent of the State's total population increase.

It probably is significant that the three districts showing the largest growth from

1930 to 1940 were all apparently affected by substantially the same influence, the population increases in areas adjacent to large cities. In the Second District it was probably the development of the suburban communities around Baltimore City which was largely responsible for its rapid gains; in the Fifth and Sixth Districts it was primarily the overflow of population from the District of Columbia which caused the sharp gains in Prince Georges and Montgomery Counties.

URBAN AREAS GROW

These figures indicate that the strictly rural sections of the State are becoming increasingly overshadowed, from the population viewpoint, by the urban and suburban areas. To translate these changes into new congressional districts in order to attain a fairly even division among the six Members of Congress, would call now for a reshuffling made to seem all the more drastic because of the 40 years of procrastination.

If the State's districts could be evenly realined, each would have a population of 303,540. Since the counties (including Cecil) now in the first, or Eastern Shore, district total only 195,427, this would mean that approximately 100,000 more people should be put into that district by including Harford and a part of Baltimore Counties.

Representative COLE's big second district would have to be trimmed down, and its present excess of 231,028 above the desired average would have to be apportioned among the others, particularly among the first and third districts. The fourth district, with 276,856, is not far below the projected State average per district. The fifth district is only 14,689 below the average, and the sixth district is 15,476 above it.

COLE ADVOCATES CHANGE

When the State legislature might tackle this job is a question which can be answered best by looking into the records of the various States and finding that few take any action unless impelled to by a change in the number of districts. Representative COLE, who has given a good deal of thought to the subject and who believes that Congress ought to take steps to induce action by the States, summed up the attitude of the State legislators during testimony last year before the House Committee on the Census, Mr. COLE said:

"The situation in Maryland, as in many other States, presents a problem in that the legislatures of the States are unwilling to tackle this problem for fear the new set-up will not be as agreeable to them as the one they now have."

WOULD FORCE ACTION

Mr. COLE endorsed a bill by which Congress would bring pressure to bear upon States which did not act of their own accord. Under such a bill, a district set-up would become invalid when the population of the largest district of the State was found, under the latest census returns, to exceed the population of the smallest district by more than 50 percent. If the districts in which such conditions prevailed were found invalid, then all Members of Congress from the State would be elected at large until new districts were established.

Mr. COLE said he thought such a law would be upheld by the Supreme Court as coming within Congress' powers to regulate the election of its Members. The House could enforce its action, he held, by denying seats to men elected in States which did not comply with the districting rule.

There is some difference of legal opinion, however, as to Congress' authority in this field, since some argue that it encroaches upon the States. It is a point which has been argued back and forth for generations, and no final determination is yet in sight.

St. Lawrence River Development

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

ARTICLE BY C. G. FERRIS

Mr. BROOKS. Mr. President, I submit an article entitled "The Seaway Proposal and the Public Interest," and ask that it be printed in the Appendix of the RECORD.

This article is by Mr. C. G. Ferris, executive vice president of the Illinois Chamber of Commerce, and appeared in its publication for May 1941. He has made a study of the subject and has been familiar with the various efforts that have been made to provide for the construction of the St. Lawrence waterway.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SEAWAY PROPOSAL AND THE PUBLIC INTEREST

Further centralization of manufacturing industry in New York is one of the objectives of the power project in connection with the Great Lakes-St. Lawrence seaway proposal, according to the third in a series of seven reports prepared by the St. Lawrence Survey of the United States Department of Commerce, at the request of the President. The report states that New York now shows only 11.6 percent of the total of the Nation's workers employed in manufacturing industry, while it showed 13.5 percent in 1937. The contemplated development, the report relates, "offers a new lease on life to New York State industry, a source of cheap electricity which should make possible the resumption of manufacturing growth."

Centralization of manufacturing industry in the East may be desirable, from a New York standpoint. In Illinois, and in most other States as well, however, decentralization of industry will be regarded as more advantageous. Certainly, there is no reason that should appeal to the great inland areas of the country why they should bear additional tax burdens to stimulate industrial growth in other sections as a product of public projects which discourage industrial growth closer to them. Yet that is precisely what the Department of Commerce report prophesies will result from the power development proposed, and that is exactly the reason it presents for support of the proposed agreement with Canada by New York interests. It is an equally good reason why representatives of Illinois and other States in the Mississippi Basin should oppose the agreement.

The Department of Commerce report says that a 25 percent or greater reduction in the rates charged industrial users for electric energy in New York should result from completion of the power project, thus reducing average rates below the average in adjoining States. It comments that it is clear "that New York State will suffer an increasing competitive disadvantage," unless cheaper hydroelectric power is developed, adding that "New York State, as a whole, has suffered a definite decline in manufacturing employment in the past 20 years." The St. Lawrence project, it is urged, would reverse that trend. The report, however, says nothing at all about the probable effects of such a development at the expense of the whole country, although the clear implication of its argument is that industrial growth in some of these other sections must have been greater relatively than in New York, during the past 20 years.

What reason is there why Illinois should support policies that have as their objective competitive advantage for New York in industrial competition with Illinois, and other States in the inland areas of the country, as ambitious to increase manufacturing employment locally as is New York, and as greatly entitled as New York to Federal preferment?

Representation that it is a national-defense project is by no means the only subterfuge involved in the proposal. The fact that the project could not, under any circumstances, be completed under 5 years, effectively lays the defense-advantage claims bare as pretense. But the agreement carries with it proposals for abandonment of United States sovereignty over Lake Michigan, without compliance with the clear intent of the Federal Constitution, which are at once more subtle and more sinister.

Presenting the proposal in resolution form now is plainly an attempt to evade the letter and intent of the Federal Constitution, which clothes the United States Senate with definite responsibilities in connection with all such agreements with foreign nations. It is likewise an effort to ignore, and make ineffective, a requirement of the Constitution; to extend executive power, and to contract the powers of the legislative branch of our Government. Approval of such a proposal by a majority of the Senate would constitute abandonment of responsibilities which the Senate has no lawful right to side-step.

C. G. FERRIS.

Involvement in War

EXTENSION OF REMARKS
OF
HON. GERALD P. NYE
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 7 (legislative day of Monday, May 5), 1941

ADDRESS BY CHARLES A. LINDBERGH

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address delivered by Col. Charles A. Lindbergh in New York on Thursday, April 24.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are many viewpoints from which the issues of this war can be argued. Some are primarily idealistic. Some are primarily practical. One should, I believe, strive for a balance of both. But, since the subjects that can be covered in a single address are limited, tonight I shall discuss the war from a viewpoint which is primarily practical. It is not that I believe ideals are unimportant, even among the realities of war; but if a nation is to survive in a hostile world, its ideals must be backed by the hard logic of military practicability. If the outcome of war depended upon ideals alone, this would be a different world than it is today.

I know I will be severely criticized by the interventionists in America when I say we should not enter a war unless we have a reasonable chance of winning. That, they will claim, is far too materialistic a viewpoint. They will advance again the same arguments that were used to persuade France to declare war against Germany in 1939. But I do not believe that our American ideals, and our way of life, will gain through an unsuccessful war. And I know that the United States is not prepared to wage war in Europe successfully at this time. We are no better prepared today than France was when the interventionists in Europe persuaded her to attack the Siegfried line.

I have said before, and I will say again, that I believe it will be a tragedy to the entire world if the British Empire collapses. That is one of the main reasons why I opposed this war before it was declared and why I have constantly advocated a negotiated peace. I did not feel that England and France had a reasonable chance of winning. France has now been defeated; and, despite the propaganda and confusion of recent months, it is now obvious that England is losing the war. I believe this is realized even by the British Government. But they have one last desperate plan remaining. They hope that they may be able to persuade us to send another American Expeditionary Force to Europe, and to share with England militarily, as well as financially, the fiasco of this war.

SAYS ENGLAND MISINFORMS

I do not blame England for this hope, or for asking for our assistance. But we now know that she declared a war under circumstances which led to the defeat of every nation that sided with her from Poland to Greece. We know that in the desperation of war England promised to all those nations armed assistance that she could not send. We know that she misinformed them, as she has misinformed us, concerning her state of preparation, her military strength, and the progress of the war.

In time of war, truth is always replaced by propaganda. I do not believe we should be too quick to criticize the actions of a belligerent nation. There is always the question whether we, ourselves, would do better under similar circumstances. But we in this country have a right to think of the welfare of America first, just as the people in England thought first of their own country when they encouraged the smaller nations of Europe to fight against hopeless odds. When England asks us to enter this war, she is considering her own future and that of her Empire. In making our reply, I believe we should consider the future of the United States and that of the Western Hemisphere.

It is not only our right, but it is our obligation as American citizens, to look at this war objectively and to weigh our chances for success if we should enter it. I have attempted to do this, especially from the standpoint of aviation; and I have been forced to the conclusion that we cannot win this war for England, regardless of how much assistance we extend.

HOLDS WE ARE ILL EQUIPPED

I ask you to look at the map of Europe today and see if you can suggest any way in which we could win this war if we entered it. Suppose we had a large army in America, trained and equipped. Where would we send it to fight? The campaigns of the war show only too clearly how difficult it is to force a landing, or to maintain an army, on a hostile coast.

Suppose we took our Navy from the Pacific and used it to convoy British shipping. That would not win the war for England. It would, at best, permit her to exist under the constant bombing of the German air fleet. Suppose we had an air force that we could send to Europe. Where could it operate? Some of our squadrons might be based in the British Isles, but it is physically impossible to base enough aircraft in the British Isles alone to equal in strength the aircraft that can be based on the continent of Europe.

I have asked these questions on the supposition that we had in existence an Army and an air force large enough and well enough equipped to send to Europe; and that we would dare to remove our Navy from the Pacific. Even on this basis, I do not see how we could invade the continent of Europe successfully as long as all of that continent and most of Asia is under Axis domination. But the fact is that none of these suppositions are correct. We have only a one-ocean Navy. Our Army is still untrained and inadequately equipped for foreign war. Our air force is deplorably lacking in modern fighting planes.

When these facts are cited, the interventionists shout that we are defeatists, that we are undermining the principles of democracy, and that we are giving comfort to Germany by talking about our military weakness. But everything I mention here has been published in our newspapers and in the reports of congressional hearings in Washington. Our military position is well known to the governments of Europe and Asia. Why, then, should it not be brought to the attention of our own people?

SCORES INTERVENTIONISTS

I say it is the interventionists in America as it was in England and in France, who give comfort to the enemy. I say it is they who are undermining the principles of democracy when they demand that we take a course to which more than 80 percent of our citizens are opposed. I charge them with being the real defeatists, for their policy has led to the defeat of every country that followed their advice since this war began. There is no better way to give comfort to an enemy than to divide the people of a nation over the issue of foreign war. There is no shorter road to defeat than by entering a war with inadequate preparation. Every nation that has adopted the interventionist policy of depending on someone else for its own defense has met with nothing but defeat and failure.

When history is written, the responsibility for the downfall of the democracies of Europe will rest squarely upon the shoulders of the interventionists who led their nations into war uninformed and unprepared. With their shouts of defeatism, and their disdain of reality, they have already sent countless thousands of young men to death in Europe. From the campaign of Poland to that of Greece, their prophesies have been false and their policies have failed. Yet these are the people who are calling us defeatists in America today. And they have led this country, too, to the verge of war.

There are many such interventionists in America, but there are more people among us of a different type. That is why you and I are assembled here tonight. There is a policy open to this Nation that will lead to success—a policy that leaves us free to follow our own way of life and to develop our own civilization. It is not a new and untried idea. It was advocated by Washington. It was incorporated in the Monroe Doctrine. Under its guidance the United States became the greatest Nation in the world.

It is based upon the belief that the security of a nation lies in the strength and character of its own people. It recommends the maintenance of armed forces sufficient to defend this hemisphere from attack by any combination of foreign powers. It demands faith in an independent American destiny. This is the policy of the America First Committee today. It is a policy not of isolation, but of independence; not of defeat, but of courage. It is a policy that led this Nation to success during the most trying years of our history, and it is a policy that will lead us to success again.

We have weakened ourselves for many months, and, still worse, we have divided our own people by this dabbling in Europe's wars. While we should have been concentrating on American defense we have been forced to argue over foreign quarrels. We must turn our eyes and our faith back to our own country before it is too late. And when we do this a different vista opens before us. Practically every difficulty we would face in invading Europe becomes an asset to us in defending America. Our enemy, and not we, would then have the problem of transporting millions of troops across the ocean and landing them on a hostile shore. They, and not we, would have to furnish the convoys to transport guns and trucks and munitions and fuel across 3,000 miles of water. Our battleships and submarines would then be fighting close to their home bases. We would then do the bombing from the air and the torpedoing at sea. And if any part of an enemy convoy should ever pass our Navy and our air force, they would still be faced with the guns of our Coast Artillery and behind them the divisions of our Army.

DENIES UNITED STATES COULD BE INVADED

The United States is better situated from a military standpoint than any other nation in the world. Even in our present condition of unpreparedness no foreign power is in a position to invade us today. If we concentrate on our own defenses and build the strength that this Nation should maintain, no foreign army will ever attempt to land on American shores.

War is not inevitable for this country. Such a claim is defeatism in the true sense. No one can make us fight abroad unless we ourselves are willing to do so. No one will attempt to fight us here if we arm ourselves as a great nation should be armed. Over a hundred million people in this Nation are opposed to entering the war. If the principles of democracy mean anything at all, that is reason enough for us to stay out. If we are forced into a war against the wishes of an overwhelming majority of our people, we will have proved democracy such a failure at home that there will be little use fighting for it abroad.

The time has come when those of us who believe in an independent American destiny must band together and organize for strength. We have been led toward war by a minority of our people. This minority has power. It has influence. It has a loud voice. But it does not represent the American people. During the last several years I have traveled over this country from one end to the other. I have talked to many hundreds of men and women, and I have letters from tens of thousands more, who feel the same way as you and I.

SAYS MAJORITY LACKS POWER

Most of these people have no influence or power. Most of them have no means of expressing their convictions, except by their vote which has always been against this war. They are the citizens who have had to work too hard at their daily jobs to organize political meetings. Hitherto, they have relied upon their vote to express their feelings; but now they find that it is hardly remembered except in the oratory of a political campaign. These people, the majority of hard-working American citizens, are with us. They are the true strength of our country. And they are beginning to realize, as you and I, that there are times when we must sacrifice our normal interests in life in order to insure the safety and the welfare of our Nation.

Such a time has come. Such a crisis is here. That is why the America First Committee has been formed—to give voice to the people who have no newspaper, or newsreel, or radio station at their command; to the people who must do the paying, and the fighting, and the dying if this country enters the war.

Whether or not we do enter the war rests upon the shoulders of you in this audience; upon us here on this platform; upon meetings of this kind that are being held by

Americans in every section of the United States today. It depends upon the action we take and the courage we show at this time. If you believe in an independent destiny for America, if you believe that this country should not enter the war in Europe, we ask you to join the America First Committee in its stand. We ask you to share our faith in the ability of this Nation to defend itself, to develop its own civilization, and to contribute to the progress of mankind in a more constructive and intelligent way than has yet been found by the warring nations of Europe. We need your support, and we need it now. The time to act is here.

Convoys Mean War

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

RADIO ADDRESS OF HON. MARTIN L. SWEENEY, OF OHIO

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I made over the red network of the National Broadcasting Co., Tuesday night, May 6:

Ladies and gentlemen, the most important question before the people of the United States is whether or not we shall use patrols and convoys to insure delivery of war supplies to Great Britain, which were made available through the lend-lease-give-away bill recently passed by Congress.

The advocates of all aid to Britain short of war told us that the cash-and-carry amendment to our neutrality law, the peacetime conscription law, and the lend-lease-give-away law, together with the $7,000,000,000 implementing the same were all steps to guarantee peace by keeping America out of the war, and keeping war out of America. These same groups are now demanding convoys, and some are openly demanding war.

At a recent press conference, when questioned on the subject, President Roosevelt said, "Convoys mean shooting, and shooting means war."

If that statement reflects the state of mind of the President, and we keep in mind his pre-election promises that no American boys would fight on foreign battlefields, then the country has the right to breathe freely, confident the President will keep his sacred word; that he will not directly or indirectly advocate the use of convoys. He has the power to direct the use of convoys, but he has not the right to utilize convoys in war zones.

There are signs on the horizon indicating we are about to use convoys and patrols. Witness the refusal last week of the Foreign Relations Committee of the United States Senate even to consider debating the resolutions of Senators TOBEY and NYE prohibiting the use of convoys. By this action the people are denied through their Representatives the discussion of this important question. We recall the statements of Secretary Knox, Department of the Navy, and Secretary Hull, Department of State, on the use of convoys, and the statement of the chairman of the Naval Affairs Committee of the House, who, only yesterday, came out unqualifiedly for the use of convoys.

This will give you an idea how close we are to war involvement. By every rule of international law the Axis Powers have the right, and they have so declared, to torpedo our ships if used as convoys. Should the U. S. S. *Alabama*, or the U. S. S. *Tennessee* be torpedoed and sunk while acting as convoys we would have another "remember the Maine" incident on our hands, and war would be inevitable.

Current newspaper advertisements by certain merchants in the United States and Canada now read: For sale, a comprehensive stock of British clothing and furnishings. They give thanks to the Royal Navy for insuring delivery of these goods to this continent, proving conclusively that Britain is now engaged in convoying her commerce to our shores. That being so, why does not Britain use her Royal Navy to convoy war supplies in the other direction instead of making demands for the use of our naval convoys, and the use of our ships to carry the supplies the taxpayers of America have so generously placed at her disposal.

Under date of April 4, 1941, in reply to an inquiry, I received a letter from Admiral E. S. Land, chairman of the United States Maritime Commission, informing that as of December 1, 1940, Great Britain had operating in the Pacific Ocean areas and in Central and South American waters 2,662 oceangoing steam and motor vessels of 2,000 gross tons and over with an aggregate gross tonnage of 16,828,009 gross tons. It is not reported that any of this tonnage has been sunk since that date. When it was suggested to the British marine minister that some of these ships be diverted to the Atlantic lanes he said, "It would not be done because Britain would not give up 1 inch of her trade, and that business would go on as usual."

In the light of these facts, don't you think the British have a colossal gall to appeal to us for ships when they have the greatest merchant marine in the world? Admiral Land and the members of his Commission are doing a fine job in building up our American merchant marine. The British should not be permitted to weaken their efforts.

Dr. Giselher Wirsing in his latest book, The 100 Families That Rule the Empire, discloses that this group who control the munitions industry, shipping, steel, and practically all of Britain's industrial wealth have control over 415 out of the 600 seats in the British Parliament, 181 members of the Parliament are managing directors or directors in 700 of the leading banks, industrial enterprises, shipping companies, and overseas trading concerns. Dr. Wirsing takes most of his data from the book England's Money Lords, written by an Englishman, Samuel Haxey.

Since the visit of the King and Queen to Washington in June 1939, every conceivable agency has been employed once more to command our blood and our treasure to save the Empire. The press, the motion-picture screen, the radio, stage, and the pulpit all compete in outdoing each other in placing the wreath of democracy on the imperialistic crown of the world's greatest Empire.

Ask the 400,000,000 people of India, the people of Ireland, the natives of South Africa, our friends in Trinidad, and the inhabitants of the vast territories and colonies held in subjection by the British Government about democracy. Ask the relatives and friends of the Jews who are periodically slaughtered by Arabs in Palestine what they think of the British justice and British democracy.

In a recent publication, Propaganda for War, by H. C. Peterson, the best factual book on propaganda in existence, you will find this important statement on page 4:

"The British campaign to induce the United States to come to their assistance affected every phase of American life. It was propaganda in its broadest meaning. News, money, and political pressure each played its part not only in London, New York, and Washington, but also in American classrooms, pulpits, and factories, purposely created so that it would not be impossible for this country to remain neutral."

When Lord Northcliffe visited this country he remarked of Americans: "They dress alike; they talk alike; they think alike—what sheep."

This was back in 1917. Can you not see the same uncanny parallel in propagandizing us into this World War. Then they called the Kaiser the "Beast of Berlin," and America was to be invaded by the terrible Huns. Now it is Hitler, and the invasion threat is once more with us. The Kaiser leads the "life of Riley" at his country estate in Holland. On occasions his blood relatives, the present King and Queen of England, together with the dukes and earls, all members of the Hohenzollern clan, send him greetings on his birthday; and British journalists who called him a beast 25 years ago continue to write and publish his memoirs. It is not beyond our imagination to ask our British cousins, What paperhanger are you grooming to fight 25 years from now in the third World War?

The international bankers created Hitler. If this is a war, as some of us believe it to be, for the control of world trade and the world's gold, we should insist they leave Uncle Sam out of it. Poor old Uncle Sam is "punch drunk" from the assaults of British propaganda administered to him. I predict should any attempt be made to send his sons into the battlefields of Europe, you will see a revitalized Uncle Sam on his feet fighting with determination that it will not happen.

No longer should we fall for the propaganda that because we speak a common language, Britain and the United States should form an alliance and invade together. Some of us recall, not so long ago, when we asked John Bull to make a payment on the war debt he shrugged his shoulders and with fine British cunning said, "Me no speak English."

Are we going to allow the British twice in a quarter of a century to draw us into the blood business of Europe? In an effort to protect their far-flung Empire are they going to be allowed to use the American-born sons of the Poles, the Greeks, the Hungarians, the Irish, the Germans, the Italians, the French, the Belgians, the Czechoslovakians, and the Yugoslavians, and other bloods, whose parents and grandparents emigrated from Europe and found asylum in this country in escaping the poverty and militarism of that war-torn continent?

Is it not evident of a totalitarian trend when we as a democracy engage in peacetime conscription, in censorship of press, fingerprinting, wire tapping, black-outs, labor baiting, and name calling—all in the interest of national unity? The creation of an American Gestapo forecloses our right to criticize the dictators of Europe who long ago threw into the discard the civil liberties of their people.

Our frontiers are not, as has been said, the chalk cliffs of Dover, or the Burma Road in China. Our frontiers are the "Tobacco Roads" of America; the roads of poverty, disease, and unemployment; the roads of slums, child labor, farm foreclosures, and illiteracy. Last Sunday's New York Times carried a story that out of 400,000 men who registered for peacetime conscription in the State of Georgia 45,000 could not write and had to sign their names with an X. These conditions along "Tobacco Road" are a greater threat to our democracy than the British-made dictators 3,000 miles away from our shores.

It is fashionable in many circles for some people to knit, sew, and furnish bundles for Britain. With few exceptions, I wonder how many of these society women ever wrapped a bundle of food and clothing, ever knit a sweater or stocking for the sharecroppers of America, or for the W. P. A. workers and their families, or for those who stood shivering in bread lines not so long ago in every city throughout this Nation? To essay the role of a Good Samaritan is one of the corporeal works of mercy. If food reaches hun-

gry stomachs and naked bodies are clothed anywhere in the world, we say "Amen." Yet there is another Christian doctrine that says charity begins at home. We still have one-third of our people ill-fed, ill-clothed, and ill-housed.

It is argued that since we have appropriated the $7,000,000,000 for war supplies for Great Britain we cannot permit these supplies to be sunk in the Atlantic Ocean. Our answer should be that of a colleague of mine in the House who responded to the same argument the other day by replying:

"I would rather see the entire $7,000,000,000 of war supplies sunk in the bottom of the Atlantic Ocean than to see even one of our fine American boys go down to watery graves."

Do any of you honestly feel that a country that believes in the divine right of kings can be a democracy? Don't you recall the words of Winston Churchill a few years ago when he said, "If I were an Italian, I would be a Fascist"? Don't you remember Churchill's broadcast to the Italian people a few months ago, when he told them to get rid of their leader, Mussolini, but never condemned the Fascist state? England, if the opportunity comes, will make a peace with the Axis Powers and leave the United States holding the bag. Yes, I predict England would even accept the Fascist state. Fascism tolerates the divine right of kings. Witness the preservation of the house of Savoy in Italy. The British love pageantry and royalty. Fascism would suit them admirably.

Those who will shed their blood and pay the cost of the war should be consulted before a decision is made. Our sympathies tonight are with the poor people of England and Germany and the other war-stricken countries of Europe and Asia. They did not start this war, and the poor people of the United States do not want war. They want no part of it. Threadneedle Street in London, with its 100 families that rule the Empire, and Wall Street of New York, with its economic royalists, want war, but Main Street, representative of the great majority of American people, do not want involvement in any foreign war.

It is my opinion that the time has arrived for all the churches who believe in the Prince of Peace, for all labor organizations, all farm organizations, the veterans of the first World War, and every American worthy of the name who thinks in terms of America first to express their disapproval of the final step toward war involvement.

Please write to the President of the United States—No convoys. Tell him that you remember the horror of the last World War and that you are determined there will be no new crop of Gold Star Mothers in America, and that one American unknown soldier is more than enough for this generation to mourn.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

STATEMENT PREPARED BY HON. BERNARD J. GEHRMANN, OF WISCONSIN, IN COOPERATION WITH THE OFFICE OF A. A. BERLE, JR.

Mr. GEHRMANN. Mr. Speaker, my colleague from St. Louis, in a statement before this body on April 25, intimated that the present proposed agreement between Canada and this country for construction of the Great Lakes-St. Lawrence seaway would mean the surrender of the sovereignty of Lake Michigan.

I conferred with Mr. A. A. Berle, Jr., Assistant Secretary of State, and through the cooperation of his office have prepared the following brief which entirely refutes the statement made by the gentleman from Missouri. My contentions are supported by the legal adviser of the Department and the Attorney General. Mr. Berle was one of three plenipotentiaries who signed the agreement on behalf of this Nation and his sources of information are unimpeachable.

The statement follows:

STATEMENT IN REPLY TO REPRESENTATIVE PLOESER'S REMARKS, APRIL 25, 1941

In his opening remarks the Representative from Missouri states that it will take so long to construct the project that the war will be over before it is completed. This argument was answered by the President when he said in his address to the Great Lakes Seaway and Power Conference at Detroit on December 5, 1940:

"Opponents of the project have pointed out that it takes 4 years to build this seaway. They know, but fail to mention, that it takes at least that long to build a battleship. They also know that this project will cost the United States less than three battleships, and that the power project will be entirely self-liquidating.

"* * * Only one who can say that we do not need the battleships that we are now building will dare to say that we do not need the essential Great Lakes-St. Lawrence seaway."

The argument that the United States surrendered sovereignty over Lake Michigan because of failure to include a special provision covering this matter in the agreement is clearly without merit. Canada has never questioned the sovereignty of this country over Lake Michigan, and there is no reason to believe that it intends to do so. To include a provision intended to prevent any claim to sovereignty on the part of Canada over Lake Michigan implies a fear on our part that such a contingency might arise, and fear generally implies a corresponding weakness. Such an attitude is tinged with childishness.

Furthermore he refers to the treaty of 1910, by which he presumably means the boundary-waters treaty which was signed January 11, 1909, and ratified by the President on April 1, 1910, and states that Elihu Root, at that time Secretary of State, "refused to have anything in the treaty about Lake Michigan. He said that he would not permit Lake Michigan to be mentioned in the treaty."

As a matter of fact, article I of this treaty provides:

"The high contracting parties agree that the navigation of all navigable boundary waters shall forever continue free and open for the purposes of commerce to the inhabitants and to the ships, vessels, and boats of both countries equally, subject, however, to any laws and regulations of either country within its own territory not inconsistent with such privilege of free navigation and applying equally and without discrimination to the inhabitants, ships, vessels, and boats of both countries.

"It is further agreed that so long as this treaty shall remain in force this same right of navigation shall extend to the waters of Lake Michigan and to all canals connecting boundary waters."

If Canada should take a similar attitude regarding sovereignty over its territory, it might well include Georgian Bay, which lies wholly within Canadian territory and the Canadian section of the St. Lawrence River, both of which are mentioned in the agreement without any qualifications as to sovereignty.

To say that by including Lake Michigan as a part of the Great Lakes system "the right of this country to complete sovereignty" over the lake has been challenged is rather absurd, since Lake Michigan is a part of the Great Lakes system by act of God, and no act of any mundane authority can change that fact.

His statement that "it is extremely doubtful whether the Supreme Court could be induced to authorize a diversion of water from Lake Michigan in excess of the amount provided in the proposed treaty" is answered by the fact that the United States Supreme Court ordered a temporary increase in the diversion last December and that arguments were heard this week on the report of the master appointed to inquire into the application made by the State of Illinois for a permanent increase and the exceptions thereto by the interested States.

The statement that the agreement changes the terms and provisions of a number of treaties at present in effect is not entirely correct. The agreement specifically provides in article VII that certain rights of navigation accorded under the terms of existing treaties shall be maintained.

Mr. Speaker, with respect to the question of the legal effect of providing for international cooperation in the development of the St. Lawrence project by means of an agreement instead of a treaty, I would like to quote from a memorandum prepared by the Legal Adviser of the State Department and a letter from the Attorney General of the United States on the subject.

FORMAL OPINIONS BY LEGAL AUTHORITIES IN THE UNITED STATES

(Memorandum by the Legal Adviser of the State Department, Washington, March 13, 1941)

AGREEMENT BETWEEN THE UNITED STATES AND CANADA FOR THE UTILIZATION OF THE WATERS OF THE GREAT LAKES-ST. LAWRENCE BASIN

For several years the United States and Canada have had under consideration the feasibility of a joint undertaking for the improvement of the Great Lakes-St. Lawrence Basin so as to make these waters available to seagoing vessels, the development of hydroelectric power, etc. The Legal Adviser of the Department of State, in a memorandum dated February 10, 1939, expressed the opinion that an arrangement between the United States and Canada concerning the project could be effected by a simple agreement between the two countries and approval of the agreement by legislation in the United States and in Canada. The negotiations have progressed to the point where an agreement is about ready to be signed, but before proceeding to signature it is thought desirable to ascertain whether the Attorney General concurs in the view that the purposes may be accomplished in this fashion.

It is not necessary here to enter into a discussion of the treaty-making power or of the power of the President to enter into executive agreements with foreign countries. It is sufficient to say that a very large number of such agreements on various subjects have been entered into from time to time throughout the history of this country. Some of them have been specifically authorized by acts of Congress; others, though not specifically authorized, have been within the framework of acts of Congress; and still others have been concluded without enabling legislation on the subject.

Following the failure of the Senate to approve a treaty for the annexation of Texas, the annexation was accomplished by a joint resolution approved on March 1, 1845 (5 Stat. 797), after passage by a simple majority vote

of the two Houses of Congress. Likewise, in the case of Hawaii, a treaty of annexation had been signed on June 16, 1897, and approved by the Hawaiian Legislature but there was not sufficient support in the United States Senate to obtain approval by a two-thirds vote. Thereafter Congress passed a joint resolution to accomplish the same purpose which was approved July 7, 1898 (30 Stat. 750).

Of interest in this connection is action by Congress with respect to the construction of bridges across the international boundary—United States and Canada, subject to similar authorization by Canada. For example, Public Resolution No. 117, Seventy-fifth Congress, third session, created the Niagara Falls Bridge Commission and authorized it to construct and operate bridges across the Niagara River, subject to "the approval of the proper authorities in the Dominion of Canada."

On November 11, 1927, President Coolidge issued a Presidential license to the Detroit-Ontario Subway, Inc., authorizing the company to construct, operate, and maintain a tunnel from a point in or near Brush or Randolph Street in the city of Detroit to a point on the international boundary line under the Detroit River. It is understood that corresponding authorization was given on the part of Canada by an order in council.

The improvement of the Great Lake-St. Lawrence Basin for navigation and other purposes would seem clearly to fall within the commerce clause of the Constitution, giving the Congress the authority to regulate interstate and foreign commerce. Where the undertaking with respect to interstate and foreign commerce involves boundary waters over which this country does not have exclusive jurisdiction, there would seem to be no reason why the Congress should not within its constitutional power enact legislation, contingent upon a like legislative enactment in the other country, signifying its approval of a joint undertaking signed by both Governments. The signing of an agreement by the two Governments would be but a convenient way of bringing about in advance of legislative enactments a joint understanding by the two Governments on a complicated question which could hardly be handled without such advance understanding. The agreement would contain provisions which might otherwise be incorporated in a treaty, but would not take the treaty form or follow the treaty process. It would not constitute a binding international agreement until Congress and the Canadian Parliament had indicated their approval.

LETTER FROM THE ATTORNEY GENERAL OF THE UNITED STATES TO THE SECRETARY OF STATE OF THE UNITED STATES, MARCH 14, 1941

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., March 14, 1941.

The Honorable the SECRETARY OF STATE.

MY DEAR MR. SECRETARY: I have your letter of March 13 and concur in the conclusion reached by your legal adviser that it is legally unobjectionable, so far as this country is concerned, for the executives of the United States and Canada to enter into an agreement regarding the Great Lakes-St. Lawrence deep waterway project, conditioned for its effectiveness upon the subsequent enactment of necessary legislation by the Congress and by the Canadian Parliament.

If an agreement is executed and approved in this manner, its provisions would be binding upon the United States as respects Canada.

Respectfully,

ROBERT H. JACKSON,
Attorney General.

Another Appeaser

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include an editorial from the Chicago Tribune:

[From the Chicago Tribune]

ANOTHER APPEASER

The citizens who support the America First Committee have heard something of Vallandigham, the northern traitor in the Civil War.

The White House secretariat dug him up out of the copperhead history of the United States for Mr. Roosevelt's use in angry comment upon Colonel Lindbergh.

Mr. Roosevelt also spoke of appeasers who wanted Washington to quit in the War of Independence. His secretariat did not supply him with names. The America First Committee can give him one. It should go on the letterheads of the Union Now organization.

When Benedict Arnold conspired to surrender the defenses of his country to the British his self-justification was that it would be better for the countrymen to remain in colonial subjection to the British Crown and Parliament.

Defense Savings

EXTENSION OF REMARKS
OF
HON. WILLIAM L. NELSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

ADDRESS BY GALE F. JOHNSTON, FIELD DIRECTOR, DEFENSE SAVINGS STAFF, TREASURY DEPARTMENT

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address as delivered by Mr. Gale F. Johnston, Field Director, Defense Savings Staff, Treasury Department, before annual meeting of Missouri Chapter, National Chapter of Postmasters of the United States, on May 1, in Kansas City, Mo.:

Postmaster General Walker, President Nivert, ladies, and gentlemen, it is a privilege to be present at this important gathering and to hear the many fine messages of such a galaxy of distinguished Americans.

The privilege of appearing before you is doubly appreciated. The great program of the Treasury Department gives one that encouragement which is needed for real Americanism. In addition, it is a great privilege to be with this group which is representative of the finest ideals of American government.

The United States Postal Department commands the respect of the world, and particularly of every citizen of this country. The efficiency with which you operate, the great quality of your service to Americans, and the fine relationship that you have with individuals comprising the American public make the privilege a most important one.

As a further evidence of great devotion to this Nation's welfare, the Postal Department will now play the most important role in the national defense savings program. It is through your good offices that the American public will purchase securities. Through your personnel the American man and woman will find a liaison with the United States Treasury. It is difficult to conceive this program without the aid of the Postal Department.

An institution is but a reflection of an individual or a group of individuals. It may be said that a large measure of any success which the defense-savings program will enjoy must, of necessity, reflect the shadow of the many individuals comprising the Postal Department of this country.

The defense-savings-bond program is not a drive; it is an American crusade. It is an important part of a heroic battle for democracy and national safety.

Your Government must have vast sums of money. To meet the present cost of the defense program, the Congress has authorized the expenditure of nearly $40,000,000,000 over the next 3 or 4 years. Secretary of the Treasury Morgenthau has suggested to the Congress that two-thirds of the total cost of defense may be raised by taxation and one-third by borrowing.

The United States Treasury has perfected what we believe to be a workable program of defense financing that gives every man, woman, and child in the Nation the opportunity of a partnership share in the destiny of his country.

During our last war we had Liberty and Victory bond drives. Quotas were set, time limits fixed, and high pressure was used to raise huge sums of money. Afterward there was a bad taste in the mouths of a great many people. This we want to avoid in this year of our Lord 1941.

The present financial program will, therefore, be different. We do not plan to have quotas or time limits. Instead, we are aiming to encourage long-range habits of thrift and saving among the rank and file of the American people. We hope and believe that vast sums of money, far in excess of previous records, will become available to the Government for its defense program, and we plan that the bulk of this money will not come from the resources of great financial institutions but from the savings of American citizens in every town and village of this great land of ours.

The national-defense program has brought to the American worker better employment and more money in his pay envelope. Since his cost of living has not increased in proportion, this means that he has a greater margin over and above his necessary expenses. What is he going to do with this excess? He will either spend as he earns or put something away for the rainy day. If he spends, this additional purchasing power at a time when the production of defense materials is cutting down the production of consumer goods will tend to produce a demand far in excess of the available supply of such goods, which, of course, is bound to increase the cost of living. This should be avoided if pos-

sible, or we may find ourselves in one of those upward spirals which are highly unpleasant at the time and which have a long drop and a painful impact at the end.

If the worker is encouraged to save a portion of his income, he is entitled to have his savings safeguarded, and that is exactly what the defense savings-bond program offers him.

This plan was not initiated as a mere dollar-raising scheme. The Secretary of the Treasury has other more convenient and less expensive methods of financing. But the defense of America depends not on money alone but rather on the morale of its people. Defense saving is a philosophy of thrift designed to encourage participation in governmental financing and make each bondholder an active partner in preserving our American way of life.

The savings-bond program is simple. Everyone can have a part—from boys and girls in school who have a few pennies to financiers with thousands of dollars to invest. There is room for every American in this all-out thrift movement.

That all may have a part in this program, the Secretary of the Treasury has authorized the sale of postal savings stamps in denominations ranging from 10 cents to $5. When stamps in the amount of $18.75 have been purchased they may be converted into a $25 savings bond.

Systematic saving will finance national defense and provide an income cushion for our citizens when economic readjustments are made after this emergency is met.

To familiarize our people with the plans and advantages of this defense program each State, county, city, and village will be organized to inform and encourage every citizen to serve his country by saving his money. The Treasury is not launching a sales campaign; neither will it permit coercion of any kind. The purchase of these securities will evidence the free will of a free people.

We face an emergency. It is not a State problem, it is not a regional question, and it is not a party polic . It is a national emergency, and every American is concerned.

Why Aid Saboteurs?

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

ADDRESS BY THE ATTORNEY GENERAL

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent speech of the Attorney General of the United States, delivered before the American Judicature Society today, on the timely subject of "wire tapping," among other issues.

It raises the pertinent question: Why saboteurs and other public enemies should be protected from detection in their use of our communications systems?

The address follows:

Europe has resumed its ancient strife, and other peoples of the world are obliged to give considerations of defense and security first place in their thoughts. Our philosophy of government makes the law by which the physical forces of the Nation are controlled quite as definitely a part of our defense program as the mobilization of the force itself. We lawyers are again holding spring meetings under the auspices of our several legal societies to consider the state of our law. But we do not feel easy about it because we are finding it really difficult in the present condition of the world to give first consideration to our normal programs, to restatements of the law, to revisions of our court procedures, and to general advancement of the peacetime administration of justice. My association with your own and with related societies interested in the betterment of the administration of justice dates from long before I entered public office and makes the officeholder's customary profession of sympathy with your usual purposes superfluous. I can get right down to what is troubling me.

If we should put first things first, the legal profession would turn its highly competent and disinterested legal staffs to resolving the almost unbelievable conflicts, confusions, and obscurities in the mass of law that governs our defense activities. I do not suggest that the organized legal profession could or should project itself into the complex and controversial questions of policy that are inherent in many of the legal questions presented to us now. But, apart from any differences over policy, much of our statute law, supplemented by judicial construction in some instances, is technically deficient to meet present-day demands.

It is almost impossible for the legal staffs of the Government departments involved, pressed as they are by the routines of their work and immersed as they must be in daily perplexities, to give either the time or the detached thought necessary to the coordination and modernization of the many laws and interpretations of laws relating to defense activities.

There is some further disadvantage that attends our efforts in this direction due to the fact that we inevitably are regarded as proponents of a policy and advocates of an administration, but I venture to say that no more vital effort could be made than to name appropriate representatives of the legal profession and set them upon the task of considering what we may denominate broadly as defense law and its improvement.

Perhaps the greatest single difficulty arises from the changed custom of states as to the method of initiating a war. Our statutes for a century have been framed with the idea that war would begin with a gentlemanly and honorable declaration of war. That chivalrous practice has disappeared. Wars today are fought and won before they are declared. Any nation that in the presence of rising hostility and strain with another awaits a declaration of war to assert itself is as naive as a citizen who expects a burglar to make a formal call to announce his housebreaking intentions.

It is safe to say that under modern methods of warfare the most critical period for a nation under attack is the period preceding the actual employment of military force. It is then that forces are set in motion that will expedite or impede the military effort and which will either strengthen or rot out a nation's morale. In country after country, from Czechoslovakia to Greece, we have seen this pattern of a premilitary and nonmilitary invasion, an invasion of business, finance, labor unions, public opinion, and political organizations, all accomplished with the liberal use of expert personnel operating entirely under the protection of the laws of the land being invaded. The secret weapon of the Nazis has been the failure of nation after nation to recognize and deal with this nonmilitary invasion.

Our statute law has in many respects failed to take into account this nonmilitary period of attack. A good many of the Government's abilities to deal with its defense still await the existence of a formal state of war. For example, the nation's power to deal with certain disloyal aliens as "enemy aliens" has been considered to await some formal recognition of a state of actual belligerency. Yet we would be blind to the experience of a modern war if we did not recognize that actual activity by foreign agents who are realistically, if not legalistically, enemy aliens does not depend upon any declaration of war.

It may be said generally that most measures of internal defense can be successfully carried out only before the excitement and hysteria and bustle of necessary preparations strike a nation.

We are fully aware in the Department of Justice that we are under the duty to anticipate and prepare for the worst of eventualities, although we may hope and pray for deliverance from them. As the Department whose ties are so close to the legal profession that the functioning of our Department as a whole may be fairly said to depend in large measure upon the confidence and good will of the profession, it will be of advantage if I tell you frankly some of the things that are troubling us as to the measures that could be taken wisely to discharge this high responsibility. I recognize that the ultimate success of our work and judgment upon it will depend upon the good opinion of those who are more detached than we who are in the heat of the thing can possibly be. You will quickly and rightly condemn us for any neglect of the public interest. You will also quickly and rightly condemn us for any disregard of the rights of individuals to differ with the Government and to take measures which are considered to be within the range of their civil liberties, even though they result in some degree of nullification of the Government's efforts. In fact, our fate will probably be that a portion of public sentiment will do both.

It is no news to you that it is difficult to serve two masters. Yet the Department of Justice must labor under dual responsibilities. The public rightly expects its law officers to protect what the old indictment forms call "the peace and dignity" of the Commonwealth. On the other hand, the most unimpeachable authority commands us to protect and respect the rights of individuals to do many of the very things that may be steps in the process of undermining the stability of the Commonwealth.

It is inevitable that in the presence of threats to our national prestige and integrity our people will demand increased emphasis on the rights of the Commonwealth. These public pressures for priority to security of the State over the liberty of the individual arouse slumbering conflicts in which emotion, temperament, and experience often divide us more bitterly than the logic of either position would warrant. The task of keeping the confidence of public opinion which shapes today's events and at the same time of steering a course that will be approved by the sober second thought of the Nation is not easy.

It will help us to appraise these difficulties if we appreciate that our own principles and techniques for guarding our freedoms are by no means universally accepted among free peoples. In fact, our own system is the exception rather than the rule. The peculiar rigidity and uncompromising character of our American procedures is in sharp contrast with the procedures of Great Britain as they have been detailed for us by an eminent friend of civil liberty, Mr. Harold Laski.

The British solution of this dilemma between public safety and private liberty may be shortly stated as a combination of large official powers coupled with moderation in their exercise. The absence of a written Constitution leaves the Government as a whole in possession of all powers which any organized society may possess. Out of its ample power Parliament confers in times of emergency correspondingly broad powers upon England's executive officials. English civil liberties thus depend for their survival not upon legal

limitations so much as upon a high sense of responsibility, a temperament of moderation, and a tradition of nonpartisan and nonpolitical action on the part of legislators and executives, and by judges as well. Britain, to save liberty, relies on limitations bred into the blood and bone of Englishmen and fostered by their culture more than it relies on parchment freedoms.

A recent article by Harold Laski points out that "the Government has powers little short of absolute over the lives and property of its citizens" in Great Britain. For example, a regulation permits prosecution of persons charged with creating alarm and despondency. I think you will agree that a proposal to give any American prosecuting officer such a power would be met with screams of opposition. However, the British Government has apparently made moderate use of the power, prosecuting only about 105 cases. A dozen of them were dismissed. Of those convicted, only 20 were sentenced to imprisonment, varying from 1 day to 3 months, while the remainder were either bound over or fined.

Under a regulation granting power to suppress processions and public meetings, only three meetings have been prohibited in the whole country. The widest sort of criticism of the Government has been tolerated, even from Communists. Yet where national safety was endangered two Communist newspapers were suppressed, pursuant to a control of the press that would not be allowed in this country.

Perhaps the most drastic regulation is one which gives the Home Secretary the power to detain persons whose conduct and views make it seem likely that they may be guilty of action prejudicial to the safety of the realm. Under this power about 1,000 persons are detained. Some others have been arrested and later released. A power so unlimited and so vaguely defined, available against both citizen and alien, is unheard of in America.

Whatever the merits or defects of this British policy, the conferring of such broad powers upon a public official leaves little room for an alibi if he does not protect the safety of the state. On the other hand, the existence among his constituents of a vigorous and wholesome respect for civil liberties and for decent treatment of the individual leaves him under a sense of responsibility which goes a long way to prevent abuses of that power. While Mr. Laski does not acquit the police of instances of stupidity and harshness and while he admits that one of two magistrates in alarm and despondency cases have played the fool on the bench, he asserts that more than that the record does not permit anyone seriously to claim. Making allowance for the pressure which the imminence of invasion would seem bound to produce, we still must regard England as a citadel of civil liberty. And who will say that England is "soft"?

Broadly stated, our American method of protecting our liberties is the exact opposite of the British. By constitutional limitation we impose upon all government, including the Congress, the courts, and the Executive, numerous and inflexible limitations. Our Government does not have the full powers of most organized societies, partly because some such powers are reserved to the States, but also because many powers commonly exercised in Europe are withheld or forbidden entirely. Our devotion to the philosophy of limitation of power is so ingrained that the Congress and our legislatures adopt it as their policy and make very limited concessions of power to executive officers. The American assumption is that officers will abuse whatever powers they have. Too frequently the expectation is realized. Every period of our national history which has felt great stress and tension from abroad has left a trail in the administration of justice that we do not retrace with pride.

However, I want to put it to you squarely whether the excesses in the administration of justice and in investigative techniques which have prevailed during times of public excitement, and which our profession has rightly condemned as reprehensible, do not bear a distinct relationship to the very narrowness of the powers which are granted to our officials. I have found that the greatest pressures to overstep the bounds of lawful law enforcement arise in situations in which existing legal procedures permit no action at all looking toward the protection of society. Confession of inability to use the law for ends that are generally held desirable gives rise to a search for means outside the law or to a vigilante movement among the populace. It is certainly an open question whether a liberty to abuse liberty does not generate a danger to liberty itself. My confidence in the perpetuity of civil liberty in Great Britain is due in no small degree to the knowledge that the law officers will be able to prevent such abuses of those liberties as would give rise to their impairment.

On the other hand, the greatest danger that I can see to American civil liberties lies in the fact that they are so rigid. The English officials responsible, by prompt and moderate actions, tend both to satisfy the public that abuses will not be allowed to reach the magnitude of a public menace and also to exert a restraining hand on the abusers. In America up to the present moment we have found no technique by which the outright abuse of these privileges is preventable, even when abused in the interests of a foreign government.

To the future of the liberties we have known it is of utmost importance that our laws be made as effective as possible within constitutional and proper policy limitations. Lack of adaptability of antiquated statutes to present world conditions should be remedied. Deficiencies in the discretion to judges and to administrative officers should be remedied. Conflicts and confusion should be eliminated by restatement of our statutes. Let me suggest a few things that are happening that I think could be partially or fully remedied by adequate application of legal craftsmanship. The continued existence of these conditions is in my judgment as menacing to liberty as to safety.

We have over 6,000 deportable aliens, against whom proceedings have been completed and deportation orders are outstanding. But, because of transportation breakdown or because of refusal of their native countries to accept their return, they are still here. They are not only here, they are free. They include some bad criminals and a considerable number of Communists proven to have advocated overthrow of our Government by force and violence. But we can cite to the courts no statute to authorize us to do anything whatever with them when deportation fails. Hence, they are turned loose in habeas corpus proceedings and resume their evil ways in our society.

We have proposed remedial legislation. It is of great importance to the whole subject I am discussing. It needs the criticism where we are wrong and the help when we are right, of the organized lawyers.

Another example: We arrest foreign agents for doing acts detrimental to the country. The Constitution commands bail. A little bail is fixed, put up by the help of their Governments, and they walk out of the courtroom and return to their jobs of producing discord in America. We must find means to a more prompt and emphatic way of enforcing our own law. It is peculiarly a problem for lawyers.

We have today definite knowledge that the sabotage of ships in our ports was ordered by simultaneous telegrams sent to all ships' masters. They tell us that themselves. Yet the law officers of the United States cannot intercept those messages and use them as evidence in our courts. The wires of America today are a protected communication system for the enemies of America. Here, again, we have proposed legislation, carefully limited legislation, to give us an equal chance on the wires with saboteurs. Again I say—if we are wrong, we need your criticism; and if right, we need your help.

The whole field of combating alien-directed and financed propaganda against the policy of our Government is one of infinite legal difficulty, as you know. I do not think we are completely and constitutionally helpless, but we are sharply circumscribed. May we not compel propagandists to identify their stuff as we compel newspapers to disclose their ownership. Must we not only allow foreign attacks on our policy but also carry it for them in our mails? These are problems not easy of solution, they hit close to things fundamental in our life Their solution is no job for amateurs.

And let me say to you that the enemies of America are not idle. They show up at congressional hearings to oppose every move to strengthen our law enforcement; they show up in court astutely to raise every legal difficulty to prevent convictions and to obstruct obtaining evidence; they propagandize endlessly against investigative officials and agencies, against prosecution policies, against law enforcement itself. The force and prestige of the organized bar is needed to vindicate the competence of the law itself to deal with the burdens that the times put upon it.

I want to take this occasion to acknowledge free and generous cooperation from leading members of the bar whom without compensation, are assisting us in the discharge of duties—such, for example, as that of giving fair, impartial, and sympathetic hearings to conscientious objectors in the separate judicial districts of the Nation.

I frequently have offers of services from my public-spirited fellows of the bar who want to offer their services, and I know that in professional organizations there is no lack of public-spirited men who would be glad to give their service if they could be mobilized.

I venture to suggest that nothing could be more helpful today than the organization under the auspices of some of our legal societies of a high-minded and disinterested group to canvass and appraise suggestions for putting our legal defenses in order. I say to you in all frankness that Government lawyers are in a better position to tell you the problems than they are to work out the solutions. The pressure, the want of time, the burden of routine, and the commitment to departmental policy, prevent us from giving this sort of thing the quality of service it needs. You could bring to that task a quality of legal experience, of practical knowledge, and of public confidence in your disinterestedness which could be of inestimable benefit. I venture to suggest that the restatement and modernization of laws relating to defense in the light of modern emergency is as timely as any work in which the organized legal profession may engage.

If I could, in one sentence, state an appeal to my brethren at the bar, it would be this: "For the sake of your profession, your liberties, and your country, mobilize the great intellectual resources of your various societies in a master effort to put the law of national defense in order."

Foreign Policy—Three Schools of Thought

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. SHANLEY. Mr. Speaker, neutrality and international law have been relegated to the limbo of forgotten doctrines in the past months. Seemingly the stage has been turned over to extremists in the persons of the so-called interventionists and the equally so-called isolationists. Apparently between the widening brackets which enclose these two schools of thought there is no other haven or sanctuary for the man who sincerely has followed the historic traditions and hopes of this Republic.

Such a forgotten group includes those who know from their study of the diplomacy of our Nation that real historic and classical neutrality has never gotten a fair chance in these United States in recent years. It virtually died still-born in the incipient days of the first World War and its entrance into our thoughts since September 4, 1939, has been as little noticed by the scholars of its history as it was in the first World War.

For the purposes of the record I am inserting a classification of the various schools of thought in neutrality, pseudo-neutrality, and the outright school of interventionists who believe that there is no place for neutrality in modern thought.

I have also added a few fundamental beliefs of international law as set out by Charles Franklin Phillips and J. V. Garland in their book, The American Neutrality Problem:

On the eve of the last World War, many rules for the conduct of international relations were regarded as well established and the United States operated on the theory that they would be obeyed by all belligerents.

Among those rules were the following principles, which have vital meaning today:

1. A belligerent may lawfully blockade the ports of an enemy and stop all ships bound to or from those ports. To be lawful a blockade had to be effective—that is, enforced by belligerent warships stationed near the ports of the enemy blockaded. The ships of neutrals that tried to run the blockade and were caught could be seized without violating any neutral rights.

2. Neutral ships carrying war goods (contraband) to any belligerent could be seized without violating any neutral rights.

3. Neutral merchant ships carrying only goods of peace (noncontraband) could be searched but they could not be seized, or attacked by any belligerent on the high seas unless they resisted.

4. No merchant ships of neutrals or belligerents could be sunk for any reason without warning and without providing for the safety of crews and passengers.

These were among the great rights which the Government of the United States had often asserted under international law. Most other governments had recognized them as binding. But after the last World War broke out, the warring powers on both sides violated most of these long-accepted rules of international law.

Owing to the submarine menance, Great Britain could not make her blockade of German ports effective by stationing warships in nearby waters. So Great Britain declared a paper blockade, planted mines in the waters near the German ports, and seized neutral ships bound to German ports.

On her part, Germany resorted to measures equally contrary to old rules of international law. German submarines sank the merchant ships of the enemy and of neutrals, without warning and without making any provisions for saving the lives of crews and passengers. Germany sent spies and wreckers into American factories to stir up trouble and destroy lives and property.

THREE SCHOOLS OF THOUGHT

During the past 6 years of the neutrality seesaw, three schools have fought to control United States peace policy: (1) The sanctionist school, led by former Secretary of State Stimson, aims to keep the United States out of war by penalizing aggressor nations which start wars, depriving them but not their victims of access to United States resources and credits; (2) the isolationist school, headed by some 40 Senators, argues that it is not the business of the United States to act as judge of international morals—let the United States keep out of war by having nothing to do with any nation that gets involved in war; (3) the school of the "historic neutrals" believes in standing pat on the pre-1914 international law which gives a neutral nation certain rights in the matter of trading with belligerents.

Sanctionists: All through the Italian-Ethiopian fight Colonel Stimson and his fellow sanctionists—among them President Nicholas Murray Butler, of Columbia University; Prof. James T. Shotwell, of the Carnegie Peace Foundation; Bishop William T. Manning—lived in hope that the League of Nations would invoke effective economic penalties against Italy. In November 1935 the League imposed sanctions (on arms, credit, raw materials) but omitted oil, asserting that no oil embargo would prove effective that did not include the United States. Any latent United States desire to do something drastic about joining in oil sanctions evaporated when Britain's Sir Samuel Hoare and France's Premier Laval made a tentative agreement in 1935 to let Mussolini get away with part of his Ethiopian swag. League sanctions did Italy no serious harm; were just strong enough to unite hitherto lukewarm Italians behind their dictator.

Isolationists: All the major neutrality-law battles since 1933 have been won by the isolationists.

Classicists: The school of classical neutrals has few famed adherents in Congress; but when the present neutrality bill was before the House 68 Representatives were in favor of outright repeal and a return to historical neutrality. Chief public advocate is the venerable John Bassett Moore, famed authority on international law. He is seconded by Prof. Edwin Borchard, of the Yale Law School, coauthor with William Lage of Neutrality for the United States.

The Moore-Borchard school does not believe in fighting other folks' wars and do not believe in trade embargoes. They point to Thomas Jefferson's Embargo Act of 1807, which drove the merchants and shipowners of New England to threaten secession.

National Defense and Negro Americans

EXTENSION OF REMARKS

OF

HON. THOMAS H. ELIOT

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

STATEMENT BY THE COMMITTEE ON NEGRO AMERICANS IN DEFENSE INDUSTRIES

Mr. ELIOT of Massachusetts. Mr. Speaker, a very fine committee of outstanding citizens has come forward with a demand that in our defense program there shall be no discrimination against members of the colored race.

There has been experience in industry in the past and right now showing that colored men can do skilled jobs just as well as white men, but despite that fact, there are today many companies which refuse to hire Negro workers for skilled jobs.

There are millions of Negro Americans. They are good citizens. As a nation, we must see to it that they are not oppressed and suppressed. The country needs the work that they can do.

The statement of the Committee on Negro Americans in Defense Industries and the members of the committee are as follows:

NATIONAL DEFENSE AND NEGRO AMERICANS

(Statement of Committee on Negro Americans in Defense Industries)

Justice for Negro Americans in the program for national defense is a searching test of American democracy. Our concern for democracy in Europe or elsewhere lacks reality and sincerity if our plans and policies disregard the rights of minorities in our own country. The guaranty of such right is established by our historic national charters of freedom and constitutional government as applicable to all our people without regard to race, color, or creed.

It seems especially important to observe these in letter and spirit in our national industrial defense program in a year when we have voted with overwhelming public support to make our country a great arsenal for the democracies and when we celebrate the sesquicentennial of the ratification of the Bill of Rights. We can urge this with the more assurance because there are notable cases, both North and South, where Negro mechanics and artisans have been long employed in certain industries and projects with satisfaction to all concerned.

Negro Americans favor all suitable tests of fitness for any given job, but naturally and rightly oppose those based merely on race. Evidences are increasing of the exclusion of their skilled workers from certain defense industries and of the frequent refusal to admit qualified Negro students into training and apprenticeship programs. Among the many illustrations of such discrimination are the following:

That some corporations of national importance receiving large Government contracts have shown themselves unwilling to employ

skilled Negro workers or have taken on so few as scarcely to affect the general situation.

That in spite of a few creditable exceptions, companies manufacturing aircraft, automobiles, and gasoline motors are among those where such conditions prevail.

That, despite the excellent record of colored men in shipbuilding during the last World War and the encouraging experience in some navy yards and private shipbuilding plants today, there are companies with defense shipping contracts which either restrict Negro workers other than common laborers to semiskilled jobs or refuse their employment altogether.

That some of the leading industrial plants in different parts of the country do not approve the training of Negroes in defense classes even when these are financed by the Federal Government.

That there are cities in widely separated States where Negroes are scarcely receiving any opportunities to obtain the special training needed to supplement the existing group of skilled mechanics. The fact that they are not being employed in certain industries except as common laborers is used as a basis for restriction in training opportunities for them, while lack of such training will probably be used to justify failure to employ more Negroes.

No thinking person can fail to realize the loss to the cause of national defense through such conditions involving the Negro tenth of our population, and their harmful effect upon the character and attitudes of Negro Americans who are eager to give concrete expression to their patriotism. Frustration, destruction of morale, and the opening of the doors for subversive agitators opposed to the American way of life will be almost inevitable consequences.

The extent of these discriminations, their basic causes, the relative degree of responsibility for them of management, labor, and the public and the best way of meeting them deserve prompt, thorough, and impartial investigation.

Insofar as ignorance and race prejudice are responsible for determining our attitude toward any American citizen in the present emergency, to that degree do we uproot the moral bases of our American civilization and make way for the totalitarian scheme of life. Dictatorship aims to dominate the world by force, and to condemn certain racial groups permanently to subservient and inferior status. If we oppose Axis doctrines we must, to be consistent, oppose all race prejudice at home.

Nor is it a question of the injury to the Negro alone; it is also a question of the harm done to the Nation's unity and morale and its reputation abroad by an unjust attitude toward any group in our population. There has been some progress in recent years, but if race prejudice is given a new foothold under existing world conditions it is bound to spread and poison the entire body politic.

The country's immediate needs demand the cooperation of all willing, loyal, and competent workers. Similar cooperation will be needed in the work of reconstruction. Those, therefore, who raise unjust barriers at this critical period are responsible for obstructing the national defense and welfare.

This is no time for Americans to compromise with race prejudice and its attendant discriminations in industrial defense programs, whether public or private. It is destructive of those basic essentials of civilization—political, economic, cultural, educational, religious—which the ages have built upon the concept of the dignity and destiny of the human person. We maintain, therefore, that the time has come for the lasting repudiation of race prejudice as an influence in determining the policies of the Nation. The brotherhood of man—based on the fatherhood of God—is no mere adornment of a democratic society. It is accepted by religious and patriotic groups as fundamental. It should involve an impartial and inflexible justice practiced and experienced by all.

We commend this statement to the thoughtful consideration of the American people, and more particularly of leaders in government, industry, labor, and the organs of public opinion.

SIGNERS OF STATEMENT ON AMERICAN NEGRO IN DEFENSE INDUSTRIES

Carl Ackerman, dean, School of Journalism, Columbia University, New York City.

Barry Bingham, proprietor, Louisville Courier-Journal, Louisville, Ky.

Algernon Blair, contractor, Montgomery, Ala.

Rev. William Adams Brown, chairman, American Section, Universal Christian Council, New York City.

John Stewart Bryan, publisher, Richmond News-Leader, Richmond, Va.; president of William and Mary College.

James Byrne, New York City.

James B. Carey, secretary, Congress of Industrial Organizations, Washington, D. C.

Elmer A. Carter, member, Unemployment Insurance Appeal Board, Department of Labor, New York.

Harry Woodburn Chase, chancelor, New York University, New York City.

Rev. Henry Sloane Coffin, chairman, Interfaith Committee for Aid to the Democracies, and president, Union Theological Seminary, New York City.

James McDonald Comer, president, Avondale Mills, Birmingham, Ala.

Howard Coonley, manufacturer, chairman of the Walworth Co., New York City.

Jackson Davis, president, New York State Colonization Society, New York City and Richmond, Va.

Stephen P. Duggan, director, Institute of International Education, New York City.

Edwin R. Embree, president, Rosenwald Foundation, Chicago, Ill.

Marshall Field, director, Marshall Field Co., chairman, United States Committee for the Care of European Children, New York City.

Lloyd K. Garrison, dean, law school, University of Wisconsin, Madison, Wis.; former Chairman of the National Labor Relations Board.

Mrs. Charles W. Gilkey, former president, national convention, Y. W. C. A., Chicago.

John M. Glenn, ex-director, Russell Sage Foundation, New York City.

Bishop John A. Gregg, cochairman, department of race relations, Federal Council of Churches, Kansas City, Kans.

Frank P. Graham, president of University of North Carolina, Chapel Hill, N. C.

N. Penrose Hallowell, chairman, board of directors, Lee Higginson Corporation, Boston.

James G. Hanes, chairman, Hanes Hosiery Mills Co., Winston-Salem, N. C.

Harold P. Herman, former chairman, Governor Lehman's committee on urban Negro, Valley Stream, Long Island, N. Y.

Robert L. Hoguet, president, Emigrant Industrial Savings Bank, New York City.

Edward L. Israel, chairman, Social Justice Commission of Central Conference of American Rabbis, Baltimore, Md.

Stephen S. Jackson, justice, domestic relations court, New York City.

Mordecai Johnson, president, Howard University, Washington, D. C.

M. Ashby Jones, honorary chairman, Interracial Commission, Atlanta, Ga.

Paul U. Kellogg, editor, the Survey Graphic, New York City.

Father John LaFarge, associate editor, America, New York City.

F. H. LaGuardia, mayor of New York City.

Morris Lazaron, rabbi of Baltimore Hebrew Congregation, Baltimore, Md.

Herbert H. Lehman, Governor of New York, Albany, N. Y.

Father Raymond McGowan, assistant director, social action development, National Catholic Welfare Conference, Washington, D. C.

Malcolm MacLean, president, Hampton Institute, Hampton, Va.

Spencer Miller, Jr., director, Workers' Education Bureau of America, New York City.

Newbold Morris, president, City Council, New York City.

Harold G. Moulton, president, Brookings Institution, Washington, D. C.

Howard W. Odum, director, Institute for Research in Social Science, University of North Carolina, Chapel Hill, N. C.

F. D. Patterson, president, Tuskegee Institute, Tuskegee, Ala.

Charles Poletti, Lieutenant Governor of New York State, Albany, N. Y.

Homer P. Rainey, president, University of Texas, and former director American Youth Commission, Austin, Tex.

A. Philip Randolph, international president, Brotherhood of Sleeping Car Porters, New York City.

Lessing Rosenwald, former chairman, Sears, Roebuck & Co., Jenkintown, Pa., and Chicago.

Msgr. John A. Ryan, director, social action department, National Catholic Welfare Conference, Washington, D. C.

Dean Sage, president, board of trustees, Atlanta University, Atlanta, Ga.; residence, New York City.

J. Henry Scattergood, Philadelphia, Pa., president, board of trustees, Hampton Institute.

William Jay Schieffelin, president, Citizens Union of New York City and trustees of Hampton Institute.

Charles Seymour, president, Yale University, New Haven, Conn.

Harper Sibley, former president, United States Chamber of Commerce, Rochester, N. Y., and Templeton, Calif.

C. C. Spaulding, president, North Carolina Mutual Life Insurance Co., Durham, N. C.

Anson Phelps Stokes, president, Phelps-Stokes Fund, New York City.

Morton S. Webster, member of Stern, Lauer Co., brokers, New York City.

Luther Weigle, president, Federal Council of Churches of Christ and dean of Yale Divinity School, New Haven, Conn.

William Allen White, editor, Emporia Gazette, Emporia, Kan.

Matthew Woll, New York City.

L. Hollingsworth Wood, chairman, executive board, National Urban League, New York City.

Mary E. Woolley, Westport, N. Y.; ex-president, Mount Holyoke College.

Arthur D. Wright, president, Southern Education Foundation, Washington, D. C.

Canada and the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

ARTICLE BY HON. C. H. CAHAN, K. C.

Mr. BEITER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the first of a series of three articles by the Honorable C. H. Cahan, K. C., which have been published in the Montreal Gazette, and which concern the joint development of the St. Lawrence.

In recent press articles and literature distributed in this country by proponents of the St. Lawrence seaway, directly and by inference the American public is being told that the Canadian people favor the construction of this waterway. Fair-minded Americans who have studied both sides of the question realize that such is not at all the case.

The people of Canada are not unmindful of the real reason for the acceptance of this scheme by their governmental officials, who seem willing to go any lengths to secure the cooperation and support of this country in aid to Great Britain. Some Canadian leaders, however, have dared to warn against this unnecessary expenditure. Among them is the Honorable Charles H. Cahan, K. C., former Secretary of State of Canada. Mr. Cahan has served his Government since 1896. In 1930 in Berlin he represented the Canadian Government in effecting the settlement of accounts arising out of the first World War with the German Government. He was also a delegate at several conferences of the League of Nations in Geneva. In December 1932 he represented the Government of Canada at Paris and in January 1933, in negotiating a new trade agreement between Canada and France, and a convention concerning the rights of nations in commercial and shipping matters. It is quite evident that Mr. Cahan speaks with authority concerning the finances of his country.

Since 1938, when Canada's national direct and guaranteed debt was, in round figures, $8,000,000,000, her tax burden has been mounting. Canadian authorities estimate that the cost of the present war on the same basis as the former war will come to at least $1,700,000,000. Therefore these two figures alone, without taking into consideration any other contingencies, would increase their national debt to over $9,000,000,000, or an average debt of a little over $800 for every man, woman, and child. Yet proponents of this seaway proposal would force upon our friendly neighbors to the north this additional tremendous expense for the construction of a deep waterway in the International Rapids section of the St. Lawrence River at this time when both countries should concentrate all of their men, materials, and money to speeding up their defense programs. Mr. Cahan's article which follows deals with the subject of treaties between the United States and Canada.

[From the Montreal (Canada) Gazette of March 20, 1941]

JOINT DEVELOPMENT OF ST. LAWRENCE

(By Hon. C. H. Cahan, K. C.)

The second article of the Constitution of the United States of America prescribes that the executive power shall be vested in the President, and that "he shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." In other words, the President may negotiate treaties with foreign countries, but no such treaty is valid and binding upon the United States unless it is ratified by the affirmative vote of two-thirds of the Senators present.

The St. Lawrence Waterway Treaty which was signed on July 18, 1932, and subsequently submitted by the President to the Senate of the United States, failed to secure the consent of that body on May 14, 1934. The vote was 46 in favor of the treaty and 42 against, instead of the two-thirds majority required by the Constitution.

It is now officially stated that negotiations are about concluded for a new St. Lawrence waterways treaty between the two countries, which will provide for only one dam across the river at Barnhart Island, instead of two dams, one at Crysler's Island and the other at Barnhart Island, as provided in the draft of the treaty of 1932, with some other changes which have not yet been made public. Until all the terms, which have been agreed upon, are officially made known, full discussion of the engineering problems involved in this latest scheme of development may not be definitely and satisfactorily discussed.

But the amazing press announcement is made from Washington that, as the President of the United States is not confident that the revised waterways scheme will obtain the consent of a two-thirds majority in the Senate of the United States, Canada will be invited to acquiesce in a method of ratification, by reciprocal or concurrent legislation by the Congress of the United States and by the Parliament of Canada, which will circumvent the express constitutional provision that a two-thirds majority in the Senate of the United States is required for the ratification of treaties with foreign countries.

It is therefore for Canada a vital consideration whether Canada's rights and interests in the proposed St. Lawrence waterways scheme will be fully and satisfactorily protected by any such method of reciprocal or current legislation as that which is now contemplated. It is obvious that if this new scheme of arrangement should be expressed in a treaty, in which the Senate of the United States shall have concurred by a two-thirds majority as required by the Constitution of that country, then such a treaty becomes the supreme law of the United States, and it may not thereafter be modified or annulled by unilateral action of the United States Congress. Moreover, it may not thereafter be revoked at will by the Executive Government of the United States, except provision for such revocation is contained in the terms of the treaty.

On the other hand, if the terms agreed upon are merely ratified by reciprocal or concurrent legislation, by the Congress of the United States or by the Parliament of Canada, the agreement will be merely temporary in its character. A statute enacted in ordinary course by Congress or by Parliament may be repealed by Congress or by Parliament, as the case may be, at any future time. Unless restrained by the terms of an existing treaty, a future Congress or a future Parliament is under no constitutional or legal obligation to maintain in force for the future any statute which has been enacted previously by the same or by a succeeding Congress or Parliament. Concurrent legislation by Congress and by Parliament does not afford that guaranty of permanence or stability which is the necessary foundation for such a vast and costly undertaking as that which is now proposed.

Since the treaty of peace which was signed at Paris in 1783 recognized the independence of the United States of America, a series of treaties have been negotiated between the United Kingdom and the United States that deal with the boundary between the United States and British North America, which now forms the Dominion of Canada, and that also deal with the respective rights of these two countries in and to their boundary waters.

There have been the Jay Treaty of 1794, the Treaty of Ghent of 1854, the Ashburton Treaty of 1842, the Treaty of Washington of 1871, and the Waterways Treaty of 1909. Each of these treaties was negotiated and signed on behalf of the British sovereign by one or more plenipotentiaries appointed by the Government at Westminster, and they are known as Empire treaties. By the terms of section 132 of the British North America Act the Parliament and Government of Canada have all powers necessary or proper for performing the obligations of Canada or of any Province of Canada arising under any or all of these treaties; but in the absence of a treaty, the Parliament of Canada is restricted to the legislative jurisdiction otherwise expressed in section 91 of that act.

By article 26 of the Treaty of Washington of 1871 the navigation of the River St. Lawrence in that section which flows from near Cornwall to the sea, through the Province of Quebec, is made free for purposes of commerce to the citizens of the United States. I quote:

"26. The navigation of the River St. Lawrence, ascending and descending from the forty-fifth parallel of north latitude, where it ceases to form the boundary between the two countries, from, to, and into the sea, shall forever remain free and open for the purposes of commerce to the citizens of the United States, subject to any laws and regulations of Great Britain or of the Dominion of Canada not consistent with such privilege of free navigation."

That treaty is not made subject to revocation by either country.

The St. Lawrence Waterways Treaty of 1909 further provides that "the navigation of all navigable boundary waters" (which include Lakes Ontario, Erie, Huron, and Superior) "shall forever continue free and open for the purpose of commerce to the inhabitants and to the ships, vessels, and boats of both countries equally." This description includes the entire waterway from the head of Lake Superior to the Quebec boundary at St. Regis, below Cornwall, where the forty-fifth parallel of latitude crosses the River St. Lawrence.

The present negotiations are chiefly concerned with navigation and with the development of hydroelectric power on the international section of the St. Lawrence River, which forms the boundary between the United States and Canada from Lake Ontario to the Quebec boundary at St. Regis. Within a distance of 10 miles above this point lie the islands of Long Sault and Barnhart. The boundary line in the river, as fixed by the Ashburton treaty of 1842, places both these islands in the territory of the United States; and nine-tenths of the total volume of water of the St. Lawrence River flows through the channel lying south of Barnhart Island and wholly in the territory of the United States.

Article 7 of the Ashburton treaty dealt with navigation of these southern channels through United States territory as follows:

"It is further agreed that the channels in the River St. Lawrence on both sides of the Long Sault and Barnhart Islands * * * shall be equally free and open to the ships, vessels, and boats of both parties."

In the negotiations preceding the signing of the Ashburton treaty, Lord Ashburton pointed out that the navigable channels south of the two said islands were on the United States side of the boundary, and he urged that an explicit declaration should be made in the treaty that these channels were open to navigation by the ships, vessels, and boats of both parties.

The development of hydroelectric power was not then thought of.

Democracy—A Question

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. McGREGOR. Mr. Speaker, the United States is spending billions of dollars in the cause of democracy. We are building the world's greatest war machine to protect our democracy and to protect our country from aggression on the part of the totalitarian governments. We are financing a British-aid program on the theory that England is fighting the cause of democracy against dictatorship and, in so doing, is battling in our defense.

Yet, in a number of instances the leaders, and particularly the head, of our Government refuse to follow the principles of democracy. I have in mind the case of Col. Charles A. Lindbergh.

Colonel Lindbergh went before a congressional committee to oppose passage of the lend-lease bill, which authorizes the expenditure of billions of dollars to furnish the friends of our Nation with war supplies. Later in public addresses Colonel Lindbergh expressed the opinion that the British cannot gain victory over the Axis Powers, opposed American help to the British to the neglect of our own defenses, and suggested that a negotiated peace would be England's best method of dealing with Germany.

Now, we may not see eye to eye with Colonel Lindbergh on all of his suggestions, but I ask you Members of Congress—Are we not living in a democratic America where we have the right to say what we think, a right guaranteed to us by our Constitution?

A few days following the colonel's most recent speech on matters of foreign policy, President Roosevelt, during the course of an interview, condemned the famous flier's attitude and compared him with the appeasers of Revolutionary and Civil War times, and classed him with the notorious copperheads who opposed prosecution of the North's fight to save the Union in the great War between the States.

I respectfully call your attention to the fact that we are not at war. As long as we are at peace there should be no attempt to suppress the rights of the people, nor should those who insist on those rights be condemned for exercising the liberties which are so precious to us.

These liberties are the foundation of our democracy. If an attempt is made to suppress them, no matter what the means, then we are not adhering to democratic principles. And if we do not adhere to democratic principles, then we are no longer a democracy.

Democracy does not mean that the right of free speech should be restricted to those who agree with you in all things. It means that it should apply to all regardless of the nature of the expressed opinions.

If we are to spend billions in the cause of democracy, maybe go to war for it, let us practice it at home.

Concentrating on Essentials in Defense

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

ADDRESS BY W. C. MULLENDORE

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by W. C. Mullendore, executive vice president of the Southern California Edison Co., Ltd., Los Angeles, Calif., before the Chamber of Commerce of the United States, Washington, D. C., on April 30, 1941:

During the past decade the American people have undergone a revolution the meaning and consequences of which they do not yet know. Now, before we have either comprehended or recovered from that revolution, we have become involved in a great world war which will subject us to sacrifices, pains, and pressures far beyond anything which most of us now expect or imagine. Again, Uncle Sam is giving a benefit performance for the rescue of world democracy. His present position is comparable to that of the high-dive performer who has just started his dive. He is now in the grip of forces beyond his control, and if this world performance is to end in success rather than tragedy, it behooves all of us rapidly to prepare and firmly hold the safety net of national defense.

On the occasion of another great crisis in our history, Patrick Henry said: "This is no time for ceremony. The question before the house is one of awful moment to this country. * * * It is natural to man to indulge in the illusions of hope. * * * Are we disposed to be of the number of those who, having eyes, see not, and having ears, hear not, the things which so nearly concern their temporal salvation? For my part, whatever anguish of spirit it may cost, I am willing to know the whole truth; to know the worst, and to provide for it." Although we do not desire at this time to recall too vividly the proposal which Patrick Henry was then discussing, we should know that the facts which now confront us are of even greater moment than those of which he spoke. It is quite as dangerous for us in 1941 to shroud reality with illusions of hope as it would have been for our forefathers, had they done so 165 years ago.

There may be times when a people can afford the comforts of ignorance, but this is not such a time. This annual meeting of the Chamber of Commerce of the United States will have failed to justify its assembly if it does not contribute to the advancement of an understanding and appreciation of some of the harsh realities which must be faced by the American people in the grim days ahead. If we are successfully to cope with the gigantic tasks to the successful consummation of which we are committed, we must be prepared mentally as well as physically, and the first requirement of mental preparation is the clearest possible comprehension of the size and character of our undertaking.

At the outset, we are met with the question: Is any particular concentration upon the essentials for defense necessary? Or, may we safely proceed upon the assumption, which seems to prevail in the minds of some, that we have enough time and enough surplus productive capacity in men, materials, and equipment that we can step up our production sufficiently to meet the defense requirements without seriously interfering with our normal regime? To answer that question, let us take a look at our commitments.

THE GREATEST WAR EFFORT IN OUR HISTORY

First of all, is it true that we are committed to the greatest war effort in our history? Who can successfully challenge the truth of that assertion, startling though it seems? Except in general terms, no one has defined, and probably no one can define for us the size or limits of our undertaking. We have not declared war, but the President has clearly indicated that we are committed to seeing war through to a victory over the forces of aggression. How we would define victory, whether it means or will resuire invasion of Europe by armed force, whether we will pursue victory if England should fall, when we will be satisfied that we have established the "four freedoms" in the world, no one has undertaken to say. But it is incontrovertible that we have allied ourselves with the cause of the British Empire and that we have undertaken to do whatever may be found necessary to bring about the defeat of what is for the present the greatest aggregation of armed force, of military power, the world has ever seen. Whether we should have done so, whether our own vital interests demanded this commitment is still a subject of debate, but so far, at least, as it bears upon the extent of our present endeavor and program, we are officially committed to a "total effort."

The commitments now made, the already foreseeable size of the task, taken together with the inconceivably rapid expansion of those commitments, enable us to say unequivocally that our effort is to be limited only by our resources, our strength, and ability. The billions of man-hours of labor, the millions of tons of fabricated products of our mines, forests, and fields which we have already planned to dump into the bottomless pit of war, for exceed the amount which we ever before undertook to produce for the insatiable appetite of Mars. Starting with a $10,000,000,000 program some 11 months ago, we have already multiplied it fourfold, or to a point where, whether we measure it by man-hours of labor required or by dollars of present value, we are committed to an effort far exceeding the total of the last war.

ARE WE STRONGER THAN IN 1916–17?

Nevertheless, some people assert that even if that be true, we are stronger and comparatively better equipped to produce than when we made our greatest previous effort in expansion of production 24 years ago. But are we stronger? Let us see. In 1916 the Federal debt was less than one and a quarter billion dollars. Today it is fast approaching 50 times that amount. In 1916 our normal Federal expenditures were $734,000,000; now they are about $500,000,000; in 1916 Federal taxes were $726,000,000; by 1940 they had increased some 600 percent. In 1916 the attitude of Government toward business was friendly. Today there is far too much suspicion and jealousy, not to say hostility, in Government leadership toward business leadership, and their joint efforts are less cooperative and hence less effective. A similar growth of suspicion and hostile attitude characterizes the relationship between labor and management as compared with 1916. Not only are labor resources impaired by this increased antagonism between management and labor but the hours worked are shorter and the rate per hour is higher. During the past decade and prior to the war construction, the country's expenditure on plant and equipment has been insufficient by a wide

margin to maintain the capacity of the previous period or to keep pace with the growth of population. The average age of our durable goods, such as houses, railroads, and much of our manufacturing equipment was much greater in 1940 than in 1930. Also, a very large percentage of the consumption of the depression decade has been provided for not through the concurrent exchange of goods and services for goods and services, but through the acceptance of future promises to pay in exchange for the goods and services consumed, thus contributing to that unbalanced condition which today threatens the breakdown of our exchange system. Since 1916, our standard of living has greatly increased, at least in the sense that it takes more labor, materials, and services to meet the demands included within normal living requirements, and hence a greater proportion of total production is taken by normal consumption.

Partially offsetting these adverse factors as compared with 1916–17, are the facts that we started our present program with more unemployment and more idle capacity and much greater agricultural surpluses than in the former period. Also, we have made great improvements in technique of production and particularly have added greatly to production per man-hour by the addition of mechanical energy. After all our slowing down of the past decade, we still lead the world in both actual and potential producing power.

Summing up this portion of the picture and placing our net productive power against the demands to be made upon it, we can say this: We are a very strong nation. We can do much better than we are now doing. We are making progress and if and when we have hit our full stride, we will do the biggest job ever done; but, after all, there is a limit to our resources, our technical skill and total productive power, and there is no limit now foreseeable to the demands which will be made upon us. The inevitable conclusion is that at the best we can afford no waste and no lost effort; and that if we devote every possible cunce of strength to the task before us, it will be none too much.

Of course, we cannot at once, and without allowing some time for adjustment, reduce our standard of living by rigidly limiting the consumption of all nonessentials. Millions of our people are engaged in producing and distributing some goods and services which, strictly speaking, might be classed as nonessentials. To curtail, by any hasty or ill-considered action, their activities, by such extreme measures as rationing or other severe restrictions upon sale and consumption, would result in so much unemployment, loss of income, and other disruption of our economic life as to greatly weaken rather than strengthen our defense efforts.

Concentration upon essentials for defense, however, does mean immediate concentration upon the primary essential of increased production. It further means that when and insofar as a conflict between the production of essentials and nonessentials arises, priority must be given to the essentials.

THE MEANING OF "TOTAL EFFORT"

It is obvious that thus far we have partially failed to grasp the necessity of summoning to that increased production the full strength and power of the American people. Surely no one who is informed on current events, who has read recent polls reflecting current popular understanding, or who has been in contact with any considerable number of his fellow citizens in various sections of the United States can be under the delusion that even a majority have comprehended the meaning of "total effort" or the magnitude of the war effort to which we are committed. If proof of such assertion be demanded, we need only observe the apparent indifference or recklessness with which vital war production is interrupted, the insistence of governmental agents and agencies upon pursuing nonessential projects which absorb energy and wealth needed in war production, the determined official resistance to modification of laws which restrict production, and, finally, the lack of unity in definition or acceptance of war aims and purposes or the extent of our participation therein.

Yet if "total effort" means anything, if we are even to begin to measure up to the requirements of the greatest war effort in our history, we must concentrate upon production, not within the limits of our ease and comfort, nor within the limits of laws, rules, and regulations designed on the theory of abundance and overproduction and the obsoleteness of our economic and social order, but within the limits of our absolute capacity for that level of production which can be sustained over the probable period of the menace from the world condition into which we have thrust ourselves and into which we have been thrust by circumstances not of our choosing.

PRIORITIES REQUIRE SACRIFICE

It is not easy for any of us to accept the stamp of nonessential upon our activities. Quite naturally our reliance upon, as well as our belief in and devotion to, our particular task or undertaking leads us to resent any attempt to sidetrack it as being an unimportant contribution to national effort, and we are inclined to carry this attitude over into the vastly changed conditions of a war emergency. We are accustomed to having priority determined by demand and supply in a free market, and it is not easy to change to the system under which priority is fixed by orders from Washington.

There are obvious cases where priority clearly applies and concerning which there can be little effective argument. The use of a shipway and construction materials for the building of vessels of commerce or warships obviously has priority over the use of the same for building a private yacht for pleasure purposes. Limited stocks of metals, chemicals, or other materials required for defense must be devoted first to the highest necessity, namely, the production of needed war materials. Priority must be given in the employment of skilled labor required for vital aircraft production over toys or even over automobiles for pleasure purposes. Thus we might go on and cite innumerable other instances wherein the principle of priority applies so clearly that all reasonable people accept its validity.

Priorities require sacrifice. The necessity for subordination of the lesser need to the greater extends throughout our national life, and it applies to all our activities and needs in proportion to our abilities to bear sacrifice and the importance of our needs in relation to national strength. We do not want to lower our standard of living, but if that becomes necessary in order to divert labor and materials to the superior necessity of national defense, patriotism as well as common sense demands that we comply. In the last war we cheerfully and voluntarily gave up certain quantities of such foods as wheat, meat, and sugar in the interest of supply to our Allies and our own fighting forces. After all, we must measure any inconvenience or sacrifice asked of the civilian against the disruption of life's plans or even the possible loss of life itself, which is the sacrifice we require of those who actively serve in the armed forces.

All of this seems so obvious that it is a waste of time to labor the point. When the private citizen must give up his job and go into the Army, or may be required to close his factory for lack of materials, or to turn over to the tax collector earnings which he had hoped to use to satisfy his own needs—if these and a million other sacrifices must be made by the citizens who carry the burden—there should be no question that the agents and agencies of government should be likewise required to curtail the less essential of their activities and expenditures. Nevertheless, too many of the policies and practices of government have not yet been brought into line with this just and unifying principle of action.

CRITICAL IMPORTANCE OF NATIONAL SOLVENCY

That national defense depends upon national solvency is axiomatic. It has been repeatedly demonstrated that national insolvency, a break-down in credit, and serious depreciation of the medium of exchange leaves only one alternative, and that is the complete regimentation and tyranny of the totalitarian state. Yet the recklessness of expenditure, and the complacency about ever-increasing and accumulating deficits which prevailed in the years before the war, is now being continued and in some directions even intensified.

A false reliance is being placed upon swollen bank deposits and easy credit as evidence of an amplitude of capital and purchasing power for an all but unlimited program of expenditure. That these bank deposits and this easy credit are in large measure the result of wealth consumption instead of wealth creation, the result of debts and deficits rather than of savings and surplus accumulation, seems to be forgotten. Billions of dollars of the purchasing power represented by our existing bank deposits were spent not for productive wealth but for consumers' goods, which have been used up, and for nonproductive improvements, which are now expense accounts. We cannot fight a war or produce defense equipment with bank deposits alone, nor with congressional appropriations alone. But as this mass of bank deposits and these appropriations are thrown into the market for goods and services, they will create additional heavy demands, the impact of which cannot but reflect itself in shortages and increased prices. Such are the stern and inescapable economic facts and forces which must be taken into account in determining the advisability of the pursuance of such governmental activities and the promotion of such projects as not only do not contribute to but restrict and hamper productive efforts of the citizens of the United States.

In his message submitting the 1942 Budget, the President said in part:

"But little change can be made in the regular operating costs of government. As I indicated in my Budget message last year, the operating costs of the regular departments are already down to the bedrock of activities and functions ordered by the Congress. * * *

"It is our policy to retain the ideals and objectives of our social and economic programs in the face of war changes. * * *

"We should realize that even with a full functioning defense effort there will remain substantial areas of need and that social security, agricultural benefits, and work relief contribute to total defense in terms of the health and morale of our people."

These statements in the Budget message, taken together with the appropriations thus far sought and made, indicate that government is not applying the same yardstick of need to its own activities and expenditures that citizen taxpayers are required through taxation, regulation, and necessity to apply in their affairs in this difficult period. Aside from reductions in relief made possible through increased employment in defense production, there has been little or no cut in total normal expenditures by government, but, on the contrary, there have been some increases in activities and expenditures which not only do not contribute to but in some cases actually restrict necessary expansion in defense efforts.

For example, bureaus and agencies administering some of the newer regulatory and

reform legislation have intensified their restrictive rules and regulations despite the obvious fact that such intensified efforts tend to create further uncertainty and add to the fear and lack of confidence in markets and trade already resulting from the war. While it is urged on behalf of these intensified efforts at reform, that we desire "to retain the ideals and objectives of our social and economic programs," it does not follow that the failure to hotly pursue these reforms to their bitter end during this trying period will in any measure destroy their ideals and objectives.

It is pertinent at this point to recall the warning of the Reynaud-Daladier joint report on a somewhat similar problem in France during the period immediately preceding the war, when France was endeavoring to recover from the effects of too much reform and too little production. In part, this joint report said:

"Actually that part of the French population which creates wealth, which labors for the future, is continually diminishing, while that part which, directly or indirectly, lives on the state is constantly growing. * * * There is a steady fall in the number of Frenchmen who are ready to bear the risks of enterprise and creation. * * *

"That everyone should work more and that the state should spend less—for ourselves we see this as the only formula for salvation; it is elementary, but it is inescapable. * * *

"The problem is not to choose between preserving or repealing the recent social reforms, whose generous inspiration nobody disputes. The problem is to prevent them from dwindling to nothing, to prevent their benefits from evaporating in the high cost of living, to prevent employers and employed, in a country which is still poor, from having nothing to share but poverty."

Whether the urgency of attention to these sound principles is as great with us at this time as it was with France, we need not stop to argue, but at least in considering the expansion of our social-security laws to cover still more "areas of need" and in insisting upon the extension of the principle of other laws such as the Wages and Hours Act, we would do well to heed the tragic experience of France. We might also again recall the words of Marshal Petain, after the French defeat, when he said that:

"The spirit of pleasure has prevailed over the spirit of sacrifice. The people have demanded more than they have given. They wanted to spare themselves effort. Today, misfortune has come."

Our Government has a responsibility beyond that of merely refraining from unnecessary expenditure. Government must set the example in economy, and while asking sacrifices from those who pay, also require sacrifices from those who benefit from its appropriations. For example, it is difficult for the taxpayer to see the justification for doubling the expenditures of the Office of Government Reports, for expanding the activities of agencies dealing with improving land practices, or of immediately intensifying the program of the Fish and Wildlife Service.

Nor are the proposals confined to the expansion of already existent activities which have no clear relation to immediate defense needs. Additional activities are urged—all in the name of national defense. Not content with the extensive regulations of the power, coal, and other industries, it is being urged also that the oil industry should be brought under similar governmental control. Further, a strenuous effort is being made to throw the cloak of national defense over the promotion of such projects as the St. Lawrence Waterway and other Authorities to be modeled after the T. V. A.

Many of these projects could not be justified under conditions of peace and prosperity. Now, when they could not possibly be completed in time to contribute to the really urgent defense needs, but when they would divert labor and materials which are badly needed in defense industries, to attempt to justify them by specious reasoning and juggled facts which connect them with defense, raises serious question as to whether there is adequate understanding of the seriousness of our crisis within those Government circles where we expect to find it first and above all.

There is a call for national unity, and no group in our country more ardently desires and thoroughly appreciates the necessity for such unity than those who are charged with the fundamental task of turning out the vital production. They understand, however, and they are asking their Government officials to understand, that the greatest menaces to unity are unjust discrimination and inconsistent policies. To ask citizens to sacrifice while permitting Government agents and agencies to spend unnecessarily is inconsistent. To offer no resistance to the extortion of higher wages through strikes and at the same time to tax away the earnings on capital, while decreeing that prices shall not be advanced, is likewise rank discrimination. Businessmen know the necessity for higher taxes, and they ask no extra profits from war emergency, but there is a minimum of earnings absolutely essential to business survival. In the making of sacrifices, those whose savings provide the capital cannot bear the whole burden. The goal of national unity and the concentration of effort upon national defense are not promoted by such unfairness and injustice.

No one has greater confidence in or greater desire for the effective realization of our national strength than the business leadership of the United States. The record of their efforts at cooperation, their prompt response to appeals for their assistance, bespeaks their realization that their lives and the future of the enterprises to which they have devoted their lives are endangered in this hour of common peril. They ask only that their suggestions, based on experience and governed by inescapable economic laws, should not be attributed only to selfishness and ignored.

IN SAVING OTHERS, LET US NOT DESTROY OURSELVES

Finally, we are concerned that in our concentration on defense and devotion to total effort we should not lose sight of the basic objective of all our effort. That objective is the protection and preservation of the freedom and the institutions of the present and future citizens of the United States of America. In our concern about policies and ideologies which threaten us from without we dare not ignore the ever-present danger of developing and nurturing these same policies and ideologies from within.

Our country consists not alone of square miles of land and precious natural resources, nor even of millions of human beings. Much more importantly, it consists of freedoms which make existence here distinctive and worth while. All forces which threaten those distinctive conditions and institutions which make possible the pursuit of happiness by individual free men and women threaten America. If in pursuing and combating these evil forces in foreign lands we should convert ourselves into a regimented people, should rivet upon ourselves the chains of tyranny, we would have lost for ourselves that which we now seek to gain for others. The essentials of defense, then, require, above all things else, that in attempting to save the world we do not destroy the essentials of American freedom.

One of our greatest perils in our present pursuit of missions abroad is that we shall undertake more than we can perform, and, in the exhaustion resulting from overtaxing our strength, fail both in our rescue mission and in the maintenance of our own Republic. A false and foolish pride which prevents men and nations from recognizing the limit of their power and resources has led to many tragedies. We are now making very broad and generous promises of aid and assistance throughout the world to an extent which is perilously near to being foolhardy. To lead other people to rely upon aid which we cannot furnish is no kindness to them nor credit to us. We are responsible if we mislead others to their injury, and we alone can appraise accurately our ability and determine what is within our power to undertake and adequately perform. The role of hero requires not only boldness and courage but judgment as well.

The demands upon us from those to whom we have promised assistance will be unlimited. They cannot and will not limit their demands to those which are within our ability to meet. They are properly first concerned with their own salvation, just as we must be. It is therefore up to us to determine what we are able to do, and if we do not limit ourselves to that which we can perform without incurring involvency or embracing the totalitarian state we will have failed.

The revolving wheel of destiny has brought us into the midst of one of the great crises of civilization. Whether mankind goes backward or forward for decades to come depends in large measure upon our courage and our wisdom in this testing period. We are called upon to face grim facts, to endure hardships and make sacrifices far beyond any for which our generation has yet shown either the strength or capacity. If we awaken in time, if God grants us the wisdom to choose and the will to follow the difficult road of mutual trust and mutual sacrifice, we will emerge from this darkness into a brighter day, in which we and our children can lead the world in the pursuit of a nobler and finer civilization. If we fail, another tragic ending will be written to another glorious chapter in humanity's upward striving. Let us believe and pray and strive to the end that all elements of our population, forsaking narrow selfishness, will have the vision to see and the strength to follow those converging paths which lead to the concentration of the full energy of a mighty nation of free people.

Attention of Secretary of War and Other Interventionists "Stumblebum Diplomacy"

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

PRIZE WINNING EDITORIAL FROM THE NEW YORK NEWS

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the Pulitzer prize-winning editorial from the New York News entitled, "Stumblebum Diplomacy." I hope all Members of Congress will not only read it but digest it as well. The Secretary of War, Mr. Stimson's, war speech of yesterday conforms with the News editorial's definition of "stumblebum diplomacy."

[From the New York News]

STUMBLEBUM DIPLOMACY

The title of this editorial—"Stumblebum Diplomacy"—is meant to make some people mad in the hope that they may snap out of it. The word "stumblebum" derives, we be-

lieve, from the prize ring. A "stumblebum" is an ex-prize fighter who has suffered several knockouts, each of which was a minor brain concussion, and who now shuffles around on his heels without any clear idea of where he is going or what anything is all about.

We take up first the subject of British stumblebum diplomacy as related to the present war.

The Versailles Treaty in reality was the product of Marshal Ferdinand Focht (1851–1929) and Premier Georges Clemenceau (1841–1929) though Woodrow Wilson didn't know it.

Its object was to destroy Germany as a military and naval power forever, with its Navy given up to Great Britain, the Rhine demilitarized, and hostile airfields menacing it from Poland and Czechoslovakia. The treaty held for 20 years.

Meanwhile the Germans had made Hitler their leader, because Hitler was the German politician who most bitterly hated and most loudly voiced his hatred of the Versailles Treaty.

Hitler rearmed Germany, while British and French taxpayers refused to pay taxes to match Hitler's armaments. Finally, in 1938, Hitler said he had to have back the Sudetenland part of Czechoslovakia, with its big German minority; and there was where the Allied stumblebum diplomacy began to shine like a mackerel in the moonlight.

The British ruling class by that time partially saw Hitler's strength, but it loathed Russia. Accordingly, before and at the Munich conferences Russia was snubbed by the Allied diplomats. If they had been willing to forget Stalin's internal economy and be practical, they might have induced Russia to give a guaranty of Czechoslovak neutrality which would have meant something.

A week before the present war began the news of the Hitler-Stalin nonaggression treaty was published. This put the Allies on notice that Russia would be at least benevolently neutral toward Germany in the event of war. Yet the Allies encouraged Poland to fight for Danzig and the Corridor and followed it into the war just the same—the British diplomats eagerly, the French somewhat less so.

That war has now ruined France, at least temporarily, and gravely threatens the existence of the British Empire.

We now come to American stumblebum diplomacy.

This country now seems committed to the policy of underwriting every British war with European powers, whether Britain consults us about these wars beforehand or not.

That would be starry-eyed idealism at worst. The stumblebum phase of our diplomacy is now manifesting itself in the way we are treating Japan and Russia.

Britain has arranged for us to have Germany and Italy and maybe in due time France as enemies in Europe. But that isn't enough for our diplomats of the general cast of thought of Bill Bullitt. They must be forever snooting, snubbing, and insulting Japan and Russia into the bargain. We're embargoing shipments of more and more kinds of goods to Japan; we have now barred shipments to Russia of machinery or equipment usable for producing defense goods.

This is the same kind of stumblebum diplomacy as the British exhibited before this war. We have never seen it justified on any ground except that the United States disapproves of internal Russian and Japanese politics and economic arrangements. Our system is so much better, it is felt by our statesmen, that we can lick all these enemies at once because spiritual force is on our side.

Spiritual force is a very fine thing. But it hasn't yet shown its superiority as a winner of wars over the practice of taking on enemies one by one and defeating them with more, better, and bigger guns, planes, tanks, ships, and soldiers.

The Vinson Bill, H. R. 4139

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. LARRABEE. Mr. Speaker, I wish to give expression to my views concerning the bill, H. R. 4139, "A bill to further expedite the national-defense program in respect to naval construction and procurement by providing for investigation and mediation of labor disputes in connection therewith, and for other purposes."

In view of the several unfortunate delays that have recently resulted in the construction and production of materials, armaments, and ordnance for the defense of our Nation, it would appear from the reading of the above-quoted title of the bill in question that this bill might be the answer to the questions arising concerning this most serious problem.

However, a careful examination of the provisions of the bill, with especial attention to the possible construction that could be placed upon terms and provisions, either by administrative officials who might be selected to administer the act that would result, or by the courts, if called upon to determine a question at issue, brings forth some conclusions of vital interest.

The bill, I am sure, is designed and intended for the purpose of expediting national defense, but I have serious doubts concerning the result that we may anticipate in the event Congress enacts such a law.

I think it is most significant that both labor and employers—and when I refer to employers, I refer advisedly to seasoned, successful employers of large numbers of workingmen and women—have raised the question of grave doubt as to the wisdom of legislation of this type.

The major section of the bill proposes the establishment of compulsory mediation of all industrial disputes affecting the Navy defense production. It seeks to set up a new system of mediation, and couples this provision with an additional mandate making strikes illegal, a proposed new theory under national law, which might easily become most dangerous to the democratic form of government we seek to perpetuate through our whole defense program. Setting up criminal penalties, as this bill proposes, is a most radical departure from our whole theory of peaceful settlement of disagreements between employee and employer.

While the bill is, in a limited way, patterned after the very successful Railway Labor Act, it departs so far from the theory of that act in several particulars as to make the two impossible of comparison.

Each provides the so-called cooling-off period. Each prescribes steps that disputants should take before resorting to dismissals or changes in working conditions on the one hand or strikes on the other. However, the Railway Labor Act gains its strength and value from the pressure that may be brought to bear upon the disputing parties by the National Mediation Board and public opinion. Contrary to this accepted policy, the bill, H. R. 4139, proposes to resort to criminal penalties.

In the light of the major accomplishments under provisions of all other existing laws, it seems to me that this is a most dangerous defect in the pending bill. The fact that the illegal period (with reference to penalties for striking) would be limited in intent to from 25 to 30 days or longer in any one strike does not make it any the less dangerous to our accepted theory of peaceful settlement of disputes.

Labor has long considered that the right to strike—even when not used—is the only really effective bargaining instrument that workers have in dealing with certain types of employers. Many employers, it is sad to realize, would doubtless refuse to even begin negotiations with their employees as long as they had the support of the knowledge that the workers would have to remain at their jobs and could not strike without subjecting themselves to the danger of heavy crminal penalties.

Vice Chairman Davis, of the National Defense Mediation Board, rather clearly pictured the probable result when he said, in hearings on the question of compulsory antistrike legislation, before the House Military Affairs Committee:

> That to tell workers they have the right to bargain collectively, and at the same time take away from them the right to strike, is like tying a man's hands behind his back and telling him he has the right to fight.

The section of the bill establishing as a requirement of the law, a "cooling-off" period, as has been so aptly stated by someone, "might establish, instead, a 'heating-up' period." This section might very easily result in many frictions and irritations by placing workers in a position where they could take no effective action—no matter what the provocations might be—during the antistrike period. I doubt that any need for a compulsory "cooling-off" period exists. Nearly all union agreements, today, we are advised by reliable informants, provide voluntary so-called cooling-off periods of from 30 to 60 days during which negotiations are carried on in a peaceful manner by management and labor at the conciliation table. I am also informed that both the A. F. of L. and the C. I. O. have voluntarily agreed to notify the United States Conciliation Service of every impending dispute and give that agency an opportunity to help adjust the differences. At the present time most of the disputes which the unions and the Conciliation Service cannot adjust peacefully are referred to mediation. Authentic figures show that this method of handling labor disputes has been successful in 90 percent of the cases in settling or averting strikes. These voluntary methods do not abridge the basic right of free labor and they do not make strikes a crime under Federal law. The

spirit of compromise cannot be encouraged by threat of fines and prison terms.

To say the least, this bill is in need of drastic revision, with a view of protecting democratic processes and personal liberties.

It has often been suggested, and I believe that there is merit in the suggestion, that industrial peace can best be achieved, not by compulsory anti-strike legislation, but by quick and effective enforcement of the existing National Labor Relations Act and the insistence that both sides in disputes abide by the intent, the spirit, and the provisions of this law, which has so often been upheld by the courts as a proper instrument in democratic processes. It is an established fact that wherever collective bargaining has been established and accepted by employers in good faith, strikes have been greatly reduced or completely abolished.

This bill also raises the question of the union closed-shop in industry, and sets forth a formula that would, it seems reasonable to assume, absolutely forbid new closed-shop contracts where such contracts are not in effect at the time the bill might be passed. It would freeze existing open-shop conditions by a provision to the effect that demands for closed-shop contracts cannot be considered a legitimate grievance under the law.

It is easy to see that this would immediately result in encouraging many employers to resist union-shop contracts and would give such employers as are opposed to unions legal support for anti-union open-shop activities. It would appear that this provision would increase, rather than retard or eliminate, industrial friction and industrial strife and would greatly weaken the entire structure of collective bargaining.

The so-called "Labor Act Amendment" provision of the bill forbids workers to "use coercive measures of any kind to induce a person to join their organization, or, to induce employers to bargain or deal therewith." This section may sound innocent enough on first reading, but it might nearly destroy the protection to organize which workers have under the National Labor Relations Act. It might be construed as rendering illegal any or practically all activities necessary for union organization and for securing collective-bargaining agreements.

Some judges have interpreted the most peaceful efforts of workers to induce others to join labor unions as coercion. The National Chamber of Commerce, in its Washington Review of April 14, 1940, describes even union requests for wage increases as coercion. In a published article it referred to such wage requests as attempts by labor organizations to coerce wage increases.

It would appear far better to leave the question of any illegal activities that overzealous, unscrupulous, or unethical persons who sometimes work their way into labor organizations, as they do into all other organizations, to such action as local authorities may deem advisable under provisions of existing State laws. Undue force, physical or otherwise, doubtless can be dealt with, if it were resorted to by labor, just as well under existing laws as it could be dealt with under a new law.

While it rides the wave of public indignation against subversive influences in our national life and the indignation against "fifth column" activity in the defense program, the so-called subversive provision of the pending bill is filled with dangerous portents.

Both labor and employer have spoken out against this section in no uncertain terms.

This section would deny to labor unions the communistic officers, and to persons with communistic views, tendencies, or persons who have at any time held membership in a communistic or other so-called subversive organization the right to benefits under provisions of the National Labor Relations Act.

Such a pronouncement would seem harmless enough, and probably appear to be beneficial in the light of needs for eradicating subversive influences from places where they might sabotage the defense-production program. However, it would permit employers to dismiss any worker if the employer "has reasonable cause to believe" that such worker holds subversive opinions or belongs or has belonged to a subversive organization. After dismissal workers would have 30 days to appeal the case to the Mediation Board. The burden of proof would be upon the worker, a reversal of our whole concept of democratic justice—"that the accused is innocent until proven guilty." Under this act the accused would be "legally" guilty until he could prove himself to be innocent. And how, I am moved to inquire, could anyone prove that he did not belong to the Communist Party, the German-American bund, the Nazi espionage service, or any other subversive organization that you can name? Where could an accused worker obtain evidence to prove he was not a member? Such organizations do not open up their membership lists to public inspection.

I would not say that an honest employer would resort to the use of such an instrument as this feature of the bill provides, but an unscrupulous employer would be delighted to have such a tool placed within his reach. With it he could accuse any employee of subversive tendencies or activity, dismiss him forthwith, and fear no danger from such action. It is likely that unscrupulous employers would immediately seize upon such an instrument of law for the purpose of dismissing, without danger to themselves, any person in their employ who had been active in unionism or union organization.

It would force the accused and dismissed employee to prove his innocence—a task that might easily be impossible if the unscrupulous employer were to trump up some framed evidence against the dismissed party.

And, even if the dismissed party found it possible to clear himself of the charges, the employer would face no penalty for having brought about the unfair action in contravention of the provisions of the existing National Labor Relations Act. The aggrieved employee could collect back pay, after a long tedious process, for the period he was out of work, but the Federal Government and not the employer would make the wage under provisions of this bill. Thus the taxpayers and not the guilty employer would pay for the employer's unfair discrimination in such a case.

Such a provision of law would establish another policy which I am sure we cannot afford, ever, to establish in this country.

The La Follette Senate Civil Liberties Committee has shown in reports from the investigations it has conducted, and hearings it has held, that there are many large employers in the Nation who scorn the National Labor Relations Act and refuse to recognize the accepted rights of labor.

The Government, and the public in general, have long accepted the theory that labor's basic rights must ever be protected. These rights are to organize into unions free from interference of employers, to bargain collectively with employers and to strike when these rights are violated or threatened.

I am convinced that the provisions of this bill might easily serve to destroy these rights. It would make it possible for anti-union employers to discharge union members without incurring any loss or penalty. It would permit employers in a period of rising living costs and increasing corporate profits to deny and ignore the demands of workers for higher wages and improved conditions, and to goad the employees into taking economic action which would subject them to criminal penalties.

Preservation of our democratic institutions and processes, protection of our rights to enjoy the freedom and privileges guaranteed by the Constitution, and the strengthening of the morale of the people, demand the defeat of this bill.

Why Not a Separate Air Force?

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Washington Times-Herald:

[From the Washington Times-Herald]

WHY NOT A SEPARATE AIR FORCE?

Assuming for the purposes of this discussion that we really mean what we say about arming primarily for our own defense, what is likely to be the air arm's main job if we ever fight a defensive war?

We may be invaded from Canada or Mexico. If we should be threatened with such a land invasion, there would be a hurry-up call for the air arm to do what long-distance combating it could before the enemy reached the border.

In case of an attempted invasion from the Atlantic or the Pacific, the air arm's big job would be to send out long-range bombers from coastal air bases with orders to bomb the enemy as far at sea as they could and still get back to base. Fighter planes would escort them some distance out and meet them coming back, presumably. Given enough bombers, plus naval surface and submarine defenders closer in to the coast, plus an adequate Army, we should be able to keep the bulk of any would-be invading expedition from ever getting here.

DIFFERENT ELEMENTS

In either of these events, we can't see how it would profit us to have the air arm subject to orders from the naval arm, the land arm, or both. Cooperation among all three of these branches of service, certainly; but the air arm would be doing an essentially independent job.

Why not, then, a separate air command? Why the present jumble of Army Air Corps, naval aviation, marine aviation, Coast Guard aviation?

The three arms fight in three different elements. The Army fights on the land, the Navy on the water, the air force in the air. Each branch's technical problems are as different from the other's as the three elements in which they fight. To the layman, at least, it seems common sense that the air arm should be commanded by officers of equal rank with those commanding the Army and Navy, and should have an equal voice in the joint work of defending the country.

AIRPLANES ESSENTIAL

Not that we think the airplane has made the battleship obsolete, or made the infantry unnecessary in the winning of wars.

We can't see how Britain and the United States ever can beat Hitler without a gigantic land invasion of Europe by huge and powerfully armed expeditionary forces consisting mainly of infantry. Certainly the battleship has yet to be pounded into ancient history by the airplane, even in the comparatively narrow Mediterranean.

But the air arm has become tremendously important in war—far more so than it was in the last war. It, with the tanks, blasted the road for the infantry in the conquests of Poland, Norway, Holland, Belgium, France, Yugoslavia, Greece. We don't think it can win a war by itself; but it looks as if only a nation or alliance having decided air superiority can hope to win a war.

Why the reluctance, then, to give the air force equal standing with the Army and Navy? Why the weaseling compromise reported worked out in the War Department, whereby the air force will have "partial autonomy" within the Army, with a mere Assistant Secretary of War for air?

We think even a layman can dope out the right answer to that one, and that the answer is: Human nature. Most Army and Navy bigwigs humanly hate the idea of losing any thority. Naturally they can figure out endless explanations to show why the air force should be parked below the salt.

The fact remains, however, that Britain and Germany both operate on the separate air force principle, and that the R. A. F. and the Luftwaffe are today the two most powerful and efficient fighting air forces in the world. They cooperate 100 percent, by all reports, with the land and sea forces. France worked on the same principle before it was knocked out of the war, and the verdict on the French air force is that it was O. K. except for a little matter of the French politicans being too late with too little equipment.

Wouldn't it be wise for us to profit by this example set by the world's two most successful air forces, and look further into the advisability of setting up our own separate air command?

National Defense

EXTENSION OF REMARKS
OF
HON. JOSEPH CLARK BALDWIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

ADDRESSES BY HON. JOSEPH CLARK BALDWIN, OF NEW YORK

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speeches which I made recently on national defense:

SPEECH BY THE HONORABLE JOSEPH CLARK BALDWIN, STATION WOL, MARCH 30, 1941, WASHINGTON, D. C.

The United States today is committed to a definite policy in national defense. The commitment was made last fall by popular vote in the national election. It was reaffirmed a few weeks ago in Congress by the passage of the so-called lend-lease bill. It was reaffirmed a few days ago, when Congress, by an overwhelming majority, voted $7,000,000,000 to implement the lend-lease bill.

That policy, briefly, is to provide certain democracies in Europe and the Far East with the ways and means, either to vanquish the declared enemies of the American way of life, or to keep them occupied until America itself is sufficiently prepared to stand off those enemies.

While I strongly and most earnestly endorse that policy, even if I didn't, the time for personal differences of opinion, and of individual judgment, has passed. Our country, as I say, is committed to that policy. And as good Americans, it behooves us to unite in insuring its success.

And let me say this: My endorsement of the lend-lease bill during my recent successful March special election campaign and my vote in Congress for the funds to make it effective, were based on a deep conviction that the only way to keep war away from this hemisphere, was to provide others with the means to handle the present declared enemies to our way of life.

Now I submit that lip-service to any policy, foreign or domestic, achieves no effective result. Moral support did not save Austria. Moral support did not save Czechoslovakia. Moral support did not save Poland. Nor did it save France. And because England's support to these nations, so important to her own national defense, came too late, or not at all, modern war in all its hideous devastation, came to the British Isles.

We must not repeat Great Britain's mistake. We must act, and act promptly. And this, I repeat, does not mean lip-service to the cause of American defense through aid to Great Britain, Greece, Yugoslavia, and China. It does not mean the loaning of money, which we know cannot be repaid, and which the last war proved would serve to absorb our own defense products, and place our own defense supplies under the control of foreign purchasing commissions.

What it means is bullets, and shells, and guns, and cannons, and tanks, and ships, and airplanes, and food. And it does not mean providing these things tomorrow, or next week, or next year. It means providing them today.

I admit, my friends, that this is a gigantic task. I admit there are risks involved. But I am convinced that the alternative is so awful—and I use this word literally and deliberately—that there must be no hesitation.

Well, we have taken the first steps. We have enacted the necessary legislation and provided by law the necessary funds.

The next steps, it seems to me, are obvious. First, we must produce the goods and then we must deliver them.

That we can produce the goods, both you and I know. The capital is there and the labor is there. That these two elements of our industrial set-up function and function promptly and efficiently, is primarily the business of the executive branch of our Government. That the Executive will have the cooperation of the Congress and of the people in this task I have no doubt. There must be no strikes and there must be no profiteering. There must be action. And we will stand behind the President in achieving it, for our way of life is at stake.

That we can deliver the goods presents a more difficult problem. For there are both physical obstacles and national risks involved. But again, it must be done, or the whole policy of national defense, to which we are committed fails—and fails hideously.

If we produce the goods, as I am sure we will, the docks of the eastern and western seaboards of our country will shortly be piled high with the material the present outposts of our democracy so sorely need. Today, the nations in question are themselves transporting this material to its ultimate destination. It is my fervent prayer that they will continue to do so. But should the day come when these goods, the use of which by these nations we have decided is vital to our own defense, remain on our docks undelivered, then I say we must deliver them whatever the risks.

I believe this can be done by meeting these nations half way, both literally and figuratively. I believe that acting under the existing neutrality laws, we can convoy this material at least half way across the ocean. This would speed up delivery, and increase the guaranty of delivery. Whether this is the solution or not, I am convinced of one thing, and that is that these goods must not lie idle on our docks, and must reach their ultimate defense destination. No war was ever won, no defense policy can ever succeed, with vital war materials lying unused on a dock.

ADDRESS BEFORE THE STUDENT SELF-GOVERNMENT ASSOCIATION OF BROOKLYN COLLEGE, WEDNESDAY, APRIL 23, 1941

I think my acceptance of your invitation to appear here this morning was prompted as much as anything by the stated subject of your conference—A Democratic World at Peace. For I am convinced that the greatest contribution this Nation can make to present world conditions is to stand in its might for peace. I have said publicly before, and repeat here again with as much emphasis as I can, that we have stayed out of every peace and gotten into every war, and I want to reverse that picture.

But any such conviction implies the assumption by the United States of a powerful part in world peace. And because I believe that our Nation will never be able to play this role, so important to ourselves and to our neighbors, if she avoids her current responsibilities in the present war, I accepted your invitation to tell you what I think these responsibilities to be, both at home and abroad.

Peace does not just happen. Treaties, international laws, neutrality acts do not preserve a nation's peace, as many countries in Europe today have learned to their sorrow. No, my friends, modern peace must be aggressive. Peace-loving peoples must protect their peace by vigorous and affirmative action.

You, yourselves, must have had this in mind when you called this conference and provided in your program your "Triple A for Peace and Democracy."

I note that the first of these is: "All material aid to nations resisting aggression." And I am curious as to just what you really mean by that. Because if you really mean what you say, then you must be prepared to face certain risks involved.

My own approach to what amounts to the same conclusion is "All material aid to nations important for the defense of America." And in this cause I am prepared to face the risks involved.

Now, this may sound cold-blooded to you. It is cold-blooded. There is not an iota of sentiment in it. While I may, and do, admire the Greeks and the Chinese and the British in their present gallant fight against aggression, my concern is primarily the defense of our own country, so that she will be able to stand in her might for the establishment of a just and democratic peace.

To this end, we have a declared American foreign and defense policy, by act of Congress, representing all of you. That policy, briefly, is to provide our friends with ways and means either to vanquish our enemies or to hold them off until we ourselves are able to handle the situation. The avowed purpose of that policy is to keep this Nation at peace and to so firmly establish and maintain our own democracy that no nation will be able to block our progress. I firmly believe that this is a right policy and that it can be made effective. But, right or wrong, we are, as I have said, committed to it. And right or wrong, it can never be made effective in disunity or without prompt and vigorous action.

On various phases of that policy your Government has already acted. The Selective Service Act was part of it. The lend-lease bill was part of it. The extension of the Monroe Doctrine to Greenland was part of it. The seizure of the ships of the dictator nations which were within our ports was part of it. The creation of the various defense agencies, national and hemispheric, was part of it. The new tax bills are part of it. And I tell you that those irreconcilables who still seek to divide the Nation on effective pursuit of that declared policy will bear a heavy responsibility if the growing might of our Nation is undermined by the eventual failure of this policy to which we are committed. Even Gen. Hugh S. Johnson, a bitter opponent of the adoption of our present policy, said in his column in the New Work World-Telegram last Monday: "The time to debate that has passed."

For there is much more yet to be done. Under that policy, we have obligated ourselves to a production of material heretofore undreamed of. If we are to be successful, we must not only provide war material for Great Britain, Greece, and China in vast quantities but at record speed. We must also provide far vaster quantities for our own defenses here at home. And no labor disputes or profiteering or failure on the part of employer or employees to recognize that they are the defenders of democracy quite as much as any soldier or sailor in any camp or on any ship, must be allowed to wreck this program.

Finally, we must see to it that these war materials are delivered to their ultimate defense destinations. There are those who will tell you that American convoys for American goods, to be used for American defense purposes, will inevitably lead to war. They told you that passage of the lend-lease bill, with its provision for repairing belligerent ships in our neutral shipyards, contrary to the international law, would mean war. And it would have 25 years ago. They told you the seizure of the dictator ships in our ports would mean war. And it would have 25 years ago. They told you that mobilization of our manpower under the Selective Service Act would mean war. And it would have 25 years ago. Indeed, Germany still claims that the Russian mobilization was what started the last war.

But they don't point out to you that these so-called violations of international law have not led to war because the dictator nations, as a matter of record, no longer recognize international law, and that they declare war or engage in war when and where they want to, not because of the acts or policies of any other nation but in spite of them.

They don't remind you that Norway and Holland and Belgium and Denmark and Albania and Greece sought unsuccessfully to remain neutral and at peace. And that, if and when the dictator nations want to make war on the United States, no strict neutrality on our part is going to prevent them.

Nor do they remind you that you are being taxed $7,000,000,000 to implement the lease-lend bill and that if the goods considered necessary for our own defense, which are purchased with that money should be sunk en route, it is equivalent of dropping that money of yours and mine into the ocean.

I tell you, my friends, that the first step for "a democratic world at peace," so far as you and I are concerned, is vigorous and prompt action by a united people on our declared foreign defense policy.

The second point in the program of your conference is in fact two-fold. "Adequate national defense—military and social." I have already spoken of the military side. We have passed the Selective Service Act and I, of course, endorse it, although I hope to see the age brackets changed to 18 to 25, with the right to serve before or after completion of a man's education. We have appropriated billions for materials, guns, tanks, airplanes, shells, and ships. And I have pointed out the vital importance of speed and cooperation between capital and labor in their production.

As to "social" defense, I have always maintained that the creation of a contented community is essential to the preservation of any form of government and certainly the only excuse for a democracy is the establishment as fast and as successfully as possible of such a community.

Of course, first things should and must come first. In order to protect our democracy from its enemies abroad, we will all of us have to make some sacrifices. But this should not and must not mean sacrificing progress already made or side-stepping any of the principles of social reforms projected or established. Our democracy, for instance, would be in as much, if not more, danger from within as from without were we to pass it on to a future generation which had been deprived of the standards of education we have set ourselves.

I might say here that as a member of the State Constitution Convention of 1938, where I was chairman of the housing committee, I sponsored and spent weeks and months writing and debating the housing amendment to our State constitution, which the people adopted, and under which much of the low-cost housing in this city is now being built. I assure you I would resent most bitterly any interruption under the guise of an emergency of the program this amendment made possible.

About the last point in your program, "Academic Freedom, Civil Liberties, and Rights of Labor," I feel quite as strongly as you do. Too often in the past have we arrested progress with emergency legislation. There is now before the House, for instance, a so-called wire-tapping bill. I claim that it abridges one of the oldest of our civil liberties. We used to say that "a man's home is his castle." I fail to see why it is any better to violate the sanctity of the home via a telephone wire than via a front door. No doubt there will be many such measures, but I promise you I shall oppose them.

On the constructive side, I do think that labor might be protected from public misunderstandings and the abuse of its rights by unscrupulous labor leaders, politicians, or employers by sound legislation. The Mexican Government has recently enacted legislation for a "cooling off" period before strikes. And there is a bill which may come before the House next week, the Vinson bill, which approaches this problem much the same way, apparently, as the Mexican Government did. It is not in final form as yet, so I can't discuss its merits or demerits in detail, or say definitely how I shall vote on it. But the principle seems to be sound.

And then in protecting labor we must not forget that free enterprise is essential to any labor movement.

In conclusion, let me make this appeal to you on all these points in your program. Debate and discussion are essential to progress, but mere lip service to a cause never produced anything. Some youth organizations have specialized in what they can get out of democracy for youth. I appeal to you to make your slogan "What can we contribute to democracy?" If you who are young work at democracy, I ar confident that our democracy will remain successful, and that in the not too distant future we will have "a democratic world at peace." The surest guarantee that none of us will have to die for democracy tomorrow is that more of us will live for democracy today.

Regulation of Freight Forwarders

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. VOORHIS of California. Mr. Speaker, at the request of one of my constituents, I am pleased to include with my remarks the following letter:

WHITTIER, CALIF., *April 16, 1941.*

Representative JERRY VOORHIS,
Washington, D. C.

DEAR SIR: I am writing you with reference to Senate bill No. 210, and House bill No. 3684, both for the regulation of freight forwarders. As a large shipper of merchandise in the furniture line from eastern markets, I believe that these bills in their entirety are detrimental to the best interests of the furniture merchants as well as to the ultimate consumer. Less-than-carload rates applied to pool-car shipments would increase the rate by 200 percent, which increase it would be necessary to pass on to the consumer.

I respectfully request that this communication be written into and made a part of the RECORD in opposition to the bills above mentioned. I would appreciate a personal acknowledgment of the receipt of this protest.

Yours truly,

H. J. PERRY.

A Bill To Encourage More Ships

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

EDITORIAL FROM THE MOBILE PRESS REGISTER OF APRIL 27, 1941

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mobile Press Register of April 27, 1941:

[From the Mobile Press Register of April 27, 1941]

A BILL TO ENCOURAGE MORE SHIPS

Ships and more ships are the crying need of America and Britain today to successfully combat the Axis in the battle of the Atlantic. On the outcome of this naval warfare, which has gone on ceaselessly since the outbreak of hostilities, will depend, in all probability, the final outcome of the war.

The Nazi blockade unquestionably has made serious inroads on British shipping. Britain looks to America for replacements of ships. Some months ago the Maritime Commission declared flatly that America's merchant marine had no more ships which could be converted to the use of Great Britain. All available cargo vessels, the Maritime Authority set forth, were needed to convey raw materials to the United States.

Seriousness of the situation in regard to the shortage of ships is reflected by the Federal Government's frantic efforts to build cargo vessels in mass quantities and the administration's decision to requisition German, Italian, and Danish ships seized in American ports for our own or Britain's use.

It is national self-preservation for the United States to exhaust every means of terminating the shortage of ships. Such is the object of a bill by Representative FRANK BOYKIN now pending before the House Merchant Marine Committee. The measure would encourage private shipping interests to supplement the Government's efforts to build more ships by allowing unsubsidized lines to set up tax-free construction reserve funds for building new vessels. The Government-subsidized lines were favored in this manner last year and the Boykin bill would simply extend a similar privilege to shipping companies not receiving financial support from the Government. The Waterman Line and other unsubsidized companies thus would be encouraged to build new ships and additional obsolete tonnage could be turned over to Britain.

Even in ordinary times there would be sound arguments for the fairness of the measure introduced by Representative BOYKIN. In this time of grave national emergency there can be no logical contention advanced against the measure when the need of new tonnage is paramount. Congress should pass the Boykin bill without quibbling and without delay.

Steel Production

REMARKS
OF
HON. WILLIAM T. SCHULTE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. SCHULTE. Mr. Speaker, in the last few days we have heard a lot of criticism about the ability of the manufacturing plants in the United States to meet the demand made upon them in this defense program. I shall speak now about one of the industries located in my district, which is the largest manufacturing district in the world, and I read from a recent newspaper article:

UNITED STATES STEEL OUTPUT TOPS TOTAL GERMAN PRODUCTION—CHAIRMAN OLDS SHOWS STEREOPTICON SLIDES OF COMPANY'S DEFENSE WORK

HOBOKEN, N. J., May 5.—One American company, United States Steel Corporation, is turning out steel faster than all the mills in Germany, the company's board chairman, Irving S. Olds, disclosed to stockholders today.

This rate of steel making, he said, equaled the combined production of Great Britain, France, and Belgium in 1939.

In the first 3 months of this year, said Olds, rolled and finished steel products were turned out by United States Steel at 100.9 percent of the total capacity previously believed possible.

Olds showed the small group of assembled stockholders 62 stereopticon slides of the company's defense work in explanation, he told his audience:

"United States Steel corporation is building cruisers, destroyers, merchantmen, and tankers. It is producing armor and protective deck plate to meet the requirements of the military and naval expansion program; it is manufacturing shell forgings, unloaded shells and bombs of various sizes; it is sending large quantities of steel to Great Britain and Canada; it is supplying a steady flow of steel to manufacturers in different parts of the country who have taken contracts of the Army and Navy under the defense program; and its oceangoing steamers are bringing strategic materials from distant foreign parts to meet defense needs."

ORE REQUIREMENTS HEAVY

Concerning details of the corporation's national-defense work, Olds said:

"To meet heavy demands for national defense, it is estimated that 1941 ore requirements from the Lake Superior district will exceed 75,000,000 tons. The previous peak was in 1929 when 65,000,000 tons were shipped from the district. Equipment necessary to ore mining is being utilized to capacity.

"As a result of national-defense demands for electric furnace steel (high-grade alloy) we are speeding expansion of output by new installations having an annual capacity of 100,000 tons.

Olds told stockholders that United States Steel is ready to expand at any time the Government deems necessary.

Current production, if continued at the same rate, will surpass not only the production of German steel mills but equal the combined before-the-war production of Great Britain, France, and Belgium, Olds declared.

"Today the advancement of the national-defense program should rank foremost in the minds of everyone," he asserted. "The corporation has not deviated from its policy of cooperation to the fullest extent with the Federal Government and in making available to the Government its plants and resources for the early attainment of an adequate national preparedness.

"We do not know to what extent, if any, additional steel-making and finishing facilities may be found necessary to meet the steel requirements of future years, but when that need is established, the stockholders of the corporation may rest assured that the corporation will be ready to assume its proper share of the added task."

Noting that Leon Henderson, of the Office of Price Administration, had agreed that an increase in steel prices might be warranted, Olds asserted:

"It seems clear that a governmental price policy would not be in the best interests of the country if the consequence thereof should be to restrict production by such an essential industry as steel * * *.

"Furthermore, there can be no doubt about the propriety of the steel industry earning a fair return on its investment when operating at full capacity especially when consideration is given to the fluctuating character of the demand for steel and to the fact that over the last decade the return on the investment in the steel industry has been a most meager one."

Commends Work Projects Administration and National Youth Administration in Massachusetts

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

LETTER FROM MAYOR ROGER L. PUTNAM, OF SPRINGFIELD, MASS., AND TWO RESOLUTIONS

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolutions:

SPRINGFIELD, MASS., *May 5, 1941.*

Hon. JOSEPH E. CASEY,
House Office Building,
Washington, D. C.

DEAR JOE: Last Saturday afternoon the Western Massachusetts Association of Mayors, Selectmen, and County Commissioners, of which I am president, had the biggest meeting in its history. At that meeting they passed the two enclosed resolutions.

As a Representative of the State of Massachusetts in Washington, I know you will be interested in these resolutions, and so I am passing them on to you for your information.

Yours very truly,

ROGER, *Mayor.*

Resolved, That the Work Projects Administration be continued in its present form for the fiscal year of 1942 and that emphasis be placed in the elasticity of operations with particular reference to national-defense projects.

That it is the sense of this meeting that a vote of commendation be given to the present administrator, Denis W. Delaney, of the Work Projects Administration program in Massachusetts for its service to the individual counties, cities, and towns during the past year.

Resolved, That the conference of mayors, selectmen, and county commissioners in meeting at Westover Field, Chicopee Falls, Mass., commends the excellent work experience training program of the N. Y. A. in Massachusetts and its assistance to our cities and towns under the able and effective direction of State Administrator John L. Donovan, Jr.

We urge the Congress of the United States to expand further this worth-while program in Massachusetts in order that our youth may obtain needed work experience in the mechanical and other trades to prepare for the national-defense emergency.

Alabama-Coosa Rivers, Ga. and Ala.

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

STATEMENT OF HON. BIBB GRAVES, REPRESENTING THE CITY OF MONTGOMERY, ALA.

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Hon. Bibb Graves, made at a hearing held on Monday, April 28, 1941, before the Board of Engineers for Rivers and Harbors, in connection with the proposed improvement of the Alabama-Coosa Rivers, Ga. and Ala.:

Mr. GRAVES. Mr. Chairman and gentlemen of the board, no man has greater respect, admiration for, and confidence in this elite corps of the American Army than I. I would believe that statement if I should go into a rehashing of the able, sound arguments here presented.

I shall try to direct your attention to one or two things suggested in this report that have not been enlarged upon.

I will read about three or four lines from the report. As to a rallying point, the district engineer finds that changes in economic conditions warrant a change in the recommendations and believes that the improvement of the Alabama-Coosa Basin for navigation, power, and flood control is now economically justified and he further recommends the ultimate plan of development, the principal features of which are—and I will not go into them because they are familiar to you.

The district engineer admits his partiality or, rather, his conservatism, by saying that the power development at selected sites can be sold at a somewhat lower rate without nullifying the economic justification of the ultimate plan.

The district engineer suggests that provision for changing freight rates should furnish a valuable assistance to the efforts to industrialize this section.

The people of Alabama and of Georgia are particularly gratified at the result of the fight they have made on freight rates. Since this report was filed in August of last year there have been more than 3,000 freight rates from the South to the North reduced. As a result of that, Birmingham coke is moving to Cleveland; Pittsburgh-plus has been abolished.

I call your attention to the things that are known to all men, especially to you; that the thing suggested brings about the result. In other words, if we get a freight-rate adjustment, there will be marked improvement of economic conditions. Witness what the freight-rate proposition was when this was first undertaken: The Birmingham district was operating at 17 percent of capacity, the lowest of any territory in America, but since the winning of the case in the Supreme Court of the United States, the Birmingham district, after the abolition of Pittsburgh-plus, never operated at less than the second highest. That is a conclusion reached from the suggestion that our district engineer makes that I would like to call to your attention.

Another thought that I would like you to dwell upon is this:

This is not a local or a sectional or a Georgia-Alabama proposition. It is a Nation-wide proposition, and if it were not a Nation-wide proposition, we would not have a right to ask the United States Government to do anything about it.

We have invested hundreds of millions of dollars in the inland waterways.

This is the greatest feeder of any undeveloped, possible feeding line today. The necessity of it I will show you here.

About 3 years ago, nearly, just about the last of my last term, the Public Service Commission of Alabama sent an expert to Chicago to investigate rates on food from Chicago to Gadsden, Ala., and Rome, Ga., and from Chicago to the leading ports of Europe.

Just as the Senator told you about wheat, one barge saved $1,500; that figure is before you. Of course, ocean rates now are all-out, but on peacetime figures it costs 53 percent more to ship a hundredweight of wheat from Chicago to Gadsden than it did to ship a hundredweight of wheat to Liverpool, Hamburg, or to Bremen.

We have, as they told you, a great cotton mill in Gadsden. How can it compete with Lancaster, England, in international business, when they are hitting us over the head with our own bread, when it is costing, as I say, 53 percent more to bring our wheat to us than it does to take it to Europe.

How can the great steel works compete with the Saar plants, or the Birmingham plants in England? They can't overcome what England overcame when she dug a ditch around Niagara Falls and got through water rates to European ports.

That concerns Gadsden and it concerns Rome.

I want to show you what the wheat farmers in Kansas, in peacetime, to get to the markets of the world had to sell on the basis of Liverpool wheat; they had to get it to water and send it to the other side of the world and compete with the labor of Russia and all the rest of the world, and it could not be done.

We have a market of our own right here.

This is a national proposition and the Senator from Kansas is as much interested in it as is the Senator from Alabama, and the wheat raiser is as much interested in it as the bread eater is.

We have put these hundreds of millions on the inland waterway. Let's finish the system.

I have practically no time in which to talk to you. I want to say a lot. What I want to say particularly is that we are to be constructive and not destructive. I have said that time and again and I have said, too, time and time again, that the conscience of America will never permit the using the taxes of the railroad companies to tear down the business of the railroad companies.

You gentlemen, representing this great arm of our Government, must recognize that the Congress of the United States has recently given to the Interstate Commerce Commission jurisdiction over water rates and you must assume that they are going to exercise that power; they are going to make transport not competitive but complementary. They have the power, now, and you must not assume that that arm of the Government, just invested with that power, would permit the use of a waterway to destroy something that is indispensable to America. It will be complementary, not competitive, and the Congress has done its duty and has given this power to this body to exercise and take care of that.

The same is true of the power companies. We must not destroy them.

I am glad to see that the report puts in the locks and all as transportation cost.

There is room for us all to live constructively, not to be destructive.

Now, one more thought, gentlemen:

The President of the United States has recently appointed an interregional highway committee. It is known to all that we are looking to the aftermath of this great emergency; that there must be something ready by which to absorb the millions of idle men and of idle manpower turned loose in the factories and from the Army, and whatnot, with nothing to do. There must be something to absorb the idle industrial power, and we are already looking to that, and I dare say—I happen to represent the South; there are five members on that committee—I dare say I will have much conference with you gentlemen concerning that before very long. I have your military roads, and so forth, already furnished, just as we supply that cushion to absorb the shock so we must see that this sort of thing will absorb some of that shock that we have heretofore experienced, and we are asking you not to stand in the way of Congress, not to say: No, you shall not consider this matter. We are asking you to put it on its way and when the time comes for Congress to take care of the shock, it will be ready, just as on the highway proposition; we will not have the debacle we had before.

This is a national proposition, a proposition to take care of what is to come.

I am sorry I have no more time.

Colonel BAIN. Thank you very much, Governor.

Lon Folger

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. DURHAM. Mr. Speaker, I want to pay a simple tribute to my friend. I have known LON FOLGER from the year 1909, when he entered the University of North Carolina. He at once proved to be

a leader in his student days. His judgment and his counsel were always sought. He impressed all with his earnestness and sincerity, later taking his place along with leaders of our great State. LON FOLGER was faithful to the interests of his people to the smallest detail, but he placed the welfare of the Nation above all local or personal consideration. He has rendered the highest service to our State and Nation, and his name will forever be connected with those that have served our Nation in this critical hour. His friendship is a priceless memory. I will never forget his kindness to me. My regard for him was an affectionate one.

The following is an article and an editorial from the Greensboro (N. C.) Daily News:

[From the Greensboro (N. C.) Daily News of May 4, 1941]

LON FOLGER LEFT IMPRESSION ON THE HEARTS OF HIS PEOPLE

(By E. B. Jeffress)

Friday afternoon just as the sun was going behind the Blue Ridge Mountains in the little town of Dobson, loving friends in the presence of a large company of officials of State and Nation gently laid the remains of LON FOLGER to their last resting place. This was the community which had been the scene of his great activity.

LON FOLGER was an unusual man. He was a true friend. Although a politician, his advice could always be safely followed. He always had the interest of the common man at heart. He knew the people of his community and loved them. It will be hard to replace him in Congress, especially when men of sound judgment are so badly needed at Washington to deal with the problems that affect every human being in this country and the world.

LON FOLGER died a poor man but is rich in the love of his fellow human beings for him. He did not care to accumulate riches and did many an unknown act of kindness for his fellowmen which was a drain upon his private means. LON will long be remembered by the folks of his district and Surry County as a man with a great heart and an understanding mind. Had he lived it is safe to say that he could have continued in the service in Congress for many years. But his long service in behalf of his fellowman had drained his strength and it is a generally accepted theory that he suffered an attack which incapacitated him to handle his automobile which resulted in the accident.

At his funeral Friday there was abundance of evidence of the esteem in which he was held both at home and abroad. The floral display was one of the greatest in the State's history. While LON rests in the quiet village of Dobson the good work which he did for his people will long remain in their memory.

At the Jackson Day dinner in March when FOLGER and his coworkers fought to a satisfactory conclusion, the elimination of North Carolina's part of the national deficit may be considered the high point of his post as national committeeman. The dinner brought to the State men high in party affairs, including the national chairman, and a large number of folks from Washington.

FOLGER showed his ability when he got young Dick Reynolds to take the job of raising finances for the party, which proved a very fortunate selection. LON knew men and knew how to get them to work for what he thought was right. He was always close to the people and that, together with his organizing ability, accounted for his remarkable success. He was one politician that the average man could depend on. In my years' connection with the State highway work I knew LON well and I learned to know that he knew his county and he knew the men in it. He was a qualified political leader because he had that rare trait so lacking in many politicians. He was a warm-hearted man and close to the people. They may erect a great monument to LON, but no monument can surpass the real affection the people have for him.

[Letter from the Greensboro (N. C.) Daily News of May 3, 1941]

CONGRESSMAN FOLGER

That part of the once imperial Fifth North Carolina District that stayed put when the new Sixth was split off has lost one of the most effective politicians who ever represented it in the Congress of the United States.

ALONZO D. (LON) FOLGER would not have objected to being called a politican instead of a statesman. He knew his men and issues and worked at them in a painstakingly practical fashion.

Perhaps the most striking instance of Mr. FOLGER'S ability to take care of himself by thinking a step or so ahead of other practical partisans was his giving up an emergency judgeship rather than to turn over the Democratic national committeemanship. He wasn't doing badly as a judge, for he was a capable lawyer, but he knew where he wanted to go, and soon there he was.

A good many congressional careers are the result of accident. Not so that of the Honorable A. D. FOLGER. He wanted the post, went out and got it, and was maintaining his right to it when his car crashed with him on his way to a commencement speech.

The special election which is held to select his successor will have to be extra special if it fills the vacancy with a man who knows more about what representing a district in Congress is about.

The Selective Service

REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. ANDREWS. Mr. Speaker, some time ago I received a very intelligent letter from the head of my home draft board having to do with the operation of the Selective Service and Training Act.

The questions and suggestions posed therein are, I know, of value to all who are interested in proper operation of this important service and I submitted them to General Hershey for his information and comment thereon. I submit herewith the letter mentioned, together with the reply of General Hershey:

BUFFALO, N. Y., *April 18, 1941.*

The Honorable WALTER G. ANDREWS,
The House of Representatives,
Washington, D. C.

DEAR SIR: At a recent meeting of Local Draft Board No. 617, of which I am a member, my colleague, Mr. Roswell Park, stated that he had had a talk with you, followed by a note, asking that he advise you as to comments and suggestions he might have relative to the operation of the selective-service law. This served to remind me of our previous talk on this subject and of my promise to write you on the same subject.

I have been active in this work since the start and have given considerable time and thought to the problems constantly arising in the selection of registrants for Army service. The following comments are offered merely in an attempt to improve the process involved and are, in no sense, intended as nonconstructive criticism.

The major difficulties encountered by us in the front ranks, i. e., charged with the original problem of selection, are as follows:

1. The questionnaire itself needs revision and clarification, especially that portion dealing with dependents. The question with regard to the financial assistance afforded such dependents by the registrant, and the independent resources of the former, is confusing.

Many registrants think that the word "dependent" means only a wife or child. Strangely enough, others seem to think that the same word applies to more remote relatives and excludes a wife and child. A great many more have no understanding of the word.

My suggestion in this respect is that the questionnaire specifically ask whether the registrant has a wife, child, father, or mother, and what, if any, assistance is given them, together with the other resources of such person or persons. I would further suggest that, instead of referring to "other dependents," the questionnaire use the word "relatives" in asking whether any such persons are receiving help.

This may sound like a mere detail, but my experience has been that time and again the questions with regard to dependents have been left entirely blank when, in fact, the registrant had "dependents" who were receiving a substantial measure of their support from the registrant. We have made it a uniform rule not to classify any registrant until we have personally examined him under oath, just to make sure that the registrant was not entitled to deferment because of dependency of others, although the questionnaire was entirely blank as to the above. As I stated above, time after time men have been entitled to deferment but would have been inducted into the Army had the information not been forthcoming which was nowhere suggested on the questionnaire.

It also struck me that the requirement that the questionnaire be sworn to is perhaps unnecessary. A deliberate misstatement on the questionnaire could be made a penal offense, if it not already is, without the necessity of an oath. It is not always easy for a man to find a notary or a member or clerk of his draft board to take his oath. Many times men have called me on the phone, contacted me at home at night, and run around the last day of the questionnaire, seeking a notary and caused themselves unnecessary annoyance and, in many cases, loss of time over this requirement.

2. The regulations, in my opinion, should be more specific with regard to professions directly concerned with the armed effort.

For example, as I understand the law and regulations, the question as to whether a young doctor or dentist is to be deferred depends upon the local board. In most cases one cannot conscientiously conclude that, in a large city well supplied with men of these professions, the induction into the Army of a given physician or dentist would adversely affect the national health or well-being. On the other hand, it doesn't seem fair to induct these men into the Army without any assurance to them that, upon induction, their professional attainments will

be utilized in the proper branch of the service.

In practice there is considerable confusion and lack of uniformity in the action of the various local boards with regard to men in these professions and, in my opinion, some uniform, definite ruling should be made, either that young men in these professions, as well as pharmacists and perhaps mechanical and civil engineers, should either be deferred by the local boards in all cases or not be entitled to deferment; and, if the latter, some assurance should be given them that they will promptly be placed in the branch of the service for which they are fitted. Of course, this observation does not apply to men who are entitled to deferment on other grounds such as dependency, previous service, occupational connections, and so forth.

An especially difficult problem in this connection arises with young internes in hospitals. It is rather difficult to defer these men on the grounds that they are necessary to the maintenance of the hospital and, on the other hand, the hospitals are quite exercised when they lose men in this capacity. There has come under my personal observation the case of a given hospital having four young internes all similarly situated. One local draft board deferred two of these men; the neighboring board granted no deferments. This, of course, engendered bad feeling between those registrants not deferred and their board, and some friction between the boards involved.

My thought in this regard is that, in a profession such as I have referred to, as well as perhaps, teachers, who present similar problems, there should be definite regulations as to the proper classification of such men who are not entitled to deferment on other grounds.

3. Another difficulty arises with regard to "one-man businesses." Various registrants, especially in the older-age group, are sole proprietors of a specialized business which will have to be liquidated if the registrant is inducted into the service, resulting in throwing a number of men out of employment who, perhaps, are specialists in that business and not readily absorbed in industry.

Where the induction of such a man would result in the dismissal of a substantial number of employees, the board of which I am a member, has deferred the registrant on the grounds that the national welfare is served thereby. However, in many cases, such men employ only a relatively few individuals. It is difficult to persuade such a man that our action in inducting him is fair, when he can point to another man employing a few more men, who has been deferred.

I think that some definite ruling should be made to the effect, either that the sole proprietor of a business is not entitled to deferment in any event on such a basis, or, on the other hand, that he is, provided he employs more than a given number of employees.

4. Provision should be made, if possible, for a definite period to elapse between notice of classification in class 1-A and actual induction.

This may be impossible by reason of administrative difficulties, but some attempt, I believe, should be made to fix the time, and it should be considerable, between the time a man is advised he is subject to the call and the actual date of his induction. As the law is now administered and as the regulations provide, or perhaps I should say fail to provide, after an individual receives a class 1-A notice he has very little idea when he will be called. He doesn't know whether to quit his job promptly so that his employer may find a substitute or whether to take a new job if he is out of work, or if a new position is more attractive, but is left in a state of complete suspense after his classification. Many men have given up their jobs and then remained idle for several weeks or perhaps months, waiting to be inducted. Others have taken new jobs, only to be called suddenly, to the detriment of all concerned.

5. The class 2-A deferment on the general grounds that a man may be deferred if his occupation or calling is connected with the national health, well-being, and safety, etc., is such a vague generalization that in practice it means little, if anything.

Of course, at one end of the scale the problem is simple; that is, in cases where men are actually engaged in war industries. On the other hand, it is pretty difficult to find any productive calling that isn't either directly or indirectly connected with the national well-being. It would seem to me that it should be possible by this time so to catalog the major industries and callings as to give the local boards at least a concrete guide.

The results in the application of this broad classification have been, in many cases, fantastic, and the lack of uniformity in its interpretation by the local boards has created confusion, resentment, and is not conducive to public confidence in the administration of the selective-service law.

6. I believe that the physical standards required, in at least one respect, are susceptible to improvement.

It has been my experience that, due to the long succession of "depression" years, the registrant's teeth are, in many cases, badly neglected. Under the regulations, to place a man in class 1-A, he must have, I believe, in all, 18 opposing teeth. Time and again fine physical specimens have been rejected by the board because they could not meet these qualifications although efficient, artificial dentures were in use, or the registrant had less than the required number of natural teeth, or substantial portions thereof, supplemented by plates. I suppose that a man in actual combat service might be at a disadvantage if he lost or broke his plates, but for training it would seem to me that the regulation should be changed so that, if a man were able properly to masticate his food, he should be available for service even though all his teeth were artificial.

In this connection I should like to suggest that consideration be given to the compulsory rectification of trifling physical defects. It may well be that such requirement would not be good policy or that it might involve insuperable constitutional complications. However, men have come in, for example, with bad teeth which could be remedied, or requiring a slight surgical measure which would qualify them for service, but whose refusal voluntarily to take such measures prevents their induction.

7. The problem of resident aliens presents itself frequently, especially in a city like Buffalo, which is on the Canadian border.

The first question that comes to my mind in this connection is the provision in the regulations that a man who has filed his intention to become a citizen is subject to the selective-service law. It is my understanding that under the immigration law a man who marries a citizen need not take out such papers. In other words, that the marriage to a woman who is a citizen takes the place of filing his notice of intention to become a citizen. If it is the intention of the law that such a man is in the same category as a single man who has filed such notice of intention, the law and the regulations should both so state.

However, a much more important problem which again presents itself many times in a city on an international border, is that of single Canadian citizens who have lived here many, many years, who reside here, work in Buffalo, in industries drawing good wages, and yet who fail to file notice of intention to become citizens. It seems most unfair that these men can avoid the obligations of citizenship of this country, although they receive the same treatment in industry as citizens.

Of course, it may be that consideration of international law, treaties, or foreign policies prevent the induction of these men, but it seems not unreasonable to present this question to your attention.

8. Finally we come to the most difficult problem of all, that is, married men.

In my opinion, it is absolutely imperative that the regulations specifically prescribe the treatment to be afforded married men in each of the following categories.

a. Married men whose wives are working, under circumstances where, if the men were inducted into the service, the woman's earnings would suffice to maintain her in a comfortable, dignified, station in life, although perhaps on not quite the same scale as the two enjoyed prior to such assumed induction.

In this connection, time and again cases have come before the board where a man is earning from $20 to $40 or $50 a week and his wife, the same amount. In such cases, many times the wife has held her position for a good many years or perhaps has secured tenure in office as a school teacher or civil-service employee.

b. Cases such as "a" where there are one or more children who are either being cared for outside of the home or by paid attendants, where the wife's earnings alone are adequate to maintain the wife and children in a reasonably comfortable situation and on a scale not greatly inferior to that afforded by the joint earnings.

c. Cases where the wife has an independent, unearned income, adequate to maintain herself or the children, if any, on the scale mentioned in "a" and "b" above, without the husband's earnings.

d. Cases where the wife has an unearned income, adequate to maintain herself and the children, if any, on the scale enjoyed by the family before the assumed induction of the husband, but which, by reason of the husband's earnings, is not being used for family purposes, but is being accumulated.

e. Cases where the husband and wife are living on the husband's earnings but he has accumulated money or property adequate to maintain his wife or the wife and children's standard of living during the period of service, without substantial reduction of the family reserve.

f. Cases similar to the foregoing, but where the family consists of the registrant and his mother, father, or sister or other relatives, instead of the registrant's wife.

There has been the most hopeless confusion in the determinations of different local boards on one or more of the foregoing state of facts. Some boards uniformly grant deferment to married men, regardless of the accumulated means of the registrant, or the earnings or other income of the wife or other members of the family. Other boards classify in class 1-A, married men in one or more of these categories. A man in one district may hence be deferred, when another man in the adjoining district, having practically the same family situation, is inducted into the Army.

I believe that the failure to promulgate definite, concise rulings as to the treatment of married men and men with claimed other dependents, will seriously affect public confidence in the selective-service law and its administration.

Incidentally, another problem presents itself in surprisingly frequent instances and for which no proper provision is made in the regulations.

Very often men are living with women who, for some reason, they do not or cannot marry, but who maintain a common home.

In many instances these couples have children. Technically, under the regulations, the registrant cannot claim deferment by reason of the woman's dependency (since she is not a relative of the designated classes) unless she is under 18 or physically or mentally disabled. However, as a practical matter, to induct him under the circumstances may make this woman a public charge. Perhaps social or moral requirements necessitate failure to recognize such a status as affording deferment, but I present the question for such consideration as you may deem it worth.

This letter has been, perhaps too long, but I feel that there may be some benefit in a recital of the problems encountered by us engaged in the selection process.

Yours very truly,

ADRIAN BLOCK.

NATIONAL HEADQUARTERS,
SELECTIVE SERVICE SYSTEM,
Washington, D. C., May 1, 1941.

Hon. WALTER G. ANDREWS,
House of Representatives.

DEAR MR. ANDREWS: I received your letter of April 25, 1941, enclosing letter of April 18, 1941, to you from Mr. Adrian Block, and also letter of April 19, 1941, to Mr. DIRKSEN from Mr. Frank A. Stewart.

Mr. Block's letter indicates that he has a very complete and thorough understanding of the operations of selective service and of the problems with which we have been confronted. We, of course, recognize the existence of these problems, and have been attempting to work out satisfactory solutions. Thus far we believe that considerable progress has been made in this respect, and for your information I shall comment in detail on some of the points which are raised by Mr. Block.

The questionnaire, DSS Form 40, is at the present time being revised as it is recognized that it is deficient in some respects, and that there is room for considerable improvement. I have submitted Mr. Block's comments to the officers who are making the revision.

In connection with the deferment of men in professions and the deferment of students preparing therefor, we have been solving the problem administratively. For your information, we issued national headquarters memorandum of March 7, covering classification of registrants in training or preparation for activities necessary to the national health, safety, or interest, as an initial step. This was followed by subsequent national headquarters memorandum also dated March 7 which supplemented the first memorandum. A third memorandum has been distributed, based upon a report received from the Office of Production Management, which should clarify the situation and bring about much more uniformity. This memorandum sets forth that there is an over-all shortage of doctors in the United States, and that the known demands on the part of the armed forces and on the part of the civilian population will require a steady flow of medical-school graduates into the profession in order to maintain an adequate supply. The memorandum, of course, goes into considerable detail in order to be most helpful to the local boards. In addition to such administrative action on our part, the regulations now authorize the State director or the National Director to take an appeal from either a local board's determination or a decision of an appeal board. By use of this appeal procedure improper decisions that are called to our attention can be rectified.

In connection with internes, the above-mentioned memoranda also cover them; but an additional point should be brought to your attention, namely, that the War Department has informed us that internes who meet Army requirements may be commissioned in the Medical Reserve Corps and will not be called to active duty until they have completed at least 1 year's internship.

It is intended to cover the question of deferment of teachers in professional schools administratively in a manner similar to that with respect to doctors and medical students. We recognize, of course, that certain teachers are essential to train those who are needed to maintain the existing supplies of necessary men. Incidentally, many of such teachers are outside the age groups or are subject to deferment on other grounds.

The problem of the one-man business has thus far been left generally to the discretion of the local boards, and we have made no determination as to the number of employees that should be required in order that there be a deferment. We shall give further study to this problem and determine whether or not a definite yardstick can be established.

Mr. Block's suggestion that a registrant be informed of his induction date immediately upon being classified in class 1–A would be complied with if it were at all possible to do so. However, as more men will be classified from time to time into class 1–A than will be immediately needed to fill War Department requisitions, it is impossible to follow this suggestion. We have, however, advised our representatives to urge class 1–A registrants not to wind up their affairs until they have been definitely informed of their induction date. In addition to this, we have recently amended section 418b of the regulations to permit a local board to postpone a registrant's induction date for 60 days, subject to renewal for cause, where it determines that individual hardship would otherwise result to the registrant. This provision will permit local boards to give additional time to a registrant in order to complete a present activity, wind up his affairs, take an examination, complete a semester which he has already begun and to perform other such acts. We believe that we have this particular situation under control.

In connection with class 2–A occupational deferments, we have been maintaining close liaison with the office of the Under Secretary of War and the office of the Under Secretary of the Navy, and we have also been requesting and obtaining statistical information and reports from the Office of Production Management concerning supplies and existing and contemplated demands for various types of skilled men. As this information has become available to us, we have issued memoranda to State headquarters for dissemination to local boards.

It is our belief that handling the situation administratively in this manner is adequately solving various existing problems and will bring about a satisfactory solution.

In the States the various Government matériel-procurement agencies, businessmen, and union officials are in close contact with the occupational advisers attached to State headquarters, and we believe that in most instances men who should receive occupational deferments are receiving them. Whenever it is brought to our attention that such is not the case, we have an immediate investigation and determine whether or not an appeal should be taken. In some cases which have slipped through our hands because we were not informed about them prior to the man's being inducted, we have received perfect cooperation from the Army, and where justified, certain necessary men have been discharged. It is our opinion that in the future very few of these cases will proceed to the point of actual induction.

We have been giving careful consideration to the problems relating to physical condition of registrants and are very much aware of the great many remedial defects that could be removed by prehabilitation or rehabilitation. We have already issued releases on this subject, calling for the cooperation of the medical profession, colleges, and others to join in an effort in the interest of national health to combat these remedial defects. However, it is our opinion that we cannot legally compel a registrant to submit to treatment for the purpose of removing such defects, although we believe that our present plan will go a long way in remedying the situation.

Our legal department informs me that under the existing selective-service law an alien is not liable for training and service unless he has in fact made a declaration of intention to become a citizen. Therefore an alien who is proceeding to become a citizen without being required to make such a declaration is not liable under the law. As we are bound by the terms of the act, this is a matter in which we have no discretion.

As the Selective Service Act does not impose liability for training and service on nondeclarant aliens, we likewise have no jurisdiction over the point raised by Mr. Block concerning nondeclarant aliens who are Canadian citizens and who are residing and working in Buffalo. As nondeclarant aliens are not at present acceptable to the War Department for enlistment, it would appear that Mr. Block's suggestion could not be carried out without additional legislation requiring aliens to make declarations and become citizens.

In this latter connection we have had some inquiries as to why persons with bad criminal records and other undesirables are deferred. In answer to such inquiries, we have explained that the quality of the Army as a whole depends upon the quality of its personnel. The matter of morale must also be considered.

We certainly agree that the question of married men and the broader question of dependency have been an outstanding problem. We have been studying all aspects of this problem for a long while and have reached some definite conclusions upon which modified procedure will be based. It is expected that the existing regulations will be amended as soon as possible in order to carry out the new procedure and bring about uniformity.

While we were studying the question of married men and dependency, we attempted to secure more uniformity by way of administrative rulings and through appeals. This has been successful in numerous instances, but we recognize the problem will not be solved until the new procedure is put into effect.

In connection with a man who is living with a woman to whom he has not been formally married, such woman may qualify as a dependent in States where common-law marriages are recognized. Also, regardless of whether or not a registrant is in a State which recognizes common-law marriages, if he has any children by reason of such union, the children, although illegitimate, are eligible to qualify as dependents. We have not covered the situation beyond that point.

We are returning herewith the letters which you enclosed and are also enclosing copy of letter written to Representative DIRKSEN, which is self-explanatory. We are also enclosing a number of recent Selective Service releases directed to the solution of many of the problems raised by the letters of Mr. Block and Mr. Stewart.

I trust that the foregoing will satisfactorily serve your purposes, but we will be glad to explain in more detail any particular point

or points upon which you desire more information.

Sincerely yours,

LEWIS B. HERSHEY,
Deputy Director.

[Enclosures.]

Mr. Speaker, may I also state to the Members that at my suggestion Mr. Hershey will send to all members of the Military Affairs Committees of the House and Senate a copy of their regulations and releases to State directors. These are very clarifying throughout. If you will study them, you will find the answers to a great many of the inquiries which we are receiving daily, and I commend them to your attention.

Increase of Aluminum Production Facilitated by Columbia River Dams

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. PIERCE. Mr. Speaker, several times in the last 2 years I have called attention in this House to the fact that the power generated by the dams on the Columbia River would probably play an important part in the defense of this Nation. I also pointed out the probable shortage of aluminum and magnesium. This was brought home clearly today by press accounts of shortage and the fact that by midsummer 50 percent and more of the aluminum produced in the United States will be made on the Columbia River from the power generated at Bonneville and Grand Coulee. It takes 2 kilowatts running 365 days and nights to make 1 ton of this light metal so we can see the importance of these great dams.

There is an article in the Washington Post this morning calling attention to the fact that the President has asked for a large increase in the production of aluminum and magnesium. When we think of the fact that the German boys are riding light-metal airplanes to victory in continental Europe, we can see the importance of the improvements on the Columbia River and the necessity for authorization of the third Columbia River dam at Umatilla Rapids.

The Umatilla Rapids Dam has been included in the authorization bill of the Rivers and Harbors Committee. I have a bill pending providing for its construction. It is vitally important.

The following is the article in the Washington Post this morning to which I have referred, showing the increased demands for light metal:

[From the Washington Post of May 7, 1941]

METAL FOR DEFENSE—UNITED STATES STRIVING TO MULTIPLY ITS PRODUCTION OF ALUMINUM

Defense officials are embarking on a program to increase production of aluminum to between two and three times the present output and to raise magnesium production to from five to six times its present level, it was learned yesterday.

Although details of the gigantic expansion program are not crystallized, officials asserted that there was no alternative for the enormous increase and that it "has got to be put through," mainly because of the demands occasioned by the President's orders on Monday for a 200- or 300-percent enlargement of the heavy-bomber program.

The new schedule for both defense metals, whose strength and light weight make them indispensable for aircraft production, call for the objective being reached by 1943.

In aluminum, the current production of which is at the rate of about 600,000,000 pounds a year, present expansion plans already "in the works" will provide for an annual output of about 800,000,000 pounds by the end of the year. The new goal is said to be in the neighborhood of from 1,500,000,000 to 1,600,000,000 pounds annually.

POWER IS NEEDED

Magnesium production, which was only 14,000,000 pounds in 1940, is now flowing at the rate of about 25,000,000 pounds a year. The new objective is an annual rate of 150,000,000 pounds.

Major hurdle to be overcome in the new program is the availability of electric power, huge quantities of which are necessary to fabricate aluminum from bauxite and magnesium from brine.

As a result, great expansion of generating facilities at the T. V. A. and Columbia River dams will be necessary, it was learned. Some of the new plants made necessary by the program will obtain new power to be generated at Grand Coulee Dam, and others will draw on energy to be produced by enlarging T. V. A. capacity, it was said.

ALCOA TO HAVE MAJOR SHARE

Also undecided are the agencies which will undertake the program and the financing arrangements to be made. The Aluminum Co. of America, it was anticipated, would shoulder the major share of the work, although a relatively newcomer to the aluminum field, the Reynolds Metal Co., may also take part. The latter concern will be in production within a month in the Pacific Northwest, using Bonneville Dam power, and is said to have shown great success in its initial operations.

A possibility that the Government itself might undertake the production was also believed to be under consideration.

Although the program is still in a formative stage, it is reported to be developing very rapidly and may be definitely launched within 2 or 3 weeks.

Meantime, shortages of aluminum, particularly forgings, have already curtailed operations at some airplane factories.

Congressional Mandate Compels Unnecessary W. P. A. Reductions

REMARKS

OF

HON. M. MICHAEL EDELSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

Mr. EDELSTEIN. Mr. Speaker, I have voted for every defense measure that came up in this House ever since I have been a Member of the House. At the time I voted for those measures I believed that we could not promote democracy for the people of the United States without preparing our defense against foreign aggression. In short, we are acting in the foreign sphere so that we may more fully protect our own people.

In my district I am advised this morning that the W. P. A. proposes to cut down considerably upon all white-collar jobs. In the light of such news I hope that the Members of this House will pause a few minutes to reflect on the significance of this news.

I wonder whether there is not stirring through this Chamber, despite the pleasant weather we are now enjoying, a dark shade of the past winter. How many of us recall that day last February when we blithely voted only $375,000,000 for W. P. A. until the end of June, even though we were warned that it meant that 650,000 people would be cut off the W. P. A. rolls, regardless of whether they could find any jobs in private industry.

At that time I urged a deficiency appropriation that would make unnecessary such discharges. The philosophy, or rather, the optimism which then prevailed was that as the defense program gained momentum and reached its height, it would rapidly reduce and then end unemployment. That optimism I could not share and still have not absorbed. England, with her back to the wall but her courage unabated, still has an army of 800,000 people registered on her unemployment rolls, people who, for one reason or another, cannot be used in defense production or any other employment. The same situation will be true here. We must continue to provide for people who will not fit into the defense program. It is said that Hitler, with characteristic Nazi ruthlessness, is killing off the aged, the old, and the infirm, who can contribute nothing to his military program and who are only a drain upon his resources. I do not think we will ever adopt Hitler's rule that those who cannot contribute to defense shall be exterminated. Yet are we any more humane because we will gradually starve to death Americans who, although they can find no place in our defense program, nevertheless have been summarily dismissed from W. P. A.

W. P. A. was created because the people of this country believed that it was better to provide work for those able and willing to work than to give them the soul-destroying dole of idleness. Where private industry could not provide jobs the unemployed were given jobs in work of public benefit until private industry was in a position to offer them jobs. That purpose is still valid. The deficiency appropriation of 3 months ago imposed a cut on W. P. A. in complete disregard of that purpose. Reductions are being made in our W. P. A. rolls not because there are less people in need of work relief but only because we have a defense program, even though it cannot absorb all those being separated from W. P. A.

I know that right now employment in industry is at an all-time high, production is even higher, and the shortage of

skilled labor is becoming more imminent, especially with increased shifts and the longer workweek. Despite all of these signs, the paradox remains that people on W. P. A. cannot find employment under our defense program. In the first place, defense contracts are not being given where unemployment is necessarily the greatest. According to Federal Security Administrator McNutt, 73 percent of primary defense contracts are in 20 centers, while only 19 percent of W. P. A. employment was in these areas. This shows that the defense program has a long way to go before it will end unemployment throughout the country. Certainly New York City has not benefited greatly from defense contracts and her W. P. A. needs are as great as ever.

In the second place, there are still about 1,000,000 more people qualified for W. P. A. for whom the defense program has no room because the trades, occupation, or art that they know bears no relation to defense, or because they are of an age or color which private industry will not hire. This is also true of many of those now on W. P. A. Age and color restrictions have not been eased by private industry under the defense program. Obviously, a man, no matter how skilled he is in his own field, is unskilled and unusable if it is not in a field relating to our armament program. A clerk, bookkeeper, tailor, cutter, or furrier cannot handle machine tools or work on an assembly line. No one can deny that when a retrenchment occurs in W. P. A. these unskilled are the first to go and in the greatest numbers.

Even if one out of every fifth defense job were filled by someone from W. P. A., as has been said, this would not justify retrenchment. To justify a dismissal of 650,000 W. P. A. workers there would have to be 3,250,000 new defense jobs created. Federal Security Administrator McNutt last month estimated defense employment to be approximately 5,000,000. I would herald an achievement which by June would even increase our defense employment to 7,000,000 and thus diminish our W. P. A. rolls to a mere vestage of their former strength. But neither one nor the other will happen.

W. P. A. for the month of May is putting through large employment cuts. In the recreation project in New York City the cut will be about 4 percent, and in the education project it will be over 12 percent. These cuts are in line with the total reduction in employment which will be effected in New York City and throughout the country. Nothing is said to show that the reduction in employment is the result of resignation rather than discharge. A cut averaging about 9 percent is rather staggering; and yet the bare fact is that this reduction is being made only because we mistakenly assumed 3 months ago that the defense program would make serious inroads on the W. P. A. rolls.

The cut in the education and recreation projects is ill-timed, ill-advised, and certainly bears no relation to the absorption of these people into defense production. The education program functions on the edge of the regular school program and supplies services which the city itself cannot furnish. It provides educational opportunities to the young and old, the sick, the mentally and physically abnormal, and the undernourished. It runs the nursery schools for preschool children whose mothers are working or ill. It serves milk and hot lunches to school children whose parents are on relief. It teaches sick and crippled children sc that they will not fall behind their classmates. It takes problem children and those who cannot cope with their lessons and by surveys and training in small groups, seeks to eliminate antisocial attitudes, and to bring them abreast of their classes. Further, it provides teachers who teach handicraft work and art as guides in taking underprivileged children to parks, playgrounds, museums, and other points of interest. This project also conducts classes in which deaf-and-dumb children are taught lip reading. Not the least of its tasks is to teach English and citizenship to thousands of adults, as well as to prepare reading matter for them. This is especially important, since New York City has over 1,000,000 aliens.

If the people employed on the education and recreation projects could easily find other employment, in or out of the defense program, there might be some justification for cutting down these two projects. If the work they were doing were finished or could be handled by the regular educational organization of New York City, the projects might be terminated if no other work could be found for the people now employed on it. Neither condition, however, has been shown to exist. Notwithstanding the absence of any such justification, cuts are being made. The only reason is because we have not provided enough funds and by our action in February deliberately ordered this reduction.

We have not as yet acted on the 1942 appropriation for W. P. A., which is still being considered by the Appropriations Committee. I think that the statements I have made here should be carefully considered by it. Whatever reductions have to be made in our civil expenditures should not be made at the expense of W. P. A., no matter how attractive and easy it may seem. I know that in many districts, just as in mine, there are still as many unemployed as before. I also know that defense contracts will have little effect on these unemployed, either because of their age, or their lack of skill in a defense industry. We must provide for them, we must give them work to do. We are already beginning to make plans for a public-works program to take up the slack of unemployment after the termination of our defense effort. That will aid those who have had defense employment. Shall we, in the meantime, let our almost perpetually unemployed starve? My answer is "no"! This year we gave for W. P. A., including a deficiency appropriation, $1,350,000,000. This necessitated a drastic cut in W. P. A. employment. Bearing that in mind, as well as the rises in the price of rent, food, and clothing, our W. P. A. appropriation for next year should not be less than $1,500,000,000, and if possible, $1,750,000,000.

The Upper Peninsula of Michigan and the National-Defense Program

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

LETTER TO DIRECTOR OF INFORMATION, OFFICE FOR EMERGENCY MANAGEMENT

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from a letter I wrote to the Director of Information, Office for Emergency Management, Executive Office of the President of the United States:

HOUSE OF REPRESENTATIVES,
Washington, D. C., May 5, 1941.

Mr. ROBERT W. HORTON,
Director of Information, Office for Emergency Management,
Executive Office of the President,
Washington, D. C.

DEAR SIR: I was just rereading your mimeographed copy of a release you sent me dated March 26, 1941, with regard to the National Defense Advisory Commission and was struck with the common-sense observations contained in that release. I am, however, completely and thoroughly disgusted with the fact that none of these suggestions seems to be carried out.

I believe I represent an area that is about as fine a glaring example of the area that was described in this release because I note that you state in it that the experience gained during the past 10 months would indicate that the immediate ends of national defense are largely consistent with the longer run objective of a better balanced industrial economy and to reach those objectives there were several suggestions made as to the principles that should be followed and should govern the location of new industrial facilities. For instance, (1) that sites be avoided in cities or regions where defense orders are absorbing or are likely to absorb the available labor supply, or to congest housing, transport, or other facilities; (2) that every possible preference be given to locations where large reserves of unemployed or poorly employed people are available and where industrialization during the defense period will contribute to a better long-run balance between industry and agriculture.

The Upper Peninsula of Michigan is a vast area that could be developed on a part-time industry, part-time agricultural basis. Some time ago the director of relief in the State of Michigan made the statement that 50,000 people would have to be moved out of the Upper Peninsula of Michigan or remain permanently on relief. I took issue with him at that time and claimed that with the natural resources of the Upper Peninsula being developed properly on a part-time agriculture, part-time industrial basis, we could not only take care of the people that were there but could take care of at least twice as many more but that we must have a basic data survey of the natural resources looking toward their development. This statement was made as early as 1935 and I made a speech that is contained in the CONGRESSIONAL RECORD on this subject. At one time the Upper Peninsula of Michigan had as high as 50 percent or better of its people on relief or W. P. A.

This area is strategically located at the head of the Great Lakes. In the Upper Peninsula in the western part along the Wisconsin border lies some of the largest iron mines in the world and in the Keweenaw and Houghton Counties peninsula we have the large deposits of copper. We have some of the largest copper mines in the world but they happen to be high-cost-production mines and with Leon Henderson's agency pegging copper at 12 cents per pound they have closed practically every one of those mines and the men there are on relief. We have at the eastern end of the peninsula the Saulte Ste. Marie locks through which twice as much tonnage passes each year than passes through the Panama Canal and Suez Canals combined. It is truly a strategic area, this Upper Peninsula of Michigan, where there should be large air bases, training fields, etc., to such an extent that there would be protection for this very strategic area. We have plenty of wide-open space that could be used for the erection of munition plants, ammunition dumps, and many other things in connection with the national defense. We have a vast virgin forest of hardwood which is the only remaining typical area of hardwood forest in the United States, and still the national-defense program does not seem to take this into consideration because the operators are going in there and slashing that national resource out to such an extent that within 8 years it will be nothing but a barren waste of slashings and stumps.

If the National Defense Advisory Commission is really interested in carrying out the program and the suggestions as set forth in the release of March 26, they would be interested in an investigation of this area.

I want to give you a further illustration of just what I mean. I have had people come down from my district, which is the Twelfth Congressional District of Michigan, and advise me that the W. P. A. officials have gone to the city officials and advised the city officials to pay the transportation of people to larger cities where there are factories and to pay their board in those cities until such time as those people obtain work.

You know and I know that the national-defense program is concentrated now in too few areas and should be spread out into the wide-open spaces. The Upper Peninsula is one of those spaces where there is a large reserve of unemployed and poorly employed people and where industrialization during the defense program could contribute to a better long-run balance between industry and agriculture.

I have heard so much about the national-defense program and the National Defense Advisory Commission and what they are going to do and what they have been doing, but I have not experienced in any instance where they have carried out any of these good suggestions.

Might I be so bold as to suggest that a study be made of the Twelfth Congressional District of Michigan toward the end of taking care of this very strategic spot in the national-defense program?

If our iron-ore mines are not important in the national-defense set-up, if our copper mines are not important, if our vast expanse of timber is not important, if our growing agricultural area is not important, if the transportation through the Soo locks is not important, then, of course, the program of completely forgetting the upper Peninsula of Michigan and treating it as though it was not a part of the United States is all right. But if these things are important, then it is all wrong.

This may be a very cynical letter, but the way things are going and the way this area has been ignored has certainly brought me to the point that I feel as though I am becoming a cynic.

Inasmuch as your office is the Office for Emergency Management, I would be very pleased to have some representative of your office call on me so that we might discuss this matter and probably interest the Office of Production Management and the National Defense Advisory Commission as to the strategic importance of this area known as the Twelfth District of Michigan.

I trust that this letter will not be merely passed on to some subordinate but will be given serious consideration.

Florida State Convention of the National Council of Catholic Women

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

ADDRESS OF BISHOP JOSEPH P. HURLEY

Mr. HENDRICKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Most Reverend Joseph P. Hurley, D. D., bishop of St. Augustine, Fla., at the Florida State Convention of the National Council of Catholic Women, Gainesville, Fla., April 30, 1941:

The Catholic women of this diocese are to be felicitated upon the ready generosity with which they have performed the tasks set them in the past, and upon the devoted spirit of self-sacrifice with which they have accepted, during this convention, the heavier and more demanding obligations of the future. To the country's imperative need of defense, you have responded with the pledge that you will dedicate yourselves to the work of maintaining and ennobling the spirit of the boys whom our Nation sends to us by surrounding them with the same healthy and virtuous atmosphere which they breathed at home. You have done it well. You will have your reward in the respect and affection of these boys, in the prayers of their mothers, in the gratitude of a nation, in the blessing of your church. Your influence here and throughout the country will go far toward equipping the American people with those solid resources of virtue, of piety, of religion, of conviction that their cause is just, of devotion come what may, without which no engines of defense can be effective. In the truest and most womanly sense, you are protecting your altars and your firesides.

Last night, from the lips of three of our priests now serving with the armed forces, you heard something of these boys whom you are to serve. They are clean American lads, generous, loyal, and radiant with those virtues which are traditionally American. I am glad to have such a text upon which to base my protest against those publicists of the written and the spoken word who on every possible occasion insist upon telling us all how bad we are, how decadent, how unregenerate, how pagan; who din into our ears that our homes and our schools are utterly evil, our Government corrupt, our public morals depraved. I, as the chaplains, do not believe that. We are not nearly as bad as some of these jaundiced fellows paint us. And I am beginning to suspect that some of these dyspeptic moralists are the dupes of a few men who have no interest whatever in morals, but who are seeking to discourage and divide us here in America. Evils there are in our land, and we should seek to remedy them. But let us not be unmindful of the warning of Shakespeare: "But 'tis strange: and oftentimes to win us to our harm, the instruments of darkness tell us truths; win us with honest trifles, to betray us in deepest consequence." No sin, I grant you, is a trifle, but our partial sins are scarcely to be compared with the totalitarian sin which has submerged Europe.

Paganism there is in America; too much of it, but it has not yet made the deep inroads into our fiber as it has in Nazi Germany. Over and above our suspicions as to the motivation of these men who stand behind the publicists, some of us are getting tired of the negative tirade in editorials, in public addresses, in radio broadcasts, condemning America and Americans as pagans when only the tenderest reference is made to that rampant paganism which has plunged a continent into tears and blood. I am sure that even if our case were much worse than in reality it is, this constant flow of invective against everything American is not the way to cure us. It is bad pedagogics; people, like children, are not corrected by perpetual scolding. One might well liken some of these commentators on the American scene to specialists who pass their time in pathological laboratories examining and reporting on diseased tissue. Let some of our critics take their eye from the microscope, and as the chaplains referred to above, look at the whole American man. It will give them back a sense of proportion. A healthy body may have a few diseased parts. And so it is with America. Our duty as moralists is first of all not to scare the patient by a head-shaking prognosis of death; we must then pull up the body's resistance by the nourishing food of positive doctrine and of positive virtue. And we must beware of pouring the searing acid of our invective into his wounds; those acids should be diluted and judiciously dosed lest we destroy the healthy with the diseased tissue. May I add, by way of candid criticism directed against a few of our national Catholic weeklies and reviews, that we Catholics will be unwise if we entrust any of our part in the work of national healing to practitioners whose only merit is their mastery of the acids of vituperation.

There is another group of men who, wittingly or unwittingly, are engaged in depressing our national spirit. They are those who day in and day out clamor that communism is America's enemy No. 1. I am convinced that until a few years ago, that was true, and that today, communism is still our enemy. But I am also convinced that, in point of urgency, if not in point of teaching, communism has now ceded its primacy to national socialism. It may well be that the menacing thing which now cowers in Kremlin may again advance to first place among those forces which wage warfare on God and man. But today the first enemy of our humanity—killer of our priests, the despoiler of our temples, the foe of all we love both as Americans and as Catholics—is the Nazi. Curiously enough, and let this be pondered, it has been through Communist complacency and help that nazi-ism has spread its devastation across the face of the west. Curiously enough, and let this be deeply meditated, these men who would have us spend all our energies combatting communism, are now in reality following the Moscow party line. That line, dictated from Berlin is this: "Confuse Americans; insert the widening wedge into every racial and religious cleavage; split America; sabotage American morale and we need

not worry about her powder factories and her assembly lines." I deeply regret to say that some good Americans, among them a few Catholic publicists, are now following this Berlin-Moscow party line. They will be chagrined and shamed when they wake to realization of the company they have been keeping. Dupes, incautious, indeed. In combatting one army, they have been caught broadside by another. Incident in Scyllam qui vult vitare Charybdim—these good but maladroit men, in seeking to avoid the whirlpool of communism, have steered their bark straight for the vortex of national socialism.

But the most serious and insidious attack upon our national spirit is being made by certain men who after a series of public defeats have now taken refuge in the sanctuary of peace, and from the loopholes they have drilled in that sacred edifice are now sniping at American morale. In the past they have opposed every step taken by the Government in legitimate national defense—the Neutrality Act, selective service, the lend-lease bill. Now, that in spite of their clamors we are well on the way to safety, these gentlemen continue to hold out against the Nation from the citadel of peace. The impression has been put artfully about by them that in some way, not specified, our Government, and more particularly our President, are intent upon leading us coldly, callously, and causelessly into war. The hope which is nourished by the men who have cunningly devised this new assault upon our national spirit (though not, I must say, by their dupes) is that this kind of peace propaganda will confuse and divide us and thus weaken our national effort.

All of us are for peace; no good man can look upon the prospect of war save with horror and loathing. Our Government wanted and wants peace. With the exception of the Holy Father, no living man has worked more intelligently, more perseveringly, more powerfully for peace than the President of the United States. During the years and months that preceded this titanic struggle he labored ceaselessly, tirelessly in the cause of peace. Long before most Americans were aware of danger he was throwing the whole weight of this country's influence into the balance on the side of peace. I recall a few years back that the President urged upon the dictators that they give guaranties not to commit acts of aggression against some 17 neighboring states; and I can never forget the snarling chorus of obloquy which arose from the belated champions of peace here even before Berlin's discourteous reply was uttered. Something of the foresight of our foreign policy may be seen from the fact that 14 of the states which the President sought to protect have now passed beneath the yoke of totalitarian tyranny.

God knows we do not want war. But neither did the sovereign peoples of Austria and Czechoslovakia, of Poland, of Denmark and of Sweden, of Holland, of Belgium and of Luxemburg, of France, of Yugoslavia, and of Greece, and the people of Britain. But they have had war with its havoc and its destruction and its death. They wanted peace, but the Nazi would not let them have it. Yes; we, too, want peace, but not the peace of abject surrender and degrading peonage; not the pitiful peace of Rumania and Bulgaria. We Catholics want peace, but the peace we want is the peace of Pope Pius, the peace of justice and of charity, of law and independence, of national life and not of national death; the peace of the four freedoms.

I question the credentials of some of these men who now plead for peace, just as I have questioned the kind of peace they would have us seek. I question their credentials, because some of them are the same men who but a few months back were inciting our people to the worst kind of war—civil war. I refer to the men who were responsible for that vulgar, hate-inspired campaign against our Jewish fellow citizens, which eventuated in attempts at racial discrimination and mob violence. It has been said that liberty is the last refuge of a scoundrel; peace, as I have described it, may well be the last refuge in this country of the Nazi propagandist.

Who has broken the peace? Who has outraged the nations of Europe? These men of the false peace have the wrong address; let them direct their chain letters and form telegrams, not to the White House at Washington but to the Reichskanzlerei in Berlin. Indeed, the men who are behind this profanation of the name of peace (though not, I again repeat, their foolish dupes) are not interested in peace except as a means of sabotaging our national morale and of destroying our defense efforts.

Who shall say that we have not here uncovered the secret weapon by which our enemies have sought to destroy us? That weapon was built in the propoganda studios of Berlin after detailed examination of models from Moscow. Some of the world's best technicians have designed it, and they have corrected its range and caliber through long trials under ideal experimental conditions on the pre-war battlefields of France, of Norway, and of all Europe. This weapon has already begun to fire, carefully and at calculated intervals, in America. The projectiles are apparently harmless in their candied coatings, but there is deadly poison within—the poison of racism, of religious prejudice, of Old World enmities, of the class struggle, of hatred, and of division. The target of the secret weapon is our national unity. The gunners are often some of our best people. In short, the plan for America—the inside job—is not murder but suicide. They would have us destroy ourselves. What a refinement of deviltry—to seek to encompass the ruin of our country through those same good and noble agencies which these enemies of the humankind have persecuted and destroyed wherever they have gone.

Of course, they will not succeed. Where the welfare of our country is in question, we Americans, with the exception of a negligible few who can be dealt with, are a solid unit. No need for me to tell you where the center of that national unity is. In Washington, at the White House and on Capitol Hill, are the men whom we have chosen to lead us through the dark valley of the world's travail. They are there in the seats of power because we wanted them there—because they have the confidence of our people; they are there through orderly process of law under our Constitution. In the conduct of the Nation's affairs they have the counsel of our Army and Navy. They are patriotic men. They are the embodiment of American unity. Them we will heed and them we will follow. By them our national course has been set; we accept that course as our own. I do not know, nor do I presume to prophesy, where that course will lead us—whether it will be possible in the long run to protect our national interests by measures short of war. All I know is that further decisions rest in safe hands.

Debate, of course, there will continue to be, not on our purposes but on the methods of achieving them, to the end that our Government may always be in touch with the thinking of our people. On the fundamentals of our national policy there is no further need to break up into panels of discussion; we cannot afford that luxury in a world of lightning aggression; on those fundamentals we must be united in a solid phalanx of action. The question is no longer academic; it is strategic. The wars of today start years before they break out, and are won or lost in the pre-war period. At their peril governments must take cognizance of this fact, even though public awareness and public opinion lag behind. Blitzkrieg can be won only by a blitzregierung.

Canada and the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

ARTICLE BY C. H. CAHAN, K. C., OF MONTREAL, CANADA

Mr. BEITER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following, which is the second article concerning the joint development of the St. Lawrence, by the Honorable C. H. Cahan, K. C., of Montreal, Quebec:

[From the Montreal (Canada) Gazette of March 21, 1941]

JOINT DEVELOPMENT OF ST. LAWRENCE

(By Hon. C. H. Cahan, K. C.)

II

The waterways treaty of 1909 defined "boundary waters" as "the waters from main shore to main shore * * * along which the international boundary between the United States and the Dominion of Canada passes," and then provided in the first article as follows:

"The high contracting parties agree that the navigation of all navigable boundary waters shall forever remain free and open for the purposes of commerce to the inhabitants and to the ships, vessels, and boats of both countries equally, subject, however, to any laws and regulations of either country, within its own territory, not inconsistent with such privilege of free navigation, and applying equally and without discrimination to the inhabitants, ships, vessels, and boats of both countries."

Thus far the successive treaties have dealt with the navigation of all navigable boundary waters, but article 8 of the same waterways treaty also provides for the use of boundary waters for "power purposes" by declaring that the United States and Canada "shall have, each on its own side of the boundary, equal and similar rights in the use of the waters, constituting the boundary, for sanitary, navigation, and power purposes."

Along the first 67 miles of this international section, proceeding easterly, the St. Lawrence is a deep, slow-moving river, in which no water power can be developed. Then the river, proceeding easterly from Chimney Point, a distance of 48 miles, to the international boundary, at St. Regis, below Cornwall, embraces a series of rapids and swift-moving waters, which are now overcome for navigation purposes by the Galops, Rapide Plat, Farran's Point, and Cornwall Canals, all of which have been constructed and are now maintained by Canada at its sole expense. The increasing demand, chiefly in the United States, for hydroelectric power, has now introduced new factors into the

problem of providing deeper canals for the navigation of the St. Lawrence River.

It is now proposed to construct an enormous dam from main shore to main shore across the St. Lawrence River at Barnhart Island, which will utilize the total drop of 92 feet in the river from Chimney Point to Barnhart Island and produce 1,700,000 horsepower of primary continuous power, necessitating for its complete utilization an installed equipment of 2,200,000 horsepower, one-half of which may be used on the New York side and one-half on the Ontario side.

This proposed joint undertaking for the production of hydroelectric power was never contemplated by the framers of the existing treaties and never provided for by the terms of any of those treaties. In this proposed dam across the river, from main shore to main shore, at Barnhart Island, the necessary locks will be constructed for the ascent and descent of shipping in order to conserve the interests of navigation. Weirs and sluices also must be constructed in these dams, which will control the flow of water into Montreal Harbor; for upon the satisfactory control of the flow of water through these weirs the depth of water in Montreal Harbor will necessarily depend.

At present the Parliament of Canada has legislative jurisdiction over Canadian territory, and over the one-tenth of the volume of the river of St. Lawrence as it flows north of Barnhart Island, while the United States Congress has legislative jurisdiction over Barnhart Island and over nine-tenths of the volume of the river St. Lawrence which flows south of Barnhart Island. The problem is indeed a very complicated one, and though for about 20 years I have followed the discussions of this problem and have read every available public document, including, I think, every engineering report, dealing with the subject, I cannot at present conceive how any satisfactory solution can be found which is not expressed in an international treaty that is ratified by a two-thirds' vote of the Senate of the United States.

The Waterways Treaty of 1909 was primarily concerned with the navigation of boundary waters and with riparian rights to the use of such waters, the exercise of which on one side of the boundary might be productive of material injury to the navigation interests on the other side of the boundary.

The high contracting parties agreed in article 1 that "the navigation of all navigable boundary waters shall forever continue free to the ships, vessels, and boats of both countries equally."

Each of the high contracting parties reserved, in article 2, "exclusive jurisdiction and control over the use and diversion, whether temporary or permanent, of all waters on its own side of the line." Each maintained its right "to object to any interference with or diversions of water on the other side of the boundary the effect of which would be productive of material injury to navigation interests on its own side of the boundary."

Article 3 provided that except as "heretofore permitted or hereafter provided for by special agreements between the parties hereto, no further or other uses or obstructions or diversions, whether temporary or permanent, of boundary waters on either side of the line, affecting the natural level or flow of boundary waters on the other side of the line, shall be made except by authority of the United States or the Dominion of Canada, within their respective jurisdictions and with the approval" of the International Joint Commission. This approval is clearly confined to obstructions or diversions created by either party on its own side of the line.

Article 8 provided that "the high contracting parties shall have, each on its own side of the boundary, equal and similar rights to the use of * * * boundary waters" for domestic and sanitary purposes, navigation, for the service of canals for purposes of navigation, and for power purposes.

These provisions of the Waterways Treaty of 1909 clearly contemplated that each of the parties, on its own side of the boundary line, might continue, as theretofore, to construct canals for navigation purposes, and make diversions of water for domestic, sanitary, power and irrigation purposes, and the like, provided that in so doing the rights of the other party on the other side of the line were not materially injured.

But I respectfully submit that the proposed scheme of development at Barnhart Island, for both navigation and power purposes, does not fall within the scope of these provisions of the Waterways Treaty. The proposed scheme will involve far more than distinct and separate action, by either the Government of the United States or the Government of Canada, on its own side of the boundary. It proposes a joint undertaking of the two Governments on a vast scale. It proposes the joint control and management of this joint undertaking by the appointment of a new Joint International Commission.

This joint undertaking involves, for the first time in our history, the construction of an immense dam, from main shore to main shore of the St. Lawrence River, that will control the flow of the river from the side of this dam to the sea. It involves the maintenance of such a uniform flow of the river as will maintain and protect the navigation of the harbor of Montreal, and the flow of water, for navigation from Montreal to Quebec, in the channel which has been excavated by Canada at a cost of thirty to forty million dollars. It proposes that Canada shall, for all future time, own one-half the hydroelectric power produced by the construction of this dam at Barnhart Island, although nine-tenths of the natural flow of the river, which produces this hydroelectric power, is, at the site of the proposed dam, wholly within United States territory and under the legislative jurisdiction of the United States.

Such a vast scheme was certainly never contemplated by the provisions of the Waterways Treaty of 1909, which dealt with navigation of boundary waters and riparian uses of the flow of the stream; and, in my opinion, this joint undertaking can never be dealt with by concurrent or reciprocal legislation so as to maintain and protect for all time the vital interests of Canada in the navigation of the river and in one-half of the hydroelectric power that may be produced by the proposed constructions. Canadian interests can only be fully protected by a new treaty, and a new treaty will not be valid and binding upon the United States unless it is negotiated by the President of the United States with the advice and consent of the Senate of the United States, and ratified by the affirmative vote of two-thirds of the Senators present.

THE FRENCH PRESS

The waterways project

L'Action Catholique (Quebec): It is precisely because the waterways problem contains so many factors, ponderable and imponderable, that those who discuss it should obtain full information before crying either "treason" or "national salvation." We hope that at Ottawa and Quebec a loyal exposition of the question will be followed by a discussion not less loyal. The times are too grave for anybody to seek to make political capital over this issue. And the enterprise itself is too considerable in all its aspects and consequences for it to be decided in any "exaggeratedly simplified" manner.

H. R. 4466

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

Mr. SPRINGER. Mr. Speaker, the bill, H. R. 4466, has been passed. It was passed without my vote because my vote is recorded against the passage of that bill. I was convinced, and I am still convinced, this is a war measure, is highly dangerous to the peace of our country, and if the provisions of this bill are exercised it will cause our involvement in this war. The people of our country do not want war. They want peace. They want to extend aid to Great Britain, short of war. But they do not want to send to foreign fields the sons of America to shed their blood in a war in which we had no part in its making. The people do not want any overt act committed which will lead us into this war.

It was disclosed during the general debate on this bill that there are now 26 Italian ships and 2 German ships in our ports, and, under the authority of the bill just passed, the President has the plenary authority to seize and take those ships. Those are the ships of belligerent nations. What will be done with those ships? What disposition will the President make of those ships, which belong to the Government or to individual citizens of Germany and Italy? During the progress of the bill an amendment was offered by the gentleman from New York [Mr. CULKIN] which would have prohibited the delivery of those ships which will be seized to Great Britain, or to any other belligerent nation, but the majority side of the House voted that amendment down by a vote of 220 to 160. The very serious threat involved in this bill is the extension of the authority to the President to seize and take the ships of foreign countries, both belligerent and nonbelligerent, which includes the ships of both Italy and Germany, and to do with those ships as he may desire, which includes the power to deliver them to any nation, either belligerent or nonbelligerent, including England or her allies. No one can tell what nation will be favored when the President makes distribution of the ships he may seize. However, the very fact that the amendment which was offered, which would have prohibited the delivery of those ships to England, was voted down by those who follow the dictates of the administration now in power is the strongest indication that these ships of Italy and Germany will be delivered to England—their enemy.

Mr. Speaker, if and when this is done, that will constitute an overt act of war, and every Member in this House is cognizant of that fact.

May I say that I have done everything within my power to keep our country out of this European war. I assured the good people of my congressional district that I was opposed to our entry into this war and that I would do everything humanly possible to keep our country out of it. My record stands untarnished. I have kept the faith. I have opposed every measure which has been proposed which was a war measure and which would, in my opinion, lead us into this European war. I was convinced this bill, H. R. 4466, was a war measure—one which will in the end lead us into this European war. Therefore I could not support that bill. I was thinking of some 30,000 of the fine boys who reside in my congressional district who would have to carry the guns and who would have to bare their breasts to enemy bullets in case of our involvement in this war. I was thinking of the boys who have now been ordered into the camps in our country, and who are training therein; those boys have the God-given right to know what is being done by those in positions of power in our country, which will probably send them forward to fight in another European war. This power to seize ships is vested in the President. If he exercises that power and sends the boys into another American expeditionary force to fight on foreign soil, the President will not only violate his positive promise made to the people of this Nation to secure his election as President for a third term but he will be guilty of the grossest fraud perpetrated upon his fellow man.

Our boys went to camp thinking that they were going for training; they were made to believe that the compulsory draft law was a peace measure—one which would keep us out of this European war. The lend-lease bill was also presented as a peace measure—one which would keep our country out of this European war. That was the statement of those who speak for the President; that was the plea for the passage of those bills. Yet, every one of those measures, including the repeal of the arms embargo, have been war measures. Each one of them has led us nearer to this war.

Mr. Speaker, we are yet at peace. When a nation is at peace and then enters upon the hazardous undertaking of seizing ships belonging to other nations, including nations who are engaged in war, such an engagement is highly dangerous. It is not alone the taking of the ships which involves us in danger, but for our Nation—now at peace—to make a delivery of those ships so taken to an antagonistic belligerent nation—that brings us wholly within the provisions of law that an act of war has been committed. When we go that far we have entered the conflict. We have given the weapon to the one to use against the other. We will have committed an overt act of war when we take that unhealthy position respecting the conflict.

We are yet at peace, but we will not long remain at peace if we continue to antagonize the belligerents in this European war. Every Member of the House realizes that we have been led down a succession of steps toward the battlefield, and we are now upon that field; we have not yet fired the first shot, and, thank God, no one has yet fired upon us. With legislation, such as H. R. 4466, being passed by the Congress, we will take another long step into this war, and, who knows, this may be the very step which will draw the fire from the enemy guns.

Mr. Speaker, we are unprepared for war. We have been preparing others for their war, it is true, but we have sadly neglected ourselves. I shudder when I think of the sorry plight in which we find ourselves. We have given both money and arms to other nations, and we have so little ourselves; yet, the Congress moves swiftly into a position which may bring war upon us quite soon—entirely forgetting our unprepared state. When the President wants more power, he asks the Congress for it; he has his great majority in both the House and Senate, and that majority gives the President just what he wants. We of the minority have fought the fight to keep our country out of this war. We are still fighting to save our boys, and our country.

These are very serious days. I was saddened when the majority voted to pass this bill. This is a war measure, and those who voted for H. R. 4466 know it is a war measure—one which is calculated to involve our country in this war. I hoped the majority would not plunge us into a position which may bring war before we are prepared to meet it. I did not think or believe the majority would vote to give the power to commit positive acts of war. If the President, and those who want to cause our country to become involved in this war, will take their positions in the front line, and fight—as the poor boys of our country will be forced to do in the event of war—then let them make this war. They have already made the war, I fear. They should not shun the element of danger. The boys have had no part in the making of this war; yet the President and his kind want them to fight it.

This bill merely gives the President the sole authority to commit another act of war. How far are we removed from active and actual participation in this war?

Some Facts About the Republican Valley

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1941

Mr. CURTIS. Mr. Speaker, my district in Nebraska has a formidable problem which Federal agencies will have to help us solve. The Republican River Valley, rising in Colorado and northwestern Kansas, and running through the southern portion of Nebraska, is subject to frequent and damaging floods. The year of 1940 witnessed as many as six distinct floods in several of the tributaries of this stream. And we are still vividly conscious of the grave disaster of 1935, when a total of 112 lives were lost, and damages—estimated by the War Department—took a toll of nearly $9,000,000.

Thirty days after these floods strike our crops frequently wither and die for want of adequate moisture, and this recent 9-year drought period, coupled with flood damages, has swept away so much of our topsoil that 10 percent of this entire watershed is already so seriously eroded that it will never again yield profitable crops.

Two years ago the unicameral Legislature of Nebraska passed a resolution memorializing Congress to recognize the Republican Valley as the State's No. 1 problem. The intervening years have seen continued floods and drought and progressive erosion damage, but not one move has yet been made by any Federal construction agency to bring us any relief.

The 1940 census reveals that a total of 65,000 persons have migrated from my State—one-half of the loss sustained was by my entire congressional district—an average of 13.2 percent per county—and this migration continues.

Our State legislature, taking cognizance once again of the seriousness of the situation in that section of the State, unanimously passed a resolution again calling the attention of Congress and Federal agencies to the extremely precarious conditions existing in the Republican Valley.

The resolution follows:

Legislative Resolution 21

Republican Valley flood control

Whereas the Congress of the United States, by the adoption of acts pertaining to flood control and reclamation, has recognized responsibility on the part of the Federal Government to control the destructive floodwaters of the basins of the Mississippi and Missouri Rivers, has declared this to be a national problem, and has heretofore authorized the expenditure of Federal funds in considerable amounts in the area for the improvement of conditions resulting from floods and droughts; and

Whereas the Republican River Valley drainage area in Nebraska, settled by people who are and have been making every effort to better their conditions in the face of adverse circumstances beyond their control, comprises many hundreds of thousands of acres of valuable land which has been greatly damaged by floods and droughts; and

Whereas the Republican Valley in Nebraska, a part of the great drainage area of the Missouri and Mississippi Rivers, has thus far received but scant Federal recognition and reclamation; and

Whereas as a result of the 1935 and 1940 floods in that valley over 100 persons lost their lives, the property loss was tremendous, and much of the vital and valuable land in the valley has been imperiled and made subject to repeated damage from floodwaters, while, on the other hand, many thousands of acres in the area are in urgent need of the waste waters of the river for irrigation; the above conditions having combined to make agriculture unprofitable in the southwestern section of Nebraska caused relief loads which counties are unable to bear, causing population losses which mean reduced land values and tax yields; and

Whereas United States Army engineers have assured residents of the upper Republican River Valley that they could set up a

plan of flood control which would give protection to Kansas City and other points on the Missouri and Mississippi Rivers as well as farm and urban property in the upper valley, by means of the constructive and comprehensive Federal program for the protection of life and property from destructive floods and drought within the drainage area of the Republican River, including its tributaries, being admittedly a national problem, which said program is needed for the control, conservation, development, and beneficial use of the water and land resources of said area: Now, therefore, be it

Resolved by the Legislature of the State of Nebraska in fifty-fifth regular session assembled:

1. That the Congress of the United States be and it is hereby requested and urged to cause to be made full, complete, and comprehensive survey and investigation into the claims of the residents of the Republican River Valley in Nebraska for flood control and reclamation therein, including the storing, preservation, and distribution of the waste and floodwater of said river and its tributaries for beneficial uses; and that the development of the irrigation program for the Republican River Valley be paralleled by flood control for said valley.

2. That the Congress of the United States be and it is hereby urged to make early appropriation of said funds to insure the inauguration and continuation of internal improvement projects within said valley, and that the proper Federal agencies be empowered and directed to give early and careful consideration to the feasibility and advisability of constructing and maintaining dams in said area in Nebraska, including the various tributaries of the Republican River, for the said purpose of flood control, conservation, and other beneficial use of the water, including that of irrigation.

3. That a copy of this resolution be spread at large upon the journal of the legislature, and that the clerk of the legislature be directed forthwith to forward a copy of this resolution, properly authenticated and suitably engrossed, to the President of the United States, the Vice President of the United States, to each Congressman and Senator from the State of Nebraska, to the Chief of the Army Engineers, Washington, D. C., to the Mississippi Valley Flood Association, to the National Rivers and Harbors Congress, and to the National Reclamation Association to the end that each of these Federal officials and agencies may know and recognize that the problem of the Republican Valley flood control is serious and that without flood control from which can flow irrigation and soil conservation, this area may become entirely destitute.

Introduced and adopted April 29, 1941.

Mr. Speaker, Maj. Miles Reber, in his testimony before the Flood Control Committee as a representative of the office of Chief of Army Engineers, said that the Republican Valley had a twofold problem. The first was the construction of the Harlan County Dam, at or near Republican City, Nebr., to control the floods below that point and for the benefit that would accrue to the Kansas City area. The second phase of the problem was the control of the floods west of the dam on the main stream of the river and the tributaries. In order to meet this twofold objective, I have introduced the bill H. R. 4383, which is in the usual form and seeks an increased authorization in the Missouri River Basin and contains the following language:

That this authorization shall include, in addition to the Harlan County Reservoir as set forth in House Document No. 842, Seventy-sixth Congress, third session, such flood-control works on the Republican River in Nebraska as the Secretary of War and the Chief of Engineers may find advisable.

Mr. Speaker, I hope that the time is not far off when the entire problem of the Republican Valley can be undertaken. The so-called Harlan County Dam should be built. It will bring great protection to those people living on the river below the dam site and the industrial area at Kansas City. In my opinion, it is essential for national defense, because of the protection that it brings to Fort Riley and industrial Kansas City. The problem above the dam and in the tributaries is deserving of the best attention that the Federal Government can give to solve their flood problem which has cost so much in life and money in recent years.

Mr. Speaker, I wish to further extend my remarks by including certain material that has been submitted to me, including a newspaper report of the activities of the State planning board, a statement of Mr. M. O. Ryan, secretary of the Republican Valley Conservation Association, and a county commissioners' resolution:

STATE PLANNING BOARD MAKES ITS FINAL REPORT ON WATER RESOURCES AND PROPOSES SIX-POINT PROGRAM

LINCOLN, April 28, 1941.—Only basic readjustments in the use of land and water resources can rehabilitate and stabilize agriculture in Nebraska, the final report of the State planning board said today.

In a comprehensive 305-page water resources survey, the board recommended a six-point program to adjust problems which arise "principally from an undependable rainfall."

Nebraska is dependent upon soil and water resources, the report warned, and "culminative effects of the current devastating drought" now threaten the security of some areas.

The board recommended:

1. Conserve rainfall on individual farms by cropping practices. This would increase individual farm feed and forage supplies, improve livestock and domestic watering supplies, and make possible large gardens—enabling farm operators to cope with drought.

2. Develop extensively small water facilities by using small, single, or multiple field irrigation systems on minor drainages; develop flood irrigation on normally dry draws, and develop recharging of ground water supplies to make small pump irrigation developments possible.

3. Extend pump irrigation practices under "appropriate and timely legislation for regulation of ground water." The report said a vast field covering 100,000 acres existed for development of pump irrigation.

4. Construct large-scale irrigation projects where, "in consideration of all possible phases of development of water resources in a basin * * *," the land may be able to repay total costs.

5. Build flood-control dams as part of a basin-wide plan of development for all water uses.

6. Empower some State agency to take an active part in investigations and detailed planning for a comprehensive, coordinated plan for conservation of all available water. (This was purpose of recently defeated water conservation board bill in the legislature, asked by the Republican Valley Conservation Association.)

"The major possibilities for the further development of gravity irrigation are situated in the Republican Valley, the tributaries of the Loup and Platte," the survey reported.

The board blamed population decreases on the drought and warned that a more "established agriculture based on sound water conservation policies is absolutely essential to the maintenance of our present population."

The report on the three major rivers:

1. Platte: In general, water supply above Kearney is fully appropriated, even to a point where it has exceeded dependable supply. Additional developments below Kearney are questionable.

2. Loup: A channel storage reservoir above Columbus would stabilize flow of stream for benefit of Columbus power plant and would enable the lower Platte irrigation district to operate without a local storage reservoir.

3. Republican: "If all available water supply were conserved by means of storage facilities and released when needed for irrigation, the supply would greatly exceed the amount now needed for existing projects." An estimated 100,000 acres of land meets requirements for successful irrigation; suggested channel reservoir near Republican City in conjunction with "certain tributary reservoirs."

STATEMENT OF M. O. RYAN, M'COOK, NEBR., SECRETARY, REPUBLICAN VALLEY CONSERVATION ASSOCIATION, BEFORE FLOOD CONTROL COMMITTEE OF HOUSE, WASHINGTON, D. C.

Mr. Chairman and gentlemen, on April 4, 1940, your committee, when questioning the United States Engineer Corps with reference to the flood-control problem in the Republican watershed, pointed out to the engineers that the single on-river dam at the Harlan County site would provide no flood protection to territory west of that site. It was west of that site that a damaging flood in 1935 took at least 112 lives, according to the Red Cross, and damaged farm lands to the extent of $8,832,000, according to the United States engineers.

Other damaging floods in the uppor Republican Valley are shown to have occurred in 1903, 1905, 1908, 1915, and 1923, and the year of 1940 again brought heavy damages. Whereas the Engineer Corps had attributed an annual average flood loss for the entire watershed above the Harlan County dam site, of only $500,000, an extended survey of just three out of a dozen tributaries of the Republican, conducted by the Nebraska State department of roads and irrigation following the floods of June and July 1940, totaled, as follows: Red Willow, $101,499.50; Frenchman, $355,395; and Medicine, $458,425, or a total of $915,319.50. There were other floods later in the season, also. Some of our tributaries last year reached flood stage as many as six times, and in many instances the damage surpassed that of 1935 in individual tributaries.

This flood menace contributed substantially to the human despair which resulted in heavy population losses between 1930 and 1940. The entire State of Nebraska lost 65,000 in population, but in our small congressional district, the great bulk of which lies within the Republican watershed, one-half of this entire loss was sustained.

To offset the precarious condition of agriculture and business generally in the watershed, the Federal Government poured millions in loans and grants into our territory until today it stands in advance of $3,000 for every farm we possess. But the emigration continues.

The upper valley, representing approximately 80 percent of the land area in the basin, last summer formed an organization of those cities and towns above the Harlan County site, in an attempt to help speed flood control and at the same time to attempt to utilize those flood waters for needed irrigation. It was felt that further expenditure of relief moneys, no matter whence their source, was not prudent, but that a rehabilitation program should be undertaken.

Commissioner John C. Page of the United States Reclamation Bureau has pointed out that 501 of the 650 counties in the Great Plains lost population, totaling 753,554 between 1930 and 1940, while 277 counties to the westward—where irrigation is quite general—had increased in population by 1,941,601. The Great Plains has suffered heavily during these recent drought years, and in the great majority of cases, an inadequate flow in the streams prevented any stabilizing effects from supplementary irrigation. The Republican watershed, with quite a stable flow, aside from flood peaks, offered unusual promise.

So, while the United States engineers—at the direction of your committee—were reviewing their former studies of the upper Republican Basin to ascertain whether there might be any means of bringing at least partial flood protection to that section, we found the United States Reclamation Bureau willing to undertake extensive investigations of feasible irrigation projects. We were advised on June 19, 1940, that the President had instructed the Engineer Corps to not initiate any flood-control projects "until the Reclamation Bureau's surveys had been received and reviewed." This gave us much hope, since it indicated that the War Department and the Bureau could coordinate their studies and bring forth a program which would provide both flood control and irrigation.

As early as October 17, 1940, the reviewing officer of the United States Engineers at Kansas City, told us they could construct an on-river dam at the Harlan County site, as well as a number of tributary dams, and have them come well within the 1-to-1 ratio of cost and benefits. They have subsequently reiterated this statement, as they proceeded with their review, which is expected to be completed and forwarded to the Chief of Staff July 1. They have also assured us that they could assign flood-control benefits to any Case-Wheeler project which would impound floodwater on the tributaries when approved by the Bureau of Reclamation. Half a dozen of these projects, storing water for irrigation, but with supplementary storage for floodwaters, linked with a major reservoir behind an on-river dam, could provide a flood-control program for the entire watershed which would cost the Army less than a single on-river dam and reservoir.

A tri-State compact, providing for the division of waters of the Republican River between Colorado, Kansas, and Nebraska was negotiated this spring and is now before Congress for approval. It is based upon consumptive use of the waters. This, we maintain, is the most intelligent possible use of the soil and water resources of our territory.

For the foregoing reasons, we want again to appeal for the authorization of a comprehensive flood-control program for the valley as a whole, and that the Harlan County Dam not preclude assignment of flood-control benefits to such other upstream projects as the War Department may find feasible.

Whereas flood damages in recent years, coupled with drought and erosion, low farm prices, and other unfavorable factors, have combined to make agriculture unprofitable in this entire area, causing relief loads which counties are unable to bear, and causing population losses, which mean reduced land values and tax yields; and

Whereas we understand that the United States Engineers have assured the upper Republican River residents that they could set up a plan of flood control which would give protection to Kansas City, and to farm and urban property in the upper valley: Now, therefore, be it

Resolved, That the southwestern district of the Nebraska County Commissioners' Association, embracing all of the Republican watershed, above Harlan County, does hereby petition Representative CARL T. CURTIS to provide for flood protection of our territory in his authorization bill now before the Congress, and that we petition the Flood Control Committee of the House, and the United States Engineers to realize that our problem is desperate, and that without flood control, from which can flow irrigation, soil conservation, etc., this area will quickly become entirely destitute.

Respectfully submitted.

MERLE ADAMS,
Arapahoe, Chairman.
L. E. MOORE,
Bartley, Secretary.

Tobacco Taxes

EXTENSION OF REMARKS
OF
HON. DAVE E. SATTERFIELD, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

Mr. SATTERFIELD. Mr. Speaker, during the last two centuries the material wealth of this country has been vastly increased by the conquest and expansion of new frontiers. Today that is finished. The physical map is made. There are only two frontiers of wealth left to us, and they, of course, are subject to conquest by a free people, for these are science and invention. The basis of future taxes is restricted, and already the danger signals are flying in the face of a government trend induced by an unthinking citizenry to slowly but surely restrict free enterprise. The deliberations of the great Committee on Ways and Means of the House of Representatives it would seem henceforward must be deeply concerned lest in its quest for revenue the one source which can produce it should be dried up.

I do not believe that the Congress has ever before in the history of this country been more nearly unanimously supported by Americans everywhere in its duty to impose taxes and to collect a revenue sufficient to meet the vast bill which the defense of our country entails. On the other hand, I am sure that "hidden taxes" are no longer hidden in any sense of that word. This form of taxation has been for many a year popular with those who momentarily were entrusted with the responsibilities and obligations of government. Popular with them for the reason that it always produced a substantial revenue with comparatively little opposition. Popular, too, with the users and the producers of the very commodities on which the tax was fastened, because they were either ill-informed or too credulous to understand that they, and not the corporations or individuals who turned the tax money over to the Government, are the ones who pay a substantial share of the bill. This state of affairs no longer exists. There are too many hustings, too many forums, too many sources of information constantly informing the average citizen of a lurking tax and its effect upon him.

In no instance can what I have just said be more true than in the case of the tobacco farmer. He has been the leading actor in a tragedy which has been playing to a full house since the turn of the century. In 1901 the tax on the finished products of his labor, cigarettes, was 54 cents per thousand wholesale.

In 1910 this was raised to $1.25 per thousand; in 1917, when this country then engaged in war was faced with the responsibility comparable to the task of today in fashioning our common defense, increased the tax on cigarettes per thousand to $1.65 in October of that year. Encouraged by the success of that venture, in 2 days less than a month the tax was again raised to $2.05 per thousand. Well do I remember that complaints from the South about these two tax raises were allayed with the understanding that this was a war tax and that when the war had come to an end these taxes would be repealed. What happened? Instead of repeal in February 1919 the Congress, faced with the loss of revenue due to the enactment of the prohibition law, once again turned to tobacco and raised the tax on a thousand cigarettes from $2.05 to $3. Those golden days which led us to the fateful months of 1929, accompanied by peace, did not, so far as I know, produce a lessening of the tax burden on this commodity. Instead, when more money was needed, the Congress added an additional tax of 25 cents, so that the tax is now $3.25 on every thousand cigarettes. Now that we are confronted with the possibility of war, it is proposed that we begin all over again to tax tobacco.

I do not believe there is in this country a group of people, beginning with the farmer in his fields and concluding with the manufacturer, who would more willingly endure uncomplainingly added burdens of taxation to pay for our common defense, if in his own heart he could be made to feel that he was beginning anywhere near scratch or on an even basis with the producers and manufacturers of other commodities upon whom the burden of taxation should fall evenly.

A great deal has been written about this Nation's tax system. Truth is we have no tax system in this country. We have instead many tax systems in the country. Today I am disturbed because I greatly fear that the Treasury Department in quest for moneys may be looking for the tax idealized by Turgot many years ago—the one which produces the most feathers from the goose with the least squawk.

In making an appeal against the imposition, certainly at this time, of further tobacco taxes it is not necessary to go into the question of the trend of centralization of tax collection, the multiplicity of taxes, the shifting of wealth and of population, the demands made by people upon their Government, or just where government is going, for above and beyond all of these things this fact must stand out, a fact that I dare say no member of this committee will deny, and that is that somewhere there must be a tax ceiling on tobacco. Apparently we have not realized this. When I think of the rapidity and the celerity with which taxes upon tobacco have been laid I am reminded of a quaint story which comes out of the tobacco country in my own

State. Within one of the tobacco-growing counties in Virginia where tobacco was raised by the Indians long before the coming of the white man there lived a man named Andy Clark, a lean, angular bachelor whose ability to kill a bull bat with a rifle on the wing had won the admiration and respect of all the youngsters in his immediate neighborhood. He was quite a philosopher. He used to sit atop an old-fashioned snake fence, and, whittling a stick, would say to his young and enthusiastic friends:

Boys, don't never start nothing, because sho' as you do the tendency is always more so.

In view of the continued increases in the tax upon tobacco, it would seem that the advice of this home-spun philosopher was sound.

The question of whether recommendations should be made for increased taxes on tobacco is no new question, nor does this issue project any new matter. It is the same old question.

In 1934 a subcommittee of the Ways and Means Committee, headed by Fred M. Vinson, chairman, stated:

Your committee is of the opinion that the tobacco-tax burden is without reason and unconscionable. * * * The committee has reached the conclusion that there should be a real reduction of the taxes on all manufactured tobacco products. * * * Your committee does not feel that this 10-percent reduction for a particular manufactured product (10-cent cigarettes) is sufficient to meet the needs of the occasion. Such reduction would not permit of any substantial benefit to the tobacco grower. * * * It is the conclusion of your subcommittee that a reduction of 40 percent of all tobacco taxes should be made.

Mr. Speaker, these conclusions apply with greater force now than they did in 1934.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

Mr. LAMBERTSON. Mr. Speaker, who is the aggressor nation in Iraq?

We send dollars to China and gasoline to Japan.

It must be tantalizing to our warmongers that Germany commits no overt acts against us.

If the English Navy is our first line of defense, why does she need ours to do her chores?

Must we send a million men to Persia to defend democracy here at home? Let us have a Ludlow referendum on it.

The only way we can be defeated is to be denuded of our own defense by entering into wars of other nations.

The continued existence of America does not depend on the continued existence of any other nation. We stand on our own feet.

Why did not the President and Lord Halifax have their pictures taken together at Mount Vernon? It is closer than Staunton.

John Philip Sousa composed the march Hands Across the Sea. Who knows a good tune for They Picked Our Pockets, Too?

Some call it the Battle of the Atlantic. Others have another name for it. Whatever it is, it is not Lexington or Fort McHenry.

We are going to the Old World to start backfires. Once I lost my hat, then my shirt, and finally my pants, and also a haystack trying to control one I started.

"What king, going to make war against another king, sitteth not down first, and consulteth whether he is able with 10,000 to meet him that cometh against him with 20,000?"—Luke xiiii:31.

A Tax on Human Happiness

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

Mr. HOUSTON. Mr. Speaker, probably no other commodity adds so much to the sum of human happiness as does gasoline.

It furnishes the power for trucks to bring the baby's milk from farm to doorstep. Our daily bread starts its journey on trucks from the wheat fields and is delivered fresh and zestful from the baker's oven by a gasoline-powered delivery truck. My lady's bonnet and habit journey over the highways as raw materials, rode by truck from factory to store, and, finally, carefully wrapped in tissue paper, were delivered by truck to the expectant lady awaiting their arrival at the threshold of her home.

Nearly 5,000,000 trucks are plying their way over the highways in the United States to meet the desires of the American people not only for necessities but also for the finer things that make modern living enjoyable.

Twenty-five million passenger cars are operating on the highways of this great Nation. Our families own more automobiles than all of the rest of the world combined. These cars are used to transport the family to church, the children to school, the mothers to market, and the fathers to work. They are an integral and a vital part of modern living. Curtail their use through excessive taxation and you sear the soul of better living. You compress the horizon of the American family. You restrict freedom of movement and opportunity of enjoyment. You lay a tax on human happiness to an extent probably greater than would be possible in any other way. Automobiles, owned by two out of every three families in the United States, and shared in by the other third of the families by means of buses with inexpensive fares, provide billions upon billions of hours of enjoyment to millions upon millions of families in the United States each year. Gasoline probably adds more to the sum of human happiness than any other single commodity in American life.

Despite the immense social and economic contributions of gasoline, there are some who look at it with a dyspeptic eye, and say: "The American people are too happy. Let us tax and tax and tax their motor fuel."

That trend of thought has been too common and has been pushed too far in legislative patterns of American life. Less than a quarter of a century ago there was no tax of any kind on motor fuel. Today, because it has proved such a boon to better living, it is subjected to heavy taxation. All the States impose heavy taxes on motor fuel. The Federal Government also imposes a "depression tax" and a "defense tax" on this magic substance that has lifted the American people far above the "horse-and buggy" standards of living. At the current rates motor fuel taxes are being collected at the staggering rate of one and one-quarter billion dollars a year. That amount is more than what all the people paid in all taxes to all taxing jurisdictions—Federal, State, and local—in the years before the advent of the horseless vehicle.

There are some phlegmatic individuals who confuse the happiness obtained from gasoline with the enjoyment derived from tobacco, liquor, and horse racing. They attempt to reason that the pleasure derived from motor fuel is of the same kind as that derived from tobacco or liquor. Upon that reasoning they conclude that heavy taxes on motor fuel are justified in the same manner as are high taxes on luxuries.

I believe that when a man takes his family out for an airing on Sunday afternoon in his second-hand jalopy the happiness that results from that outing is wholly different from the pleasure that would result if the father of the family, instead of spending his dollar for motor fuel, spent it for liquor on Saturday night. The laughter of the children in the back seat bears no comparison with the boisterous merriment in the back room.

As far as luxuries go, what is a luxury? Our forefathers toasted their toes before open fireplaces while their backs froze. They washed in the clothes tub. Furnaces and bathtubs were luxuries up until comparatively recent times. We could do without most of the refinements of modern living, but would we be happy? Should heavy taxes be placed upon washing machines, radios, telephones, automobiles, and motor fuel merely because we could get along without them by relapsing into the standards of living that prevailed a century ago?

And as far as gasoline goes, that is less a luxury item than appears on the surface. About 25 percent of the gasoline used in the United States is con-

sumed in trucks to provide economical transportation of commodities from producer to consumer. Of the motor fuel used in passenger cars, more than half is used in connection with business activities, according to the United States Public Roads Administration. Factory and other workers get to and from their jobs. Carpenters and other entrepreneurs use their cars in earning a livelihood. Yes; half of the motor fuel used in passenger cars has something to do with people earning a living. That gasoline, together with the gasoline used in trucks, accounts for two-thirds of the total gasoline consumed on the highways. That gasoline, by any stretch of the imagination, cannot be said to have been put to luxury uses—unless the desire of humanity for better jobs and better living is considered a luxury.

How can any rational men, in view of these facts, contend that heavy taxes should be piled upon gasoline by the State and Federal Governments. The present Federal taxes on gasoline amount to approximately 11 percent of the average retail price in the United States. If all retail sales were subjected to the same rate of taxation, a total of more than $4,000,000,000 in revenue would be produced—an amount exceeding that now being sought by Congress in new defense taxes. State motor-fuel taxes stand at an average of 31 percent of the retail price—or nearly three times the burden of the present Federal tax. Combined, these State and Federal levies on gasoline constitute the greatest tax on human happiness ever devised by the mind of man. The burden of that tax should not be increased.

In closing, let us glance briefly at the man in the front seat of the automobile. Studies by Government agencies reveal that three out of every five car-owning families have never purchased a new car. Thus, most of the automobile owners in this country are used-car motorists. They are not sitting in the lap of luxury. Other studies reveal that slightly more than half of the car-owning families in this country have incomes of less than $30 a week. Contrary to the thought of some, automobile owners as a class do not possess any extraordinary ability to pay taxes. As a matter of fact, the average $60 a year paid out to the Federal and State Governments in taxes on his car costs the typical motorist 2 weeks' wages each year.

Each half-cent tax on the gasoline tax takes 1 day's pay from millions of farmers, factory workers and others, who already are contributing 2 weeks' wages in taxes on their cars. Each half cent of the gasoline tax keeps millions of children out of the sunshine and fresh air. Each half cent of the gasoline tax, as Maurice Maeterlinck would say, hangs a leaden weight upon the bluebird of happiness of the American people—a bird already struggling under a terrific burden to rise and sing happily in the sunshine of opportunity, freedom, and democracy.

Let Congress not lay upon the bluebird the last and final tax weight that will break the bird's back, causing it to flutter, fall, and finally grovel in the mire of despair.

The Army Came to Monterey

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

THE STORY OF FORT ORD CONSTRUCTION, BY NEAL L. McGINTY

Mr. GEARHART. Mr. Speaker, in the April 23 and 24 issues of the Monterey (Calif.) Peninsula-Herald there appeared an article in which is told most interestingly the story of Fort Ord construction, an article in which is recounted a typical American effort, one which is being reenacted many places within the four corners of our country, to rearm our country and to render it invincible against attack by any nation or combination of nations on the face of the earth.

Because it comes to us from the capable pen of Camp Ord's superintending engineer of construction, Mr. Neal L. McGinty, of Monterey and Fresno, and constitutes an important contribution to the history of our country which is in the making, I am constrained to ask the unanimous consent of the Members of the House of Representatives that that which he has so entertainingly written be spread upon the pages of the CONGRESSIONAL RECORD.

There being no objection to the request of the gentleman from California, Mr. Neal L. McGinty's article, The Army Came to Monterey, follows:

[From the Monterey (Calif.) Peninsula-Herald]

THE ARMY COMES TO MONTEREY

(By Neal L. McGinty)

Since the faraway day in 1542 when Juan Rodriquez Cabrillo sailed his little ships, the *San Salvador* and *Victoria* over the dancing blue waters of this crescent bay this has been a port of ships and a place of guns, a land of the old conquistadors' dreams. They were certain that beyond these green pine-clad hills lay the seven fabled cities with their cathedral spires and buildings of pure gold.

Among the wanderers in the wake of Cabrillo came Sebastian Vizcaino and named this port Monterey, in honor of his friend Count de Monterey, Viceroy General of Mexico, but it was not until a century and a half later that Don Gaspar de Portola lost his way on the road to Monterey and found instead the Bay of St. Francis to the north. Portola, disappointed, returned to Mexico City and sought the help of a navigator. By water came Capt. Juan Perez, studying the log of Cabrillo, visiting each inlet and cove, found the lost port of ships, and unfurled the Spanish emblem over this land in the far-flung name of Spain.

EARLY ENGINEER

Overland and on foot came the gallant brown-robed Franciscan Padre Junipero Serra with Lt. Pedro Fages and 20 Spanish soldiers, among them Castanos, an engineer. Orders were, first, build the Royal Presidio de Monterey and next the Royal Chapel San Carlos. From Monterey in these glorious years that followed came everything concerning civil, military, and religious orders. In the years that followed Monterey was the traders' paradise, the haunt of the wandering sail; here were history's crowded pages written amid the wealth, the jewels, and silks of the East. Truly the old conquistadors' dreams were unfolding in all their splendor, but only to vanish when Marshall found a yellow flake of gold in the sands along the American River. Gold! Gold! And ships spread their white sails and rounded Point Pinos for the Harbor of St. Francis to the north, never to return. The days of her glory were at an end. The stirring days of which this is written are gone forever. There can be no such days again, and there is but faint hope that there will again be such men as Serra and his trusty Lieutenant Fages.

OLDEST POST

The Royal Chapel Don Carlos and the Presidio de Monterey still stand, the latter the oldest military post in all our land, and now a proud part of the new Fort Ord, the model link of the 240 new cantonments of our national-defense program, just 4 miles northeast of the city of Monterey and on the old Camino Real, now California's State Highway No. 1. Fort Ord, comprising some 21,000 acres, was so named in honor of Maj. Gen. Edward O. C. Ord, who, as a young officer, was stationed in the old Presidio from 1846 until 1849. General Ord graduated from West Point in 1839, later to become a distinguished commander in the Civil War, and died in 1883.

Less than 8 months ago this vast military reservation was just another pasture land near the sea, with its shifting sand dunes, scrubby oaks, withered grass, and here and there a crooked cypress. That was the landscape that met the eyes of Ford J. Twaits Construction Co. of Los Angeles and Morrison-Knudsen, Inc., general contractors of Boise, Idaho, when Lt. Col. Harold D. Stetson, constructing quartermaster (and, by the way, former resident of Fresno), handed them their drawings and blueprints and said, "Go ahead and build us a $16,000,000 home for Maj. Gen. Joseph W. Stilwell's Seventh Division."

FROM THE SOUTH

R. M. Conner, chief construction engineer of Los Angeles, with a long, successful record, was appointed project manager. Chief assistants to Conner included Paul B. Tichenor, general superintendent and W. W. Price, chief field engineer. Like the builders of old, all were from the southland.

Building statistics, we know, are at best uninteresting reading to the average person, but extremely interesting to architects; Fisher and McNulty's; and to engineering students of the high schools and colleges. But to tell the building of this project we must talk of the drone of mills, lumber, and of hammers and nails.

First came an administration office for the engineers, draftsmen, clerks, timekeepers, and the temperamental stenographer. Then came a tent city to accommodate 1,800 workmen, a bakery, kitchen, a dining room to seat 1,000 men at a meal, washrooms, bathrooms with their hot and cold showers, a field commissary where men could purchase anything from a safety razor blade to leather coats, and a first-aid station manned by a staff of registered nurses to care for unexpected injuries.

BIGGEST HOSPITAL

On came trainloads of equipment, caterpillars with their 30-cubic-yard carriers, bulldozers, locomotive cranes, trench diggers, a fleet of 50 trucks ranging from pick-up to heavy-duty units for hauling materials, and scores of electric-driven saws to shape 40,000,000 board feet of lumber, men to mold it into 1,428 one- and two-story buildings, barracks to accommodate 63 men each, warehouses, storerooms, post exchanges, mess halls, bakeries, offices, and every type of building necessary to a cantonment.

In addition there appeared 4 theaters, each with a seating capacity of 1,100. Here was built the second largest hospital on the Pacific coast comprising 104 separate units, 1,500 beds, 3 miles of canopied walls between its buildings with a separate 600-horsepower steam-power unit. This hospital is 1½ times the size of the Letterman General Hospital in San Francisco. There were also built 1,040 tent bottoms and frames built for the incoming National Guards of the Middle West and guard houses for "McGintys not so great," stables and barns for the 3,000 Field Artillery horses.

For "bundles for buddies" the world's largest steam laundry has been built with its 50,000 square feet of ground floor space that has taken 15 carloads of steam-laundry machinery to equip for 300 women operators. Three 150 steam boilers were installed to furnish steam and hot water.

And then there is the little Oregon pine-box coffin with a white cross above it with this simple inscription "Laddie," the beloved little dog that died of a broken heart.

LUMBER AND GLASS

The lumber alone at Fort Ord required a felling of a hillside of 100,000 Oregon pines, with a 24-inch base diameter and 60 feet high, that were born about 40 years ago. If this lumber was shaped to a boardwalk 1 inch thick and 12 inches wide, it would reach from San Francisco, Calif., across the continent and over the Atlantic to Berlin, Germany. Seven hundred and eighty thousand panes of glass were installed in the various buildings to let the sunlight in during the day. Two thousand five hundred miles of electric wiring were used to bring light at night.

The men of the Seventh must be the Army's champion gossipers for 700 telephone exchanges are plugging with their daily chatter. They eat at 5 miles of messroom tables on 10 miles of benches. Eleven thousand kegs of wire nails were driven, or approximately 107,000,000 individual nails that, if placed end to end, could begin at the Golden Gate, string along to New York City, then down the Atlantic coastline to a point far below Miami, Fla. Or if laid in a straight line, they would reach over the forty-second meridian in the Atlantic.

SOME NAILS

Over 424,000,000 hammer blows were struck by carpenters to drive this handful of nails home. The records of the first-aid station reveal that the carpenters missed the nail head 219 times, requiring medical attention to bruised fingers. A further check of this record indicates that 82 percent of the misslicks happened in the forenoon of the day following pay-day night. We are requesting the National Safety Council to check this as to the cause.

All the building roofs were covered with tar felt paper roofing and 4,000,000 square yards were required to do the job. Seventeen million roofing nails were used to fasten this paper to the roofs. Four million square yards of roofing paper are enough to cover 40 New York City blocks, or to cover 3,300 Fresno, Calif., dwellings and leave enough draping over the edges to work a fringe.

PAINT BY LAKEFUL

The exterior of the buildings was given 3 coats of cream-colored paint that alone consumed 50,000 gallons, and it was applied with brushes. An additional 10,000 gallons will be required for some interior work. Forty-two miles of gas mains, 42 miles of water mains, and 40 miles of sewer lines were placed in trenches from 2 to 5 feet of depth underground.

The caterpillar tractors and their 35-cubic-yard carriers moved 3,000,000 cubic yards of earth, hither and yon. From the 3,672 carloads of crushed rock received, a parking lot of 50 acres—the largest yet built—has been topped with a 7-inch stone facing, rolled as smooth as plate glass and as hard as native granite. Hard-rock facing was also rolled on 26.7 miles of paved roads and streets and on 18.5 miles of secondary roads.

LEAD THE WAY

The maximum number of builders on the contractors pay rolls at any one time was 2,300 men with a $80,000 weekly pay roll. In the 7 months from a pasture land to a city of 31,000 officers and men, with a $700,000 Army monthly pay roll, Fort Ord has become a reality. A mighty undertaking. Yes, but this among the first of the 240 cantonments being built or proposed on the schedule of our national defense program, completed and occupied on time, built without a fatal or serious accident happening to a man notwithstanding 1,150,000 man-hours of exposure. Again the California engineers lead the way. All of which prompted Maj. Gen. E. D. Peek, commanding general of the Ninth Corps Area, to issue the following statement: "A wonderful job has been done at Fort Ord by the contractors in their cooperation and speed in carrying out the $16,000,000 building project."

Monterey, the harbor that was, is again to be, as tens of thousands of young Americans roam through her streets and visit the old red-tiled buildings where history still clusters, where tender memories cling of Robert Louis Stevenson and the Sherman Rose. While within a short distance they may wander into the green vale where sleeps forever the brave Franciscan Padre that built Presidio de Monterey 170 years ago, and laid the foundation for Monterey's mighty Fort Ord.

Deportation of Certain Aliens

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

AN OPEN LETTER SIGNED BY 53 PROMINENT AMERICANS

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein an open letter to the Congress of the United States of America signed by 53 prominent Americans.

AN OPEN LETTER

To the Congress of the United States of America, Washington, D. C.

We, the undersigned, join in urging upon the Congress of the United States of America that it defeat the legislative proposal to legalize "supervision and detention" of certain noncitizens ordered deported, but whose deportation, because of war conditions, cannot be effected through no fault of their own. This proposal has been embodied in two bills now pending before Congress, H. R. 3, introduced by Representative SAM HOBBS, of Alabama, and S. 1232, introduced by Senator RICHARD B. RUSSELL, Jr., of Georgia.

We are convinced that these bills arise from a war excitement and are designed to further extend hysteria. They will serve to attach unjust and unwarranted suspicions and imputations to all Americans of foreign birth. They provide an instrument which may be used to inflame the public mind, to arouse hatreds which will destroy the democratic life of our country.

The provisions of the Hobbs-Russell bills are cause for the gravest concern. Subjecting certain noncitizens to "supervision," the bill requires that those so subjected must submit to medical examination, furnish information as to "circumstances, habits, associations, and activities," and must conform to "reasonable" written restrictions on conduct and activities. These provisions establish conditions amazingly similar to Fascist practices. They impose a regime of restriction and terror, whose only purpose can be to prevent the full exercise of democratic rights on the part of all of our people.

These bills, moreover, make possible detention without bail and imprisonment for long terms, some of which may amount to life, without jury trial. Thus there is incorporated the principles and procedures of the Fascist concentration camp as a part of the Government apparatus.

Furthermore, these bills seek to create a new class of deportable aliens by proscribing certain political, social, and economic opinions. This is a clear limitation of our democratic rights of free speech, press, and assembly. The effects of this provision will be to spread fear and to open the way for wholesale persecution, victimization, and discrimination of those whose views may differ from those of the advocates or administrators of the measure. Here, again, is a pattern of Fascist regimentation.

We are convinced that the Hobbs-Russell bills are actually a disguised attack on our American democracy, promoted and advocated under the pretext of national defense. They purport, of course, to deal only with certain deportable aliens; but, substituted for the tolerance and understanding with which the problems of the noncitizen should be considered, are the principles and procedures of fascism—supervision, the concentration camp, proscription of opinion.

These principles and procedures, once established for certain noncitizens, may readily be extended to our 14,000,000 naturalized citizens and to native-born citizens. To think that concentration camps will be confined to only one section of our people is to ignore the lessons and warnings of contemporary history, to be blind to the methods of Fascist encroachment on democratic rights.

For the reasons outlined, we believe that the Hobbs-Russell bills, or any similar legislative proposals, are undemocratic in intent and in inevitable effect. We, therefore, urge that the Congress of the United States of America defeat the Hobbs-Russell concentration-camp bills.

Signers of the open letter to the Congress of the United States of America urging the defeat of the Hobbs-Russell concentration camp bills:

Josephine Truslow Adams, Swathmore College, Pennsylvania; Rev. William C. Anderson, Bremen, Ind.; Emily Greene Balch, honorary international president, Women's International League for Peace and Freedom, Wellesley, Mass.; Herbert Benjamin, secretary, International Workers Order, New York, N. Y.; Herman Long, chairman, Southern Negro Youth Congress, Birmingham, Ala.; Rosalie Manning, New York Conference on Inalienable Rights; M. T. Martentz, secretary, Armenian Progressive League of America, New York; Prof Kirtley F. Mather, president, Institute of Propaganda Analysis, Boston; Prof. F. O. Mathiessen, Harvard University, Cambridge, Mass.; Roy Mizara, president, Association of Lithuanian Workers, Brooklyn, N. Y.; Hon. Stanley Nowak, State senator, Michigan; Hon. Clifford T. McAvoy, deputy commissioner of welfare, New York City; Laurence E. Prendergast, secretary, New York City Teachers Union, Local 5; Patrick L. Quinlan, editor, The Gaelic American, New York, N. Y.; Wallingford Riegger, composer, New York, N. Y.; Mary W. Rittenhouse, Brooklyn (N. Y.) Bureau of Charities; Mr. and Mrs. Earl Robinson, Brooklyn, N. Y.; Prof. T. C. Schneirla, New York University, New York City; Jane Sherman, secretary, The Exiled Writers Committee, New York, N. Y.; Rev. William B. Spofford, editor, The Witness, New York, N. Y.; A. E. Stevenson, secretary, Cleveland (Ohio) Industrial Union Council; Calvin J. Sutherlin, organizer, Labor's Non-Partisan League of Connecticut; Dr. Harry F. Ward, Union Theological Seminary, New York, N. Y.; Theodore Ward, president, Negro Playwrights Co., New York, N. Y.; Max Weber, artists, Great Neck, L. I., N. Y.; Prof. Doxey A. Wilkerson, Howard University, Washington, D. C.; Dr. Mary E. Woolley, president emeritus, Mount Holyoke College; Dr. Max Yergan, president, National Negro Congress.

Will the People Keep Steadfast?

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

Mr. GEHRMANN. Mr. Speaker, I believe in this government of the people, by the people, and for the people. I believe with all my heart in the workability and the greatness of a representative democracy. I concur in the statement made by Teddy Roosevelt:

> The majority of the plain people will, day in and day out, make fewer mistakes in governing themselves than any smaller class or body of men will make in trying to govern them.

Here in simple language is the finest statement of the principles of democracy it has ever been my privilege to hear.

All my life, circumstances have forced me to be a realist. I do not believe in the empty repetitions of creed without some attempt to be practical. I am the unbonded trustee of the welfare and future of 244,672 people who, year after year, have seen fit to place their confidence and trust in me by reelecting me to this high office. When a serious problem has presented itself I have asked the people to write to me expressing their views. Believing in the good judgment of the majority of the plain people, I have always accepted their counsel and cast my vote accordingly.

For the past two terms in this office I have faced the approaching specter of war. I have taken this grim issue back to the people from whom I derive my authority. Their answer was clarion clear and overwhelmingly decisive—no convoys; no overt acts which mean actual war. Over 97 percent of all the letters regarding the present international situation reaffirmed their faith and hope in an adequately prepared America, but reiterated with purposeful firmness that our leaders should not, in opposition to the majority will, take steps that would surely mean active warfare. All of these letters were written in response to my question, "Shall our Navy be used to convoy lease-lend shipments to Britain?"

Now that the people have chosen the path they wish to travel, and the course which I, as their Representative, am bound to pursue, I want them to resist with sound judgment and stability the insidious forces of the crafty power groups that are moving us to madness. In spite of the hysterical assaults on reason by seductive forces of propaganda, by the fomenters of mob psychology, and the appealers to prejudice and race hatred, I hope and pray that the people of my district will remain steadfast—steadfast in their determination to stay out of the recurring and bloody political and class struggles of Europe; steadfast in a wise course to build up and make this a well-armed and defended nation.

I came to this great land as an immigrant boy. I came here to escape Prussian intolerance and gain freedom. I wanted to live where men could create opportunities and build a living with standards of their own choosing. We, the adopted sons of America can count our blessings as they have been dramatized by comparison.

In all deference it may be said that perhaps our love of this land transcends that of her native sons.

After long years of service in our State legislature and here in the Nation's Capital, I have preserved the passionate belief and confidence in this system of government and its freedom that I had when I first started the long trip to these shores. I am not disposed to treat with levity or take for granted the opportunities we have for choosing our own manners of living and for selecting our government and directing its activities. I would be the last to affirm or vote for any measure which in my judgment would abridge some of our rights or be ultimately harmful to the people I represent. We should all be on zealous guard and particularly at times such as these, to keep this Nation from harm.

I want this Nation to prepare for defense on such scale that we shall be safe from attack and maintain our freedom. I insist that we shall solve the fiscal problems of our country and make workable our industrial democracy. Lastly, that we do not declare war on the specious excuse that it is to preserve democracy elsewhere only to lose it here at home. This last resolve has been strengthened by the flood of letters from home, all demanding and praying that we render all the help we can to Britain but avoid open hostilities. This will take sacrifice for our convictions and much strength.

We are still calm with a cautious watchfulness. What will be the reaction of the people if and when war comes? When hysterical mobs burn the figure of us who in this great Congress vote "no" on the war issues according to their expressed will. Will they show the same courage that we are called upon to give? Now, we are comparatively free to speak our minds. When and if we are gagged by a censored press and radio—will they insist on the right that we be heard in peaceful assembly? Will they allow us to respectfully and sincerely point out the path we want our beloved country to travel or will we be stoned from the platform as pro-Germans—as un-Americans—as traitors?

The people of Wisconsin have a shameful precedent before them that should bespeak caution to all of us. In the last war when our beloved Senator Robert M. La Follette, Sr., was courageous enough to vote against the war he was hanged in effigy. Since that time many members of the Wisconsin Legislature who served during that period have confessed with a self-admission of disgrace how they signed a petition to recall him from office. He was called a traitor and his family villified and abused. Later when sanity returned, he was sent back here with an overwhelming vote. Each year a pilgrimage of the grateful is made to his grave and here to his statute in the Capitol where they hold services in revered memory of this sublimely brave statesman, who, with unbending will and the courage of his convictions, withstood their wrath alone.

Think, America, think! All too soon this ugly picture may be a reality. If the time comes, and God forbid that it does, will they remember that they were once, in heart and mind, at one with us? We as believers in true democracy respected and reflected their will—we were honor bound to serve their dictates. Will the people meet with high moral courage the issue they produced, or will they join the howling mob of furious war-mad men?

If war comes and if we can reasonably expect the events of the last war to recur, and I think we can, will the communities in which we live turn hateful wrath and spite against our families and loyal friends? Or will our houses be painted yellow and our property destroyed? Or will they assume with dignity and purpose a place by our side?

Will those who are now commending our firmness and applauding us as right,

resolve that the issue is theirs and return the measure of loyalty that we have given, or will they turn us out from our present places and let passing time alone vindicate us?

These questions are not to be construed as a faltering or a change of heart as far as I am concerned. They are a serious reminder to the people that we are choosing a path not easy to travel. It is a road beset with peril and hidden pitfalls—but of your own choosing. When you point the way you must accept your share of the responsibility. I will not falter, no matter what may be the consequences.

Mark Twain in his monograph on war hysteria presents the problem with clear force and vividness:

WAR HYSTERIA

There has never been a just war or an honorable one. I can see a million years ahead and this rule will never change. The loud little handful will shout for war. The pulpit will object at first. The great, big, dull bulk of the nation will rub its sleepy eyes and try to make out why there should be a war, and will say, "It is unjust and dishonorable, and there is no necessity for it." Then the handful will shout louder. A few fair men on the other side will argue and reason against war and at first will have a hearing and will be applauded, but it will not last long; those others will outshout them and presently the antiwar audiences will thin out and lose popularity. Before long you will see this curious thing, the speakers stoned from the platform, and free speech strangled by hordes of furious men, who in their hearts are still at one with those stoned speakers, but do not dare say so. And now the whole nation, pulpit and all, will take up the war cry and mob any honest man who ventures to open his mouth, and presently such mouths will cease to open.

Mr. Speaker, I have chosen this time to make myself clear on the issues, because I can speak without coercion. Our statements now come with unquestioned acceptance because the "haters" have not yet branded us nor impugned our motives. You will still read these lines without emotion and compose your mind to the resolution that you will not be a participant to the barbarious and savage picture I have drawn. That is well, may you keep firm and remain steadfast.

The St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

EDITORIAL FROM THE SHEBOYGAN (WIS.) PRESS

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sheboygan (Wis.) Press of May 3, 1941:

[From the Sheboygan (Wis.) Press of May 3, 1941]

LET CAT OUT OF THE BAG

According to an Associated Press dispatch the St. Lawrence waterway and power project is scheduled to be abandoned for this session of Congress.

Upon what authority the Associated Press gleaned this is not made clear, but whenever there is opposition to an undertaking like the St. Lawrence waterway in which the people are vitally interested congressional opponents of the measure usually circulate a grapevine statement of this character.

We do not question but what the Associated Press was informed in congressional quarters, because that is where opponents of a measure start their campaign publicity. To say that it started in congressional quarters doesn't mean that Congressmen originated the opposition. It comes from the representatives of big business, including the railroads. For years this Government has been keeping many of the railroads in business, and yet they are the first to voice their opposition along with the mine owners, chambers of commerce and the like from every section of the country where the St. Lawrence waterway might offer some competition. If the railroads and the mine owners were sincere they would look at this from a national viewpoint and likewise as a measure of benefit to the whole country.

When we were South we picked up a pamphlet issued by the National St. Lawrence project conference and bearing the names of some 40 corporations and associations that have just one viewpoint, to kill the St. Lawrence waterway.

The booklet is entitled "For National Defense?" and contains arguments that the St. Lawrence waterway could by no possible means be utilized at this time; that its completion would take until 1947, and that "long before that this war will be over one way or another." "Instead of helping national defense in the present crisis which is being fought out now in 1941 and not in 1947, the building of a St. Lawrence canal would be a positive hindrance. The United States is engaged in the tremendous task of rearming—now—for eventualities which, if they are ever to happen, will happen soon. That task is enough to absorb all the manpower, all the machines, all the materials, all the money which the United States can pour into it."

Then follows a long description of expenditures and a comparison of the costs of the Chicago Drainage Canal, the Suez Canal, Panama Canal, and the proposed St. Lawrence waterway, stating that its construction costs may reach $655,000,000. That is an absolute falsehood placed in this booklet to deceive the public. The building of the St. Lawrence waterway would cost less than the Panama Canal, and it would be of equal service. The arguments advanced against the St. Lawrence waterway and the objects and aims of those who are propounding the questions in the argument are best answered by a review of those associations that are against it.

The New Orleans Times-Picayune of some 2 weeks ago carried a lengthy editorial in opposition, contending that first consideration should be given to the Mississippi and other waterways in the South. You will note in the Associated Press dispatch yesterday that the Florida ship canal and other waterway projects costing a billion dollars would be urged by the South if the St. Lawrence were to go through. Well, suppose they were. If these projects have merit, they ought to be built, but for the Times-Picayune of New Orleans to combat the building of the St. Lawrence waterway shows the opposition that is developing in the South.

If we can't have the St. Lawrence waterway there will be no need for any other waterways in this country. For the information of our readers we submit the names of the individuals and the firms and associations which issued the booklet For National Defense? and in opposition to the St. Lawrence waterway. Look them over. Visualize the territory from which they come—largely from the East, South, and including the Association of American Railroads.

The Chicago Tribune, the railroad interests, the mining interests have all been opposed to the St. Lawrence waterway from its very inception. The fact that they are against the waterway should hasten action by the Congress of the United States and Canada. What would these great big associations that have signed their names to this booklet have in common with the people of Michigan, Wisconsin, Minnesota, and those States that are landlocked because of the absence of a waterway to the ocean. The list of signers follows:

Akron Chamber of Commerce, American Mining Congress, American National Livestock Association, American Short Line Railroad Association, Anthracite Institute; Association of American Railroads, Atlantic State Shippers Advisory Board, Boston Chamber of Commerce, Bronx Chamber of Commerce, Buffalo Chamber of Commerce, Cleveland Chamber of Commerce, Hampton Roads Maritime Exchange, Inland Water Petroleum Carriers Association, Lake Carriers Association, Maritime Association of the Port of New York, Maritime Association of the Boston Chamber of Commerce, Merchants' Association of New York, Merchant Truckmen's Bureau of New York, Mississippi Valley Association, National Association of Shippers Advisory Boards, National Coal Association, National Conference of Investors, New Orleans Association of Commerce, New York Board of Trade, New York Produce Exchange, New York State Chamber of Commerce, Niagara Frontier Planning Board, Norfolk Port-traffic Commission, Ohio Chamber of Commerce, Ohio Coal Association, Pennsylvania State Chamber of Commerce, Philadelphia Bourse, Pittsburgh Chamber of Commerce, Southern States Industrial Council, State Port Authority of Virginia, Transportation Association of America, Warehousemen's Association of the Port of New York, and West Side Association of Commerce of New York.

National-Defense Legislation

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

ADDRESS BY MR. GEORGE H. CABANISS, JR., OF THE SAN FRANCISCO BAR

Mr. GEARHART. Mr. Speaker, because of the timely nature of this expression from one of California's leading lawyers, Mr. George H. Cabaniss, Jr., of San Francisco, I ask the unanimous consent of the membership of the House of Representatives to spread upon the pages of the CONGRESSIONAL RECORD the text of an address which he recently delivered before the Columbus Civic Club of San Francisco, an address in which the speaker outlines the consequence and explains the legal phases of our recently enacted national-defense legislation.

It might be well for me to point out at this point that Mr. Cabaniss is a veteran of World War I, a past commander of an American Legion post, the membership of which is composed of San Francisco lawyers of ability, who is again serving his country during these days of emergency as Government appeal agent, local board No. 84, under our Selective Service System. Because of his outstanding legal attainments and undoubted patriotic purposes, anything that he might have to say in respect to any public question is a valued contribution to the subject which might be under discussion.

There being no objection to the request of the gentleman from California, the address of George H. Cabaniss, Jr., of San Francisco, follows:

NATIONAL-DEFENSE LEGISLATION

(Address by Attorney George H. Cabaniss, Jr.)

Mr. Chairman, members of the Columbus Civic Club, your organization, one of the most representative in San Francisco, is to be commended for your patriotism and civic spirit. You have performed splendid work in Americanization and assisting persons of Italian birth in obtaining their citizenship papers, and are the articulate political organization of a representative group in the city and county of San Francisco.

The national-defense legislation of 1940 may be said to comprehend three distinct fields—manpower, industry, and finance. In other words, the Selective Service Act passed by Congress and approved by the President September 16, 1940, and the Soldiers and Sailors' Civil Relief Act, approved October 17, 1940, are concerned with the duty of the young men aged between 21 and 36, being registered, classified, selected, and inducted into the armed forces for the national defense of our country.

The latter act safeguards and protects certain rights of those who have been inducted into the armed forces.

The Selective Service Act is based upon the principle that every citizen owes the obligation of serving his country when needed. Approximately 16,000,000 have registered of whom no more than 900,000 may at any one time, under present conditions, be called to active service. In other words, approximately not more than 6 percent of the registrants will at any given time be in the Army of the United States.

The present act, in a sense, is based upon the 1917-18 act with a few exceptions which shall subsequently be noted.

During the period of the Civil War a draft act was passed. That act had certain weaknesses. Then a person could be exempted from military service by paying a substitute to take his place, or military service could be commuted by the payment of a fixed sum.

The 1917-18 act allowed exemptions of persons employed in certain occupations. One of the great weaknesses of that act was that a person employed, for example in a shipyard, was exempted, even though he might have been a window washer or a janitor and not a mechanic. Under the present act there are no exemptions granted. All male persons between the ages of 21 and 36, with the exception of persons joining the Army, Navy, or Marine Corps or the Reserves, or foreign diplomats, are obliged to register. Every alien, excepting diplomatic or consular attachés, is required to register.

The persons registering have been divided into four classes:

Class I. A. Persons immediately available for active duty.

B. Persons fit for limited military service.

C. Persons already members of the land or naval forces of the United States.

D. Students who will not be available prior to July 1, 1941.

E. Students available for limited service after July 1, 1941.

Class II. Persons deferred because of their occupation.

Class III. Persons deferred because they have dependents.

Class IV. A. Persons who have finished military service.

B. Public officials who, by law, are deferred.

C. Nondeclarant aliens.

D. Clergymen or divinity students.

E. Conscientious objectors.

F. Persons physically, mentally, or morally unfit. (Insane or criminal.)

For the administration of the Selective Service Act, draft boards, consisting of three members to serve approximately every 30,000 population, have been formed. It is the duty of each local board to register its registrants and to determine their classification. Attached to each local board is a Government appeal agent, an attorney. It is his duty to combine the functions of a prosecuting attorney and public defender. If any person who has been classified believes his classification unfair, he may take an appeal within 5 days of receiving written notice of his classification. If he demands that the appeal agent make the appeal for him, it will be the duty of the agent to do so, or the agent may, if he believes the board has wrongly classified any person, take an appeal either for the person so classified, or in behalf of the Governor.

In San Francisco there are 27 local draft boards. There are two appeal boards of 5 members each. Members of the appeal boards include representatives of business, labor, the medical and legal professions, and the general public.

I would advise any person who believes that he has been discriminated against to take an appeal immediately, for otherwise he will be deemed to have waived his rights.

During the World War period of 1917-18 certain aliens who had not declared their intention of becoming citizens, who did not understand the English language, and who did not waive their claims to exemption, were drafted and the courts held that there was nothing that could be done about the matter.

The selective service officials in administering the Selective Service Act are guided by the principles of justice. While each local board's determination is binding, each case is examined fairly and fully upon its own merits. There are no blanket classifications. In cases of dependencies the selective service officials have been urged to give the benefit of every doubt in favor of the registrant.

The Soldiers' and Sailors' Civil Relief Act provides for a moratorium against certain civil actions against persons who have been inducted into the United States Army. While the Selective Service Act will end May 15, 1945, unless continued in further effect by Congress, the act states that no default judgment may be obtained in any court unless the plaintiff produces an affidavit that the person sued is not in the military service. If the person is in the military service the judge may require that a bond be posted to protect that person from any damages which may be caused by the judgment against him.

The families of persons in the military service, where the rental is less than $80 a month, cannot be evicted without court action, and the court may grant a 90-day stay of execution. In cases of purchases under conditional sales contracts, the party selling the article cannot recover possession without court action, and the judge may, as a condition of recovery of the article, make him return to the person in the military service the amount paid on the article. However, in the case of automobiles the court cannot grant a stay unless more than half of the purchase price was paid. A person in the military service is not required to pay his taxes and may have 6 months after the ending of his military service in which to pay the taxes. The interest upon the taxes cannot exceed 6 percent. Payment of income tax may be deferred until 6 months after the ending of the military service and no interest or penalty for nonpayment can accrue.

During 1917 the Espionage Act was passed, and only recently the United States Supreme Court affirmed the conviction in Los Angeles of two persons for violating that act. Both were sentenced to the payment of fines of $10,000 and one to 6 years' and the other to 3 years' imprisonment.

In that case a person named Salich, a naturalized Russian-born employee of the United States Government Naval Intelligence Department, for payment of $1,700, sold to Gorin, an agent of the Russian Soviet Government, confidential reports of the Naval Intelligence Unit in San Pedro, Calif., concerning the activities of certain Japanese who were suspected of espionage.

Under the Espionage Act in time of war the penalty may be death or not more than 30 years' imprisonment.

June 28, 1940, Congress passed an act known as the Federal Alien Registration Act, which provided that all aliens over 14 years old should register and be fingerprinted. Failure to register is a crime which may be punished by a $1,000 fine or 6 months' imprisonment, or both.

The State of Pennsylvania in 1939 had a State act providing that every alien should be obliged to pay a $1 annual registration fee and register and carry an identification card. The only aliens who were exempt from registering were aliens who had lived in the United States since December 31, 1908, and who had no criminal record, or aliens who had filed their first papers.

The act was held to be unconstitutional by the United States Supreme Court, which held that the control of aliens is exclusively the duty of the United States Government, and that the States had no such control.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

RESOLUTION OF COUNCIL NO. 8 OF THE POLISH ROMAN CATHOLIC UNION OF AMERICA

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of Council No. 8 of the Polish Roman Catholic Union of America:

Resolution of Council No. 8 of the Polish Roman Catholic Union of America, adopted at its regular meeting held on Sunday, March 30, 1941, held in the St. Hedwig's Parish Hall, Junction Avenue, in the city of Detroit, county of Wayne, State of Michigan)

Whereas the deepening of the St. Lawrence Channel as advocated by President Roosevelt will enable us to make our full contribution to the present needs of our Nation and to participate in the post-war program of world rehabilitation and stabilization; and

Whereas our national defense requires full utilization of the potentialities of our 21 active shipyards on the Great Lakes; and

Whereas engineering surveys made by our Government have approved the feasibility of the Great Lakes-St. Lawrence seaway and power project and forecast a benefit to the entire Nation; and

Whereas the Great Lakes and the St. Lawrence River provide an unparalleled natural highway of over 2,350 miles from the heart of our Nation to the Atlantic Ocean; and

Whereas a deep waterway from our great inland industrial, mineral, and agricultural region is vital to our Nation and a bulwark of strength to our defense; and

Whereas, the people of Michigan and the States adjacent to the Great Lakes possess a natural right to transport their industrial products, agricultural and mining commodities to the markets of America and the world in the most economical manner; and

Whereas, the Detroit industrial area and the State of Michigan are a part of the great midwestern section of our country in which 40,000,000 people live; and

Whereas, the Great Lakes-St. Lawrence seaway and power project is not only a defense measure but also a means of bringing a new era to the country's most important agricultural and industrial region: Therefore be it

Resolved by Council No. 8 of the Polish Roman Catholic Union of America, That we do formally and respectfully request the Congress of the United States of America to enact legislation enabling the completion of the Great Lakes-St. Lawrence seaway and power project by removing existing barriers; be it further

Resolved, That a formally attested copy of this resolution be sent to the Secretary of State of the United States; to Michigan Senators and Representatives in our National Congress; and to the mayors of the cities of Detroit and Hamtramck, Mich.

Respectfully submitted.

COUNCIL No. 8 OF THE POLISH ROMAN CATHOLIC UNION OF AMERICA,
———— ————, *President.*
GENEVIEVE DUDEK, *Secretary.*

De Seversky Versus Lindbergh

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

EDITORIAL FROM THE DALLAS MORNING NEWS

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Morning News of Friday, April 25, 1941:

[From the Dallas Morning News of April 25, 1941]

DE SEVERSKY VERSUS LINDBERGH

De Seversky's reply to the Lindbergh letter appeared in the current American Mercury almost simultaneously with the regrettably explosive scenes outside the meeting which the trans-Atlantic flier addressed in New York Wednesday. On the practical question of aid to Britain, the Lindbergh letter and the De Seversky article embody the essential differences between the America that thinks we can best defend ourselves by aiding Britain and that America that seems to think we are safe whatever happens.

So far as Britain is concerned, Lindbergh is frankly defeatist. He insists that the Britons are already beaten, this in spite of the fine defensive work of the R. A. F. and its ability to carry punishment to Germany in staving off a channel crossing. Because Britain is not self-sufficing, Britain is beaten unless supplies continue to come in steady and increasing amounts from this country. And whether Britain finally succumbs or not, our continued aid is self-insurance, because it gives us a longer breathing spell in which to correct our woeful state of unpreparedness for war.

The technical aspects of the air situation can be left to the two experts. De Seversky is certainly fully as well informed and more widely experienced than Colonel Lindbergh. You will pardon us then, Colonel, if we prefer his views to yours. And may we add that no contention you have made as to our effective defense in proud isolation has ever considered the economic side in which Hitler and his colleagues have steadily maintained that, if victorious in Europe, they can defeat us without firing a shot.

In one respect, Colonel Lindbergh erred grossly in his talk. He blames the fate of the overwhelmed nations on advice taken from us. What advice the luckless little countries took was not ours, but Hitler's. He advised and insisted that they maintain neutrality. And neutral they remained until with other barriers swept aside, Hitler in his own good time struck them down. What nation has fought Hitler because we so advised them? What nation outside of Britain and France has fought Hitler save in heroic effort to defend itself? Poland? Denmark? Norway? The Netherlands? Belgium? Yugoslavia? Greece? And what has it booted Rumania and Bulgaria and little Luxembourg that they agreed to the terms of the master liar of Berchtesgaden? Are we to understand then, Colonel, that on the precedent already set we are to make our peace with Hitler and expect to rest easy thereafter?

Secretary Stimson's Speech

EXTENSION OF REMARKS
OF
HON. GERALD P. NYE
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Washington Times-Herald of this morning under the title "Our Secretary of War Outlines Our Naval Policy."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

OUR SECRETARY OF WAR OUTLINES OUR NAVAL POLICY

Secretary of War Henry L. Stimson Tuesday evening radioed a long speech in which he outlined what he thinks should be this country's naval policy regarding the European war. Mr. Stimson thinks we ought to use the Navy to make secure the seas for the delivery of our munitions to Great Britain.

Stephen T. Early, White House secretary, told reporters they could assume that Stimson had talked with the President before making the speech. Meaning it was an administration utterance. An advance copy of the entire speech was sent to the papers early Tuesday morning, to give them plenty of time to wind up and write editorials on it for Wednesday morning's editions.

We didn't wind up and shoot an editorial against the speech yesterday morning, because it didn't seem ethical, somehow, to do so. As Earle Combs, of the Yankees, once remarked, "'Tain't ethical to curve-ball a pitcher."

What we think about the Stimson speech is this: That we are headed for a shooting war, declared or undeclared, and that the administration is conditioning the public mind for such shooting war.

It does seem a bit strange, however, for our Secretary of War to be laying down the course for our Navy to follow. May we now expect to hear presently from Secretary of the Navy Frank Knox, laying down the course for our Army to follow?

What kind of war are we heading for? What will it be like? We have a notion it will include more and better shambles as a leading feature.

SHAMBLES IN TOKYO

We gather this notion from Tuesday's Senate speech by Senator CLAUDE PEPPER (Democrat, Florida), generally regarded as close to the White House horse's mouth. Senator PEPPER suggested changing our laws so as to give Generalissimo Chang Kai-shek, of China, "the advantage of some gallant American boys at the controls of some first-class American bombing planes. Fifty of them, in my opinion, can make a shambles out of Tokyo."

We wouldn't doubt that, Tokyo being made pretty much of wood and paper. But we thought the interventionists wanted first to make shambles out of Berlin and some key Italian city. Can it be that they expect to take on Germany, Italy, and Japan all at once, and perhaps even Russia?

The Japs no doubt could make a shambles of Manila; and, if they got even temporary control of the Pacific while our Navy was fighting the battle of the Atlantic for Britain, they could make a couple of shambles of San Francisco and Los Angeles. Indeed, it looks as if our chief foreign trade, both import and export, would be shambles.

That seems to be what we're driving toward. As we read these shambles advocates' reasoning, the ideal end to this war would be a condition of shambles all over the world, with the survivors living in caves of the kind pictured in H. G. Wells' The Shape of Things to Come.

WHAT TO NAME THIS BABY?

It looks as if most of us are going nuts with war fever and are headed inescapably for the holocaust. Senator GERALD P. NYE (Republican, North Dakota) suggests that this expected war will come to be known as the Roosevelt War. We dissent. We think "the Roosevelt Wars" would be a better name for it, because we think it promises to turn into a series of wars instead of just one chinchy little war.

"Wars" sounds much more impressive than "war." History has witnessed, for examples, the wars of Alexander the Great, the wars of Julius Caesar, the wars of Frederick the Great, the Napoleonic Wars. Up to now, the United States has had only individual wars—the Revolution, the War of 1812, the Mexican War, the Civil War, the Spanish-American War, the World War.

To call this present war World War No. 2, or World War Jr., or by some such repetitious name, seems inapt and undramatic. The

Roosevelt Wars is a much more sonorous title and one which future historians should like.

We only hope that future historians will be able to record that the Roosevelt Wars were highly successful ones.

Oil for Our Enemies

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

EDITORIAL FROM THE LONG BEACH (CALIF.) INDEPENDENT

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Long Beach Independent of May 6, 1941:

[From the Long Beach (Calif.) Independent of May 6, 1941]

OIL FOR OUR ENEMIES

Day after day, week after week, millions of barrels of oil are being exported from our local harbor and are being transported to Japan. Japan is one of the signers of the tripartite alliance of the Axis Powers. Every American knows that these powers are openly and avowedly the enemies of the United States.

Somewhere, some place along the line are interests which are betraying the democratic interests of this Nation in a time of peril—and let's not mince words about that. All of the fine-spun diplomatic reasons are no excuse at all for placing into the hands of an enemy power the material most essential for the success of that power in operations against our security and vital interests.

This is an "all out" effort we are told. It is drummed into our minds and ears every day. Still we ship millions of barrels of oil to Japan. Is someone fooling us? Are we actually engaged in an effort to help the Axis defeat our friends and finally ourselves? Are we being betrayed in high places?

There are some interests who will exceedingly dislike what we say about shipments of oil to Japan. For their dislike we care not a fig. We do care about the United States and we do insist and demand that somebody explain this unwitting treason against our chances of ultimate victory over the forces of totalitarianism.

Every barrel of oil that goes to Japan becomes an Axis asset and a democratic liability. The wells which produce this oil are working for the Axis. The men who load it into tankers are working for Japan. The labor which runs the pumps is working for Japan. The Government could see to it these wells work only for democracy.

Japan is working for Adolf Hitler. The United States is against Adolf Hitler. In Axis eyes oil is more precious than diamonds, and here are we ladling it out with a prodigal dipper to arm our enemies. This fact has been made public time and time again, but we do nothing about it, and something must be done about it.

We know what the public's answer to the question of whether we should or should not ship oil to Japan would be. The answer would be an overwhelming "No." Everyone knows that, and yet the oil still flows across the Pacific into Japanese reservoirs, thence into Japanese war vessels, and thus powers the Axis drive to encircle the world of democracy.

Where are our leaders in this matter? We hear not a single voice raised against this suicidal continuation of business as usual—business for dollars—business against defense—business against democracy. The decision rests with the Government of the United States.

We stopped scrap-iron shipments, and we can stop oil shipments, but we don't. A few days ago the price of gasoline went up, and all of us pay for that increase although we have so much oil that wells are stopped down to only a fraction of their potential, and production is withheld from the domestic market but is sold openly and freely to our enemies.

These shipments are criminal, because they conspire to defeat democracy in a world at war. They are treasonable because they menace national security. Every American should see to it they are stopped and stopped now and that all goods of any kind being sent to any Axis country or Axis-dominated country be embargoed.

Are we going to repeat here the folly, the greedy connivance that ushered in the fall of France and every other nation now beneath the Axis heel? Have we our American De Wendels, trading materials of war to one another across the lines of our struggle? Are we going to let "business as usual" deliver us into slavery unspeakable or are we going to expose and tear away the shams that keep the great force of democracy from meeting and defeating Hitlerism within and without? Shall we fold our hands while our enemies are armed or will our Government act?

Once there was a Boston tea party. Unless something is done about oil for Japan, there will be a new kind of party based on the same flaming indignation that burst out of bounds in Boston when this Nation was young. Oil shipments to Japan must stop.

Convoys

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

RADIO ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an eloquent address delivered over the Mutual Broadcasting System last night by the Senator from North Dakota [Mr. NYE] on the subject No Convoys; No War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, the floodgates of war propaganda flung wide open these last few days, are subjecting the people of our country to a frantic verbal whipping.

America's interventionists are on the spot, driven frantic by discovery that the people could not be moved by pleas for any aid in Europe's war beyond that which could be given without dragging us into the war.

In this frantic hour the interventionists are putting the people of America on the spot. This week, or these next few days, are to determine whether or not America is going to be in Europe's war. And the people who determine that are going to be the fathers and the mothers, the sons and the daughters of America. Determination of this critical question rests now upon the question of whether the American people will make their wishes heard.

I cannot believe that there are people listening tonight who are not aware of the fact that members of the President's administration and spokesmen for the cause of intervention are "blitzkrieging" the American people into this war. All possible pressure, accompanied by deception, is being brought into play to cause that great majority of the people of our land opposed to going to war, to be fearful, and quiet, while the organized interventionist minority strives to give the President reason to believe that there is overwhelming public sentiment favorable to our getting into Europe's war, at least with our Navy, at once.

While the interventionists and the Cabinet members serve as shock troops, tossing their trial balloons, it is anticipated that the President will sit back and await tomorrow what is the public reaction to these proposals. If none but the organized interventionists pour their thought into the White House by letter and telegram now, the President may be given reason to say that he is forced to convoy by public sentiment. If, on the other hand, the American people will continue making their mind known, the result that accumulates in the White House can only be good.

This verbal blitzkrieg which has prevailed now for a few days, was precipitated by discovery that the people are unqualifiedly opposed to convoying. The President knew it because his mail and telegrams revealed it. Everyone knows it who has contact with the people of this country. The interventionists know it and they now find it their last chance to drive forcefully and quickly for action which cannot be revoked but which will lead America straight to war.

This verbal blitzkrieg by the interventionists has been cleverly organized. Survey it for just a moment.

Down the road to war we have been going with assurances by our leaders that ours were steps "short of war." Hesitatingly, the people have gone along, approving repeal of the arms embargo, the unlawful dispossession of 50 valuable destroyers, peacetime conscription. On down the road to war we have moved, adopting the lend-lease bill, abandoning the cash-and-carry feature of the neutrality law, appropriating, as a first installment on our leasing and lending and underwriting of a foreign war, $7,000,000,000. All the way have the people gone, but always with the positive assurance that those were steps to keep us out of war, steps "short of war."

It was fair to assume that ultimately the request would come to use our Navy to convoy production intended to aid Britain through the dangerous war zones. But when 2 weeks ago the stage was set for the push to convoying, the American people rose up in magnificent might, left no uncertainty in official Washington respecting their unqualified opposition to this further step, reminding the President that he had said some time back that "convoying means shooting, and shooting means war." The people at that stage cried out "Enough," and began demanding greater frankness on the part of American leadership.

The anger of those who were displeased by this showing of public determination found outlet through declarations by columnists that there was terrible and dangerous apathy over the country. This anger brought deception into largest play.

The Nation was told by the press one day that an administration Member of Congress had said that it was reliable that at least 40 percent of our aid was being destroyed before

it reached Great Britain. It followed that we must convoy this aid. "What is the sense of spending $7,000,000,000 to aid Britain when 40 percent of it does not get there?" we were asked. This was unadulterated deception, and when motion was made last Wednesday to get the Senate Foreign Relations Committee to invite the authorities who knew what the losses were to give the committee and the Congress the benefit of their information, the administration forces upon that committee denied the motion. There was determination that not even the Congress should be given access to truth in this hour when men were driving us to war.

But today truth has its hour. Admiral Land, of the Maritime Commission, has advised Congress that from December 31 to March 31, 205 vessels loaded with goods for Britain have cleared from United States ports for United Kingdom ports, that of these 205 vessels only 8 have been destroyed. A further disclosure is that in the months of March and April not one shipment of these goods from United States ports to British ports have been destroyed.

With that excuse for convoying smashed, what shall be stated by the interventionists as a sizable excuse for convoying now?

On the same day that this deception about losses was planted, the anger of that hour found the President declaring that there might be Nazis in Greenland. Knowing the circumstances that surrounded that declaration, the only conclusion to be drawn is that the apathy of the people had to be met by frightening them into doing the thing against which their sober judgment dictated.

That was but the beginning of this blitzkrieg to move America into this war. These last 3 days have brought into the drive deception, incitement to fear, demands for immediate action, and organization to roll onto the President's desk a mighty telegraphic response from people demanding convoying by our Navy.

Three days ago came the headlines announcing that 17 so-called experts were agreed that we could defeat Germany. On the same day came the word from one of these grasshopper statesmen who hops to England and hops back, President Conant, that it was time for America to throw her might into this war on just the naval side. And on that same day the President let the headlines say: "America is ready to fight for democracy again." Yesterday the blitz continued, with Senator PEPPER tossing up his trial balloon, proposing that we grab Dakar and the Azores, bomb Tokio, get tough.

Only last evening came Secretary Stimson with an unadulterated demand to use our Navy to deliver aid to Great Britain through the war zones, and declaring that Great Britain "has been accepted by us for a century," as having "accommodated our whole method of life" in America. No man knows better than Secretary Stimson the part that Britain played during this last century in striving to destroy our Union, and yet he would cause the people to adopt the theory that our very life depends upon Great Britain and her Navy.

Tonight the blitzkrieg continues, with Mr. Wendell Willkie's panzer division in a rally in New York, broadcasting a continuation of this spirit of hate and fear, and this demand for America to get into this convoying business without further delay.

Only when men lend their personalities to questionable programs are we entitled to deal with personalities. In this hour when personalities would drive America to war I am not going to hesitate to speak clearly with respect to some of these personalities. It is time now to speak and to act, tomorrow may be too late; to be as bold as are the interventionists. This is the time to be demanding that American leaders keep their promises—write an end to deception. This is time to be turning our backs upon those who have condemned themselves as insincere leaders.

Many of you heard Mr. Willkie tonight. His purpose in this hour is so diametrically opposed to the one he pledged last fall that I insist that his appeal now is subject to question. It was Wendell Willkie who, last November 4, said:

"Let us remember that dictatorship always begins by asking the people to give up some law or tradition for some special reason. The reason given may even seem logical. The motives behind it may be honorable and sincere. But if you give in to such reasons, little by little the structure of democracy is taken away from you without your realizing it."

This was the same Mr. Willkie who was prevailed on in February to do his hop to England and back, just in time to testify on the last day of the hearings on the lend-lease bill and appeal for this largest grant of power ever extended by a Congress to an Executive—the same Willkie.

During his testimony at that time, Mr. Willkie was reminded of his campaign assertain of October 30 when he said:

"On the basis of his (Roosevelt's) pas performance with pledges to the people, you may expect we will be at war by April 1941 if he is elected."

When asked whether or not he still agreed that might be the case, Mr. Willkie responded, "It was a bit of campaign oratory."

It was Willkie who, on November 12, with all call for campaign oratory gone, said:

"Mr. Roosevelt and I both promised the people in the course of the campaign that if we were elected we would keep this country out of war unless attacked. Mr. Roosevelt was elected, and this solemn pledge of his I know will be fulfilled, and I know the American people desire him to keep it sacred."

Could there be language more emphatic? Yet today we hear Mr. Willkie say things that have us wondering if he ever meant what he said when he expressed the desire to keep sacred promises that he and Roosevelt had made to keep out of war.

Let us be sure who leads these days and that sincerity governs.

America, don't you see what has been happening—what is being done now? Don't you realize that here is concerted effort to drive against the determined will of the American people—to take this Republic of ours into another futile European war that involves no issues new to those that were involved in the last war?

It is time for the people who have a heart for the future of America to emphatically make known to official Washington, from the President on down, that all of this blitzkrieg by the Winchells, the Thompsons, the Stimsons, the Peppers, and the Willkies is not a reflection of popular faith and popular belief. It is time to be demanding frankness, the abandonment of deception, to be reminding official Washington of the promises it has made as these so-called steps short of war have been taken. Among other things, the people should be reminding their President and their representatives of assurances that were given on September 21, 1939, when the President said:

"With the repeal of the embargo, this Government clearly and definitely will insist that American citizens and American ships keep away from the immediate perils of the actual zones of conflict."

Remind the President—and remind your Congress—that these words of 1939 were accepted as being a sincere assurance to the American people, and that May of 1941 finds the people demanding reassurance on this score of keeping out of the fields of war.

One does not associate with people in the East and West in this land of ours without knowing that there is an overwhelming demand that our country stay out of war. All the beautiful words in captivity are not going to alter that determination so long as the facts remain what they are today. Interventionists may go forth with their program of planting and fanning hate and fear, but so long as that part of our great people who constitute this overwhelming majority make it clear that they are for America first, the fanning and planting are to no avail.

To talk about carrying freedom of worship, freedom of speech, freedom from want, and freedom from fear to all the world, in our time and generation, does not mean much when all the people of America know that there is a considerable portion of these freedoms not yet available to all Americans. The cause that takes America into these foreign wars again has got to be a better cause than that.

I am not one of those who believes that the President of the United States has been without knowledge of the steps that have recently been taken by interventionists and members of his administration to make it seem that public opinion is driving him to convoying and to war. There will be those who will insist that the President has promised to keep us out of war, therefore he will not let these interventionists drag us in. But let me remind you that however much assurance may have been given to the people by the President, that Mrs. Roosevelt, so very recently, gave notice that the President had never given any such assurance or made any such promise.

Don't, I plead with you who hear me, don't let official Washington have any reason after this pending blitzkrieg is ended, to believe that the people are for the purposes which the blitzkreig has enunciated. Make yourselves heard, just as the interventionists are going to make themselves heard these next few hours, when with all the might of their organizations they will flood the President with telegrams and communications which would give the President chance to demonstrate that he was being pressured into convoying, that public demand insisted that convoying be undertaken. Americans, use the same machinery that your interventionist foes are using in this hour. It is the telling hour. It is the critical hour. It is the determining hour. Don't let the record of public expression that comes to rest in Washington these next few days be any excuse for a conclusion that the American people are for convoying, shooting, and going to war.

No Further Without War

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

RADIO ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me last Saturday evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Time and again the President has given America assurance and promise that none of

our sons would be sent into war abroad. A few evenings ago at Los Angeles Mrs. Roosevelt, according to an Associated Press dispatch, said the President had made no promise to keep us out of war.

The President on January 6, 1941, proclaimed "freedom of speech, freedom from want, and freedom from fear, everywhere in the world, in our own time and generation," as the foundation to which our present policy of all-out aid (all out of the United States) was devoted. Yet in April his administration declared against such help as the Senate had written for larger parity payments to our distressed farmers. And in April the President labeled Lindbergh a copperhead for practicing freedom of speech in a plea to keep this country of ours out of war. And, again in April, the President contributed to the cause of "freedom from fear" the assertion that there might be Nazis in Greenland, and let pass without contradiction the probable plant that 40 percent of our lend-lease production was being sunk before it reached Britain, that therefore we ought to take the direct war step of convoying these goods.

Only 2 weeks ago administration leaders in Congress assured Congress that convoys were not being considered by the administration. Much was being said of the President's declaration that "convoys mean shooting, and shooting means war." Then in a few days came the bold announcements of how our armed forces were patrolling the sea lanes, and persistent is the effort, led by Cabinet members, to break down public opposition to the mad effort to get into the war over the convoy route.

In the Congress anticonvoy talks are met by silence, and when a proconvoy talk is made by an administration leader, that leader declines to debate the points of his arguments.

The administration would have the Congress and public believe there was no need to fear that convoys would be undertaken, but declines a chance for legislation forbidding convoys and closes the door against letting Congress have the information basic to intelligent action on the convoy issue. A Senate committee has this week refused to invite the testimony of those Government authorities who could reveal the true extent of losses of our shipments to England. Obviously they prefer to let the rumor stand that 40 percent of it is being lost. That order lets fear rather than knowledge prevail in shaping the public mind and making it ready to tolerate convoys.

This is no time for fear. If America is to be saved from the mess to be the lot of every civilization letting itself into this present war, America needs to adopt sanity and let truth have its rightful place in our thinking. We need to insist that deception cease being any part of our system of government or leadership in this hour.

Nor is this a time calling for explaining by those who would keep our country out of war. Those who would serve such a cause are not necessarily serving any but an American interest. To do something for America does not make the doer pro anything but American. This effort these days is no contest to determine who hates Hitler most or loves Britain best. It is alone effort to save America.

America wants no part in Europe's war, a war for the same identical causes that have held Europe its slave for centuries. We remember Jefferson's warning that—

"For us to attempt to reform all Europe and bring them back to principles of morality, and a respect for the equal rights of nations would show us to be only maniacs of another character."

And we are quite mindful that "if anyone believes the American people can go out and force other nations around to our way of thinking, he has a Hitler complex," as stated by Dr. Wilbur, of Stanford University. America remembers her failure of 25 years ago, when we were going to do so much for Europe and the world, only to find that we had only helped Europe to another early war.

America wants no part in Europe's war. However great may be our sympathies for the cause of Britain, they are not so great that the American people would go to war to save Britain in this war which Britain herself declared.

It is realization of this—that the people of this country count that we have gone as far as we can in aiding Britain; that we cannot resort to convoying; that we can go no further without resorting to part in the war—it is realization of this powerful sentiment that has so angered some administration leaders and all the interventionists these past 2 weeks. It has been an anger that seems to dictate both arrogance and boldness in leadership, as if these qualities might overcome the roll of popular sentiment against any further march to war.

However much he may strive to avoid responsibility for our entry in the war, however much he may seem now to choose to leave the decision on convoys to public sentiment and opinion, so long as he encourages and lets his own official family drive for convoying consent—if we get into this war over the convoy route, our war shall forever be known as President Roosevelt's war.

The people have followed his leadership so long as his lead was short of war. But the moment he began talking about "winning this war," and showed inclination to get into the convoying business, which he had previously said "meant war," the "blitz" of Presidential leadership was off, and the people made that clearly understood in their daily talk and their letters to the White House. The severity of this public voice was what caused the President to say that people did not understand the severity of the situation, which was followed by the "blitz" appearance of the President's Cabinet on the air to pave the way for continued following for the President in just one more little short step to war.

Let's make no mistake about it—this policy which has taken us so far toward part in this war was given by the President; he was never driven to it by the American people. The people may go along with him on patrolling and convoying, but only because he leads and gives them no alternative; never because they wanted patrolling and convoying. And if the people will continue their voicing of opposition, I doubt that the President will dare take the fatal step. Such a step calls for greatest unity, and it is clear that at this stage there can be no unity on going to war.

The President is not wanting to go down in history as the President who took the country to war after 8 years of protesting that his aim was peace. The White House strategy now appears to be for the President to let his official family take the lead in blitzing the people into a war mood. If they succeed, then he will appear to have been forced to act.

In the last few weeks the ventriloquist's voice has been frequently heard. Let's call the roll: On April 24 Secretary Wickard told the country: "I think it's time the farmers and the people of this country got excited about the world situation."

Secretary Knox on the same day declared: "We've committed ourselves. We cannot allow our goods to be sunk," which we can interpret only as a plea for convoys.

Secretary Hull also on April 24 said that "aid must reach its destination in the shortest of time in maximum quantity," and "ways must be found to do this." He, too, implied convoys when he said that our safety "calls for resistance wherever resistance will be most effective."

Vice President WALLACE has told us that "the United States now has her second opportunity to make the world safe for democracy."

Secretary Ickes, speaking in Chicago, smeared those who are opposed to intervention.

Former Ambassador Bullitt on April 27 scored us for not producing "as fast as if we were at war." He, too, implied convoys with his statement that we must "deliver the goods."

Secretary Stimson prepared us for what may follow with his testimony before a Senate committee: "Our forces must be prepared for the possibilities of war in many and varied terrains, it being quite uncertain in what part of North or South or Central America, or even possibly other regions, it ultimately may be necessary to use them in the defense of this country and its possessions."

Secretary Jones, Colonel Donovan, Administrator McNutt have all added their voices to swell the oral blitzkrieg, paving the way for convoys, which would mean war.

This administration blitzkrieg followed the appearance in several columns of statements deploring the people's "apathy." Since several columnists and writers used the same line at about the same time, I can only assume that they got it straight from the feed box, probably in the form of discreet hints dropped at the White House.

The administration knows that the people are not apathetic, that what is called apathy is plainly firm resistance to participation in war.

The President has always had a sense of history. He has always been conscious of the niche he was carving for himself in the halls of time. Of course, he will not want to be classed with that other President who took the country to war after his election on the slogan "He kept us out of war." If we are to have war, he would rather be driven to it, and he knows the people will not now support it.

Read the speeches of the President's spokesmen as this blitzkrieg continues. Listen to them over the radio. But, as you do, be aware that the speaker is a front for the man who calls the plays. I do not need to tell you that in these critical times public officials are not making speeches dealing with official foreign policy without advance approval. And as you listen to these speeches, picture the man who patiently waits for public opinion to catch up with him, public opinion that is whipped up by his panzer divisions of men who will take the rap for him after he has set the country on a road that leads straight to war.

Put it down as a fundamental truth: If we get into this war it will not be because the President tried to keep us out.

America wants to stay out of this war. Those who believe they can create the public opinion that will catch up with the President and the interventionists ought to be answered by the people acting as those who know that the way to catch up with the President is to overtake him, as you would a runaway horse, and stop him.

Let America really have freedom from fear. We are at peace still with the world. The only censorship we know is voluntary. Truth can still be entertained and opinion still has right of expression.

Let us be done with this fear that our dependence is upon the British Navy, the only Navy that has ever practiced aggression against this hemisphere.

Let us devote our preparation to our own defense and be done with this fear that aggression may be practiced against us. If it is aggressors we fear and would stop, let us not become again the partner of the land which for three centuries of military

aggression and conquest has builded the greatest empire of all time.

Let us, when we consider our world trade, in connection with the future, remember that on a normal basis it is only 4 percent or 5 percent of our economic dependence, and that our most severe competitor in this field is Great Britain.

Let us be doing more thinking of America and less of empires across the seas. If an empire dies, it will only mean that history is repeating itself, and that our forefathers successfully fought to free America from European empire builders.

And occasionally it would serve Americans well to remember that parts of the British Empire are doing far less by reason of the present war than we are doing—that we are doing more to save England than its possessions are doing to save England. All-out-aid for Britain on our part is silliness unless the British Dominions are themselves doing as much.

I do not criticize Britain for seeking our full aid. I do not criticize Canada because she has not yet done for Britain what we are doing. But it is truth that while we draft boys and can use them in Newfoundland and Greenland, Canada drafts only for a few months, not more than 4 months, of training, with no obligation for service out of Canada, even in Newfoundland. Canadian conscripts are paid $36 per month, while our draftees receive $21. We open our purse to the tune of $7,000,000,000 as a first installment, while Canada sells to England on a cash basis. Indeed, we are told by visitors that we are much more emotional about the war than the people of Great Britain themselves.

Let's be honest with ourselves. Britain and France made Hitler and then declared war against him. Having declared it, let them finish what they themselves started, if they can. If they can't then let them at least see what kind of a peace can be had and let us know what it is before they ask and receive our aid to the extent of participation in their war.

And one thing more, after all that has been reported about what Ambassador Bullitt may or may not have done to prod England and France to war, there comes now the unqualified declaration by Demaree Bess in the Saturday Evening Post that Colonel Donovan, Secretary Knox's "eyes" in Europe, told Bulgarian diplomats that "the United States was on the verge of entering the European war and would go on fighting Germany until Germany was defeated." If this sort of thing has been going on, then lets have it understood that these spokesmen were not speaking for the American people, that the American people were ready to help, but only by steps that would not involve us in the war.

It is not sport to be saying these things. But they must be said, and should be said, again and again. Had there been greater frankness on the part of American leadership while it was preaching peace, peace, peace for America, there would be no need now for such plain talk as is necessary to save peace for America while that same leadership talks about winning the war before we talk peace.

Watch the blitzkreig teams of Wickard, Wallace, and Knox; Stimson, Ickes, and Hull; Bullitt, Jones, and McNutt; Donovan, Winchell, and Thompson. Be ever mindful that in their approach these days they speak—the officials always—for the President. They may offer only trial balloons, but with Presidential consent. And let every trial balloon, when it invites the next step to war, be punctured by public protest straight to the White House, just as the people have directed it so well of late. Only in that manner can we hope to avoid partnership with Europe in a cause that has taken one after another of Britain's partners to national death and starvation.

Longevity Bill for Postal Employees

EXTENSION OF REMARKS
OF
HON. PAT McCARRAN
OF NEVADA
IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

RADIO ADDRESS BY HON. PAT McCARRAN, OF NEVADA

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by me on the program of the United National Association of Post Office Clerks on Friday, May 2, 1941. The subject of the address was the postal employees' longevity pay bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen who do me the honor of listening to me tonight. I want to express my appreciation for this opportunity to address you on the postal employees' longevity-pay bill, now pending before the Congress. This bill is not primarily a pay bill to increase salaries; neither is it a bill to provide compensation for many years of faithful experienced service; nor is its sole object to increase efficiency in the Postal Service. The postal longevity-pay bill is a combination of all these three factors—salary increase, for experienced service, in order to increase efficiency.

Briefly, the bill provides that postal employees who have rendered not less than 10 years of satisfactory service shall receive an automatic salary increase of $100, in addition to the annual salary, and $100 for each 5-year period of satisfactory service thereafter until the thirtieth year of employment; or, by putting the bill into operation, we see that after an employee has rendered 10 years of satisfactory service his salary automatically would be increased $100 annually, or approximately $8 per month. When he has completed 15 years of service he would receive another $100 increment, and so on for each 5-year period of service until he reaches the maximum of 30 years. After 30 years of faithful service he will have received a total maximum salary increase of $500 as recompense for the added experience and efficiency which he has brought to his job. That's the meaning of the word "longevity." Indeed, longevity, by any other name, can only mean "compensation for experienced service."

Under existing law, the average postal employee enters upon his duties with the knowledge that he may receive five promotions for efficiency, one each year. At the end of his fifth year he has nothing to look forward to by way of promotion or advancement. At that point he has reached the peak of advancement, except in a few circumstances, and this is true even though he remain with the Postal Service for the rest of his life. But as a matter of fact, 95 percent of those who enter the Postal Service in their youth do remain with it throughout their lives. All available records indicate that these employees have made, and will continue to make, a life career out of postal work. Postal work is a career job because its very nature requires special skills that can be gained only by experience. Moreover, postal work is accomplished mainly by manpower—that is, by individual efficiency. It could not be done otherwise. And so it is quite apparent that if we are to expect experienced postal employees to remain in their skilled capacities, we must look to their needs as reflected in the light of this passing era.

Advancement in the Postal Service is today regulated by a law enacted in 1925. That was 16 years ago. For 16 years these employees have had to content themselves with an antiquated wage scale, notwithstanding unthought of advancements in the American standard of living, which they are required to meet, and notwithstanding the fact that the Post Office Department last year achieved an unprecedented surplus of receipts over expenditures. In fact, during 7 out of the last 8 years the Postal Service has recorded remarkable surpluses of cash receipts over expenditures, and it is my belief that since the Post Office Department is essentially a service to the people, and was established for no other purpose, it should not be permitted to profit by that service at the expense of its employees.

The principle of longevity pay is neither novel nor is it untried. Longevity was recognized in the military branches of the Government as long ago as 1870, and it has constantly been extended. Today, those who make a career of their service with the armed forces may look to a longevity-pay increase of approximately 50 percent over the maximum service of 30 years. But longevity pay for postal employees, as embodied in pending legislation, can in nowise approximate that afforded to members of the armed forces. Although this is true, yet postal longevity will furnish a very desirable incentive to maintain postal efficiency at the highest possible peak, which, in turn, must result in a saving to all taxpayers.

The principle of longevity is sound. It has been proved by many years of testing, and I know of no more appropriate field for its application than the Postal Service. No one would presume that a salary law enacted 16 years ago, to meet living conditions 16 years ago, is or could be adequate to meet the high American standard of living of today. No one would presume that it is just and reasonable for the vast majority of postal employees in the lower brackets to be "frozen" in their particular skilled capacities after their first 5 years of service, without hope of promotion or advancement, and without regard to efficiency or ability. It is for these reasons that I am sponsoring postal employees' longevity-pay legislation, which I hope to see enacted into law by the present Congress.

The worker in any line of endeavor and especially in the service of the Government should not be permitted to get into the frame of mind that his worth has reached a limit, that his earning power can never be greater however much he may give of his devotion, thought, and energy. Let us give heart and hope to the postal employee as he gives his life to the great service that touches every hand and home of the Nation.

Participation of the United States in War

EXTENSION OF REMARKS
OF
HON. WILLIAM H. SMATHERS
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

LETTER FROM KENNETH B. WALTON AND AN EDITORIAL FROM THE DARTMOUTH

Mr. SMATHERS. Mr. President, I ask unanimous consent to have pub-

lished in the Appendix of the RECORD a congratulatory letter written by a friend of mine in Atlantic City, N. J., Mr. Kenneth B. Walton, and addressed to the editor of The Dartmouth, Dartmouth College, N. H., and also an editorial written by the Dartmouth College newspaper, under the heading, We Have Waited Long Enough.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

KENTS RESTAURANT & BAKING CO.,
Atlantic City, N. J., May 6, 1941.

The EDITOR, THE DARTMOUTH,
Dartmouth College, Hanover, N. H.

DEAR SIR: Please allow me to congratulate you and your associates on the directorate of The Dartmouth on the splendid editorial you recently printed on your front page entitled "We Have Waited Long Enough." I have thought it so good that I have had copies made of it as per the enclosed for private distribution.

It is very encouraging to find that you undergraduates of Dartmouth understand so fully the grave necessities of this day and hour. You have set a notable example for all the colleges of America, and I have sent it to Haverford College, where I graduated, to ask them to print something as good (if they can).

To cry only that we want peace is so self-evident that it is silly. Everyone wants peace, of course. Unfortunately we have no such simple choice. There has rearisen the plundering force of German brutality and aggression in such a form that our only choice is as to when is best to fight to repel it, because the American people will never surrender what we have. When they see the problem clearly they will call for war as loudly as you do who understand beyond the headlines of today.

There are some who counsel that we should sit tight, arm ourselves to the teeth and do nothing to take part in the present frightful struggle abroad, except perhaps to give the British Empire munitions if they can take them away. Such a reckless policy can be embraced only by those who are mesmerized by wishful thinking or blind to anything beyond tomorrow.

They would have us let Germany, which has been building a war machine for 8 years, defeat England and have us turn our heads the other way. Thus with the peoples of the whole Continent of Europe, western Asia, and at least northern Africa at their mercy, the Germans would settle down to several years of building a huge navy and trans-Atlantic striking force. They would probably be able to outstrip our naval building with all of Europe's shipyards at their disposal and with millions of conquered people to work for them under bondage. And what a still more desperate struggle we should have to contemplate 5 years from now. The recklessness of isolationist nonsense which would submit us to such terrible struggle is beyond belief. We would not even be able to choose our time to strike before Hitler built too powerful armaments, without appearing in the eyes of the world as the aggressor nation which would break the then peace.

Between this prospect and action now, while we have a strong British Empire as allies, there can be no sound choice except yours. Now we can defeat this menace to our country with allies; with all the world behind us (except Japan, neutralized by our fleet). Now we can fight with every chance to attain victory and peace within a few years, with the aggressors confined to the Continent of Europe and already weakened by blockade and bombing. Now we can win this fight at infinitely less cost in blood, suffering, and treasure than there would be if we let these plunderers consolidate their gains and arm as naval powers.

Your course is the sound, wise, realistic, and conservative course. I hope that we may see evidence that most of the other colleges of America will shun the reckless, wishful thinking that we can buy an easier path with a few months of peace now. The time for half-way measures has passed; it is time to strike hard to defend all that is America.

Thanks again for your fine editorial. With best wishes, I am,

Sincerely yours,
KENNETH B. WALTON, *President.*

WE HAVE WAITED LONG ENOUGH—DARTMOUTH COLLEGE NEWSPAPER ASKS PRESIDENT TO WAGE IMMEDIATE WAR

(The following letter, addressed to President Roosevelt, was written yesterday by a member of the 1941 directorate of The Dartmouth. The 1942 directorate feels it is the best current expression of The Dartmouth's editorial opinion, and feels it is of enough importance to put on this morning's front page.—Editor, The Dartmouth.)

SIR: Now we have waited long enough. We have seen the Greeks go down, and we have heard the words of a Greek: "On October 28 Roosevelt pledged America's complete aid to Greece, but not a single cartridge has yet arrived from the United States." Greece held on no longer. Like other modern small countries—even one or two modern big countries—Greece found that brave men cannot indefinitely fight airplanes with rifles.

Now we have waited long enough. We hear that Greece has fallen, and on the same radio broadcast we hear that the United States is sending Britain some ships—"small ships, 20 torpedo boats." It is travesty in the midst of tragedy. We cannot laugh, though; only shake our heads in dumb amazement.

All over the world men are waiting for you. In Greece, in Yugoslavia, in Norway, in France, in Belgium, in Holland, in Poland, you are the only hope of men who fought and lost. In England you are the only hope of men who are still fighting. It must be that in Germany itself there are men who think of you as the only hope.

In America we, too, hope. We know that your action is the only thing left that can change the course of the world. Because we know that, although the soldiers of the British Empire have fought longer and harder and better than any other soldiers, they cannot fight alone and poorly armed forever.

Now we have waited long enough. We have seen the United States slowly move toward war—through conscription, industrial defense mobilization, and the Lease-Lend Act; we have known that it moved too slowly.

We have not produced enough guns, tanks, airplanes, bombs.

We have not supplied the ships to carry what we have produced across the seas.

Now we ask you to order complete industrial mobilization of the country on wartime lines. We ask you to set in motion the executive and legislative machinery which will stop the farce of producing automobiles, washing machines, gaudy fashions, and aluminum salad bowls while the peaceful world which is enhanced by these products is being blasted to pieces.

Now we ask you to authorize the sending of supplies across the seas in American ships, convoyed by the American Navy.

Now we ask you to send American pilots, mechanics, sailors, and soldiers to fight wherever they are needed.

In the dark catalog of our public events no other answer can be given. The world we know is breaking up around us, and we try to maintain business as usual. We do not wish to die, so we seek reasons for avoiding war. Our logic compels us to the warlike answer, so we rat on our logic and turn off our conviction with the craven phrase, "all aid short of war." In a world given over to war and bound to be shaped and determined by war we strike for peace.

We are not our best selves when we do this. The loudest voices are those crying "peace, peace," when there is no peace. In the Congress are men who, through an honest hatred of war, blind themselves to the consequences of refusing to wage war when it becomes essential. Having waited long, sir, we now ask you to override these voices; make us our best selves by waging war.

We cannot win without fighting. The people will not make up their minds that this is war unless we fight it. We will never win so long as we continue to lead strictly private lives, so long as we go on getting 7-percent profits, so long as we refuse to give up an inch of ourselves to something bigger than ourselves.

We can lose without fighting. If England loses, we stand alone. Ridden with internal dissension, hanging each other for "fifth columnists," bearing the weight of a huge conscript Army and a wartime economy, we will see Germany rule the world; and we will, out of that mess, produce a native fascism and an American Hitler. We will lose the war without even fighting it; or, if we do fight—finally goaded to it and still strong enough to field a unified Army—we will fight alone, in two oceans at the same time, against an incomparably stronger and more concentrated foe.

We can win if we fight now. We can wake the sleepers in America. We can move the self-hypnotics from the destruction they seek before the wave of the future. We can stop "business as usual" and work longer and harder and for less money to produce the things we need. We can send ships to England and to the Mediterranean and to the East Indies. We can build a hemisphere strongly resistant. We can act now to save the last best hope on earth a nation ever had of staying free and bringing freedom.

Now, having waited long enough, we ask you to help us do this. We ask you to believe in us as much as we have believed in you. We ask you not to leave us stranded like the Greeks.

CHARLES G. BOLTE.

HANOVER, N. H., *April 23, 1941.*

Tribute to the Late Senator Sheppard

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

EDITORIAL BY DR. CLINTON N. HOWARD

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able editorial written by Dr. Clinton N. Howard for the Progress, the official organ of the International Reform Federation, in which a fine tribute is paid to our beloved and distinguished colleague, the late Senator MORRIS SHEPPARD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR MORRIS SHEPPARD

"Then shall the dust return to the earth as it was; but the spirit shall return to God who gave it" (Ecclesiastes, xii:7).

This issue of Progress would not be complete without an appreciation of Senator MORRIS SHEPPARD, father of the eighteenth amendment, which abolished the legalized liquor traffic in the United States, the greatest moral enactment since the Decalogue, and the dream of Abraham Lincoln, the father of the thirteenth amendment, that abolished slavery, of a land without a slave or a drunkard.

In his Washington birthday address, delivered at Springfield, Ill., on February 2, 1842 (at 33), as published in the Sangamon Journal, Abraham Lincoln said, "And when that victory shall be complete, when there shall be neither a slave nor a drunkard on the earth, now proud the title of that land which may truly claim to be the birthplace and cradle of both those revolutions, which shall have ended in that victory."

This also was the dream of Senator SHEPPARD from the day that he entered public life until the day of his death, which occurred on April 9, after only 3 days of serious illness. The announcement of his death at the comparative early age of 66, was a shock to the entire Nation, without respect to party, church, or personal habits, for Senator SHEPPARD was respected alike by all.

Ten years in the House of Representatives, and 29 years in the Senate, as one of his colleagues said at the memorial service held in the Senate Chamber today, April 25, "without a stain on his personal or political career."

The editor has just come from that Senate memorial service, and he can truthfully say that never was greater tribute paid to mortal man so soon after his passing as was paid to the life and character of Senator SHEPPARD. Said one of his eulogists, recognized as a liberal and wet Senator, "No matter whether one agreed with all that he stood for, one always felt that Senator Sheppard was right. He was one of the most sincere and gentle men I have ever known."

To tell the story of his life and his achievements would fill a volume. He was the Dean of Congress, having served longer than any other living member, and so great was the respect in which he was held by the people of Texas that in the same year that they repealed the prohibition law by popular vote, they returned MORRIS SHEPPARD, the father of the law they voted to repeal, to the Senate by the largest majority he or any other Texas statesman ever received. The editor campaigned in that election and found a fixed gulf between drys and wets, but both sides wearing SHEPPARD badges. His death is a loss to a great cause and to the Nation.

The President told it all when he said, "He has gone to his account with every obligation to duty fulfilled." There, in 12 words, is an appropriate inscription for his monument, which doubtless the State of Texas will erect to his memory.

* * * * *

It was with heavy heart that we looked into his silent face as his body lay in state in the Senate Chamber on the day it left Washington for interment at his Texas home at Texarkana, where 25,000 mourners waited the arrival of the funeral train, and followed his body to the cemetery.

Senator SHEPPARD is dead, and as one of the speakers in the Senate today said, "We shall never see his like in the Senate again."

"Know ye not that there is a prince and great man fallen this day in Israel." We extend our deepest sympathy to his family, and express the hope that his successor will be a statesman of like high ideals.

America

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

ADDRESS BY HON. C. WAYLAND BROOKS, OF ILLINOIS

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a speech which I delivered before the Chamber of Commerce of the United States at its twenty-ninth annual meeting, held in Washington, D. C., May 5, 1941, with the introductory remarks of James Kemper, president of the chamber of commerce.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

President KEMPER. We of Illinois are proud, pardonably proud, of our junior United States Senator. Affectionately and appreciatively we call him "CURLY" BROOKS.

He was a student at the University of Illinois when the World War broke out. He immediately enlisted and with his father and two brothers went to France. There he fought in many important engagements. Their seriousness may be indicated by the fact that he was wounded seven times. His heroism on the field of battle was recognized by the United States by the award of the Distinguished Service Cross both of the Army and the Navy and by France with the Croix de Guerre.

Returning to Illinois after the war, he completed his education in college and then in the law at Northwestern University. As assistant State's attorney in Chicago he won universal commendation for his achievements in a war on organized crime.

In November of last year he was elected to the Senate of the United States. We know that he is a lawyer; he likes to think of himself as a farmer. I venture the prophecy that he will be better known as a statesman—the type of statesman, I might add, who puts love of this America of ours above every other consideration.

I have the honor of presenting to you the Honorable C. WAYLAND BROOKS, United States Senator from Illinois. [Applause.]

ADDRESS BY HON. C. WAYLAND BROOKS

President Kemper, distinguished guests, ladies and gentlemen, I am tremendously honored tonight to have the privilege of closing this all-important conference of the leaders of American industry and business, meeting in this the last great free capital of the world without the fear of bombardment, and I want to express my gratitude not only to the president of this association and his officers, but to its members for the fact that they have gathered in this all-important hour to find out what is ahead for America and to lay their plans to continue to play that all-important part which they have played thus far in building the civilization that you and I enjoy.

Tonight I see in this audience a number of my seniors in the Senate, and I wish to pay my tribute to them for the part that they will play in the arduous task that is ahead, for surely America stands tonight in a forest of question marks, and upon what we do in the Congress, what the executive branch of our Government decides to do, and the part that the businessmen of America will take in support of that action will depend the future of the liberty-loving people of the world.

The subject that they gave me tonight is a subject of love; it is of America—America, the world's new life, with none of the dust of the ancient day, none of her crumbling shrines, none of the ancient art; a people capable of throwing off the outgrown and outworn; the new life of the world. Yet we stand, asking of each other, "What part shall we play?" as the Chamber of Commerce of America meets to ask the question of itself, "What lies ahead?"

The past, of course, is secure. Nothing that we can do can add to or detract from it except that we may take lessons from it, for America is the hope and the dream and the fulfillment of the prayers of countless centuries of courageous men and women who longed for the day when there might be a government where all men might play a part, where the individual might be supreme, where the worship of God might be unrestricted and the initiative of men might be the challenge of the day.

It started as a result of a revolution, a revolution to throw off chains, traditions, slavery, and bigotry; a revolution that started in many ways, for as we read of it we find that they were not certain what they were revolting against. Some of them said, "It is a religious war," but there were bigots among them for they burned the Pope in effigy in the squares of Connecticut and said it was a war against him; others said, "It is a religious war but not against the Pope, but against the Church of England," and they were equally sincere but equally vicious.

Adams and Hancock said it was a war for the freedom of trade, but they spoke of their trade. Franklin and his associates said, "It's not only for a religious freedom and a freedom of trade, but a complete freedom, a war for independence." Yet they were struggling on, 13 colonies, 13 armies, 13 flags. But finally they agreed to sign a Declaration of Independence. They signed their names and willed their future and their fortune and their lives; they chose a common commander, and America started her march of liberty. She moved on for 75 years. And to this cause came the strong of every creed and every color and every nationality of the world, in unseaworthy boats, longing and hoping for the opportunity to help forge and build a new civilization.

America moved to the West. Finally, Illinois became a State. Then she made her contribution. Tonight I had the privilege of sitting beside and between two of Illinois' distinguished citizens. You have heard the tribute paid them here—Silas Strawn, former president of the American Bar Association and of this chamber; and James Kemper, president of a great insurance organization and retiring tonight from his responsibility here as president. But that's not the great contribution Illinois made, for out of the woodland, from the humble folk, Illinois presented at the most trying hour in the march of liberty of this Nation—Abraham Lincoln. Lincoln came with the experience of the humble man, who knew all the hardships and all the heartaches. Time will not permit to trace his history, but this will suffice. We often hear, in this land of ours, in political campaigns, folks say that this man or that individual is not qualified for the office he seeks. Certainly that could have been said of Lincoln when he sought the Presidency of the United States of America. He had no experience as an executive, but he proved to be the best qualified man in the land for he had a love of liberty, he had a love of all else, a love to preserve the Union, the Union of States, a government of divided power, a government of distributed opportunity, a government of law and not men, a government that was merely started on its way to distribute the opportunities of life to all men and women of all creeds and colors.

It can be said of him that he was born as humble as the son of God, in a hovel; reared in poverty; living a life of struggle against adversity; finally elevated to supreme command of a nation. He preserved the Union; he preserved a government; he set more men free, and like the son of God was crucified for his service to humanity. But the Nation moved on.

In this country of ours, womanhood, motherhood, have been elevated to a finer and a higher plane of respect than anywhere in the world; and yet my pretty mother died before she was ever given the privilege to cast her vote; she never cast her vote to select a prosecutor or a judge or a man to make the law. But that finally came. By 1917, all men, all women, all creeds, all colors, every manner of humanity known to God was free and equal under the kind of government that was established here, marching on to, shall we say tonight, its destiny or to its fate.

And then for the first time, as the richest nation in the world, with the highest standard of living that ever had been accomplished in the universe, we moved back into the Old World. For the first time we turned our backs on our own march of liberty and moved back into the bitternesses of the century-old struggles of Europe. I realize that it was a challenge. They said it was a war to make the world safe for our kind of understanding; it was a war to end all war. That seemed worthy of America's contribution. America had always contributed before. Out of God's blessing bestowed on us we had reached back into the Old World in its every difficulty; whether it be flood or famine, earthquake or war, wherever distressed people sent up their cry to a God-fearing people for help, America had extended her hand. But now we were asked to extend more—our blood, our force, our prayers. And we did. And we turned to with everything we had, believing, as the chaplain told me as a common soldier, that God was on our side. The German soldier of that day had printed on his belt, "Gott mitt uns," and his chaplain told him the same thing. But he came from a different government; he came from a government of centralized power where an individual with lust for power and the arrogance that goes with power was in command—and arrogance always will go with power, whether it is centralized in Germany, Italy, France, or America. The lust for power causes men to die. We felt that we were wiping it out. And when the armistice was signed we were glad, for our President spoke that day and said, "All that America has fought for has been accomplished." And the bells rang, the whistles blew, and old men and little children rejoiced in the streets.

Then the aftermath set in, and then the great boom came, and then the depression; and then somebody had to be blamed, and business became the whipping boy of America.

Then came the charges, and they charged business of America with being the obstructionists, the economic royalists, the selfish few, the upper 10 percent, the well-entrenched minority, the earls of privilege, the barons of finance. And the tirade went on and on.

With new agencies of propaganda came the radio, that blankets the Nation as the rain. No longer on the public platform alone, but reaching into the automobile and the fast-moving train, into the farm, the barn, and the cottage on the hill and the little room in the tenement district came the official voice condemning business, until finally all America began to wonder: Was business the enemy of American society?

Some men held true to their dreams of what America meant. I was taught that private enterprise and the American form of government were the twin sons of Columbia; they were born of the same mother; they were weak in the beginning, but sustaining each other they both became great, and the American Government became the greatest Government of the world, and the American people, through private enterprise, became the most productive and the builders of the greatest standard of living, the greatest joy that had ever been known. When one of them dies they both will die, for America, if she reaches her destiny, will cling to two things. One is a division of power of the Government with its distributive opportunity of people to participate and the right and the dream and the hope of the humblest son some day to build a finer plane, a finer bridge, a finer tower, a finer automobile, and, if necessary, a finer gun, than ever has been established or developed in the history of the world.

America with her ideals has traveled far. I think it was Carl Schurz who said, one time, that ideals are like the stars; you can't reach up and touch them and fondle them and hold them; like a seafaring man on a desert of water, you search for them, and when you find them if you follow them you reach your destiny. And those are the things that to me are important tonight. Whether we reach our destiny as a great people. We have done great things. We are only 6 percent of the world's area; we are only 7 percent of the world's population; and yet we enjoy and use 60 percent of all the telephone and telegraph facilities of the world; we operate on this continent 80 percent of the motor cars of the world; we produce 70 percent of the world's production of oil; we produce on this continent 60 percent of the world's production of wheat and cotton. We are the world's new life. What shall we do with it now? Shall we distribute it across the face of the earth? Can we settle the differences of the centuries, the bitternesses that have been engendered in the hearts of sons since birth? Ever since I came back from the last war I have wondered what the mother of Germany or the mother of France or the mother of Belgium or the mother of England must have said to the son whose father was killed in the war. Every opportunity that they were denied must be explained because somebody less than 25 miles away caused that handicap, that bitterness, that hatred that has been poured into the sons of the Old World for centuries, while we here have learned to know that the German and the Jew, the British and the French, the Belgian and the Greek, the Italian and the Spaniard, and all the nations of the earth are equal under our law, that every nationality has a right with us to enjoy the fruits of his own labor, and every mother has the right to instill a dream in the heart of her son that some day he may ride down Pennsylvania Avenue and occupy the White House.

That is a different world, and that these things shall live we must make wise decisions now. I, for one, as my family proved in the last war, will be for my country no matter what decision she makes, but in the meantime my thought is that the blood of America belongs to America and to American defense, and that the Government of America must realize that the Government didn't manufacture nor invent the washing machine nor the telephone nor the telegraph nor the automobile; the Government, if you please, calls on industry today to build the tank and the gun and the plane. We can draft men, we can train them in squads right, we can tell them to stand at attention, but they can't alone defend themselves or us against the plane that dives like a meteor from the sky; they can't stop with their common hands a tank traveling 50 to 75 miles an hour. America calls tonight for industry to produce as she has never produced in her life. And if industry is to produce, industry must know that she is a part of America; that she will have the understanding and the appreciation of the Government and its heads; that it may say to industry, "We call upon you as we do upon the soldiers that we take from their homes and their occupations; without that skilled labor that we take from you, you must build again a new force, build that mechanized force that seems to challenge the world."

America! That is my subject. Valiant America! We salute you, glowingly as befits our youth, reverently as befits our devotion, and silently as we sacredly pledge to guard the heritage that was given to us. We will reach one of two things, our destiny or our fate, and it depends upon industry and the sons of America to move together.

As one who is honored to be in the service of the Government I say to the industrial leaders of America: What a challenge comes to you. You have never failed; you won't fail now. God bless you and God speed you as you meet the emergency of this hour, and may America know that business is equally as important as the Government, the twin sons of Columbia, marching on not to their fate but to their destiny.

Broadcasting Regulations of Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

STATEMENT BY HON. JAMES L. FLY

Mr. NORRIS. Mr. President, on the 6th day of May 1941 the Senator from South Dakota [Mr. GURNEY] asked unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Washington Evening Star of May 5, and also an article by Mr. David Lawrence on the subject of the operations and action of the Federal Communications Commission. I have before me a statement by Mr. James L. Fly, the Chairman of the Federal Communications Commission, in reply to the article and editorial printed in the RECORD, above referred to, and I ask unanimous consent that Mr. Fly's reply be printed in the Appendix.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My attention has been called to a column by Mr. David Lawrence, appearing in the Washington Evening Star on May 5, 1941, and in other newspapers all over the country, and introduced in the CONGRESSIONAL RECORD of May 6 by Senator GURNEY. Mr. Lawrence discussed the recent network regulations handed down by the Federal Communications Commission, and stated that these regulations were issued "without public hearing."

That, as anyone who has followed the subject must be aware, is a serious misstatement. Let me quote from the introduction to the Commission's report:

"Between November 14, 1938, and May 19, 1939, the committee held hearings pursuant to public notice that the Commission would hear any person or organization desiring to present evidence on the matters included for investigation in Commission Order No. 37. The committee requested the national networks, regional networks, station licensees, and transcription and recording companies to present evidence. It also requested information by questionnaire from licensees of stations and from holders of stock in licensee corporations. In addition, persons and organizations requesting an opportunity to

present evidence material to the investigation were given an opportunity to be heard. On June 12, 1940, the committee issued its report based upon the evidence adduced at the hearings and the official records of the Commission.

"In November 1940 briefs in this proceeding were filed on behalf of the national networks and other interested parties. On December 2 and 3, 1940, oral arguments before the full Commission were presented by the parties. These arguments were directed to the committee report and to certain draft regulations issued solely for the purpose of giving scope and direction to the oral arguments. On January 2, 1941, supplementary briefs were filed on behalf of the three national network organizations in which were discussed the jurisdiction of this Commission with respect to matters covered by the committee report and the draft regulations, and in which attention was given to the actual and feasible limits of competition in the broadcasting field, with particular reference to network broadcasting."

David Lawrence, like myself, is an ardent defender of freedom of the press. It does seem to me, however, that a man who holds himself out to be a responsible newspaper columnist, should at least read a report before devoting a column to attacking it. The words which I have quoted appear on pages 1 and 2 of the report. Throughout the report there are references to the hearings and to the testimony of network witnesses at those hearings. I think the attention of the Senate and of the country should be called to the fact Mr. Lawrence devoted his whole column to an attack upon a Government report which he either had not read or fatally misconstrued.

Perhaps it might be argued Mr. Lawrence did not have time between the release of the F. C. C. report last Saturday morning and the release of his column last Monday afternoon to digest the report's contents. But certainly he had time to digest them by Wednesday afternoon. Yet here is what he said in the Washington Evening Star on Wednesday:

"No hearing was even given interested parties before the order was promulgated."

Even if Mr. Lawrence could not find time to read the report which he attacked on Monday and Wednesday, he might at least have read the two-page order. Mr. Lawrence said that "no hearing was even given interested parties before the order was promulgated." Yet the order on its very face calls attention to the fact that "extensive hearings" were in fact held, and that thereafter briefs were filed, oral arguments were had, and draft regulations were discussed in those briefs and oral arguments. When Mr Lawrence stated on Wednesday that "no hearing was given," had he really read the two-page order he was attacking?

Mr. Lawrence also said that the regulations were adopted "suddenly out of a clear sky." I wonder whether Mr. Lawrence really means that 2½ years devoted to hearings, oral arguments, presentation of briefs, and consideration of the record justify his phrase "suddenly out of a clear sky."

I have not myself had an opportunity to study carefully the report and order. I hope that it accomplishes what it purports to accomplish; the decentralization of the vast power over the listening public now wielded by two or three New York corporations. In this connection, I wish to submit for the record an editorial published in the Washington Post on Thursday morning, May 8.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

[From the Washington Post of May 8, 1941]

CHAIN BROADCASTING

It is not surprising that the antimonopoly order issued last Saturday by the Federal Communications Commission has brought forth numerous protests. That order will effect some far-reaching changes in the relations of radio stations to broadcasting networks. No business organization likes to see established practices banned, and that is particularly true when the required changes involve a sacrifice of privileges. But the real question at issue is not whether the large radio networks find the new order burdensome, but whether it will best serve the public interest.

The F. C. C.'s order is based on the generally acceptable assumption that the public interest in radio may be protected most effectively by active competition among broadcasters and network systems. It recognizes, however, that this competition will be limited in any event because only a relatively small number of radio stations may be operated successfully in any community. Still the Commission insists that no artificial restraints upon competition be added to those inherent in the nature of the radio spectrum. Accordingly, it has laid down a policy of forbidding licenses to stations that are bound by contract to broadcast the programs of only one network. Even nonexclusive affiliation contracts between stations and network systems will be limited to 1-year periods, and no network will be permitted to operate more than one standard broadcast station in the same area.

At present only three major networks are in operation, and this field is dominated by the National and Columbia Broadcasting Cos. The F. C. C. does not deny that they are rendering good service. Its concern is with the concentration in a few hands of great power over this vital means of communication. The evidence is plentiful of concentrated power. When existing networks forbid their affiliate stations to utilize national programs from any other source, they close the door of opportunity to new enterprise in this field. When they insist upon 5-year contracts for this purpose, they effectively bolt the same door, and any hope of creating new networks is virtually destroyed. Surely Congress never intended to grant such monopolistic privileges to three broadcasting chains.

Of course, the rules now adopted by the F. C. C. should have been put into effect before the present network systems came into being. Lack of foresight in the past, however, is no reason to perpetuate relations that encourage monopoly. Rules similar to those included in the present order have already been applied to television and frequency modulation. And their application to existing radio broadcasting systems cannot be postponed indefinitely because important readjustments will be required. All that can be reasonably asked is that the Commission afford ample time for effectuation of the changes. Competition is still the mainspring of our economic system, even though there is need to prevent competition from degenerating into mere chaos.

Aid to Britain

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

ADDRESS BY HON. HENRY L. STIMSON

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered on May 6 over a Nationwide radio network by Hon. Henry L. Stimson, Secretary of War, on the subject of aid to Britain.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 7, 1941]

TEXT OF STIMSON ADDRESS—SECRETARY OF WAR SAYS LIFELINE TO BRITAIN MUST BE PROTECTED

(Following is the text of Secretary of War Stimson's radio address last night:)

You will excuse a word of preface as to the personal position from which I speak. Today I am being called a warmonger by some of those who oppose our present efforts at national defense. As a matter of fact, for many years after the Great War, both as a private citizen and as Secretary of State, I labored with my full strength for the establishment of a reign of law among the nations by which their controversies should be settled by judicial methods instead of force. There was a time when such a movement seemed full of hope. Today that time has passed—temporarily, we trust—and our hopes for peace have been dashed by international aggression. The world is facing so great a crisis that all our efforts must be turned toward the defense of our Nation's safety. For that reason tonight I am speaking of that crisis and of our defense in meeting it.

In 1933 a group of men under the leadership of Adolf Hitler obtained possession of the Government of Germany and overthrew the German Republic. Mr. Hull, our Secretary of State, has recently well described the methods of those men as the methods of barbarism. Both within and without Germany they have set back the clock of time more than five centuries. They have embarked on a scheme of conquest which is avowedly intended to be world wide. For that purpose they have built up in secret an immense military machine based on the forced labor of Germany. They have already attacked, conquered, and occupied Austria, Czechoslovakia, Poland, Norway, Denmark, Holland, Belgium, Luxembourg, France, Rumania, Hungary, Bulgaria, and Yugoslavia, and have reduced the people of those 13 countries to a condition of semislavery to the Nazi despotism. They have attached to their Axis as vassals 2 other nations dominated by the same purpose of military conquest—Italy, guilty of unprovoked attacks upon Ethiopia, Albania, and Greece; and Japan, guilty of a similar attack upon her neighbor, China.

NAZIS BATTER DOWN DOMESTIC AND INTERNATIONAL LAW

By this conquest they have destroyed the western civilization, which had been slowly building up in Europe ever since the Dark Ages. We are so close to these happenings that we can hardly yet realize the havoc which has thus been wrought both within and without the national boundaries of that unhappy continent. For example, for many centuries humanity has slowly been building up the rule of individual freedom in all its various manifestations; freedom of the person, including the abolition of serfdom and chattel slavery; freedom of the mind, including the freedom to think and talk and to write with our fellows; freedom of enterprise in our business and commerce; freedom to travel about the world with ever-growing liberty; and, finally, the crowning freedom of all—political freedom in respect to the choice of our governments.

This growth in freedom had been so long and so steady that we had come to believe it was soon to be the recognized system of the whole world. All at once it has been dashed aside and trampled on by these Nazi rulers who are proposing to establish a world order in which they shall be the masters and the people of all other nations their slaves.

They have left no such thing as individual rights or liberty within their territory or international rights of independence without their territory. Both domestic and international law have gone down under their blows. For the rule of law they have substituted the rule of the gestapo, the secret police under whose malign terrorism no vestige of personal freedom is safe.

This is the so-called new order which we face today. It has openly announced its hostility to us and to our order. It has been steadily encircling our western world. Its advance agents are already busy among the republics to the south of us, building strategic air lines through vital portions of that continent and creeping up toward our Panama Canal. Its armed forces are threatening West Africa, looking toward a jumping off place within easy reach of the Brazilian coast. Its propagandists are already vigorously active in our own population.

PLASTIC MINDS OF YOUTH BENT TOWARD INTOLERANCE

Hitler and his military associates have seized their opportunities with uncommon skill. They have used their power to inculcate into the plastic minds of a generation of youth the abhorrent and reactionary doctrines of racial intolerance and hatred of other men. They have taken advantage of modern science to develop in secret, while other nations slept, a mechanized striking force of unprecedented power. They have used every method of duplicity and of propaganda to surprise their victim nations with sudden attack. They now arrogantly confront the world, including ourselves, with the alternative of abject surrender or uncompromising forceful resistance.

I cannot recall that the United States throughout its history—even when it was small and weak—has yielded to such demand. Let us see whether there is any need of changing our policy now. In the first place, this so-called new order of Hitler is not new; and it has not and never will create order in this world. Hitler's regime of brutal lawlessness is merely one of those temporary reactions, which have occurred at intervals during all of man's long history of progress upward.

Since his origin millions of years ago, ambitious men have many times attempted a world-wide conquest over the liberties of their fellow men. But they have never permanently succeeded, and they never will. Hitler has taken advantage of the discontent of a troubled post-war period to impose his rule upon a docile-minded nation which has more than once temporarily yielded its love of liberty to an efficient autocrat. His rise has been facilitated by many an accident which might easily have been prevented. Many an unwary sentinel of liberty has been caught napping at vital moments. But as has always happened before, the progress of man along the path toward freedom will be taken up again and carried forward with new spirit and with fresh knowledge acquired by the unhappy experiences of the past. To be frightened into belief that Hitler had created a new and permanent world order would be as naive as it would be cowardly.

In the next place, let us examine the strategic conditions which must govern our defense against an admittedly serious danger, albeit it is only temporary.

The people of the United States have been greatly blessed by the geographical conditions of their homeland. Two broad oceans lie to the east and west of us, while north and south of us are only friendly nations of whose intentions and power we have no fear. Thus, the instinct of our people in regard to their ocean defense is a sound instinct. There is great possibility of protection in the fact that we have the Atlantic Ocean between us and Europe and the Pacific Ocean between us and Asia. So long as those oceans are under our own or of friendly control, their broad waters constitute an insuperable barrier to any armies which may be built up by would-be aggressor governments. But that condition of friendly control is imperative. If it should be lost, the oceans overnight would become easy channels for the path of attack against us.

LANDING ON HEMISPHERE WOULD THREATEN UNITED STATES

The development of modern air power greatly intensifies this necessity of friendly control of the oceans. It now makes it necessary for us to command not only the reaches of ocean adjacent to our own shores but the entire reach of the oceans surrounding the western continent; for if hostile nations possessing powerful armies and air power can once make a landing on the shores of our weaker neighbor nations either north or south of us, our immunity is gone. It would then become a comparatively simple matter for them to establish air bases within striking distance of the great industrial cities which now fill our country. And the only way in which we could prevent this would be the intolerable method of ourselves maintaining armies large enough to command the areas of our continent for thousands of miles beyond our own borders. Such a condition would transform the good-neighbor relations which now prevail throughout the American republics into the same abhorrent system of forceful domination which we are seeking to keep out of the hemisphere. In short, to the nations of America friendly control of the surrounding oceans is a condition of the reign of freedom and mutual independence which now prevails in that continent.

For over 100 years the control of the Atlantic Ocean has been exercised by the British Fleet. By the Washington treaty of 1922 Great Britain voluntarily consented to parity between her fleet and ours, and thus admitted us to an equal share in that control. The significant feature to us of this century-old condition has been that a country speaking our language, possessing our traditions of individual and legal freedom, and inhabited by a population from which considerably more than 50 percent of our own population is descended, has been accepted by us as a dominant factor in the ocean defense upon which our safety and mode of life depend. During that century we have accommodated our whole method of life to that situation. We have maintained no large standing armies. We have built populous cities upon our seacoast which are easily vulnerable to attack from the Atlantic Ocean. We have, in short, adopted a mode of national life which is dependent upon the continuance of a sea power of which we ourselves feel in no apprehension.

Today that situation is gravely threatened. The British Isles, which have been a fortress against any despotic approach to our shores through the northern reaches of the Atlantic, are threatened both by attacks from the air and blockade from the sea. If their Government should fall either from starvation or from attack, the British Fleet, if it survived at all, would have no adequate base for its continued operations. If the British Isles should fall, all of the great shipyards of Britain would pass into the hands of the aggressor nations, and their maritime shipbuilding capacity, thus augmented, would becomes six or seven times as large as our own. Under such conditions our own fleet would be quite unable to protect the Western Hemisphere from the overwhelming sea power which would then confront it. Even today its tonnage is exceeded by the combined tonnage of the Axis Powers, and, with the enormous preponderance in building capacity which they would then have, command of the entire seas surrounding us would in time inevitably pass into their hands.

BRITAIN'S THINLY SPREAD FORCES GIVE AMERICA PRECIOUS TIME

Furthermore we have only just begun to build up our military and air defenses. At least a year will pass before we can have an army and an air force adequate to meet the air and ground forces which could be brought against us if the control of the seas passes into Axis hands. Ten months ago we began to build up those air and ground defenses and the progress which has thus far been made has been satisfactory and has surpassed our expectations. But the stubborn fact remains that an adequately constructed and trained air force and army in a country of this size cannot be created in less than a minimum of 2 years fit to meet the air forces and army which Germany has been spending 6 years in producing. Time is the essential factor and time cannot be had if sea power is lost. Today the wide-flung forces of the British Navy are threatened in the North Atlantic, the Mediterranean, and in Malaysia. Those thinly spread forces today alone are securing to us that precious time.

None of these facts are new. They have been unfolded before the eyes of us all, if we would take the trouble to read the lesson. They have been the motive of the policy and action of our Government thus far and our people understand them and have approved the course which the Government has so far followed. Not only have enormous appropriations been passed by the Congress for our own defense but a statute, the so-called Lease and Lend Act, has been passed expressly for the purpose of furnishing aid to Britain and those other beleaguered nations whose defense the Congress has deemed necessary to our own defense. Under that act seven billion more dollars have been appropriated to effectuate that assistance. All of these statutes have been passed by overwhelming majorities.

Now, it is becoming every day more clear that all this alone is not sufficient. The lifeline of Great Britain is threatened. The high-water mark of the Nazi effort is at hand in the shape of an attack on the shipping which furnishes Britain with the means and the nourishment to maintain her battle. Not only does the blockade imperil the delivery to Great Britain of the munitions which we are sending her, but the supplies of food necessary for her population are already becoming gradually impaired. What are we going to do about it?

CAN TURN DARKNESS TIDE BACK FROM OUR WORLD

By the grace of fortune this most dangerous threat on all the threatening horizon is an attack which, if we will, we can successfully meet. While we are struggling to build up an uncompleted Army and an uncompleted air force, we have at our hands a naval instrument prepared and ready for just such an emergency in our defense. Right now, at this crossroads of history, it is within our power, if we choose to use that instrument, to turn the tide of darkness back from the Atlantic world, and while it is thus held in check, to gain the means which will preclude it forever from attaining its full purpose. For many years we have been building and maintaining this Navy. We call it our first line of defense. It has been our pride. In it are serving in the cause of patriotism the flower of our young manhood. If today that Navy should make secure the seas for the delivery of our munitions to Great Britain, it will render as great a service to our own country and to the preservation of American freedom as it has ever rendered in all its glorious history. Supplementing the efforts of the British Navy, it can render secure all of the oceans, north and south, west and east, which surround our continent. In that way it can help to hold in check the onward rush of the tide of nazi-ism

until the other defense forces of all the democracies are completed. This would eventually and permanently confine the malign forces of despotism until the virus has run its course and the tide of freedom has begun to rise again.

On the other hand, if our Navy's assistance should be withheld until the power of the British Fleet and nation is broken, its own power of execution would at once shrink to but an impotent fraction of what it could do at the present moment. If we should allow the present strategic moment to pass until the power of the British Navy is gone, the power of our Navy would become merely a secondary power instead of the decisive and winning power in the world contest. Is it conceivable that the American people would allow this to happen? After the carefully determined course which we have pursued until this moment; after the clear statements and appeals which have been made by our President in respect to the danger which confronts us; after the overwhelming response to his appeals which has been made by the Congress; after we have taken our place definitely behind the warring democracies and against the aggressor nations in the defense of our freedom; after providing for billions worth of munitions to carry on that defense and while we hold in our hands the instrument ready and able to make all these steps effective, shall we now flinch and permit these munitions to be sunk in the Atlantic Ocean? Our entire history shows no precedent to make such a supposition credible. Neither the Government nor people of the United States have ever given occasion to make anyone believe that such an act of irresponsibility and indecision would be possible.

The unrestricted submarine warfare which Germany is carrying on in the North Atlantic, sinking ships without warning and without the possibility of saving the lives of their crews, is not a legal blockade under the rules of marine warfare. It has never been recognized as lawful by the United States. America's spokesmen at international conferences have again and again condemned it as a form of piracy. It was expressly the violation of law and humanity involved in unrestricted submarine warfare which in 1917 caused the President and Congress to take up arms in defense of the freedom of the seas. Today Germany by these same illegal means is not only seeking to frighten our commerce and our vessels from the Atlantic, she has extended even into the Western Hemisphere a zone into which she has forbidden us to enter. Hitler has not only torn up all the rules of international law, but he is expanding his lawless activities into our own hemisphere.

READINESS TO SACRIFICE NECESSARY TO SAVE FREEDOM

Our Government is acting with care and prudence. But our own self-defense requires that limits should be put to lawless aggression on the ocean. The President has said that we must not allow the steps which we have already taken to become ineffective.

I do not minimize the danger which confronts us. This is an occasion for grave seriousness, but not for gloom or despondency. I have studied the military potency of the Axis Powers and I do not underestimate the courage of their men in battle. But I also know well the initiative, the ready aptitude, and the courage of the men of this country. I have become familiar with the plans which are being made by our military and naval leaders for our defense. Provided that we all act with promptness and a united spirit, I have full faith in the outcome.

But I am not one of those who think that the priceless freedom of our country can be saved without sacrifice. It cannot. That has not been the way by which during millions of years humanity has slowly and painfully toiled upward toward a better and more humane civilization. The men who suffered at Valley Forge and won at Yorktown gave more than money to the cause of freedom.

Today a small group of evil leaders have taught the young men of Germany that the freedom of other men and nations must be destroyed. Today those young men are ready to die for that perverted conviction. Unless we on our side are ready to sacrifice and, if need be, die for the conviction that the freedom of America must be saved it will not be saved. Only by a readiness for the same sacrifice can that freedom be preserved.

Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

ARTICLE BY DAVID LAWRENCE

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article in the Evening Star of yesterday regarding a recent ruling of the Federal Communications Commission.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 7, 1941]

CENSORSHIP PATH OPENED BY F. C. C.—USURPATION SEEN IN LATEST DECREE ON BROADCASTING

(By David Lawrence)

Hardly more than a year ago—on March 25, 1940—a unanimous opinion of the Supreme Court, written by Justice Roberts, explained the law of radio and ruled that the licensing power of the Federal Communications Commission was limited solely to the allocation of mechanical facilities.

This opinion becomes pertinent now because the Commission last Friday issued an order which will virtually demoralize if not destroy the business of network broadcasting and program distribution in America. The Commission was never given such authority in the law itself, and yet more than 400 radio stations today face a penalty—the loss of their licenses—if they do not comply with the Commission's order to break up their existing program service.

Here is what the Supreme Court said, in part:

"The Communications Act does not essay to regulate the business of the licensee. The Commission is given no supervisory control of the programs, of business management, or of policy. In short, the broadcasting field is open to anyone, provided there is an available frequency (wave length) over which he can broadcast without interference to others, if he shows his competency, the adequacy of his equipment, and financial ability to make good use of the assigned channel. * * *

"Plainly it is not the purpose of the act to protect a licensee against competition, but to protect the public. Congress intended to leave competition in the business of broadcasting where it found it, to permit a licensee who was not interfering electrically with other broadcasters to survive or succumb according to his ability to make his programs attractive to the public."

HALTS NATIONAL SERVICE

And yet five out of the seven members of the Commission in their latest decree tell the stations that they will lose their licenses unless they change their present relationships with the network companies. National service, as the public has enjoyed it, must now be superseded by a purely local hit-or-miss scheme and no network can make an arrangement to sell its time for specified hours to a group of stations, even though the local station wants to do it that way and the public wants that kind of service.

The Commission has repeatedly licensed radio stations under the present system and a network series of programs has been built up which renders the American people satisfactory service, but the Commission, suddenly out of a clear sky, upsets the whole arrangement of 12 years and threatens not to renew licenses unless its edict is complied with.

Entirely apart from such mischievous use of governmental power to break down the stability of a business operation by means of the licensing authority—arrogating to itself powers not granted or delegated by Congress—is the fact that the Commission really endeavors to say what should or should not be broadcast over the air. It even hints in its latest report that it will control the talent participating in the programs.

OPENS WAY TO CENSORSHIP

If the licensing privilege in government extends to any such abuse, then the Government may set up censorship any time, not merely of the radio but of the newspapers. The second-class mail privilege is a form of license. The courts have ruled that it must not be used to decide what shall be printed, but it will be easy, once the Communications Commission has established a precedent, for a Government department to say how the newspaper business shall be conducted. In fact, the first step has been taken already by the Federal Communications Commission in threatening to refuse to permit newspapers to own broadcasting stations. There is no authority in law which allows the F. C. C. to discriminate as between citizens or companies in the granting of licenses, but once usurpation goes unchecked, the liberties of the people are gradually whittled away in other directions, too.

These words of Commissioners Case and Craven, who voted against the latest decree, are a clear warning against the fascism that's in the making in Washington:

"On the whole, radio broadcasting has an excellent record of public service. * * * Radio is so constituted that it is sensitive to public criticism and responds promptly to changing public tastes. For this Commission, or any agency of government, to attempt to substitute its judgment for that of the public involves an arrogant presumption which should be avoided at all costs. * * *
* * *

"It can be argued with logic that invasion of this economic field by the licensing authority in the absence of clear legal mandate would constitute an inevitable prelude to the second step of assuming the role of arbiter of public tastes.

"Circumstances may require the Federal Government to exercise broad powers in many fields of our economic life, but it is imperative that broadcasting be maintained as a free American institution."

NO NEED OF THREAT

Not content with a formal threat to revoke licenses unless its orders are obeyed, the F. C. C. now has turned over its report to the Justice Department for study and presumably prosecution. This is where the whole matter should have gone in the first place. The Sherman anti-trust laws apply to everybody. There was no need to threaten

to revoke licenses. But this is the era of arbitrary and capricious bureaucracy which ignores the statutes of Congress and stipulates its own penalties irrespective of the fact that there are no words in the law granting such punitive powers. No hearing was even given interested parties before the order was promulgated.

Is this the kind of democracy the American people are asked to tax themselves for and perhaps give the lives of their sons? President Roosevelt appointed these commissioners and he has encouraged the punitive practices of governmental commissions by refusing to sign the Logan-Walter bill, passed last session by an overwhelming majority of both Houses of Congress—a measure designed to curb the usurpers of governmental power.

British and American Civil-Service Plans

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

ARTICLE BY GEORGE D. RILEY

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "U. S. and Us," by George D. Riley, published in the Washington Times-Herald of May 4, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 4, 1941]

U. S. AND US

(By George D. Riley)

MANY PARALLELS CAN BE DRAWN IN COMPARING BRITISH AND AMERICAN CIVIL SERVICE PLANS—ENGLAND FORBIDS PUBLIC EMPLOYEES JOINING LABOR UNIONS AND SCHOLARS GET THE CALL FOR GOOD-PAY JOBS

Last Sunday U. S. and Us related the intense efforts being made to interlock the American and British civil-service methods and administrative procedures into one common pattern. It was pointed out that several foundations are at work to bring about a close coordination between the two nations.

It was recalled that Cecil Rhodes originated the foundation plan whereunder American scholars were to complete their studies at Oxford. It was Rhodes' purpose that such scholars were returned to this country to preach a close understanding between these countries and advancement of international cohesion.

In return today, the Rockefeller Foundation is bringing from England to these shores highly selected students at its expense, while Nelson Rockefeller is coordinator of cultural relations with the Latin-American republics.

It is appropriate at this juncture to draw the parallels between the public services in the United States Government and those in the British civil service, both as they presently exist and as they are about to exist. Here are the main features in rough outline:

1. In England it is extremely difficult for a man to enter the administrative class of government without these connections: Education from Oxford or Cambridge, family background, money. Experience is a handicap for entrance into this class service.

FAMILY BACKGROUND AND MONEY

In the United States, education at one, two, or three selected schools having apparent association or affinity with Oxford and Cambridge is highly to be desired in the Federal administrative service. Those with family background and sufficient finances go far toward acquiring the all-important educational background demanded for the British civil service of the administrative class.

The British Foreign Office employs the oral-examination method of finding the man for the job. So does our own State Department. In England it is maintained that examinations are open to all, in the democratic manner, yet the entrance examination always has been expressly designed to find the "fortunate few who can manage to get to Oxford or Cambridge." This is the statement of Prof. W. A. Robson, civil-service authority in London and author of four works on the subject.

In the United States experience increasingly is a handicap for one who would enter the public service except those in the crafts and trades. It has come to the point here where the Civil Service Commission on more than one occasion has proposed that a fee be charged all who would aspire to take examinations. In England there is a charge, a stiff fee, for taking examinations, so steep, in fact, that charge is so great at times that, to quote from the Minutes of Evidence of the Royal Commission on the Civil Service (1929–31), we read:

"In no way facetiously it may be said that expense probably deters many candidates from Scottish universities. Besides the £8 fee, for sitting from the examinations, there is the expense of renting 'dugs' in London, and with the large number of candidates for the places to be filled many young people from over the Tweed do not care to risk a trial."

2. The Reed committee recently called, by a 4 to 3 vote, for a board of attorney examiners who will instruct the Civil Service Commission what to do. This is known as plan A or the Frankfurter plan, which has just been endorsed and ordered by the President to become effective.

ATTORNEY BOARDS SIMILAR

In England the Civil Service Commission is an appendage dangling in air, with little more than a record-keeping prerogative. It, too, has its board of lawyers, and each agency has its establishments division, each subordinate to the Treasury. The Treasury Establishments Division controls all other such units in all other departments.

Even as Chairman Reed and his three committeemen demand for this Government, the British Civil Service Commission approves the findings of the board of lawyers as well as the decision of the departments. This is the same scheme we are about to launch in the Federal service.

3. The British bureaucracy devises its own legislative proposals to be submitted to Parliament, generally through their own ministers. In the United States legislation is credited with having been written in executive branches by the "brain trust," Ben Cohen, Tommy Corcoran, James Landis, all from Harvard, and by Rexford Tugwell, from Columbia.

"Students of British Government have frequently pointed out the enormous—to many of them alarming—degree to which Parliament has abdicated its legislative duty in favor of departmental regulation," says Hiram Miller Stout. "Writing of this 'wholesale transference of control from Parliament to the departments,' Professor Laski has said, 'legislation by reference and by delegation has taken the place of the older method which regulated with a jealous precision each item of official activity * * *'."

THE INTERN SYSTEM

4. England has its "assistant principals" system. In this country we refer to them as "interns." The latter are hand-selected through the Rockefeller Fund-financed National Institute of Public Affairs, which lays deep stress on Phi Beta Kappa background. Prof. F. M. Davenport, who by coincidence is director of all the organized personnel chiefs, also is director of this intern-picking potentially quasi public bureau.

The young bureaucrats selected by the N. I. P. A. are sent abroad into the various agencies of Government, payless on the part of the Government. Some of them stick. Others use these openings for stepping stones to business jobs. This hothouse arrangement for picking public servants has its roots, not in the United States but in Great Britain, for we read:

"Men and women so recruited (as assistant principals) should be regarded as a cadet corps from which selection should be made to higher administrative posts, and members of this corps should be treated, so far as practicable, as a body available for service in any department in which the administrative class is employed."

This excerpt is from the report of the Joint Committee on the Organization of the Civil Service in England, February 17, 1920. The Reed committee has endorsed this selfsame interne-principal-assistant operation. In the British Treasury the future main bureaucrats are trained upon transfer from other departments and personnel control. In our own Government the Budget Bureau has arrogated this task and has called in men from various agencies.

Establishment of the British Treasury is identical with our Budget Bureau. An example is the labor-displacing method of Budget Bureau which only recently installed a $12,000 machine to displace human hands. Budget Bureau does its best work, whether as an efficiency bureau or labor-saving device force in the atmosphere of anonymity, as prescribed by the Brownlow committee in 1937. This keep-your-heads-down basis has its counterpart in the British Treasury. Few today can name offhand the permanent secretary of the British Treasury, who also is head of the British Civil Service.

In the United States everything pertaining to personnel must bottleneck initially through Budget Bureau: Hours (staggered), salary formulas promotions.

An Appeal Addressed to the German People

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

LETTER TO THE CHRISTIAN SCIENCE MONITOR

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication, which was printed in the Christian Science Monitor of Tuesday, May 6, 1941:

[From the Christian Science Monitor of May 6, 1941]

AN APPEAL ADDRESSED TO THE GERMAN PEOPLE

To the Christian Science Monitor:

Your readers may be interested in an appeal to be addressed to the German people

that a group of Germans in the United States plan to broadcast as the first in a series of messages to Germany.

A translation of the appeal, in part, follows:

"In this earnest hour we speak to you, fellow countrymen in the homeland, and beseech you, for the sake of our beloved country, for the sake of Europe, and of all humanity, to heed our message. As free Germans, we speak to you because our conscience and our faith in a better Germany to come commands us to speak.

"Hitler tells you: Soon there will be peace, and you will be the masters of Europe. We tell you: As long as Hitler commands German destiny there will be no peace.

"Hitler tells you: There is no alternative left for Germany but victory under his banner or a crushing defeat that will destroy Germany as a proud and independent nation. We tell you: There are many men in America and Britain who recognize that grave mistakes have been made by their own Governments in the past. They know as well as we know that lasting peace cannot come to Europe without the voluntary and wholehearted cooperation of the Germany people.

"Hitler tells you that the National Socialist revolution is bound to win the fight against the dying forces of capitalism and democracy. We tell you: The pressing social tasks of our age can be achieved through other means than the Gestapo terror. Germany's position in the world will be established through finer means than the military conquest of weaker neighbors. We tell you: The respect for the dignity of man and man's love for decency will never die.

"Our message to you, German countrymen, is that there lies before us a great and unique opportunity to build a new Germany and a new Europe—a world free of social oppression and vindictive persecution. The Christian tradition of Germany, the wealth of her social experiences, the energy and industry of the German people oblige them to play a role of leadership on the European Continent, but leadership in peace, in justice, and in progress.

"Many of you have come to join Hitler's legions or to acquiesce in his regime from clean and irreproachable motives. In the bare and hopeless hours after the first World War many of us thought we saw a ray of hope in the promises of national revival and social justice of the National Socialists. Many of you, in the years after 1933, saw and felt at first only the good sides of the Nazi revolution, the abolition of unemployment, the advance towards national unity and the like. You did not want to see its dangers and evil sides. Yet—

"Each time during these last 8 years that I returned to that sacred place that is home I found fewer and fewer among you who still knew how to smile and to be happy, as you once were, in spite of many cares and hardships, in those difficult but much maligned 14 years of the Weimar Republic.

"I remember with what gloomy and awesome apprehension we listened to Hitler's voice when he gave the command to invade Poland. With the same bitter and sad earnestness as last spring, you now prepare for a great assault upon a people that you do not hate and that does not hate you.

"Countrymen, in this late and somber hour we ask you once more to pause and to consider well the course of action you will take. Before you lies a grave and fateful alternative—the choice perhaps between disaster and survival. You still have an opportunity to separate yourselves from the man who is driving you and all of Europe into darkness and despair."

HANS SCHMIDT.

CHICAGO.

Is America To Go to War?

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial which appeared on May 5, 1941, in the Chicago Daily Tribune, entitled "Is America To Go To War?" having particular reference to the censorship and the reign of terror being established in Miami, Fla.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of May 5, 1941]

IS AMERICA TO GO TO WAR?

CLAUDE PEPPER'S Florida seems to have beat the gun and gone to war on its own account. The city manager of Miami, L. L. Lee, refused to allow the America First Committee to hold a meeting in Bayfront Park, where recently the Committee to Defend America by Aiding the Allies was given a permit and Douglas Fairbanks, Jr., spoke.

The members of the America First Committee then sought the use of the Dade County courthouse, where public meetings have been held. The county commissioners refused the request, and one of the commissioners, with the approval of the others, said that the America First Committee was a subversive organization. Another commissioner added that organizations fighting national policy should not be encouraged.

The Florida officials can say that they are only following the example of the White House in describing the opponents of American entry into the war as treasonable. The distinguished Americans who head the America First Committee, men of long patriotic service, have been referred to in official Washington circles in terms which would imply that they were seditiously interfering with their country's cause in time of war.

The advocates of immediate war have jumped to the assumption that the Nation is now in it and that consequently any disagreement with governmental policies is in effect traitorous. If the people generally could be brought to accept such a theory, the opprobrium attached to the opposition might act as a suppression of free speech in a time when freedom of opinion and expression is most needed.

There is an issue before the American people, and most of them recognize it as one of the most serious in their recent history. Mr. Roosevelt has some fixed policies, the objectives of which become clearer every day. For some of them he has the consent of Congres, for others he still lacks that. The questions are in debate in Congress and they are being discussed all over the country.

The opposition to Mr. Roosevelt's program of direct armed intervention in the war consists of many men and women distinguished in public and private life. Many of them have service records which cannot be equaled by the party supporting war. The division is not upon party lines, although a majority of the Republicans in Congress are opposed to the Roosevelt policy when it goes beyond the Western Hemisphere.

No one is opposed to the protective measures being taken for the defense of the United States. The only criticism is of the delays and the mistakes which have slowed down the preparations described as of such imperative emergency.

The question about which honest men can differ involves the use to be made of the national resources as they are assembled in the armed forces. Patriotic men and women believe that the future of the country is best protected by building up defense and staying out of the war for which the country is not prepared. There are other people who no doubt sincerely believe that this involves dangers which would be minimized by helping the British now to defeat Hitler's Nazi forces. If such people are sincere and thoughtful, they do not regard the man who sees the other side as a traitor. They must themselves at times have their doubts. We all lack an exact and error-proof vision of the future.

The primary requirement in the forming of opinion and the making of decisions is that the motive be wholly one devoted to the security and well-being of the American people, now and in the future. That is an obligation particularly imposed upon persons in authority. The right to debate this momentous question is one of the guaranteed rights of American citizenship and the attempt to deny it by intimidation and vilification is one highly charged with the sort of rule which has blighted so large a part of the world.

This country is not supporting the rights of freemen by trying to suppress them.

Roosevelt at Wilson's Birthplace

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

POEM BY HORACE C. CARLISLE

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem written by Horace C. Carlisle, of Alabama:

ROOSEVELT AT WILSON'S BIRTHPLACE

We are meeting today to rededicate here
A unique shrine of freedom upon
This rare spot, to the hearts of Americans dear,
Where, aback in the days that are gone,
Woodrow Wilson was born into being on earth,
To transcend the surroundings of his humble birth,
And become a great leader, to history worth
More and more, as the ages move on.

To the faith that is in us are we, by this act,
Bearing witness that we, trusting still
In democracy's freedom, a recognized fact,
Will continue to fight for it till
All the covetous wars raging elsewhere shall cease,
And the pris'ners of war all are granted release,
And the nations of earth, that are praying for peace,
Learn to live in accord with God's will.
In the quiet of this Presbyterian manse

Woodrow Wilson's foundation was laid—
Here he learned how to master adverse circumstance,
On his knees, while his own father prayed
For the wisdom, past all understanding, that comes
From Him who pinned the stars in the highest of domes,
Yet supplies all the needs in the humblest of homes,
And keeps those dwelling there unafraid.

In the tragic conflict which we witness today,
Threat'ning everything that we most love,
More than ever, we ought, as a people, to pray
For the spirit that comes from above—
For the spiritual growth of the human race stands
As a gage for the hopes of its mind and its hands—
When it moves in accordance with God's just demands,
His "amen" justifies every move.

At a time when world councils were reeking with greed,
Woodrow Wilson had vision to see,
Through it all, God's sublime handiwork, and the need
For more faith in the God of the Free;
And—although selfish men neither would nor could share
In this vision of his, that all men everywhere
Not learn war any more—in the land, sea, or air,
He contended that war should not be.

Woodrow Wilson in lasting remembrance will we
Ever hold, after others who fought
For material gain or revenge cease to be—
Like the conquests that they vainly sought—
It is good for Americans that this manse where
Woodrow Wilson was born, as love's answer to prayer,
Will be kept as a shrine—in democracy's care—
In the land of the brave and the free.

Editorials on Current Events

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

EDITORIALS FROM MINNESOTA LABOR ADVOCATE, PORTLAND (OREG.) JOURNAL, AND SALEM (OREG.) CAPITAL PRESS

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three brief editorials, each on a subject very pertinent to current events.

The first is an editorial entitled "A Crazy Money System," from the Minnesota Labor Advocate.

The second is an editorial from the Portland (Oreg.) Journal, under the caption "Those who believe that nothing stops the mail are given something to think about in the Montgomery Ward case."

The third is an editorial by A. M. Church, editor of the Capital Press, of Salem, Oreg., under the caption "Who will light the torch?"

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Minnesota Labor Advocate]

A CRAZY MONEY SYSTEM

The Federal Reserve Board urges the restriction of money and credit to prevent price inflation, and some bankers are echoing the same sentiments. The view is that millions of workers will be set to earning wages and receiving buying power which will stimulate a demand for commodities which will mean that prices of goods, wares, and merchandise will go up and the price of the dollar will go down and those whose wealth consists of legal-tender cash and money due would lose in the process, and they want to keep money scarce and dear.

Jesse Jones, of the R. F. C. and Secretary of Commerce, takes the opposite view, and said he would continue to lend money when the bankers refused to make loans, and that with the enormous increase of production and exchange there was need for a like increase in the medium of exchange.

Now, what kind of a financial system have we when eminent leaders like those mentioned differ on such a vital matter? Is it not evident that we should take out of private hands the issue and control of money and its representative, public credit, and place it in control of a public, impartial court with facilities to determine the amount of currency necessary to meet the needs of the Nation at different times so that we may have an adequate and stable currency to avoid the course of inflation and deflation?

[From the Portland (Oreg.) Journal]

THOSE WHO BELIEVE THAT NOTHING STOPS THE MAIL ARE GIVEN SOMETHING TO THINK ABOUT IN THE MONTGOMERY WARD CASE

"Neither snow nor rain nor gloom of night stays these couriers from their appointed rounds."

The United States Post Office Department borrowed this tribute given 2,400 years ago to the messengers of the King of Persia. The line is proudly emblazoned across the front of the post office in Washington, D. C.

Every postal employee—railway mail clerk, rural delivery man, or city mail carrier—seeks to make the slogan effective, just as do the veteran troupers when they say, "The show must go on."

And most Americans, proud of their service, also believe "nothing stops the mail."

But in Portland it wasn't snowing on May day; it wasn't gloom, as days lengthen, that restricted parcel-mail delivery to the Montgomery Ward & Co. mail order and retail store, which restriction is assigned by the company as one of the reasons for closing the plant and the releasing of 1,375 employees.

On the surface, the cause was the accumulation of mail beyond the delivery facilities of the Portland post office. But there has been going on since December 7, 1940, a strike at the Montgomery Ward place of business (in which the Post Office Department maintains the Wardway postal substation). Truck lines, railway express, and the railroads suspended service in order not to cross picket lines.

The situation has a precedent, but scarcely a parallel. In June 1937, restrictions were placed upon delivery of packages of food to the Republic Steel Co. in Cleveland. Somewhat the same action was taken at the Chrysler plant in Detroit. At both places strikes were in progress. But in each of these cases a new and extraordinary parcel-post service was involved, one that, had it been given by postal authorities, could have borne a strike-breaking label.

The Post Office Department, by restricting delivery of mail to the Montgomery Ward plant to the normal amount, may avoid the charge that it recognizes a picket line and that it is lending its facilities to one party in a labor dispute.

Montgomery Ward, in its effort to carry on, may have increased the volume of incoming mail to abnormal proportions and yet offered for delivery only mailable material meeting the requirements of postage length, breadth, and weight.

If the order in the Montgomery Ward case is forwarded from the Post Office Department in Washington, D. C., solely because of accumulation of mail, the subject becomes interesting to all agencies concerned with getting and maintaining industry and employment. Emergency delivery facilities might be organized.

But if it was given for any other reason, the reminder is due that when Lincoln spoke of "government of the people, by the people, and for the people," he meant all the people.

[From the Salem (Oreg.) Capital Press]

WHO WILL LIGHT THE TORCH?

There is no question but that this war, and all other wars, are caused by greed—the profit motive. As long as uncontrolled greed exists we will have wars. Will we have to adopt government ownership of everything or establish some sort of a socialistic world in order to banish greed and thus secure peace? There must be, somehow, somewhere, a less drastic way to curb man's inhumanity to man. The fecund and generous earth offers easy and luxurious living to everybody, but men and governments greedily reach beyond their necessities and try to grab the substance of others. Could they be satisfied with comfort and happy living and banish cupidity, there would be no wars. But men are stubborn. It seems that it should be easy to induce them to revamp their mental attitudes and thus escape war and turmoil and live happily; but try it and you'll be surprised at their reactions. Most of them will not even understand what you are talking about, and those who do will brusquely brush it aside with the time-worn inanity: "You can't change human nature," which is utterly false, for human nature has been changing and improving, slowly but surely, ever since the world began.

Well, the people of the world have their choice. They can stop following the false gods of avarice and cupidity and live happily in peace, or they can continue to kill each other off and postpone the brotherhood of man. Eventually peace and common sense will win, but it may take a long time. Incidentally, peace will not be brought about without a great spiritual reawakening couched on the teachings of the Prince of Peace. Where is the great evangel who shall light the torch?

Steps Toward War

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

EDITORIAL FROM THE GRAND RAPIDS (MICH.) PRESS

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Grand Rapids Press of May 5, 1941:

[From the Grand Rapids (Mich.) Press of May 5, 1941]

STEP BY STEP

The calendar of steps toward war taken by this country since the outbreak of hostilities in Europe on September 1, 1939, offers an interesting study. It reveals how one step leading to another may carry a nation to the very brink. Some of the major dates are as follows:

October 1939: Establishment of neutrality zone around the Americas—first conceived as a step to keep the war away from America but now used as a means of taking patrols to the very zones of war.

November 3, 1939: Repeal of the arms embargo of the Neutrality Act.

May 1940: Congressional authorization of transfer of 119 Government-owned ships to Britain.

June 6, 1940: Announcement of trade-in policy by which old stocks of munitions were turned in for delivery to Britain.

August 1940: Arrangements for joint defense with Canada.

September 3, 1940: Transfer of 50 overage destroyers to Britain in exchange for naval-base sites.

March 11, 1941: Lease Lend Act approved. A $7,000,000,000 appropriation was adopted soon after to meet the cost. This placed America in the war economically.

March 1941: German, Italian, and Danish ship seizures.

April 1940: Extra-legal acquisition of Greenland base accomplished.

In addition to these steps there have been frequent embargoes on goods which might be used by Axis Powers. Loans through the Export-Import Bank have been directed to antitotalitarian ends. Funds of nations conquered by Germany have been "frozen" so they could not be used by the Axis.

Now there are other steps in process. The patrol of waters has been extended thousands of miles at sea to warn of Axis raiders—a form of convoy in everything but name. It is even suggested that these patrols will be extended into the Far East.

Not all these steps have been belligerent. Some of them would have been dictated even if this country had followed a course of strict neutrality. But on the whole they represent a distinct drift, edging ever closer to the conflict. Just a little more and we will be in it in fact as we are now in everything but manpower.

Ironically these steps have been taken "to keep us out of war," yet every one has brought us closer. It is only now that this pretense is being dropped.

Daylight Saving

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

SURVEY MADE BY MERCHANTS' ASSOCIATION OF NEW YORK

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following survey made by the Merchants' Association of New York with regard to daylight saving:

DAYLIGHT SAVING—COMMUNITIES WHICH ARE ON "SUMMER TIME" FOR THE SEASON OF 1941

The Merchants' Association of New York, which for years has been a leading advocate of daylight saving, receives many inquiries regarding observance of this beneficial measure in the State of New York, throughout the United States and Canada.

To answer such inquiries and for the information of its members, the association has sent out a questionnaire to municipal officials and commercial organizations, from the results of which the following information and listings have been compiled relative to the observance of daylight saving time in New York, other States, and Canada during the current year.

Information is also contained herein regarding practices relative to daylight saving in certain foreign countries.

The most general period of observance in the United States is from 2 a. m., April 27 (the last Sunday in April), until 2 a. m., September 28 (the last Sunday in September). Variations from these dates determinable up to the date of this issue are listed.

Space consideration has prevented the listing of many small communities. Often these take their time from the nearest large center.

NEW YORK CITY

Daylight saving is observed throughout Greater New York, and this practice influences a large area surrounding the city, including all of Long Island, all of Westchester County, the entire State of Connecticut, and the entire State of New Jersey.

NEW YORK STATE

During the last few years the observance of daylight-saving time in New York State has expanded to such a degree that it is now in effect (for the most part, during 5 months of the year) in all communities classified as cities in the State; in practically all communities near those cities and in all other sections of the State, excepting those in which agricultural pursuits are dominant.

The cities are:

Albany, Amsterdam, Auburn, Batavia, Beacon, Binghamton, Buffalo, Canandaigua, Cohoes, Corning, Cortland, Dunkirk, Elmira, Fulton, Geneva, Glen Cove, Glens Falls, Gloversville, Hornell, Hudson, Ithaca, Jamestown, Johnstown, Kingston, Lackawanna, Little Falls, Lockport, Long Beach, Mechanicville, Middletown, Mount Vernon, Newburgh, New Rochelle, New York, Niagara Falls, North Tonawanda, Norwich, Ogdensburg, Olean, Oneida, Oneonta, Oswego, Peekskill, Plattsburg, Port Jervis, Poughkeepsie, Rensselaer, Rochester, Rome, Salamanca, Saratoga Springs, Schenectady, Sherrill, Syracuse, Tonawanda, Troy, Utica, Watertown, Watervliet (April 27–September 7), White Plains, Yonkers.

It is impossible to list all of the communities in New York State that will observe daylight-saving time.

The following localities reported as observing daylight-saving time in response to the Merchants' Association's questionnaire, are listed for the guidance of those using the association's survey of New York State for reference purposes:

Afton (June-September),[1] Albion, Altamont, Arcade (Village), Attica, Bainbridge (June 20-September 1),[1] Baldwinsville, Ballston Spa, Barker, Bath, Belmont, Bergen, Bolivar, Briarcliff Manor, Brockport, Bronxville, Canajoharie, Canastota, Candor (May 4-September 28), Canisteo, Canton (May 31-August 30), Carthage, Catskill, Cedarhurst, Chatham, Cherry Creek, Clayton (June 22-August 31), Clermont (May 1-September 30), Clifton Springs, Clyde, Cobleskill, Cooperstown, Corfu (April 27-September 7), Dannemora, Delanson, Delevan, Delmar, Depew, Deposit (June 1-August 31), Dobbs Ferry, Dolgeville, Dundee, East Aurora, Ellenville, Elmsford, Fairport, Fonda, Fort Edward, Fort Plain, Frankfort, Franklinville, Friendship, (dates not decided), Gallatin, Geneseo, Ghent, Goshen, Gouverneur (May 5-September 11), Gowanda, Granville, Greene, Green Island, Greenport, Hamburg, Hamilton, Harmon, Harrison, Hartsdale, Hastings-on-Hudson, Haverstraw, Herkimer, Hillsdale, Hobart, Hoosick Falls, Howes Cave, Hudson Falls, Hyde Park, Ilion, Interlaken, Irondequoit (April 27-October 4), Irvington, Johnson City (May 4-September 28), Kenmore, Lake George, Lancaster, Larchmont, Lawrence, LeRoy, Liberty, Lindenhurst, Livingston, Livingston Manor, Lowville, Lyons, Malone, (June 15-September 7),[1] Mamaroneck, Massena, Mayville, Medina, Monticello, Mooers (May 1-September 1),[1] Mount Kisco, Newark, New York Mills, Norwood, Nyack, Oriskany, Ossining, Otego (May 18-September 7), Owego (May 4-September 28), Oxford, Painted Post, Palmyra (Village), Pelham, Pelham Manor, Penn Yan, Perry, Pleasantville, Port Chester, Potsdam, Red Hook, Ripley, Richburg, Roscoe, Rouses Point, Rushville, Rye, Saugerties, Scarsdale, Schenevus, Scio, Scotia, Seneca Falls, Sidney, Silver Creek, Silver Springs, South Dayton (April 28-September 2), Spring Valley, Springville, St. Johnsville, Stuyvesant, Suffern, Tarrytown, Ticonderoga, Trumansburg, Tuckahoe, Tupper Lake, Tuxedo, Unadilla, Voorheesville, Walden, Warsaw, Waterford, Waterloo, Wellsville, Westfield, West Lebanon, West Point, Whitesboro, Williamsville, Yorkville (Oneida County).

CONNECTICUT

Daylight saving generally observed throughout the State.

DELAWARE

Daylight saving observed in Wilmington and a number of nearby towns in the northern part of Delaware.

GEORGIA

Entire State of Georgia has been placed on Eastern Standard Time by action of the State legislature. This has the effect of giving daylight saving to a large part of the State which has not had it before.

IDAHO

Cities of Kellogg, Mullan, Wallace, and Burke observe daylight-saving time throughout the entire year by adhering to Mountain Time.

ILLINOIS

Daylight-saving time observed in the Chicago metropolitan area.

INDIANA

Daylight-saving time is observed in practically all of the extreme northern counties of Indiana.

Communities in Indiana reported as observing daylight-saving time include:

Angola, Auburn, Bremen, Crown Point, Culver, East Chicago, Elkhart, Fort Wayne, Garrett, Gary, Goshen, Hammond, Hobart, Kendallville, La Grange, La Porte, Michigan City, Mishawaka, Nappanee, Plymouth, Shipshewana, South Bend, Topeka (May 3-August 30), Valparaiso, Wakarusa, Waterloo, Westville, Whiting, Wolcottville.

At time of going to press, the city council of Indianapolis is considering daylight saving. If it is voted, it will affect surrounding communities.

MAINE

Daylight Saving Time is widely observed in Maine.

Among communities observing Daylight Saving Time as reported in response to the Merchants' Association's questionnaire are the following:

Auburn, Augusta, Bangor, Bar Harbor, Bath (April 20–September 28), Belfast,

[1] Approximate dates.

[1] Approximate dates.

Belgrade, Biddeford, Bingham, Boothbay Harbor, Bridgton, Brunswick, Bucksport, Camden, Cape Elizabeth, Cape Porpoise, Caribou, Damariscotta, Deering Junction, Dexter, Dixfield (May 31–October 15),[1] Dover-Foxcroft, Eastport, Ellsworth, Fairfield, Farmington, Fort Fairfield, Freeport, Gardiner, Goose Rocks Beach, Greenville (April 27–September 8), Guilford, Hallowell, Harrison, Kennebunkport, Lewiston, Lincoln, Madison, Manchester, Mechanic Falls, Milford, Milo, Monson, Mount Desert, Mount Vernon, Naples, Norridgewock, North Anson, North Berwick, North Jay, Norway, Oakland, Ogunquit, Old Orchard Beach, Old Town, Orono, Pittsfield, Poland, Portland, Rangeley (May 1–October 1), Readfield, Rockland, Rumford, Saco, Sanford, Sangerville, Sebec, Skowhegan, Solon (April 27–September 7), South Portland, Thomaston, Waldoboro, Waterford, Waterville, Westbrook, Winthrop, Wiscasset, Woolwich, Yarmouth, York Harbor.

MASSACHUSETTS

Observance required by State law.

MICHIGAN

Under the terms of the State law adopted April 23, 1931, eastern standard time is defined as legal time for the entire State of Michigan.

However, by order of the Interstate Commerce Commission, effective September 27, 1936, only the Lower Peninsula is included in the eastern standard time zone throughout the year.

In the Upper Peninsula, eastern standard time is followed throughout the year in the territories surrounding and east of the following cities and towns:

Calumet, Hancock, Houghton, Manistique, Newberry, St. Ignace, Sault Ste. Marie.

The remainder of the Upper Peninsula observes central standard time, with the exception that from the last Sunday in April to the last Sunday in September of each year eastern standard time (daylight-saving time in that area) is observed in the following communities:

Escanaba, Gladstone, Gwinn, Ishpeming, Marquette, Munising (May 4–September 28), Negaunee, Rapid River.

MINNESOTA

Unofficial observance of daylight-saving time in grain exchange, brokerage houses, and radio station of Minneapolis.

NEW HAMPSHIRE

Observance required by State law.

NEW JERSEY

Every city, town, and village in the State observes daylight saving.

OHIO

Entire State in eastern standard time zone throughout the year by order of Interstate Commerce Commission, effective September 27, 1936.

PENNSYLVANIA

The majority of the communities listed below observe daylight-saving time for the period from April 27 to September 28. Variations from these dates were not in all cases determinable up to the date of publication. Daylight-saving time places reported from direct and indirect sources include:

Adamstown, Akron, Aliquippa, Allentown, Ambler, Ambridge, Analomink, Annville, Ardmore, Arnold, Atglen, Bangor, Beaver, Beaver Falls, Bethlehem, Bird-in-Hand, Birdsboro, Boothwyn, Boyertown, Brackenridge, Braddock, Bradford (April 27–September 1), Bristol, Bryn Mawr, Camp Hill, Carlisle, Carnegie, Catasauqua, Center Bridge, Chester, Clairton, Coatesville, Columbia, Conshohocken, Coraopolis, Corry, Cresco, Danielsville, Dauphin, Delaware Water Gap, Devault, Downington, Doylestown, Dravosburg, Duquesne, East Earl, East Liberty, Easton, East Pittsburgh, East Stroudsburg, Eddystone, Edgeworth, Elizabethtown, Emmaus, Enola, Ephrata, Erie, Evans City (May 1–October 1), Fleetwood, Ford City, Franklin, Freemansburg, Freeport, Glenloch, Hamburg, Harrisburg, Hatboro, Hatfield (April 26–September 9),[1] Haverford, Haysville, Henryville, Highspire, Homestead District, Honey Brook, Hummelstown, Jenkintown, Kennett Square, Kittanning, Kutztown, Lancaster, Landisville, Lansdale, Lansdowne, Lebanon, Lemoyne, Leola, Lititz, Manheim, Marcus Hook, Marietta, Mars, Martins Creek, Marysville, Matamoras, McKeesport, Mechanicsburg, Media, Merion (Lower), Middletown, Midland, Milford, Monaca, Morrisville, Mount Bethel, Mount Joy, Mount Pocono, Munhall, Myerstown, Nazareth, New Brighton, New Holland, New Hope, New Kensington, Newtown, Norristown, Northampton, North Wales, Oaks, Ogden, Oil City, Palmerton, Paoli, Paxtang, Pen Argyl, Penbrook, Pennsburg, Perkasie, Philadelphia, Phoenixville, Pitcairn, Pittsburgh, Plymouth Meeting, Pocono Manor, Port Allegany, Pottstown, Pottsville, Quarryville, Quakertown, Radnor, Reading, Rochester, Rohrerstown, Royesford, Schuylkill Haven, Schwenksville, Sellersville, Shiremanstown, Skytop, Souderton, South Heights, Spring City (May 1–October 1), Springdale, Steelton, Stockertown, Stroudsburg, Swarthmore, Swissvale, Tarentum, Telford, Temple, Thorndale, Tionesta, Topton, Trainer, Union City, Versailles, Warren, Wayne, West Chester, West Fairview, West Reading, West Willow, Whitford, Wilkinsburg, Willow Grove, Wilmerding, Wind Gap, Wormleysburg, York, Zelienople.

The Merchants' Association is indebted to the Pennsylvania State Chamber of Commerce for a considerable part of the above list.

RHODE ISLAND

Daylight saving time has been adopted by ordinance in all the cities and most of the towns of Rhode Island between 2 a. m. on the last Sunday in April and 2 a. m. on the last Sunday in September (April 27-September 28).

VERMONT

Large sections of the State of Vermont use daylight saving.

Places from which observance is reported include:

Albany, Andover, Arlington, Bakesfield, Barre, Barnet, Barton, Bartonsville, Bellows Falls, Bennington, Berlin, Bethel, Bloomfield, Braintree, Brandon, Brattleboro, Brighton, Brookfield, Brookline, Burke, Burlington City, Cabot (May 20-September 20), Cambridgeport Canaan, Castleton, Cavendish, Charlotte (May 1-October 1), Chelsea, Chester, Clarendon, Colchester, Concord, Craftsbury, Danby, Danville, Derby, Dorset (generally observed), Dover, Dummerston, Duxbury, Enosburg Falls (village), Fairfax, Fair Haven, Fairlee, Gassetts, Gilman, Grafton, Grand Isle, Granville, Greensboro, Groton, Guilford, Halifax, Hancock, Hardwicke, Hartford, Hartland, Hinesburg (starting April 20), Hyde Park, Irasburg, Jamaica, Jay, Kirby, Lake Bomoseen, Lincoln, Londonderry, Lowell, Ludlow, Lyndonville, Manchester, Marlboro, Middlebury (April 27-October 26), Middlesex, Middletown, Milton, Montgomery, Montpelier City, Moretown, Morgan, Newfane, New Haven, Newport, Northfield, North Hero, North Troy (May 1-October 1), Norwich, Orange, Orleans, Pawlet, Pittsfield, Pittsford, Plainfield, Plymouth, Pomfret, Poultney (May 1-October 1), Pownal, Proctor, Putney, Readsboro, Richford, Richmond (May-October), Rochester, Rockingham, Roxbury, Royalton, Rupert, Rutland, Ryegate, St. Albans City, St. Johnsbury, Saxton's River, Searsburg, Shaftsbury, Sheffield, Shelburne (May-October), Sheldon, South Burlington, South Hero, Springfield, Stamford, Stockbridge, Stowe, Strafford, Swanton, Topsham, Townshend, Tunbridge, Vergennes City, Vershire, Vernon, Waitsfield, Wallingford, Warren, Washington, Waterbury, Weathersfield, Wells, West Fairlee, West Hartford, Westminster, Weston, West Pawlet (generally observed), West Windsor, White River, Whittingham, Williamstown (April 30-October 31), Williston, Wilmington, Windham, Windsor, Winooski, Woodbury, Woodford, Woodstock, Worcester.

A substantial part of the above listing comes from The National Survey, Chester, Vt.

CANADA

In September 1940, just before daylight-saving time was to revert to standard time, the Federal Government, by Order-in-Council under the War Measures Act, ordered those municipalities in the Provinces of Ontario and Quebec which had operated on daylight-saving time during the summer of 1940 to continue on fast time indefinitely.

Following are communities listed in last year's survey as observing daylight-saving time:

Province of Ontario

Acton, Arnprior, Aurora, Belleville, Bowmanville Brampton, Brockville, Burlington, Cheltenham, Cobourg, Cooksville, Cornwall, Dundas, Fergus Fort Erie, Fort William, Gananoque, Georgetown, Grimsby, Guelph, Hamilton, Hawkesbury, Islington, Kingston, Leaside, Merritton, Milton, Napanee, Newcastle, Newmarket, Niagara Falls, Oakville, Orillia, Oshawa, Ottawa, Perth, Peterborough, Pickering, Picton, Port Arthur, Port Colborne, Port Hope, Prescott, Richmond Hill, St. Catharines, Smiths Falls, Streetsville, Sudbury, Thorold, Toronto, Trenton, Welland, Weston, Whitby, Woodbridge.

Province of Quebec

Arvida, Aylmer, Beauharnois, Black Lake, Coaticook, Chicoutimi (city and county), Coleraine, Cowansville, Danville, Farnham, Granby, Grand Mere, Hull, Isle Maligne, Joliette, Jonquière, Kénogami, Lachute, La Tuque, Lennoxville, Lévis, Magog, Metis Beach, Mont-Joli, Montreal (metropolitan area), Outremont, Port-Alfred, Quebec City and surrounding district, Richmond, Rimouski, Riverbend, Rivière-du-Loup, St. Hyacinthe, St. Jerome, St. Johns, St. Lambert, St. Raymond, Shawinigan Falls, Sherbrooke, Sorel, Temiscaming, Thetford Mines, Three Rivers, Valleyfield, Verdun, Westmount.

Canadian observance elsewhere:

Province of New Brunswick

Moncton (May 4–September 27), St. John (May 4–September 27).

Province of Nova Scotia

Dartmouth (May 4–September 28), Halifax (May 4–September 28).

Province of Saskatchewan

Estevan (all year 'round), Regina (April 13–October 12), Saskatoon (April 27–October —), Weyburn (May 1–September 30), Yorkton (all year 'round).

Province of British Columbia

Townships from Creston to Crowsnest along the line of the Canadian Pacific Railway use Mountain Time throughout the year, although the district is in the Pacific Time zone and, notwithstanding that the railway operates on Pacific Time. The intervening townships between these two termini are listed below alphabetically:

Aldridge, Caithness, Canyon, Colvalli, Cranbrook, Elko, Erickson, Fassiferne, Fernie, Galloway, Goatfell, Hosmer, Jaffray, Jerome, Lumberton, Mayook, McConnell, McGillivray, Michel, Morrissey, Moyie, Natal, Rampart, Ryan, Sparwood, Tochty, Wardner, Yahk.

NEWFOUNDLAND AND LABRADOR

One hour daylight saving provided by statute from May 11 to October 5. Probable advancement of another hour in June.

[1] Approximate dates.

[1] Approximate dates.

FOREIGN COUNTRIES

Cuba, clocks advanced 1 hour June 1 to September 7, 1941.

Egypt, clocks advanced 1 hour April 15 to September 5, 1941.

Estonia (same time as Moscow), clocks advanced indefinitely.

France[1] (unoccupied), clocks advanced 2 hours May 5, 1941.

Germany, clocks advanced 1 hour, indefinitely.

(Occupied France, Netherlands, Belgium, and Denmark are reported on same time as Germany.)

Great Britain,[1] clocks advanced 2 hours May 3 to August 9, 1941.

Greece, clocks advanced 1 hour April 7, 1941.

Hungary, clocks advanced 1 hour April 7, 1941.

Iceland, clocks advanced 1 hour March 1, 1941.

Italy and the Vatican, clocks advanced 1 hour indefinitely.

Latvia (same time as Moscow), clocks advanced indefinitely.

Lithuania (same time as Moscow), clocks advanced indefinitely.

Mexico, clocks advanced 1 hour indefinitely.

New Zealand, clocks advanced 30 minutes September 28, 1941, terminates April 26, 1942.

Norway, clocks advanced 1 hour indefinitely.

Portugal, clocks advanced 1 hour April 5, 1941, probably terminate November 1, 1941.

Shanghai, clocks advanced 1 hour March 16, 1941.

Slovakia, clocks advanced 1 hour April 8, 1941.

Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Thursday, May 8), 1941

EDITORIALS FROM SCRANTON (PA.) TIMES

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials published in the Scranton (Pa.) Times of May 2 and May 5, 1941.

There being no objection the editorials were ordered to be printed in the RECORD, as follows:

[From the Scranton (Pa.) Times of May 2, 1941]

OUR COUNTRY

To what extent, for practical and effective purposes, can the Government of the United States fulfill its military, naval, and economic commitments on the basis of applying them anywhere and everywhere beyond our own country?

The question is not propounded captiously. It recognizes what is increasingly in the minds of the American people as they witness the experiences of Great Britain and new phases of American policy.

Great Britain's empire is spread all over the map. Of necessity her defensive efforts are spread out pretty thin. Because of her diversity of territorial and economic interests calling for first protection, Great Britain has not been able to help much those allied with her in resisting Axis aggression.

The military force that Great Britain was able to send to Greece was only 60,000. Compared with the threefold forces the Nazis had in the Balkan area, British help for Greece could not have resulted other than in the forced evacuation that attended the British effort, fine and heroic as it was.

Because the British Empire is scattered all over the earth, Great Britain, being undermanned by comparison with Germany, cannot concentrate great forces outside the British Isles themselves to minimize the risks to her own empire and the communications vital to keeping it well knitted. Britain simply cannot give any decisive assistance to what are loosely referred to, here and overseas, as "the democracies."

Glorious resistance and damage inflicted upon an enemy are all to the good, but defeats, if too often, and retreats too prolonged, add to the dynamic qualities of an enemy and do not win battles for those on the defensive regardless of any enforced necessity to remain on the defensive. We in this country must be realistic in thinking things out since we are, more or less, among the pipers and the payers.

We have, to aid Great Britain, diminished our naval forces by 50 torpedo boats, 20 mosquito torpedo boats and 10 fast revenue cutters. Soon 20 more fast armored ships of small tonnage will go over. Fifty tankers, for service to Great Britain, are being assembled today.

We are dispersing troops to Hawaii, Guam, the Philippines and other American possessions in the Pacific and to the new leased bases all the way from Newfoundland north and east of Canada to the semi-Tropics.

We have assumed responsibility for protecting Greenland, a Danish possession. Then, there is South America. The latter is, truly, in our hemisphere. We also have in effect a wide and ranging sea patrol, so that our naval and military forces, are like Great Britain's, becoming more scattered all the time.

Great Britain's greatest and most disturbing peril is not only a Nazi juggernaut. A grave danger of the British people is inherent in Great Britain's many tenuous and undependable political alliances and obligations, in her vast expanse of territory and in her great navy and armies of many races and colors being distributed all over the globe. In this thinment of Great Britain's dispersed power is the signal for the United States not to sprawl itself out too far or bite off more than it can chew. We must have the vision, and courage to think of our own country, too.

[From the Scranton (Pa.) Times of May 5, 1941]

THE REMARKS OF ADOLF HITLER

On this side of the water the people do not believe in any Hitler promises or good intentions, although they aren't scared of him in the slightest.

Because of their contempt for him, based upon his acts, the American people cannot feel the slightest sympathy in what he said in his speech yesterday.

What particularly interests the American people is his disclaimer of having aims and ambitions, or intentions of war, against us.

It is true Hitler has not egged the United States into the war, but he gives notice now that Germany is better than any imaginable coalition that can be brought against her.

What is meant by Hitler is that if this country insists on carrying a chip on its shoulder—which some mighty high Americans have been carrying—Hitler may fight us.

To dwell on what Hitler says today is to warm over yesterday's hash. What interests or should interest our Government and the people is not trying to save the world whether it wishes to be saved or not, but to make the United States Navy, the United States Army and the United States flying service top anything and everything Hitler's got.

The people of this country are chiefly interested in what their Government is doing about the national defense. They feel if that defense is all powerful the American people will be able to finish Mister Hitler if he gets fresh with them. The place to find out that this is the sentiment of the people is not in the war-excited National Capital but out in parts of the country away from Washington.

ONE FROM THE WAR BOOK FOR US

Probably before the day is out the world will witness, in faraway Ethiopia, an incident involving Haile Selassie that is small compared with the terrible events of human slaughter elsewhere, but significant for what it is as a reminder of what a rotten thing is international diplomacy and war.

Haile Selassie was the outstanding civilized blackamoor chief of a half-civilized people in Africa. He sat on the throne of Ethiopia. On the fictitious fraud of the need of more "living room' the Italian state under Benito Mussolini warred upon the barefoot and barely armed Ethiopians.

A perfunctory protest and half-hearted boycott was put on Italy by the League of Nations, but none of the nations in the League nor the United States now being told it should go to war to "save democracy" for the second time in 25 years, got worked up to the point of going to war to save the independent, sovereign, and unoffending black people of Abyssinia. It has never been denied that Laval, Premier of France, and Hoare, of England, gave Mussolini the go signal in Ethiopia.

When the lowly little black King appealed again to the league England told him it couldn't do any more in his behalf. England followed up and recognized Mussolini's crime, or if not a crime his conquest, in Ethiopia.

After a time England had to go to war against Mussolini and Hitler and it needed the black tribes of Selassie. She withdrew "recognition" of the Italian conquest. British troops in that part of Africa and Selassie's tribesmen have now driven the Italians out of most of Ethiopia, so the Lion of Judah reaches Addis Ababa, today it is expected, to sit himself upon his ancient throne.

The case of Ethiopia is one for the book. People in this country being slugged or persuaded, in 57 varieties of ways, to enter a European war, should be interested.

"EVER READY TO FIGHT"

Dedicating a shrine to the memory of Woodrow Wilson, a truly great American, at Staunton, Va., yesterday, President Roosevelt made an important speech, but what the President said about the personality and service of President Wilson will be remembered less than what he said in the following paragraphs:

"We are meeting here today to dedicate a new shrine of freedom. By this action we are bearing true witness to the faith that is in us—simple faith in the freedom of democracy in the world.

"It is the kind of faith for which we have fought before, for the existence of which we are ever ready to fight again."

It is unreservedly possible to agree with the President as to the willingness of the American people to be "ever ready" for preserving their freedom and democracy, if it is their freedom and democracy.

What the American people have a right to see, through the clouds gathering around them, is that the European war is not unlike other European wars. Up to now the war has been shot through with international aims and ambitions that have been characteristically European.

[1] Clocks have been advanced 1 hour since last fall.

Woodrow Wilson, the war President in 1914–18, had to fight tooth and claw with the statesmen of the victorious Allied Powers—although this country's forces brought about the decisive victory—to keep a treaty, since judged by Allied statesmen as well as the Germans as evil in its results, from being worse.

The people are with their President on the abstract proposition of defending democracy, if it is democracy; and with him on the specific proposition of defending American democracy; and with him in making the national defense as it concerns American people, American institutions, and American land, positively certain.

The people of the United States have obediently followed all the persuasions to help "the democracies" with "all-out" aid "short of war," but it is only frank and honest recognition of the truth to say they are not united on becoming a shooting belligerent in another war of and by Europe now and, as with other European wars, for Europe in the end.

What did we get out of the first time we went in to "save democracy"?

The Japanese-American Creed

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Thursday, May 8), 1941

ARTICLE BY MIKE M. MASAOKA, OF SALT LAKE CITY, UTAH

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Japanese-American creed, which has come to be accepted as representing the true sentiments of American citizens of Japanese ancestry.

The author of this creed is a young friend and constituent of mine, Mike M. Masaoka, of Salt Lake City, Utah. Mr. Masaoka—or Mike, as he is known to me and his many other friends—was the recipient of the Yamagata award as the Nisei of the year 1940. This award is given to the young Japanese-American who during the year has done the most to reflect credit upon those of similar parentage. The award is given to the outstanding young Japanese-American in the entire country by a Chicago group of young people. Mr. Masaoka has made a very splendid record, having served in many community activities, such as the community chest, the Red Cross, and the infantile paralysis drive. He received the Salt Lake City Chamber of Commerce's citizen of the community award for outstanding citizenship qualities. He is now debate coach in one of the Salt Lake City high schools.

I am sure Senators will agree with me that the Japanese-American creed reflects the true American spirit and the American way.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

JAPANESE-AMERICAN CREED

I am proud that I am an American citizen of Japanese ancestry for my very background makes me appreciate more fully the wonderful advantages of this Nation.

I believe in her institutions, ideals, and traditions; I glory in her heritage; I boast of her history; I trust in her future. She has granted me liberties and opportunities such as no individual enjoys in this world today. She has given me an education befitting kings. She has entrusted me with the responsibilities of the franchise. She has permitted me to build a home, to earn a livelihood, to worship, think, speak, and act as I please—as a free man equal to every other man.

Although some individuals may discriminate against me, I shall never become bitter or lose faith for I know that such persons are not representative of the majority of the American people.

True, I shall do all in my power to discourage such practices, but I shall do it in the American way; aboveboard, in the open, through courts of law, by education, by proving myself to be worthy of equal treatment and consideration. I am firm in my belief that American sportsmanship and attitude of fair play will judge citizenship and patriotism on the basis of action and achievement, and not on the basis of physical characteristics.

Because I believe in America, and I trust she believes in me, and because I have received innumerable benefits from her, I pledge myself to do honor to her at all times and in all places; to support her constitution; to obey her laws; to respect her flag; to defend her against all her enemies, foreign and domestic; to actively assume my duties and obligations as a citizen, cheerfully and without any reservations whatsoever, in the hope that I may become a better American in a greater America.

Convoys

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, in reply to the gentleman from Michigan [Mr. WOODRUFF], I call attention to the fact that when the lease-lend bill was passed it was understood that the Government could transfer these boats to British registry, and that they might then be used under the British flag. That does not mean that it is necessary for us to convoy these boats under the American flag. If we did, and one of them were sunk, it would probably draw us into the war, and that would virtually paralyze what assistance we are now giving Great Britain, because it would subject our commerce to attack all over the world and probably draw Japan into the war against us. That would compel us to keep our Navy, or a large part of it, at least, in the Pacific Ocean.

Therefore we would be far less able to furnish supplies to Britain than if we merely transferred these vessels to the British registry and let them do the convoying under their own flag.

This may not suit those warmongers who are doing everything they can to get President Roosevelt to plunge this country into war; but it is in accord with the President's commitments and with the understanding of a majority of the Members of Congress who voted for the lend-lease bill.

It will get the supplies to England and at the same time keep our country out of war and our boys from being sent to fight on foreign soil.

In fact, there is no foreign soil to send them to now on which a landing could be made—even if we were to declare war.

Congress is not in favor of going into this war; the American people are not in favor of going to war; President Roosevelt has said repeatedly that he was not in favor of plunging this country into war.

By transferring these vessels to British registry, as we understood would be done when we passed the lend-lease bill, we can give Great Britain all the aid possible, short of war, as we promised we would, and at the same time keep our country out of the European conflict.

Expression of Views of Two Prominent Idaho Residents on the International Situation

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

TWO LETTERS FROM IDAHO RESIDENTS

Mr. WHITE. Mr. Speaker, many earnest and thoughtful citizens of this country, realizing the dangerous and serious consequences of the course being followed by our Government in dealing witn nations at war in Europe, are giving words of caution and advice to their chosen representatives and through them to Congress and the administration. There are presented herewith two letters from residents of the State of Idaho for your especial consideration:

PARMA, IDAHO, *April 28, 1941.*

Hon. COMPTON I. WHITE,
Representative from Idaho,
House of Representatives,
Washington, D. C.

DEAR MR. WHITE: Last year when I wrote to you about employment you sent such kind and prompt replies I am writing this time on another subject.

Before going further, I want to say we are pleased with you and proud of the stand you have taken against war. Often people feel Congress Members are tempted by big money interests and are entirely out of our control and have forgotten us soon after election day. "Wars make rich men richer and poor men poorer" is trite but still true. At this time war could benefit only our few financiers and manufacturers who make up only a tiny fraction of the American people. Let that fraction don the uniform, pick up the pack, shoulder the rifle once, just one day, and see how long war lasts. It's not they

who fight. It's we young fellows. Our only reward would be a bullet in the back.

Mr. WHITE, conscription is all right. Army training is beneficial in many ways. We need the Army, and we'll fight willingly to defend America here at home. I'd like to express the views of an average young Idahoan. I have attended Lewiston and Moscow, have traveled twice to the east coast, visited Congress last summer during conscription debate, and am teaching my third year of grade school in this same community. I am 24, single, and shall be inducted soon after the close of my school.

Few single fellows are left, as so many of our old schoolmates have gone off to National Guard or Army camp. This is done willingly, but it's the daily papers, radio, movies, and floods of propaganda that depress us and give us the jitters. Such movies as Comrade X, Night Train, Arise, My Love, and Four Sons disgust and insult our intelligence. Let's not be swept away or even swayed by such simple attempts and the same old slogans dressed up and streamlined. Many are assuming the attitude of living for today, because there'll be no tomorrow. Certainly if war comes, there'll be no future for us.

For months it seems as if many acts of Congress and our foreign policy have invited hatred and war from foreign countries. Of course, we're not pro-German but let's remember England's history. Has she always loved us, France, or any of the other countries she does this year? Today John Bull keeps quiet about the dark account of conquest which built the empire.

Democracy can still work. Let's slam on the brakes before things get a bit worse here. Please vote against all measures which will take us a step closer to the brink. Remember the only ones wanting war are the very few who'll become rich. The rest of us are dead against it. It's not too late yet to save us from disaster. Stand against the tide More power and greater success to you.

Hopefully,

DONALD B. POTTER.

GRIMES PASS, IDAHO, *April 29, 1941.*

To the Members of the now convened Congress of the United States:

GENTLEMEN: I think it about time that you quit your shillyshallying around about this war business. We, the people of the United States, were led into a European conflict 24 years ago this month. The great cry at that time was we were going to "save the world for democracy." If that's what we've had the last twenty-odd years, let's not get ourselves in any such mess again.

You gentlemen, with the President, ran for office last fall on the platform that you would do your utmost to keep the United States out of war. All right; you have passed the so-called lease-lend bill to help Britain. Well enough. Please let's manufacture what Britain needs and let her come and get it. Don't please sanction any laws that will jeopardize our right to life and liberty as we have known it.

Let us arm ourselves on land, sea, and in the air to such an extent that no European power or combination of powers would dare start an invasion. We can and will do that in a big way if we all pull together.

As to the convoying of supplies across the oceans, I see nothing but danger in that. The one tragedy that took us into the other war was the sinking of a huge passenger liner that had a cargo of munitions, as well as women and children.

There might not be women or children involved in a convoy tragedy, though there would be American boys that we could ill afford to lose. So don't let's have any of that kind of business.

Far better we make the supplies and give them away than to take a chance on losing one boy's life in transporting the goods to where it is needed.

Should the time arise that Britain couldn't transport the supplies, then we will warehouse them and use them over on this side if and when any of the European gangsters feel lucky enough to try to take our freedom away from us. We have always defended ourselves against aggressors, and I see no reason why we aren't more able now to do so than ever before.

During the other Great War the United States built up the greatest and most powerful war machine the world has ever known—all that in a short time. We have the same resources now, with more knowledge and manpower than ever before, so why should we fear any power on earth?

Please let us not be led astray by this terrible round of propaganda and war hysteria the radio and newspapers are serving up to us every minute.

I am a man in my early forties and I may never be called into training, though I wish to say right here and now that I am ready at any moment to fight for my country against an invasion, but I'll not consent to being sent to foreign lands to help save anyone else's country.

Remember, gentlemen, there may be another election a few years hence.

JOHN A. MYERS,
A citizen, a voter, and a layman.

Promise To Keep American Boys Out of Foreign Wars

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

LETTER TO THE PRESIDENT FROM CHARLES F. AND RUTH E. MAPES, OF CENTERBURG, OHIO

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the President by Charles F. and Ruth E. Mapes, of Centerburg, Ohio:

CENTERBURG, OHIO, *May 6, 1941.*

MR. FRANKLIN D. ROOSEVELT,
Washington, D. C.:

As an American mother, I expect you to keep the solemn preelection promise which you made to us that you would not send our sons to fight in a foreign war unless attacked.

But before election you did not tell us that all provocations and invitations for such an attack, including convoying by our Navy, would be given.

Certainly, a true American, President of the greatest and grandest country on earth, would not repudiate his word to American mothers. On this May 11, 1941, the day designated as Mother's Day throughout our country, remember your promise to the American fathers and mothers and that your third term as President of the United States is due to a very great extent to this promise. We expect you to keep it, as God is your judge.

You talk about making every place in the world safe for democracy. You remember in the debate on the lease-lend bill that someone told Mr. Knox that was why the last World War was fought, and he said that was just a shibboleth. In 25 years from now, what will the old cry be—another shibboleth?

The failure of Mr. Wilson to force democracy upon any people against their wish, or inability to govern themselves, is the most potent example and argument why we should not allow ourselves to be dragged into a second experiment of this kind.

You knew when you promised all-out aid to Britain that there might be difficulty in getting it there. But you still promised no foreign fighting for our sons. Better the whole $7,000,000,000 at the bottom of the ocean than one transport of American sons.

And remember we the common people furnish most of the money and the sons. It doesn't all come from east of the Alleghenies. How many of the men who cry war will go? How many of them went in the last World War? How many of them have sons who will go? It is easy to advocate war if someone else fights it.

So Mother's Day, when you meet your mother, remember your promise to all American mothers.

CHARLES F. and RUTH E. MAPES.

"I Am an American"

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ADDRESS BY HON. J. F. T. O'CONNOR

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. J. F. T. O'Connor, United States district judge, delivered before the Los Angeles Breakfast Club on May 7, 1941, upon the occasion of a meeting devoted to "I Am an American" Day:

I am an American. What does it mean? The Lost Colony; the memory of Virginia Dare, first white child of English parentage born in the New World 354 years ago, before the Carolinas were christened; the early settlement of Virginia and the romance of Capt. John Smith; the Pilgrim Fathers; savage Indians; blizzards, whispering death; saved from ocean peril but confronted with new dangers on land. It is all a glorious part of a new nation's birth. A century had passed since the stout heart of a sailor, with high determination and great faith, had plowed the unfurrowed waves and claimed for God and his country a new land.

The early settlers met unfriendly red men, and the very soil seemed reluctant to yield subsistence—each toll of the bell signaled the departure of another soul. Did some stand on the bleak shores of the rockbound coast and attempt to penetrate the blue haze of the ocean mists? Perhaps. Did the memories of relatives and friends moisten the eye? Perhaps. But here were compensations. In their darkest hour of pain and hunger they found joy in the realization that they were freemen, able to think and speak and act and worship God as their conscience dictated. There was purpose in it all beyond the petty understanding of men's minds; ages ago, even before Mesopotamia was ruled by Hammurabi, 2,000 years before the Christian era, Sargon, nearly 700 years earlier, ruled from the Persian Gulf to the Mediterranean. Peace and war, war and peace, as one civilization supplanted another, as one empire rose and fell and cities were builded and destroyed, and on and on the so-called story of civilized man was written in blood and tears, in triumph and defeat. The theater for all this was the Old World.

In the pathway of the setting sun, 3,000 miles away, was another world, with giant forests and mighty rivers, with endless plains richer than the Nile, and majestic mountains

crowned with snow. Bison and buffalo, fish and fowl, fruits and wild grain in abundance—a veritable paradise on earth. Tell me, sage, why was this new world hidden for so many centuries from man? My own feeble explanation can, perhaps, satisfy only myself: It was in the divine plan that man should first prove his worthiness to this inheritance—that the bloody battles of ambitious kings, where people were his pawns, should be fought in the Old World and not in the New, that the fallacy of the divine right of any kind to rule should find its urn in the palaces of a decadent civilization; that the poisoned weeds of intolerance and race hatred should never be transplanted to the virgin soil of the land beyond the sea! Here a new race was to arise—not with a single origin, but from the blended blood of the best people from every land under the sun. Men and women with a new destiny, bringing from their own lands only the finest fruits of their civilization, and leaving in the ashes of the fires that burned through the centuries the hatreds and the jealousies that divided a people and destroyed empires.

Our road toward the accomplishment of our dream and destiny has been strewn with thorns and roses—nothing great was ever achieved without sacrifice. The red-stained snows of Valley Forge, marked by the shoeless feet of Washington's army; the courage of Barry, father of the American Navy, and the valiant exploits of John Paul Jones gave the highest evidence that the new Nation would vindicate the hopes of its founders. When Cornwallis waved the white flag at Yorktown it signaled the defeat of the Imperial Army and the triumph of American independence. A people had won the right to live as a free nation.

With the costly victory won, the process of democracy commenced its test under a Constitution which carefully protected the people against the wrongs inflicted by rulers upon their subjects. The fundamental truth expressed in the Declaration of Independence that "all men are created equal, that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness," was, 13 years after it was written, embodied in the Constitution of the United States. Under this Constitution we have grown into a mighty nation. From Thirteen Colonies we have expanded across a continent—our flag floats far in the frozen north and far to the west where the lazy tropical waters wash the shores of our island possessions.

One hundred and fifty-two years marks the span of our national life under the Federal Constitution. During that period nearly every nation in the world has changed its form of government. The absolutism which we believed had gone forever has again raised its ugly head, and men and women under its jurisdiction are denied the right to speak or to write, and the accident of birth marks men and women for official assassination. Into the peaceful neighborhood fields of other countries plunge their mechanized engines of death, while destruction rains from the heavens and from under the sea. Fear hovers over every home in Europe—any moment the snakelike hissing of a bomb may crash the roof—little children with terror in their hearts and tears in their eyes, huddled together in dark underground passages, are denied the right to normal lives. What kind of citizens will their fear-crazed minds make of them tomorrow?

Again the tragedy of the Old World—thank God not the New. It is no pleasant task to recreate these scenes of horror in your minds—yet no more realistic method presents itself to make clear the proud expression, "I am an American." We appreciate its significance more today than ever before. The President and the Congress have asked the Nation to dedicate May 18 to a fuller appreciation of the value of American citizenship. Here in sunny California originated the idea which has captivated the imagination of all true Americans. Again in our famed Hollywood Bowl, on Sunday, May 18, we shall witness one of the most impressive patriotic ceremonies ever held under southern skies. I acknowledge to the great number of men and women assembled here this morning and to those listening on the air, my deep appreciation to Edward Arnold, president of I Am an American, and to Benjamin E. Neal, its founder, who have launched this successful movement.

In my court I have watched the expressions on the faces of hundreds as they have taken the oath of allegiance to the United States—a tear streak down the faces of men who would be firm in the face of death—a prayer from the lips of women whose memories recall less fortunate relatives or friends. They have suffered—they know what it means to say, "I am an American."

As Americans we must acknowledge a duty which we owe to aliens who come to our shores looking forward to citizenship in this country. The I Am an American Foundation seeks to emphasize this duty and to assist these aliens on their way to citizenship. There are 4,677,839 registered aliens in the United States at the present time. The I Am an American seeks an equal number of volunteer good neighbors who will each take one of these foreign-born for guidance, discussing with him or her the advantages of our free democracy, teaching him the value of citizenship in the United States, instructing him in the history of our people.

It is also the object of the I Am An American Foundation to honor native-born citizens who have reached voting age and aliens who have received their final naturalization papers within the past year, impressing upon them the seriousness of their responsibility as full-fledged American citizens. The first sentence in article 14 of the Constitution of the United States, section 1, provides: "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."

This shrine of friendship is indeed a fitting place to speak upon such a subject. Here the stranger from every clime, in the many years since this organization was formed, has been made welcome. Here men and women strengthen the ties of friendship and, in many instances, recement the broken bonds. The contribution which you have made to a better understanding between all classes and races, places the city of Los Angeles deeply in your debt. High honors have come to many of your members. Many have served in high positions in the counsels of our Nation and State and city. Some have received high honors from our great universities and colleges, but there is no higher honor, and there is no greater, more justifiable boast than for a man or a woman to say, "I am an American."

Chain Broadcasting

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 8, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. LEE. Mr. President, I wish to compliment the Federal Communications Commission for its recent anti-monopoly order with respect to the broadcasting chains. I feel that this is definitely in the interest of free communications.

I ask leave to have printed in the Appendix of the RECORD an editorial complimentary of that decision which appeared in the Washington Post today.

There being no objection, the editorial was ordered to be printed in the RECORD.

(See editorial printed on request of Senator NORRIS, p. A2195, Appendix of the RECORD.)

Missouri Postmasters' Convention

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1941

ADDRESS BY HON. WILLIAM L. NELSON, OF MISSOURI

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made on April 30, 1941, before the Missouri Chapter, National Postmasters' Association, in Kansas City, Mo.:

Chairman Nivert, Postmaster Graham, Mayor Gage, and members and guests of Missouri Chapter, National Postmasters' Association, permit me first to express my appreciation of courtesies, which are so characteristic of Kansas City. I can pay this thriving city, located midway between the population and geographic centers of the United States and in the very center of the agricultural universe, no greater compliment than to refer to it as a magnified and enlarged country town, where hospitality and friendliness prevail. I love the small town and the country, where life is real and where the dwellers are neighbors in the fullest sense of the word. It is in such environment that big men, big postmasters, like "Boss" Graham, for Kansas City, and Rufus Jackson, for St. Louis, are produced. Real would have been the calamity had all our smaller population centers grown into cities whose people are counted in millions.

Gathered here together, as we are this morning, in this magnificent building, in this beautiful municipal auditorium, we meet as friends and fellow workers—postmasters, Missourians, Americans.

I speak to you as Missouri postmasters. I would add that we are happy to have distinguished officials such as Mr. Jesse M. Donaldson, Deputy First Assistant Postmaster General, as well as visitors from Oklahoma, Kansas, and Nebraska. Of course, too, we look forward to the visit tomorrow of Postmaster General Frank C. Walker.

The Postal Service represents the mightiest implement of human democracy. As postmasters, you are direct representatives of Uncle Sam. In fact, you as postmaster in your village, town, or city may be practically the only Federal official with whom the people are personally acquainted. So it behooves you not only to give service but to give that service with a smile, to serve all, and to serve impartially.

Some 300 years ago the Postal Service was first established in the colonies. Two

hundred years ago Benjamin Franklin was appointed postmaster at Philadelphia at a salary of $3,000, one-half of this going to his associates. Franklin was temporarily fired, it being charged, not that he read post cards, but that he had read a number of private letters. He was later shown to be innocent. In 1775, when Franklin became Postmaster General, he altered his frank to read "B-Free-Franklin." How appropriate seems this today, when the heart desire of men and women everywhere is to be free.

Speaking of freedom, I wonder if we, in the busy lives that we lead, give sufficient thought to the freedom which we enjoy. Here we have freedom of worship, freedom of assembly, freedom to listen over radio, free speech, free elections. We are free to read, comment, and criticize. Always, though, and especially at a time like this, any criticism should be constructive. This is no hour to fan the fires of hate. Rather do we need to take off the blind bridles of creed, class, politics, and whatever else might divide us, and be Americans without prefix or hyphen.

But I have digressed. I was speaking directly to you as postmasters. You and I are Federal employees. Your place, measured by the area in which you serve, is as important as mine. You are representatives of the greatest and best Government in the world. You are givers of service—yes, and keepers of secrets If every postmaster, every city or rural carrier, were to tell all he knows, I am afraid that more "scraps" would be started than could ever be stopped and the road to Reno might be more crowded than now. You are salesmen, but you have been warned that no attempt to boost sales be made near the end of the year when just a small addition is needed to put you over the increased salary mark.

The biggest bargain counter in all our country is the stamp sale window in any post office. Our Postal Service is not only the most efficient, but it gives most for the money Not all post-office buildings are fireproof, but legislation has now made most postmasters "fired-proof."

Some cynic once said, "A successful Congressman is one who can cause a post-office building to rise where only a rural route existed before." This is not my thought, much as we appreciate proper Federal buildings. Success is measured by service. One of the most far-reaching services that I have been able to render to the almost 300,000 people in the Second Congressional District of Missouri, which I have the honor to represent, is in making possible the appointment of efficient, capable, courteous postmasters, who impartially serve all patrons.

Just here I want to express my appreciation of the many postmasters from our district and who are here today, not only to learn and to enjoy the program but to give to our own Postmaster Nivert, president of the State association, their wholehearted support. Surely I am proud of our postmasters. I like that word "proud" as I have heard it used in rural regions, where a visitor is greeted with the salutation, "I am proud to see you." It goes well with "I reckon" and "you all." We may be old fashioned, but we are not too finicky to be friendly.

Delighted as I am to see such a large representation of postmasters from our district, I am especially pleased that so many ladies are present. In this connection it might be said that the first woman postmaster in the United States was a Missourian, Mrs. Richard Gentry, of Columbia.

It is great to be a Missourian. Great is Missouri, far enough north for hustle, and far enough south for hospitality. Missouri, daughter of Virginia, Kentucky, and other States to the east, is the mother of most States to the west. For the hardy pioneer who more than a century ago journeyed west from the States lying along the Atlantic coast, Missouri was the stopping place; a little later, for the sons and grandsons of these same citizens who, moved by the spirit of adventure, pressed toward the setting sun, Missouri was the starting place. From our State, roads, here dim or there deep, stretched like the fingers of one's hands and completely covered all that vast trans-Mississippi country from Oregon to Mexico. Only a few miles from where we are now assembled once stood a post on which was a signboard reading, "Oregon—1,900 miles."

Over that far Northwest trail traveled caravans made up of as brave men and women as ever lived. To Santa Fe, 700 miles to the southwest, went other fearless men. That trail, often marked by shallow graves or bleached bones, told a story of daring and of death. It was from Missouri, too, that 81 years ago the Pony Express made its initial run from St. Joseph to Sacramento. From that experiment came the expression, "The mail must go through." It did; it ever will!

While history was much in the making all over Missouri, it seems to have centered in what is known as the Boone's Lick country, or, as some of us mention with pride, as Little Dixie. By this, please do not understand that I am making any reference to politics, a subject absolutely barred when postmasters get together. High officials, including inspectors present, will please note.

From Howard County, where Boone's Lick Road and the trail to the far Southwest met, went John Becknel, Kit Carson, the latter guide of Fremont, and others who helped blaze the trail westward. From Boone County went Colonel Gentry with a regiment to the Seminole War. From the western part of the State went General Doniphan, who, with his men, as they marched to Mexico, set an all-time long-distance travel mark.

Not only have Missourians been pioneers, but they have been as fearless soldiers as the world has even seen. Of 2,361 battles, engagements in which 10 or more men were killed during the Civil War, 244 were fought in Missouri, as was the Battle of Boonville, first land battle of the war between the States. In that frightful fraticidal conflict, the bitterness of which has long since been "cast into the all-forgetting river," Missouri gave to the Union Army 47 percent of her fighting men, and boys in their tender teens were then "fighting men." To the cause of the Confederacy, Missouri contributed 23 percent of her sons—70 percent of Missouri's young men going to war for the causes which they believed to be right. Twenty-odd years ago in the World War three illustrious Missourians, Pershing, Crowder, and Koontz, made records, needless now to review.

Advocates of peace, for which all Missourians now fervently pray, our people, when in defense of home and those things dearer than life itself, are not afraid to fight. They remember that even the word "pacifist" ends in f-i-s-t.

Yes; we are thankful as Missourians, but more, we are thankful as Americans. Personally, I am thankful that we have one Wendell Willkie, one Franklin D. Roosevelt, and only one Charles Lindbergh. Well do I recall the pride I once felt in the latter. It was not so many years ago when the *Spirit of St. Louis* was successfully piloted across the Atlantic by "The Lone Eagle." Men glory in the daring of a lone eagle, its solitary flight symbolizing strength, but the perch, peck, and peeve of a rail bird arouses no such sentiments.

A short time ago the press told of a young man who, on entering the military service of our country, was found to have his heart on the wrong side. A day or two ago another man whose heart, it seems, may be on the wrong side, ceased to be a part of our military service. Time marches on.

I digress to suggest that because of the many unfounded rumors coming out of the National Capital, not all should be believed. For instance, any report that Secretary of State Cordell Hull, native Tennesseean and, in my opinion, premier statesman of the world, is about to attempt a lone flight across the Atlantic may be branded as false.

I am glad that we have in this assembly hall today the most beautiful flag in all the world. It is fitting that such a flag of red, white, and blue should float over every Federal building in the Nation, over every schoolhouse in our State, and that the things for which it stands should be treasured in our hearts and builded strong in our homes—homes which, after all, represent the real strength of the Nation. There is one place, though, that I would not have our flag fly. Somehow, it does not seem appropriate that it should be displayed over a pacifist camp or where conscientious objectors find refuge.

We may honestly and sincerely differ as to methods, but for those of us who call ourselves Americans and who must choose between dictatorship and democracy, there should be no serious difference. We must be Americans in the real sense of the word, believing in our country above all others. I do not suspect that there is one postmaster in Missouri whose Americanism is to be questioned. However, should there be one lacking in loyalty, he should quit the service of Uncle Sam. This view holds true of every public official, whether constable or Congressman, justice of the peace or President.

I have spoken to you as postmasters, as Missourians, and as Americans. Perhaps, you wish to have me say something of what is going on in Washington, key city of the world. I might summarize by quoting Will Rogers. And how we need that philosopher now, need him to use his good natured ridicule, need him to poke fun, need him to philosophize and to tell the truth in fearless Western way. Will Rogers, you will remember, once remarked that all he knew was what he read in the newspapers. I feel that this might be my answer to your question, and possibly I should add a limitation to the effect that I do not know all that I read in the papers.

The Congress, regardless of party, is united as it has seldom been. Of course, decisions are difficult at a time "when old paths are lost and new roads perplex." As Abraham Lincoln once said, "If we could first know where we are, and whither we are tending, we could better judge what to do and how to do it."

Most, it seems to me, that we can safely do is to hope for the best and prepare for the worst, prepare to meet whatever the war-mad dictators of the world may attempt to deal out to us.

These are dark days overseas, difficult days here. This is no time for doubt or discord. With nations, as with individuals, God in His goodness sometimes takes us down into the depths so that looking up through the shadows we may see the stars. In times of trouble we find our solace and our strength. Not only do we need military preparedness, but we need moral preparedness.

It is for our beloved country to prove that we are good as well as great. Important as is the part that we now play, more important will be our leadership when comes the day, as come it will, when world sanity has been restored and the dark clouds of war no longer darken the skies.

In conclusion, I would stress how vital it is that we as a people and a nation keep to the right course. To a naval observatory went a sea-bronzed man, carrying with him a small mahogany box bound about with silver. It was the ship's chronometer. The captain was taking it so that it might be tested. He realized how important it was that compass and chronometer be true. The slightest deficiency might send his ship from its course, send it to the bottom of the sea. He was thinking not of himself alone but of his passengers and of those who made up his crew. If so important were the instruments of guidance and safety to the old captain,

much more important is it that we, as individuals and as Americans, make certain that all that we depend upon for guidance in our course—a course which may determine not only the direction but the continuance of civilization—be true. We do well, then, to look for guidance to the Master who set the stars in the far firmament, to the Master whose measurements of time are not days and nights but endless ages.

Electric Power Features of Colorado-Big Thompson Reclamation Project in Northern Colorado

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

STATEMENT BY R. J. TIPTON, OF DENVER, COLO., CONSULTING ENGINEER, BEFORE INTERIOR DEPARTMENT SUBCOMMITTEE OF APPROPRIATIONS COMMITTEE OF HOUSE OF REPRESENTATIVES

Mr. LEWIS. Mr. Speaker, the primary purpose of the Colorado-Big Thompson reclamation project is to bring each year 310,000 acre-feet of water from the western slope to supplement the present existing but inadequate water supply for a region on the eastern slope in northern Colorado, which has been settled for approximately 70 years. As incidental to this primary purpose there will be developed in hydroelectric plants a considerable amount of electric power by taking advantage of the fall of water from the places on the western slope of Colorado where the water is gathered to the places on the eastern slope, where it will be used for irrigation.

At the hearing on this project held on April 17, 1941, before the Interior Department subcommittee of the Appropriations Committee of the House of Representatives, Mr. R. J. Tipton, of Denver, Colo., consulting engineer for Colorado Water Conservation Board and for Northern Colorado Water Conservancy District, was one of the witnesses. His statement, which was devoted largely to the electric power features of Colorado-Big Thompson reclamation project, was as follows:

Mr. TIPTON. Gentlemen, I will hit some of the high spots. In order to make my testimony clear to the committee I should like to refer to some exhibits. I will try to do so in such a manner that the record will be straight.

There are two additional items which I want to mention as necessitating the early completion of this project. One is the rapid increase in the installation of pumping plants in the area which will be benefited by the project.

Approximately 1,500 pumping plants have been installed in the northern Colorado conservancy district, representing an investment of over $2,000,000. Most of these plants have been installed during the last decade and additional plants are being placed in operation each year. These plants constitute a duplication of capital expenditures in that they are intended to provide relief that will be furnished by the Colorado-Big Thompson project. The relief furnished by them, however, will not be permanently effective, nor is such relief provided for the territory as a whole. The water supply for the lower South Platte area consists largely of return flow from higher lands irrigated on the river and its tributaries. The withdrawal of water by the pumps already is depleting the flow of the river by reducing the return flow, thereby depriving many canals of water which they have formerly diverted under their old decrees. This situation not only will cause large losses of money but may lead to lengthy and costly litigation. To prevent this situation from becoming more acute by the installation of additional pumping plants and by the continual withdrawal of ground water which will require years to replace, the completion of the Colorado-Big Thompson project should be accomplished as soon as possible.

The next major item is power.

This project will generate, as a byproduct, considerable power. The demand for power in the region which will be served by the project has been increasing at a rapid rate. I will illustrate by outlining the condition with respect to the largest utility system in the area, the central system of the Public Service Co. of Colorado.

The installed capacity of that system on January 1, 1942, will be 165,500 kilowatts. The capacity available for the continuous generation of power, after allowing for reserve, will be 136,500 kilowatts. The demand last year was about 105,000 kilowatts. Twelve thousand kilowatts will be added by the new small-arms munitions plant near Denver, bringing the demand to about 117,000 kilowatts. The demand is increasing normally at the rate of about 7,500 kilowatts a year. This does not include probable increases which may result from additional defense industries.

Mr. SHEPPARD. What is justifying the increase other than the munitions plant that you have just referred to?

Mr. TIPTON. Just the natural increase in the load in the area, both in the domestic load and in the agricultural load.

Mr. SHEPPARD. Has that been made possible or accentuated by new distribution lines?

Mr. TIPTON. Yes; to some extent. A large number of rural electrification projects also are being constructed in the area served by this system. The per capita use of energy in Colorado is lower than in other parts of the United States. In the intermountain region it is 1,153 kilowatt-hours per capita per year, and in Colorado it is 642 kilowatt-hours per capita per year, and the per capita consumption in the United States as a whole is 941 kilowatt-hours per year. It is reasonable to assume that the per capita use in Colorado will increase materially. The use of customers under the Rural Electrification Administration systems should be greater than that of urban users, due to the operation of pumps and various types of farm machinery.

Mr. LEAVY. There is no question in your mind that even if this project should be greatly accelerated, as has been here suggested, the region will absorb the power that will be generated there?

Mr. TIPTON. I will go further than that. The point I want to make is that if construction of the project is not accelerated additional steam capacity will have to be constructed in that area in addition to the capacity which is being constructed at the present time.

Mr. LEAVY. There is no contract in existence contracting this power away to private utilities operating in that region, and there is no plan on foot of that kind?

Mr. TIPTON. No, sir; not that I know of. There are no contracts and, so far as I know, no negotiations. I am quite sure that that is true.

Mr. LEAVY. In other words, this project is not in any way being constructed in order to increase the amount of electrical energy that the private utilities may need for distribution?

Mr. TIPTON. No, sir. The byproduct of the project will be considerable electrical energy, and there will be a need for that energy in the area, no matter how fast the construction of the project is accelerated. By the time the first plant goes into operation in 1943 there will be an immediate demand for the energy generated by it. As soon as the tunnel under the Continental Divide can be completed, assuming the most rapid rate, there will be need for the power generated by the first power plants on the eastern slope. There is no question about that.

Mr. LEAVY. And if the local people want that power as public power, there is nothing in the picture that would in any way interfere with that desire?

Mr. TIPTON. Nothing at this time.

Mr. CARTER. Are any private companies distributing within that area at this time?

Mr. TIPTON. Yes, sir. The Public Service Co. of Colorado has the largest system in the area. It is the system which I just described.

Mr. CARTER. Have they made application for any of this power; do you know?

Mr. TIPTON. I do not think so.

Mr. CARTER. They have plenty of power of their own?

Mr. TIPTON. They are installing a new unit of 25,000 kilowatts at the present time in order to take care of the increased load. They will be on the ragged edge again in 1943, when the first project plant, on the western slope, is scheduled to go into operation. By 1945 the power which will be generated by the first plant of this Colorado-Big Thompson reclamation project, which is on the western slope and does not depend upon the tunnel, will all be absorbed and additional power will be necessary.

Mr. SHEPPARD. Mr. Tipton, as an expert in your profession, what are the private utilities within the area to which you refer doing to step up their ability to produce and pick up the slack at this time, if you know?

Mr. TIPTON. As mentioned, the largest company in the area is constructing an additional unit of 25,000 kilowatts steam capacity.

Mr. SHEPPARD. In other words, the competitive field is wide open for any investing capital which sees fit to go along and produce and take care of the requirements?

Mr. TIPTON. There are no restrictions at all.

Mr. SHEPPARD. Thank you.

Mr. RICH. Do you think the Government at any time would have to construct any steam plants there to aid and assist in this project?

Mr. TIPTON. No, sir. Personally I sincerely hope that that never will be the case.

In order to make that clear, Congressman RICH, I want to refer to this particular graph [indicating], which shows the situation from 1902 to 1940. It shows the amount of power which this project would have generated within that period.

These years embrace the lowest period, 1934 to 1935, of water supply since at least 1850.

Taking the energy that can be generated during this period of lowest water supply as a measure, about 720,000,000 kilowatt-hours of firm power per annum can be generated by all project power plants. This is in addition to the energy required for pumping at Granby pumping plant.

Now, it might be argued by some that it would be desirable to put in a steam plant to firm all energy to that quantity which can be generated during periods of high run-off. I think, however, anyone can readily see from the graph it would be uneconomic to put a plant in that would be used for only such a short time during this long time period.

Mr. SHEPPARD. Again asking you in your restrictive position as a professional man, having a pretty complete understanding of electrical

unit production, if you found that the water resources in that area were not there in volume enough to justify a firm-load requirement, then as a technical man what would be recommended to pick up the slack necessary to produce the total required load?

Mr. TIPTON. I think this project can dovetail in with existing steam plants and make a very excellent set-up in the area.

Mr. SHEPPARD. Naturally, as long as you have the water power that is the proper commodity to use.

Mr. TIPTON. The energy during the infrequent periods of exceptionally low water supply can be firmed to a considerable extent by the use of off-peak steam energy from existing plants which will be interconnected with the project.

Mr. RICH. As an electrical engineer you would not try to put the peak to the point that you would always have steam to make it a firm-power project, would you?

Mr. TIPTON. That is an economic problem on each individual project. I do not believe the construction of a steam stand-by plant would be economical for this project.

Mr. FITZPATRICK. You would only use that in the case of an emergency.

Mr. TIPTON. Yes. And there will be sufficient existing steam capacity interconnected with the project to serve that purpose.

Mr. LEAVY. How many months of the year would you be taking water for irrigation purposes?

Mr. TIPTON. Water for this purpose would be used about 3 months in the year.

Mr. LEAVY. And the other 9 months it would flow across the Continental Divide for power purposes?

Mr. TIPTON. It will be used for power purposes for the entire 12-month period and stored during the 9-month period to be released for irrigation purposes during the 3-month period.

Mr. LEAVY. Then actually that water would flow across the Divide for 12 months in the year.

Mr. TIPTON. Yes, sir.

This [indicating] chart shows the estimated flow through the tunnel by months from 1902 to date.

Mr. FITZPATRICK. What would be the capacity of Grand Lake there, what amount?

Mr. TIPTON. It is estimated an average of 310,000 acre-feet of water per year will be diverted from the western to the eastern slope.

Mr. FITZPATRICK. In the case of a dry season how long would that last?

Mr. TIPTON. In a very dry season there may be a remaining shortage up to 200,000 acre-feet for adequate irrigation of district lands.

Mr. FITZPATRICK. Are you going over on the east side of the Rockies to store the water?

Mr. TIPTON. Yes, sir. As part of the $54,000,000 project there are proposed to be constructed three reservoirs on the east slope. In addition there are numerous reservoirs owned by private companies which will be beneficiaries of the project, in which reservoirs some of the water can be stored.

Mr. FITZPATRICK. They are very small, I suppose?

Mr. TIPTON. They are small, but most of them have some reserve capacity. They are small as individuals, but taken in the aggregate they represent appreciable capacity.

Mr. FITZPATRICK. At the present time there is quite a scarcity of water.

Mr. TIPTON. Yes, sir.

Mr. FITZPATRICK. In those privately owned reservoirs?

Mr. TIPTON. Yes, sir; that is true.

Mr. CARTER. Mr. Chairman, may we have the witness outline that map? I think he understands it thoroughly, and I wonder if the committee wants to listen to him explain it for a few minutes.

The CHAIRMAN. He can do it briefly. We do not want to waste any time.

Mr. TIPTON. I can do it very briefly.

I want to refresh the recollection of the members of the committee on some of the major features of the project.

The main feature of the project consists of the 13-mile tunnel, which will divert water from the western slope to the eastern slope.

The main storage unit is Granby Reservoir on the western slope, which will have a capacity of something over 400,000 acre-feet. It will regulate the entire run-off of the basin tributary to the reservoir.

The water will be pumped from that reservoir to another small reservoir situated at Shadow Mountain from which the water will flow directly to the tunnel. The average pump head will be about 130 feet. Granby Reservoir can regulate the water in such a way as to permit a uniform delivery through the tunnel. The water will be transported through the 13-mile tunnel and thence through five power plants down to the mouth of what is called Big Thompson Canyon.

After passing through the power plants the water will be stored in three reservoirs situated at the foot of the foothills. From these reservoirs the water will then be distributed to the lands which need the water for supplemental irrigation.

As an essential part of the project there is a 152,000 acre-foot reservoir on Blue River, a tributary of the Colorado River, which is used for replacement purposes and the generation of power. This reservoir will protect present and future uses on the western slope.

I should like to discuss now what we consider to be a logical construction schedule for the project in order to support our contention that there should be appropriated more than $3,000,000 a year for the project. The bottleneck, of course, is the 13-mile tunnel. The construction of that item can be completed by the middle of 1945. At the present rate of construction it could be completed sooner. The tunnel is being driven from both portals at a present rate of about 90 feet per day. It is estimated about 18,000 feet will have been driven by June 30, 1941. To complete the driving of the remaining 51,000 feet by January 1, 1945, would require a rate of only 40 feet per day or 20 feet at each heading. However, we have fixed as a logical completion date for the tunnel the middle of 1945. In order that the project can be used at the time the tunnel is completed, other units must be started at once. The most important of these is Granby Reservoir. This reservoir will be required to permit the diversion of the full amount of project water through the tunnel. Construction of this reservoir will require about 3 years. It should be completed in sufficient time to store 1 year's run-off prior to completion of the tunnel so that water will be available to divert through the tunnel immediately when it is completed.

Therefore, construction of this reservoir should start this year in order that this can be done, and that work can be prosecuted in such a manner that it shall be completed 1 year prior to the completion of the tunnel.

To accomplish this and also to carry on expeditiously the work at the tunnel and at Green Mountain Reservoir $5,000,000 should be appropriated for the fiscal year 1942.

Mr. FITZPATRICK. Has the necessary land been secured over to the western side for Grand Lake?

Mr. TIPTON. Yes; many items of rights-of-way have been secured and additional items are being secured.

Mr. FITZPATRICK. There is no hold-up on that, is there?

Mr. TIPTON. No, sir; there is no hold-up on the rights-of-way.

The construction schedule for 1942 just described is the minimum desirable. This [indicating chart] indicates our opinion of a desirable construction schedule through the fiscal year 1945. It shows Granby Reservoir starting this year and being completed 1 year prior to the time the tunnel is to be completed. Many other units of the project could be started this year and it would be desirable to start them, but that would require considerable sums of money. In order to take care of the minimum desired schedule $5,000,000 will be required during the fiscal year 1942.

I think that is all, Mr. Chairman, unless there are any questions you wish to ask.

Mr. RICH. May I just ask you this one question: What do you figure the whole sum total cost of this project is going to be?

Mr. TIPTON. The cost is estimated by the Bureau of Reclamation to be $54,288,000.

Mr. FITZPATRICK. All of which is reimbursable to the Government.

Mr. TIPTON. Yes, sir. Every dollar of it is to be reimbursed through the sale of water to the irrigators and through the sale of electrical energy.

Mr. LEAVY. And that part charged to the generation of electrical energy would be repaid with interest, I understand.

Mr. TIPTON. Yes, sir.

Mr. LEAVY. That allocation has not yet been made.

Mr. TIPTON. Repayment of the cost allocated to power is assumed to be made in 40 years with 3-percent interest.

Mr. LEAVY. This committee has had submitted to it by the Bureau of Reclamation a program that is an impossible program when this money has to come out of the revolving fund.

Your appropriation calls for $4,428,000 for the fiscal year 1943, and $8,000,000 for the fiscal year 1944, $11,000,000 for the fiscal year 1945, and $10,000,000 for the fiscal year 1946.

Mr. TIPTON. Yes, sir.

Mr. LEAVY. So unless there is some legislation to take major projects like this out from under the reclamation revolving fund this project cannot be completed as outlined.

Mr. TIPTON. That is correct, sir

And to consummate the logical construction program which we think should be pursued, there will be required during the coming fiscal year 1942, $5,125,000; in 1943, $9,940,000; in 1944, $10,615,000; and in 1945, $9,718,000. Even these sums will not complete the project, but sufficient features will have been completed to permit diversion of water to the eastern slope and the generation of some power.

Mr. FITZPATRICK. Unless that money is in the revolving fund at the present you would not get that amount?

Mr. TIPTON. No. And it would take years to complete the project, during which time the large crop losses would continue, and considerable additional steam capacity would be installed in the area to supply demands which otherwise could be taken care of by project power plants. The Government also would have large sums of money tied up for a considerable length of time before repayment could start.

Mr. SHEPPARD. I understand you have been familiar with the electrical industry within the area which we have been discussing over a long period; is that correct?

Mr. TIPTON. To some extent. I am not so familiar with that as I am with water matters.

Mr. SHEPPARD. Do you know of your own knowledge as to how far behind the demand in that area the operating utilities are and how long they have been behind the demand?

Mr. TIPTON. I can show that graphically by this chart [consulting chart]. This starts in 1915. This shows the installed capacity [indicating].

Mr. SHEPPARD. For the purpose of the record would you kindly call out the installed capacity, because the ordinary indication does not reproduce in the record?

Mr. TIPTON. Yes; I understand that.

The following gives the installed capacity of, and demand on the central system of the

Public Service Co. of Colorado for each fifth year since 1915, as read from the graph.

Year	Installed capacity kilowatts	Demand kilowatts
1915	40,000	30,000
1920	60,000	40,000
1925	78,000	55,000
1930	96,000	70,000
1935	96,000	72,000
1940	130,000	104,000

I do not believe they have been behind the demand, but they have been on the ragged edge several times.

Mr. FITZPATRICK. Would not there be a greater demand for power if it was cheaper?

Mr. TIPTON. I think that is true.

Mr. FITZPATRICK. And you cut the rate?

Mr. TIPTON. Yes, sir.

Mr. FITZPATRICK. Do you suppose there will be a lower rate when this is finished?

Mr. TIPTON. That is conjectural. The cost of generation of project energy will be cheaper than the cost of steam energy.

Mr. FITZPATRICK. It is supposed to be cheaper power.

Mr. TIPTON. It will cost a little over 3 mills at the wholesale market.

Mr. FITZPATRICK. What is the average you pay now per kilowatt?

Mr. TIPTON. It costs about 5 mills to generate it by steam.

Mr. FITZPATRICK. Haven't you any idea in the region what it costs now?

Mr. TIPTON. The present residential rate in Denver, Colo., is as follows for the monthly use indicated:

Monthly use, kilowatt-hours, and rate in cents per kilowatt-hour

	Cents
25	5.00
100	3.80
250	2.72

Mr. RICH. As an engineer in figuring out the cost of power so far as the Government is concerned you advocate the whole sum total cost of all this engineering work to be set up as a principal sum and then figure the rest of the cost to the Government for the construction of this project?

Mr. TIPTON. Yes; plus interest.

Mr. RICH. Certainly; but all over it and all other charges of every kind.

Mr. TIPTON. Yes; all charges, including engineering and overhead and the Bureau of Reclamation charges, are carried in as a part of the cost of the project. The cost of generating and delivering the energy is made up of the sum of the following: First, annual repayment and interest at 3 percent on that portion of cost of the project allocated to power; second, one-half of the annual operation and maintenance of the joint features; third, the annual operation and maintenance expense of the power plants and power canals; and, fourth, the annual depreciation of the power features.

Mr. SHEPPARD. That has already been done in this proposal.

Mr. TIPTON. That is right.

Mr. RICH. The same as on a private proposal.

Mr. TIPTON. Yes, sir; with one exception. It is contemplated the entire cost of the project will be recovered in 40 years and the project will be in 100 percent condition at that time.

Mr. SHEPPARD. The gentleman stated that that has been done in this proposal.

Mr. RICH. We are hoping they are going to continue it; that is the only thing. He, as an engineer, has suggested that they will do it, but will they do it?

Underwater Carriers

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

LETTER TO THE PRESIDENT FROM SIMON LAKE

Mr. SHANLEY. Mr. Speaker, whenever Simon Lake says anything about underwater carriers and vessels he commands respect, for his name is indissolubly linked with subsurface construction and inventions. We, in Connecticut, are proud that he has a laboratory in our State and I take this chance to present his views on a subject that is certainly in the forefront today.

For those of us who have made the freedom of the seas one of the bridgeheads of our foreign policy there is in his suggestion a manifest evidence of the inventive progress of our people. While Nazi Germany has developed aircraft into its tremendous lethal power and England, the master of the surface waters for a longer time than any one other nation, has displayed her versatility in surface resilience, the versatility in the submarine has been blessed by American ingenuity.

Have we made the most of it or have we neglected our opportunity in the complacent attitude of those who have shackled our merchant marine and destroyed the historic developments of a century of progress? Whatever the answer is on these questions there can be no controversy about our duty to examine this famous man's proposal.

He is famous, as his sketch from the Who's Who of 1940 shows:

Lake, Simon, naval architect, mech. engr.; b. Pleasantville, N. J., Sept. 4, 1866; s. John Christopher and Miriam M. (Adams) L.; ed. Clinton Liberal Inst., Fort Plain, N. Y., and Franklin Inst., Phila.; m. Margaret Vogel, of Baltimore, June 9, 1890. Inventor of even-keel type of submarine torpedo boats; built first experimental boat 1894; built *Argonaut* 1897 (first submarine to operate successfully in the open sea); has designed and built many submarine torpedo boats for U. S. and foreign countries; spent several years in Russia, Germany, and England designing, building, and acting in an advisory capacity in construction of submarine torpedo boats. Also inventor submarine apparatus for locating and recovering sunken vessels and their cargoes, submarine apparatus for pearl and sponge fishing, heavy-oil internal-combustion engine for marine purposes, etc. Pres. the Lake Submarine Co., the Lake Engineering Co., Merchant Submarine Co., Lake Submarine Salvage Corporation, Industrial Submarine Corporation, Lake Torpedo Boat Co. (also consulting engineer). Member Society Naval Architects and Marine Engrs., Am. Soc. M. E., Am. Soc. Naval Engrs. Instn. of Naval Architects (London), Soc. Founders and Patriots of America, Soc. Colonial Wars, S. A. R. Mason. Clubs: Engineers (New York); Algonquin (Bridgeport, Conn.) Home: Milford, Conn.

MAY 5, 1941.

Hon. FRANKLIN D. ROOSEVELT,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: A great political controversy is now raging whether the United States should use its naval vessels to guard convoys of merchant craft carrying products to Great Britain. The final decision on this question may mean peace or war for the United States.

I have, on numerous occasions, recommended the use of submarine cargo-carrying vessels, by means of which products may be transported from this country to England, without danger from the German submarine blockade, and without committing any unneutral act under the established rules of international law. I am generally given credit for having contributed very largely to the development of the submarine and I have been engaged in the designing and construction of submarines for more than 50 years. I know that the building and operation of such vessels is practical and no one entitled to be called a submarine expert has ever contradicted this statement. That it is feasible is indicated by the following extract from a letter to me from the State Department under date of December 4, 1939, quoting the Navy Department and the Maritime Commission:

"I am also in receipt of a letter of November 24, 1939, from the Chairman of the United States Maritime Commission, in which he suggests that you be informed that the 'merchant cargo-carrying submarine in question, while beyond doubt an engineering possibility, cannot be considered an efficient cargo-carrying vessel. This is because of the complicated machinery and pumping equipment; the special and unusually robust type of hull structure necessitated by her ability to submerge, and the very high resultant costs. A merchant vessel must pay for itself by the cargo it carries.

"The Chairman of the United States Maritime Commission adds that it is, however, conceivable that in the presence of a serious crisis such as is pictured by you, a vessel of this type might be of some value; and that while the use of government funds for purposes of development of construction may not be justifiable there appears to be no valid reason for refusing your request that you be allowed to design and build such a type of ship for private interests, all within the provisions of United States legislation."

I think such vessels can be built and operated more economically than surface vessels of the same cargo-carrying capacity. Even if they will cost more, however, as suggested by the Maritime Commission, is it not cheaper in the end to adopt a method of "delivering the goods" to England which we know can evade the German blockade and which can be carried out without committing belligerent acts which may involve us in war.

It will take time, of course, to produce these vessels. It will take just as much time, however, to produce the necessary surface vessels to carry out any other program and when they have been built there will be no assurance that they can successfully run the blockade, either singly or in convoys, with or without the protection of the United States Navy.

No one seems to have paid any attention to this suggestion. No one seems even interested. France fell because she failed to keep pace with scientific and engineering progress. Great Britain is tottering for the same reason. The United States should not make the same mistake. If we really wish to "deliver the goods" to England and keep out of the war at the same time this is the way and, in my opinion, the only way to do it. It is the only sure way of transporting goods to England through the German submarine

blockade whether we want to go to war or not, as the cargo-carrying submarine can make the shortest voyages from our American shores to England without being seen or attacked by other ships or by airplanes.

Very truly yours,

SIMON LAKE.

The People Must Be Told the Truth—A Free Press and Free Speech Necessary to Preserve Our Way of Life

EXTENSION OF REMARKS

OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ADDRESS OF HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. POWERS. Mr. Speaker, under leave to extend my remarks, I insert herewith an address given by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, Republican leader of the House of Representatives and chairman of the Republican National Committee, at a luncheon honoring five Republican assemblywomen of the State of New Jersey, at Trenton, on April 29, 1941:

It is always a real pleasure to attend any gathering of loyal, enthusiastic Republicans. It is doubly a pleasure to be here today to join in paying tribute to these Republican members of the New Jersey Legislature who are of the gentler sex.

Women have demonstrated their intelligence, ability, and capacity to sit with the men in the legislative councils; to help govern, to help make the laws; to help work out the problems of state.

There is a general tendency, it seems, to regard as something unusual and surprising the success women have made of statecraft—and politics—as though it were an accomplishment not to have been expected. I feel a bit differently about it. I am, perhaps, less inclined to enthuse as much as some over the success women have made as legislators because I have always expected, given a fair chance, they would be successful.

I have suspected for some time women are getting bored; and a bit resentful of being complimented merely as women rather than being treated as the equals of men in intelligence, capacity, and ability in the world of politics and government. Therefore, today I shall not try to turn flattering phrases and complimentary sentences for you. Anyway there are others who have much more talent for that art than have I. What I want to do is not to try to tell you what special work women can do, but to tell you what work needs to be done—and the women can take their fair share of doing it alongside the men. I do not believe women want to be given the simple, easy tasks because they are women. They are ready to tackle the hardest tasks right along with the men, and they will do their share of the difficult work just as ably, just as efficiently, and just as quickly as will the men.

Let me say to you bluntly the bigegst job we have ahead of us today is to preserve Americanism. We must preserve and perpetuate the American way. We must preserve and perpetuate constitutional government. We must foil the very subtle and clever schemes of those who would change our form of government into some brand of centralized absolutism—whether it be communistic, nazi-istic, fascistic, socialistic, or some combination of them. Those schemes have been planned. Those plotters are at work in this country. Within their own private circles they now speak openly of the form of government they intend, if possible, to bring about in the economic chaos and social bewilderment they believe will follow the war. The form of government they desire is not our revered and priceless American form of constitutional, representative republic, by a long shot. We must foil these schemers and their schemes. That is not a job which calls for the predominance of men or women. It is a task calling for the best there is in all men and women who believe in the American way, who believe in the Constitution, who believe in the Bill of Rights, who believe in the traditional two-party system.

I believe American men and women everywhere in the Nation want to be told the facts. They want to be told what they can do, what function they can perform toward providing the Nation with an invincible national defense. They want to know how they can help to solve those domestic problems which have been obscured—but greatly aggravated—by the war.

Several things must be done—and they must be done as quickly as we can do them if they are to be effective.

Now what part can the women in the legislative bodies, and the women in the clubs, and societies, and associations—and the women in the millions of American homes—what part can they play? What can they do to help preserve liberty, the American way of life and of government, to assist in the building of an invincible national defense?

Here are some of the things we can all do—women as well and as effectively as men:

1. Insistently demand the truth about defense production. The country is not getting the facts now. The people are not being told the truth about it. Had I the time I could quote you figures upon figures, statement after statement to prove the real situation is being glossed over, concealed from the American people, whose vital business national defense is and must be since it is they who must pay for it, man it, die for it if need be. We must make sure this so-called voluntary censorship of the news is not misused. It will not conceal a single essential fact from our potential enemies. It might be a very clever and effective way of concealing the facts, however dangerous or ugly they may be, from the American people. It could be a smooth way of excusing such concealments on the ground that to tell the people the general facts about our national defense would be to reveal to the agents of our potential enemies information of value to them.

2. Demand the truth about the strikes in the defense industries. It serves no good purpose to argue about percentages. There is no use comparing the number of man-hours being lost now with those lost in the first World War. It is waste of time to argue about whether the fault is that of the employers or of the employees. The need for an invincible national defense is too great, too vital, too pressing for us to lose a single day in any strike. Let us demand the work be kept going and let the decisions, through mediation and compromise, be retroactive. But let nothing stop the work on the national defense.

3. Demand the truth about defense expenditures. We are not getting the facts from the administration now. Republican Members of the Congress have personally investigated these matters and have found waste, indications of corruption and graft, and incompetency. Congress is not being told the truth about the waste and inefficiency now going on. The people are not being given the facts. Let's have them. A new tax bill which will shock the Nation, when the people learn the rates, is already on the way to enactment. The waste, the graft, and the inefficiency must be paid for out of the family pocketbook the same as the money legitimately and efficiently spent. This waste and corruption and inefficiency must be paid for in terms of milk the baby can't have; of shoes the other children cannot have; of clothes father and mother must do without; of many family necessities which must be sacrificed. I say here and now it is damnable for any man or any group of men to be allowed for one hour to leech on the people through the national defense. Run down and expose to public scorn and indignation the last man of them!

4. Demand the maintenance of free speech and free press. There must be no intolerance and abuse of those who exercise their right of free speech. Free speech and fearless expression of thought offer our most certain method of perpetuating our way of life. Let us demand an end to un-American intolerance. And the same thing applies to the newspapers.

5. Demand the maintenance of free ballots. Demand an end to favoritism and discrimination in the awarding of defense contracts. Demand fairness, justice, and honesty in the administration of the W. P. A. and the other relief agencies, in the agricultural payments, and all the other nonmilitary functions of the Government. Unless we do this, we will lose our government of, for, and by the people, and we will have put upon us a government of, for, and by the dominant political party. We have already gone far along that road.

6. Demand the national defense be managed, controlled, and produced by the trained and experienced military and naval experts, with the help of honest and experienced managers of industry and leaders of labor. This is no time to turn over to New Deal theorists the management and production of our national defense. They totally lack the necessary training, temperament, and ability to do the job.

7. Demand the right of the Nation through the minority party to audit and police the political bureaucracy, both in Washington and throughout the United States, which has thrown away many millions of dollars, and which the people fear will waste many more millions and not do the defense job efficiently. We must not forget our military defense against dangers from without may be defeated and our liberties lost and our Nation wrecked by agencies and causes within. Economic chaos, national bankruptcy are just as dangerous enemies to freedom and democracy as any dictators who ever lived—and they are vastly more difficult to detect in time.

8. Stamp out revolutionary communism, fascism, every sort of absolutism at home. Oppose them in your own communities. Stand for Americanism—and stand aggressively, earnestly, actively for it against every seduction, against every argument, against every threat. Eternal vigilance is still the price of liberty, and that means vigilance by the hour and by the day, not each 2 or 4 years when elections come around.

9. Oppose and discourage class and sectional divisions, prejudices, suspicions, hatreds, frictions. "United we stand, divided we fall."

10. Demand real national unity. Resist demands for blind submission. Unity is not submission. It is intelligent cooperation. Submission is blind yielding to dictation, whether bureaucratic, administrative, or social—when nobody dares to disagree. Unity is reached through proposal, disagreement, discussion, compromise—the American way. We are unified as to the need for an invincible national defense. We all want it. We are not all agreed as to the methods

which have thus far been employed to get it. We believe—a lot of us—that national defense can be achieved more economically, more efficiently, more quickly under practical military and naval officials, industrial managers, and honest labor leaders than under political and social theorists, whose chief concern is to perpetuate themselves in power at the expense of the taxpayers.

11. Demand frankness and candor on the part of the administration about these eventful and vital matters which involve the lives, the happiness, the security and the property of all of us in our generation, and of those generations which are to come after us. We have heard much, indeed, about candor. We have had all too little of it.

12. There has been built up by means of a clever and widespread propaganda the claim it is unpatriotic, un-American, treasonable, to dare question a single statement or act of the administration in regard to government; or the national defense; or in regard to its policies. That simply is the device of political bureaucrats who do not want the facts to be known to the people.

We must be ready and willing to face the bitter criticism of those who want to conceal their acts and their policies when we demand those acts and policies be made known to the people who have a right to know about them.

The administration must not be a political administration. It must be a national administration.

All the people must give their sons and brothers and fathers to the draft. All the people must be ready to work, and sacrifice and die, if need be, for the defense of our country. All of us must pay and pay and pay—down to a far generation of Americans yet to be born. We are all vitally involved. We are all entitled to know the facts. We are all entitled to do our part. We are all vitally interested in preserving and perpetuating the form of government, the Constitution, the Bill of Rights, the way of life which have brought to us, as a people, the richest blessings, the finest living conditions, the greatest spiritual, and cultural and material advancement ever achieved by any people on the face of the globe.

We are all vitally interested in preserving this rich heritage and in passing it on, unimpaired, untarnished, to those who are to come after us.

In the name of humanity, in the name of conscience, in the name of all that makes life worth living let us demand—and secure—what is honest and just and right and efficient. Let us preserve our beloved country. Let us keep our unsurpassed way of life and not change it in panic, in fright, in despair or in futility.

We can come through the American way. Let's do it.

Keep the United States Out of War

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 9 (legislative day of Thursday, May 8), 1941

STATEMENT BY WOMEN'S NATIONAL COMMITTEE

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued yesterday by the Women's National Committee To Keep the United States Out of War.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NINETY-FOUR PERCENT OF WOMEN OPPOSE FOREIGN WAR INVOLVEMENT—NATION-WIDE POLL BY WOMEN'S NATIONAL COMMITTEE TO KEEP U. S. OUT OF WAR ALSO SHOWS SAME PERCENTAGE VOTED AGAINST COMMON CITIZENSHIP WITH GREAT BRITAIN—POLL ANALYSIS REVEALS 77 PERCENT OF PRO-WAR VOTE CAME FROM EASTERN SEABOARD, WITH 41 PERCENT COMING FROM NEW YORK CITY

WASHINGTON.—Ninety-four and nine-tenths percent of the women in this country are opposed to foreign war involvement and common citizenship with Great Britain, according to analysis of returns from a Nation-wide poll just completed by the Women's National Committee to Keep U. S. Out of War. Only 5.1 percent voted for war involvement and common British citizenship, and 77 percent of the pro-war vote came from eastern seaboard States, according to a statement issued today at the committee's Washington headquarters by Miss Cathrine Curtis, national chairman.

"We have been hearing more and more about certain polls showing an increasing war involvement sentiment in this country," Miss Curtis said. "Unable to find anyone who had been approached and questioned by any of these polls, we decided to conduct our own poll, contacting women in all parts of the country direct by mail. We sent a special polling blank to housewives, nurses, school teachers, members of college faculties, business and professional women, doctors, lawyers, and others in every State in the Union.

"The questions asked were:

"'Do you oppose our involvement in the present European war?

"'Would you oppose a common citizenship with England, such as proposed by the Union Now movement?'

"We did not ask those voting to sign their names to the polling blanks, but made provision for signature and address for those who wished to so identify themselves.

"It is interesting to note that while 88 percent of those voting against war involvement and common British citizenship not only signed their names, but also gave their address; only 45.6 percent of those voting for war involvement and common citizenship so identified themselves.

"We consider this poll—with its direct contact by mail—a definite demonstration of the true sentiment of a vast majority of the women on the war-involvement and common-citizenship issues. They are definitely opposed to both, particularly west of the Allegheny Mountains.

"Analysis of the returns reveals that 77 percent of the pro-war, pro-common-citizenship vote came from the eastern seaboard States, with 55 percent of that vote coming from the Northeastern States and 22 percent from the southeastern group. These returns also show that New York City furnished 41 percent of the pro-war vote in the northeastern section, while certain communities in New Hampshire having a number of Rhodes scholars—Oxford University graduates—either in local faculties or in the local business and professional fields, furnished 26 percent of that section's pro-war vote.

"We included the question relative to a possible reunion with Great Britain—a common citizenship—because we recognize that is one of the strong underlying motives in the campaign toward war here. We feel this is more than evidenced by the fact that everyone who voted for war involvement also voted for 'union now', or a return to the colonial status from which our forefathers freed us by the wars of the Revolution and of 1812.

"Unquestionably, acceptance of this so-called 'union now' proposal by our people will be sought under the guise of 'uniting the strength of the democracies' or some such fanciful phrase. But, no matter how it may be cloaked in confusing language, this poll shows our people are opposed to it because they realize it means not only the loss of our liberties and independence, but also a union of world debts to be saddled upon the backs of our taxpayers," Miss Curtis' statement said.

The returns received by mail at the committee's Washington headquarters, show the following results:

	Percent
Against war and common British citizenship	94.9
For war and common British citizenship	5.1

The Women's National Committee to Keep U. S. Out of War was organized in 1939 as successor to the Women's National Committee for Hands Off the Supreme Court which, under the leadership of Miss Curtis, successfully led the women's campaign against the Supreme Court packing plan in 1937. Since it was organized 2 years ago, the keep-out-of-war committee has served as an information center for anti-foreign-war women's groups throughout the country, and has represented them before various committees on Capitol Hill, expressing for them their opposition to foreign war involvement.

Miss Curtis is well known, both on Capitol Hill and throughout the country, as a lecturer, writer, and economist. She has appeared before a number of congressional committees on behalf of women and their investment in our form of government, and is recognized as an outstanding leader of women, and a champion of their great stake in the Republic. She has just returned from an extended speaking tour of the West coast, where she was unanimously elected national chairman of the Mothers' National Executive Committee, an emergency organization formed for the purpose of coordinating the activities of mothers and women's groups in this country opposed to foreign war involvement.

The American Way of Life

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ORATION BY FRANK CHURCH, JR., OF BOISE, IDAHO

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks, I include an oration on "The American Way of Life" delivered by Frank Church, Jr., 16-year old Boise, Idaho, youth, who won the 1941 national high-school oratorial contest conducted by the American Legion on April 18, 1941, at Charleston, S. C.:

During the course of the past year the American people have witnessed with apprehension the destruction of democracy in all parts of the world. We have witnessed this conquest at the hands of a brutal alien philosophy of life, and we have determined, in unanimity, that the fate of France, the fate of Norway, of Belgium, and of Poland shall

not be the fate of America. To realize this objective we are engaged in an unprecedented program of defense.

Do you believe that this effort to prepare is merely for the defense of our independence? Do you believe that it is merely to protect our farms, our industries, and our property, or do you believe, with me, that it is primarily to defend democracy, to defend freedom, to defend the American way of life? Our ambition to succeed in this attempt is laudable, but we will not succeed, we cannot succeed, in defending the American way unless we thoroughly and completely understand it. What, then, is the American way? How can we understand it? How can we defend it?

Over 50 years ago the noted clergyman, Henry Ward Beecher, made this statement: "The real democratic American ideal is not that every man should be on the same level with every other but that everyone shall have liberty, without hindrance, to be what God made him." In other words, that everyone is to have the opportunity to develop according to his own wish and his own ability. This, friends, is the one way to find and enjoy life, liberty, and the pursuit of happiness.

Around this ideal we have molded our manner of living in America and have founded it upon three fundamental principles of freedom.

The first of these principles is the natural development of our history. It is that of a society, free, classless, and equal. A free and equal society was inevitable in America. Our ancestors fled from Europe to break away from a society of privilege. In the New World they established one of justice and equality. In Europe, command and guidance were the result of hereditary rank. In America, authority and leadership became the result of diligence, ability, and toil. In Europe, opportunity was dependent upon riches and prestige. In America, dependent upon nothing, but open to all. Our system of free schools and our public libraries manifest that equality of opportunity afforded to every American. And we must keep it that way. We must keep it free from all privilege in order that every citizen, unhampered by birth, or rank, or wealth, might continue to enjoy an equal chance to succeed. We must, because a free society is the first of the three principles upon which our system rests. A free society is a vital part of the American way.

The second principle in our manner of living is inseparable from the first. What value would a free society have for any one of you if you were the victims of a regimented economy? Social freedom is worthless in an economy where all industrial policy is decided and directed from above, and where every position, every advancement is dependent upon the whims of a political bureaucrat. Indeed, the inalienable truth that social freedom must always go hand in hand with economic freedom has ever been recognized in America. Because of this we have encouraged free enterprise and private initiative. We have respected the freedom of every citizen, first, to select his own occupation, and, secondly, if possible, to own his own business. The natural ambition to succeed, the natural desire for private gain, and the efficiency-making competition of free, rival enterprise have built our dynamic economy, and our free, dynamic economy has given us more luxuries, more comforts, and a higher standard of living than any other people have ever enjoyed in any other place or at any other time.

Even so, this system is not perfect. Its greatest weakness is monopoly, for monopoly alone can destroy all its advantages and inevitably results in shocking abuse of power. But our Federal Government has the authority to destroy monopoly. It must use this authority. It must wage a constant fight against abuse of power and favor justice for the common man. It must do so in a constructive defense of our free capital and our free economy; for, economic freedom, as social freedom, is a vital part of the American way.

Today all of us are confronted with a tremendous task—that of defending our manner of life. We shall willingly defend it from without, but we are baffled and confused when we ponder how to defend it from within. Even at this moment an insidiously inspired propaganda campaign is causing that confusion. This campaign is being waged, not against social freedom, not against economic freedom, but against the third principle of the American way—political freedom. If this principle fails, the others shall perish; if it endures, the others will endure. The incomparable privilege of political freedom is more than majority rule or representative government. It is protection for the minority. It is the freedom granted to every individual to speak, to read, and to think as he pleases. It is the right to worship God according to the dictates of his own conscience. It is his guaranty, in emergency, of a speedy, public trial by jury, and his protection against excessive fines or cruel and unusual punishment. It is his right to be secure against unreasonable search or seizure in his person, his property, and his home.

Friends, of all our obligations to the American way not one is more vital than a jealous defense of political freedom against any kind of limitation, for there has been no period in all the centuries of the history of man where political freedom has been limited and where democracy has survived. This does not mean that our Government should take no action against spies, saboteurs, or traitors. Such is the obligation of responsible government. But it does mean that we must respect the political freedom of every citizen and every sincere minority, for only in that manner can we protect democracy, and only in that way can a truly enlightened people discuss fairly and adequately solve their problems.

If, during the crisis that confronts us today and tomorrow, we defend social, economic, and political freedom, guided by the precepts of Christian faith, we shall have maintained the American way. Preserve, protect, and defend these three principles, and no matter how dark the future may be a united America will move forward with unshakable courage and irresistible power toward unlimited democracy and happier times.

The Doctrine of Good Neighbors and the Solidarity Pact of Panama

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1941

Mr. SHANLEY. Mr. Speaker, yesterday I propounded to the distinguished gentleman from New York [Mr. CULKIN] a question on the ship bill relating to the South American nations. He answered as I expected that there was not the slightest intention to include them in this bill.

That is perfectly right, as it seems to me the bill only deals with "idle ships." However, it is important that we obtain this statement of the exclusion of our neighbors in order that the fullest implications of the good-neighbor doctrine be preserved.

I noticed with pleasure that the Inter-American Financial and Economic Advisory Committee recommendation to the governments of the American Republics advising a common policy toward foreign flagships tied up in their ports by the European war. To me the important thing is not so much what they agreed upon, but that they agreed. They have met a situation that is causing trouble in every port, and they met it as pan Americans—solidly and unanimously.

I congratulate Under Secretary Sumner Welles for this splendid demonstration of unanimity.

It was certainly reassuring and inspiring to see gathered around a conference table at the Pan American Union these representatives of the 21 American Republics recommending in unison that their respective nations take over more than 160 foreign vessels idle in their ports.

The chairman of the Inter-American Financial and Economic Advisory Committee, Under Secretary of State Sumner Welles, sat with the following men:

Arturo Lares, Venezuelan Chargé d'Affaires; Jose Richling, Uruguayan Minister; Santiago Rivas Costa, Uruguayan representative on the Committee; Julio Vega Battle, Dominican Chargé d'Affaires; Juan Chavez, Peruvian Commercial Attaché; Juan J. Soler, Paraguayan Minister; Juan Ehrman, Panamanian First Secretary; Leon De Bayle, Nicaraguan Minister; Raimundo Cuervo, Mexican First Secretary; Conzalo Carias, Honduran consul general at New York; Jacques Carmeleau-Antoine, Haitian Chargé d'Affaires; Henry Lewis, committee secretary; Enrique Lopez-Herrarte, Guatemalan First Secretary; Hector David Castro, El Salvador Minister; Colon Eloy Alfaro, Ecuadoran Ambassador; Rodolfo Michels, Chilean Ambassador; Ramiro Guerra, Cuban representative on the Committee; Octavian Beeche, Costa Rican representative; Gabriel Turbay, Colombian Ambassador; Carlos Martins, Brazilian Ambassador; Luis F. Guachalla, Bolivian Minister; Carlos Pardo, Argentine representative on Committee; Felipe A. Espil, Argentine Ambassador.

It is a far cry from the dawn of the good-neighbor policy through the Buenos Aires Conference of 1936 and the Lima, Peru declaration of 1938 to this present development but under the implications of those assemblies we have today a perfect demonstration of spiritual unity achieved through the similarity of Republican institutions predicated on an unshakeable will for peace. We have a practical demonstration that the good-neighbor policy is reaping dividends in these consultations. Here is what the advisory committee recommended:

Whereas subparagraph (D) of article 2, resolution IV, on economic cooperation, of the meeting of foreign ministers of the American republics at Panama in 1939 charged the Inter-American Financial and Economic Advisory Committee with studying and proposing to the governments the most effective measures for mutual cooperation to lessen or offset dislocations in the trade of the American republics resulting from the present war;

The commerce of the American republics has normally been carried on in large measure in merchant vessels of non-American powers, many of which are not available for

such trade because of the increasing rate of destruction of the means of maritime transportation by the belligerent nations, the consequent increased diversion of such vessels to other trades, and the prolonged stationing by their owners of a large number of such vessels in American ports interrupting their normal commercial activities; and

The resulting shipping shortage has prejudiced and is prejudicing the commerce of and among the American republics, creating a very grave problem for the fundamental right of the nations of the Americas to preserve the trade which is essential to their normal existence;

Some of the American republics have already been forced to take step: with a view to remedying this situation; and

Bearing in mind the recommendations of the Inter-American Neutrality Committee, which were adopted by resolution I of the second meeting of the Ministers of Foreign Affairs of the American republics at Habana in July 1940, the Inter-American Financial and Economic Advisory Committee resolves to recommend to the governments of the American republics:

A. That they declare that the foreign-flag vessels in American ports, the normal commercial activities of which have been interrupted as a consequence of the war, may now be utilized by the American republics in accordance with the rules of international law and the provisions of their respective national legislations, in such a manner as to promote the defense of their economies as well as the peace and security of the continent.

The utilization of said vessels through agreements with the owners of the vessels or by virtue of the right of each of the American republics to assume complete jurisdiction and control over such vessels, and as they may deem it convenient to satisfy their own requirements.

B. That just and adequate compensation for the utilization of the said vessels be made in accordance with the commonly accepted rules of international law and the national legislations of each of the American republics. In the determination of this compensation, the damages which might have been caused and the other obligations resulting by the presence of these ships in the ports in which they may be, shall be taken into consideration.

C. That they reaffirm their full right to the free navigation of those vessels, both in their national and international trade, once they are under the flag of any one of the American republics, and that they agree upon measures tending to facilitate the effective exercise of said right.

Mr. Speaker, in setting up this machinery under the direction of the Ministers of Foreign Affairs of the American republics we have an ever-open opportunity for any one of them at their own initiative to call for a meeting "in the event that the peace of any of the American republics is menaced."

We have had a joint declaration of the American republics protesting the violation of the neutrality of Belgium, Holland, and Luxemburg under the Solidarity Pact of Panama of 1939. We have had the famous protest of the 21 American republics to violation of the neutrality zone in connection with the encounter between the naval forces of the British and the German belligerents in December 1939. We have even had a specific protest to Great Britain protesting against the hostile act of the British along the Brazilian coast.

It also ought to be remembered that—

The act of Habana provides for an emergency committee composed of a representative of each of the American republics, and will be constituted as soon as two-thirds of the American republics shall have appointed their members. The committee shall assume the administration of any region in the Western Hemisphere now controlled by a European power whenever an attempt shall be made to transfer the sovereignty or control of such territory to another non-American nation.

We can truly salute the consultative pacts and the entire doctrine of the good-neighbor policy.

Canada and the St. Lawrence

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ARTICLE BY HON. C. H. CAHAN, K. C., OF MONTREAL, CANADA

Mr. BEITER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third of a series of articles concerning the St. Lawrence situation which were prepared by the Honorable C. H. Cahan, K. C., and recently published in the Montreal Gazette. I believe that Mr. Cahan's remarks are of great interest to my colleagues, and take pleasure in submitting the following, which completes the series:

[From the Montreal (Canada) Gazette of March 27, 1941]

JOINT DEVELOPMENT OF ST. LAWRENCE

(By Hon. C. H. Cahan, K. C.)

III

In the two articles, which the Gazette published on March 20 and 21, I contended that an agreement to carry into effect the proposed scheme for the construction of a dam across the St. Lawrence River at Barnhart Island, and for the development of hydroelectric power in the international section of the river, was not authorized by the terms of the Waterways Treaty of 1909, and could not be made effective by concurrent legislation of the United States Congress and of the Parliament of Canada. The legal opinions of Mr. W. Stuart Edwards, Deputy Minister of Justice, and of J. E. Read, legal adviser of the Department of External Affairs, more recently published at Ottawa, both concur in this contention.

Mr. Edwards, in a letter dated March 11, declared that procedure by agreement in this matter would not be justified by the provisions of the Boundary Waters Treaty of 1909. Mr. Read, in a memorandum dated March 12, declared that "procedure by concurrent legislation or by agreement could not be supported by the authority of the provisions of the Boundary Waters Treaty." Mr. Edwards also adds that "Canada is entitled to have the contract ratified in a manner or by a method which the United States will regard as binding. It is generally understood that a treaty ratified in accordance with the United States Constitution is binding upon the United States," that is, a treaty consented to or ratified by the affirmative vote of two-thirds of the Senators present. Mr. Edwards also suggested that an opinion be secured from the law officers of the United States, if possible from the Attorney General, as to whether the proposed procedure would be binding on that country.

Mr. Green H. Hackworth, the Legal Adviser of the State Department, Washington, in a memorandum dated March 13, subsequently stated as follows:

"It is not necessary here to enter into a discusison of the treaty-making power or of the power of the President to enter into Executive agreements with foreign countries. It is sufficient to say that a very large number of agreements on various subjects have been entered into from time to time throughout the history of this country."

This is certainly a very indefinite basis on which to base an agreement which involves the vital interests of Canada and the illustrations cited by Mr. Hackworth are somewhat alarming. He says:

"Following the failure of the Senate to approve a treaty for the annexation of Texas, the annexation was accomplished by a joint resolution approved on March 1, 1845, after passage by a simple majority vote of the two Houses of Congress. Likewise, in the case of Hawaii, a treaty of annexation had been signed on June 16, 1897, and approved by the Hawaiian Legislature, but there was not sufficient support in the United States Senate to obtain approval by a two-thirds vote. Thereafter Congress passed a joint resolution to accomplish the same purpose, which was approved July 7, 1898."

Public opinion has already passed an adverse judgment upon each of these remarkable proceedings. Texas, which was a part of Mexico, was overrun by an influx of immigrants from the United States, that was planned and carried out under the leadership of Moses Austin, an American citizen. These immigrants incited a revolution and the secession of Texas from Mexico. They first declared the independence of Texas, and then conspired to procure the annexation of the new Republic of Texas to the United States. The history of this movement is available to every student of American history.

In 1893, a revolutionary party in Hawaii, instigated by United States Consul Stevens, dethroned Queen Liliuokalani, declared their independence and placed the islands under the protection of the United States. President Cleveland sent Blount, an American, as Commissioner to the islands, who induced the people of Hawaii to proclaim a republic under Sanford B. Dole, another American, as president. President Cleveland then sent a treaty of annexation to the Senate for ratification, which his successor, President Harrison, withdrew. Congress then passed a resolution annexing the islands, and thereupon they became a Territory of the United States.

The people of Canado may approve of an agreement or a treaty for such a joint undertaking in the international section of the St. Lawrence River as that now proposed; but the majority of Canadians are not disposed to ratify any such proceeding as a mere preliminary to the annexation of Canada by the United States.

Mr. J. E. Read of the Department of External Affairs, Ottawa, says that:

"The question as to whether an agreement based on the legislative authority of Congress would give rise to a valid obligation is one that would depend primarily upon the constitutional law of the United States. It is one upon which it is not possible for a Canadian lawyer to speak with confidence and it is necessary to rely upon the formal opinion submitted by the advisers of the United States Government in legal matters."

Mr. Read thereupon indulges in what he terms "theoretical speculations," and proceeds to deal rather cleverly with the political

probabilities of United States executive and congressional action, even though not subject to any valid legal obligations, to conserve Canada's interests in respect of navigation and power production in the international section of the St. Lawrence River. But he does not assert that mere agreements, entered into by the United States and confirmed by statutory enactments, are valid and enforceable, or that such agreements are not subject to the changing caprices of future congressional majorities.

A treaty is a contract made between nation and nation, which is binding upon the contracting nations notwithstanding changes of government or changes in the personnel of their respective legislatures. The authority, in whom the treaty-making power is vested, is prescribed by the fundamental or constitutional law of each sovereign state; and under the rules of international law it is essential for the validity of a treaty that it is made by the sovereign power of each of the contracting states. Throughout the British Commonwealth this power is vested in the Crown; in the United States it is vested in the President, subject to the concurrence of a two-thirds majority in the Senate, as provided in the second article of the Constitution of the United States.

The second clause of the sixth article of that Constitution provides that—

"All treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges of every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding."

The third clause of the same article provides that "the Senators and Representatives * * * shall be bound by oath or affirmation to support this Constitution."

The President negotiates treaties through the Department of State regular Ministers abroad, or special envoys or plenipotentiaries appointed for the purpose. The President negotiates and the Senate ratifies, two-thirds of its Members present necessarily concurring. The participation of the House of Representatives is necessary only when appropriations of money or other legislation is required to carry the provisions of the treaty into effect.

In hundreds of cases these prescriptions of the Constitution of the United States are clearly enunciated. Why should the legal advisers of the Canadian Government shut their eyes to these facts, or refuse to consider them on the plea that they are merely Canadian lawyers? The provisions of the United States Constitution dealing with this matter are written in plain and unmistakable terms.

Any intelligent person who reads the draft agreement presented to the House of Commons on Friday, the 21st of March, must admit that in form and substance it is a treaty, and its validity, so far as the United States is concerned, depends upon its ratification by two-thirds majority of the United States Senate.

With these facts staring him in the face, Mr. Jackson, Attorney General of the United States, on March 14, gave his opinion that the agreement in its present form is "legally unobjectionable so far as this country is concerned," and "its provisions would be binding upon the United States so far as Canada is concerned." Morally binding it may be, but merely moral obligations are not enforceable in the courts of the United States or in Canada. Mr. Jackson carefully avoids the real issue and fails to assert that the Government of Canada or any Canadian, whose interests are prejudicially affected by a breach of this agreement, could enforce its terms in the courts of the United States, in case it is not ratified by the Senate of the United States as prescribed by its Constitution.

A treaty, which has been duly ratified in conformity with the provisions of the Constitution of the United States, becomes "the supreme law of the land," and is enforceable in all its courts. So vast and complicated are the Canadian interests involved that Canada should insist upon a ratification of the proposed agreement in a mode that is undoubtedly valid. Mr. Jackson is only concerned with a valid ratification by Canada; but it is of the highest concern to Canada that the proposed treaty should be properly and effectively ratified by the Senate of the United States, and therefore, Canada should not complacently acquiesce in any doubtful procedure such as that now proposed.

Lewis and Clark, Trail Blazers Magnificent

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. SMITH of Washington. Mr. Speaker, one of the most interesting and thrilling accounts of the Lewis and Clark expedition to the Pacific Northwest which I have ever read is contained in a recent article by Mr. Richard L. Neuberger, published in the American Legion magazine, March 1941.

The article reads as follows:

TRAIL BLAZERS MAGNIFICENT

(By Richard L. Neuberger)

From St. Louis, edge of American civilization, Sergt. John Ordway, of the United States Army, wrote to his father and mother in New Hampshire: "Honored parents: I am now on an expedition to the westward with Captain Lewis and Lieutenant Clark, who are appointed by President Jefferson to go through the interior of North America. We are to ascend the Missouri River and then go by land to the great western ocean."

A courier went through the camp collecting such messages from men who were not sure they would ever be heard from again. Then, late on the rainy afternoon of May 14, 1804, the 29 members of the party embarked in two long, trim rowboats and a 55-foot bargelike bateau. They were voyaging into the unknown.

At St. Louis geography ended and myth began. The Indians whispered of the Shining or Rocky Mountains that scraped the sky. Was this merely one of their legends? Jefferson, when Minister to France, had heard mariners who sailed with Captain Cook on his Pacific voyages describe evergreen forests as boundless as the oceans and peaks high as the Alps, to be seen on America's western shore. Were their tales true? Jefferson's lively imagination had been fired and thenceforward he dreamed of sending brave men to "explore the great wilderness beyond the Mississippi and form a line of communication from sea to sea."

As soon as his envoys had bought from Napoleon for $15,000,000 the million square miles of territory that France claimed on the sundown side of the Mississippi, Jefferson asked Congress for $2,500 to finance its exploration. "And let us search out even that which lies beyond," he urged.

To lead the expedition the President selected his private secretary, 29-year-old Meriwether Lewis, believing that this young Army captain had a determination that nothing could conquer. Such a man was needed; there might be more than dangers of the wilderness to face, and temptations to turn back might be many. A race for empire was in prospect, for the British were talking of sending men to hoist the Union Jack at the mouth of the Columbia.

Jefferson suggested that Lewis select an alternative commander, and Lewis named his best friend, William Clark, a 34-year-old Artillery lieutenant.

They were in strong contrast. Lewis' thin countenance, with defiant jaw and slate-gray eyes, had an eaglelike intensity. He was taciturn, almost gloomy. Clark, red-headed, red-faced, was never stern or silent. His cheerful chatter often had revived the spirits of troops weary on the march. He liked to dodge officers' mess to eat with the men; he hailed colonels and corporals alike by their first names. He got along with Indians better than anyone else in the Army, possibly because he treated them as equals.

Clark went from post to post on the frontier, asking picked men if they wanted to plant their country's flag on the western ocean. Lewis arranged for supplies, which included presents for the Indians—mirrors, red cloth, needles, beads, calico shirts.

Men picked for the journey were enlisted in the Army at $10 a month for privates, $15 for the three sergeants, $80 each for Lewis and Clark, and as a bonus they were promised parcels of land. Whether any of them would survive to enjoy these rewards was doubtful. Their eventual destination was so indefinite that Jefferson gave them papers bespeaking the good offices of "our consuls in Batavia, in Java, and at the Cape of Good Hope."

As they rowed up the sluggish Missouri, under the flag with 15 stars, the party was a cross section of the expanding Nation. Alongside Kentuckians chosen for their woodcraft were hunters from Virginia, farmers from Vermont, carpenters from Pennsylvania. There were Irishmen, Scots, Dutchmen, and Frenchmen. Near Lieutenant Clark in the first boat crouched his brawny Negro servant, York.
